PROFESSOR OF LITERARY AND CULTURAL STUDIES
CARNEGIE MELLON UNIVERSITY

W. W. Norton & Company has been independent since its founding in 1923, when William Warder Norton and Mary D. Herter Norton first published lectures delivered at the People's Institute, the adult education division of New York City's Cooper Union. The firm soon expanded its program beyond the Institute, publishing books by celebrated academics from America and abroad. By mid-century, the two major pillars of Norton's publishing program—trade books and college texts—were firmly established. In the 1950s, the Norton family transferred control of the company to its employees, and today—with a staff of four hundred and a comparable number of trade, college, and professional titles published each year—W. W. Norton & Company stands as the largest and oldest publishing house owned wholly by its employees.

Introduction to Theory and Criticism

In recent times, theory and criticism have become central to literary and cultural studies, treated less as aids to the study of literature and culture than as ends in themselves. As Jonathan Culler noted in *Framing the Sign: Criticism and Its Institutions* (1988), “Formerly the history of criticism was part of the history of literature (the story of changing conceptions of literature advanced by great writers), but . . . now the history of literature is part of the history of criticism.” This dramatic reversal, which occurred gradually over the course of the twentieth century, means that the history of criticism and theory increasingly provides the general framework for studying literature and culture in colleges and universities. Some literary scholars and writers deplore the shift toward “theory,” regarding it as a turn away from literature and its central concerns. These “antitheorists,” as they are called, advocate a return to studying literature for itself—yet however sensible this position may at first appear, it has problems: it itself presupposes a definition of literature, and it promotes a certain way of scrutinizing literature (“for itself”). In other words, the antitheory position turns out to rely on unexamined—and debatable—theories of literature and criticism. What theory demonstrates, in this case and in others, is that there is no position free of theory, not even the one called “common sense.”

The history of theory and criticism from ancient times to the present is one of contending ideas and opinions about such apparently self-evident topics as “literature” and “interpretation.” Historically, interpretation has been conceptualized in a number of different ways: as, for example, objective textual analysis or moral assessment or emotional response or literary evaluation or cultural critique. The same is also true of literature, which has been defined in terms of its ability to represent reality, or to express its author’s inner being, or to teach morality, or to cleanse our emotions, to name only a few common but conflicting formulations. The history of criticism and theory contains many such arguments. Taken together, the antitheorists themselves adhere to very different, often contradictory understandings of literature and interpretation. Such conflict points to the vitality, the excitement, and the complexity of the field of theory and criticism, whose expansive universe of issues and problems engages ideas not only about literature, language, interpretation, genre, style, meaning, and tradition but also about subjectivity, ethnicity, race, gender, sexuality, class, culture, nationality, ideology, institutions, and historical periods. In this anthology, students new to literary and cultural studies will discover a wide-ranging interdisciplinary and comparative field whose practitioners

examine, formulate, and assess all manner of theories and problems related to the study of literature and culture.

In addition, students new to criticism and theory will encounter a rich array of technical terms and concepts, critical approaches and schools, and literary and cultural theories and theorists. From *signifier* to *deconstruction* to *cultural studies*, from Aristotle to Foucault, the field of theory and criticism is marked by a multitude of signposts sometimes unfamiliar to even the most widely read students. In this introduction as well as in the headnotes to each author, we help students make sense of this complex but rewarding area. We begin by surveying an array of notable answers to two central questions—what is interpretation? and what is literature?—in order to establish our bearings. Shifting direction, we then survey the historical development of theory and criticism, from the classical to the Romantic periods, after which we provide brief overviews of major schools and movements of the last century, plus finally the disaggregation of the field in the twenty-first century. Along the way, we discuss many of the theorists in this anthology, explain perennial problems and issues, define key concepts and terms, and illuminate the underlying structure of the field of theory and criticism, including its most significant conflicts.

WHAT IS INTERPRETATION?

Within the field of theory and criticism, various terms and concepts are applied to the encounter between the reader and the text. This transaction, which we will provisionally call “reading” or “interpretation,” typically involves such activities as personal response, appreciation, evaluation, historical reception, explication, exegesis, and critique. Not surprisingly, the master words *interpretation* and *reading* are themselves debatable. In fact, in choosing a term or terms to characterize the encounter between text and reader, one takes a specific theoretical position regarding the exact nature of reading and interpretation.

Consider a few such key terms. Whereas *explication* and *exegesis* stress the objective labor of deciphering a text in a methodical way (line by line, in the case of a short poem), *personal response* and *appreciation* emphasize the intimate, casual, and subjective aspects of reading. *Critique* and *historical reception*, in turn, accentuate the distances in values and time between the interpreter and the work. An exegesis of a text is not the same as an appreciation or a critique. Exegesis presumes a dense and enigmatic text in need of elaborate explanation; appreciation implies a reader-friendly work just waiting to be enjoyed here and now; and critique presupposes a hidden set of questionable or dangerous premises and values undergirding a complex document. In the case of exegesis an interpreter needs to be a knowledgeable puzzle solver; appreciation positions the reader as an eager and sympathetic hedonist; and critique calls for a critic at once suspicious and ethical, committed to a set of values different from, or directly opposed to, those expressed in the text. In depicting the critical encounter, theories of reading and interpretation invariably assign characteristics to texts and allocate particular roles and tasks to readers.

Many of the selections in this anthology differ markedly in how they characterize interpretation and reading. For instance, Friedrich Schleiermacher draws a detailed account of interpretation both as historically informed grammatical explication and as psychological identification with the author. His view contrasts with the perspective of Fredric Jameson, who advocates an elaborate three-phase process of interpretation focused specifically on ideology critique of social contradictions, class antagonisms, and historical stages of social development manifested in texts. And Paul de Man instead pictures reading as a mode of exegesis wherein the reader's rewriting or restaging of the text replaces the original with an interpretive allegory: reading for him unavoidably becomes "misreading." That highly competent theorists can propose completely different models of reading fuels continued theoretical debate about interpretation.

One of the most famous ways of reading is the mode of textual analysis developed by the New Critics, particularly Cleanth Brooks. During the mid-twentieth century, the New Criticism became the dominant critical practice in many North American and British universities, and it remains influential today, especially in the introductory literature classroom. To interpret as a New Critic is to demonstrate through multiple (re)readings of poetic texts the intricacy of artistic forms. "Meaning" is found neither in a simple paraphrase of the text, nor in propositions extracted from it, but in carefully orchestrated and unified textual elements (for example, images, tropes, tones, and symbols). The literary work is (pre)conceived as an autonomous, highly coherent, dramatic artifact (a "well-wrought urn") separate from and above the life of the author and reader as well as separate from its social context and from everyday language. Textual inconsistencies are harmonized by being valorized as artful literary ambiguities, paradoxes, or ironies.

Yet there are problems with this seemingly sensible "formalist" method. Some theorists have complained that it posits an overly aestheticized, narrow theory of meaning. The "close reading" or "practical criticism" advocated rules out a great deal, including personal response, authorial intention, propositional meaning, social and historical context, and ideology. It values retrospective analysis rather than the risky ongoing experience or actual process of trying to make sense of a work. It privileges both freestanding spatial form over temporal flow and critical distance over the reader's personal participation. It makes textual unity mandatory, finessing gaps and loose ends. It favors well-made and compact rather than sprawling works and genres. The reading practice of New Criticism is an explicit emptying out of literary interpretation in order to highlight intrinsic artistic craft and form while ruling out such extrinsic matters as morality, psychology, and politics.

Even without sampling further the many theories of reading and interpretation presented in this anthology, we can see that there are no easy answers to the question "what is interpretation?" New Criticism has been singled out to demonstrate how a practice of reading might be questioned, but many of the other theories in this anthology could have served equally well. The relationship between interpretation and reading continues to be a major preoccupation in the field of criticism and theory. All who think critically have an opportunity to engage various theories of reading and to define their own views.

WHAT IS LITERATURE?

Another major question—"what is literature?"—can be, and regularly is, answered by associating literature with such keywords as representation, expression, knowledge, poetic or rhetorical language, genre, text, or discourse.

In our ordinary understanding, literature represents life; it holds up, as it were, a mirror to nature and is thus "mimetic." The expressive theory of literature, which regards literature as stemming from the author's inner being, similarly depends on a notion of mirroring, though here literature reflects the inner soul rather than the external world of the writer. The didactic theory, which sees literature as a source of knowledge, insight, wisdom, purgation, and perhaps prophecy, is compatible with both the mimetic and the expressive theory: literature can depict external and internal realities while at the same time disseminating valuable knowledge and clarifying emotions. The dominant view of literature as both mimetic and didactic, still alive today, arose with the ancient Greeks and was challenged by the Romantics and then the moderns. Though the theory of literature—or "poetics," as it is sometimes called—has been a contested topic throughout history, the debate has been especially fierce from the late nineteenth century to the present.

Modern theorists often insist that the language of literature, unlike that of newspapers and science, foregrounds poetic effects (particularly tropes and figures) that range from alliteration, assonance, metaphor, and paradox to rhythm and rhyme. In this formalist theory of literature or poetics, neither depiction of external or internal reality nor knowledge about existence or refined emotion distinguishes literature from ordinary and scientific discourse: instead, "literariness" (or "poeticity") renders literature distinctive and special.

This theory first emerged during the nineteenth century when poets such as Edgar Allan Poe and Gerard Manley Hopkins started exploring, sometimes extravagantly, the constituent materials of literature (especially sound effects), turning away from the notion of literature as simply a reliable recorder of nature or source of morality. A similar transformation followed in the visual arts; the postimpressionist painters focused on paint textures, brush strokes, and color intensities rather than seeking photographic realities. Writers and theorists at the time often felt that to justify literature by pointing to its accuracy and realism was to put it in competition with the sciences, social sciences, journalism, and photography—a competition they believed it could not win. Conversely, by emphasizing the literariness of literature, they would accord it a distinctive and elevated aesthetic status over competing domains and fields, ensuring its survival and dignity in challenging times. Such a formalist theory of literature prevailed in the early and mid-twentieth century among Anglo-American New Critics and Slavic formalists, some of whom are represented in this anthology.

A well-known heuristic device conveniently summarizes all the accounts of literature discussed up to this point. Developed by M. H. Abrams in *The Mirror and the Lamp: Romantic Theory and the Critical Tradition* (1953), this study aid pictures the literary "work" at the center of a triangular structure; the outer three points are occupied by the "universe," the "artist," and the "audience." Mimetic theory emphasizes the relations between the work

and the universe; expressive theory foregrounds the link between work and artist; didactic theory highlights the tie between work and audience. Formalist theory focuses on the work itself; as we have just seen, it deemphasizes connections between the text and the universe, artist, or audience. Until the early Romantic era, literary theory dealt with the poem's relationship to the universe and the audience; in the nineteenth century it focused on the artist; and in the twentieth century it turned to the work itself. Most theories of criticism and literature, argues Abrams, juggle these four major elements and orientations, tending to privilege one.

This classification scheme and its lessons have proven useful, especially in illustrating basic theoretical orientations and in delineating broad historical trends. But the famous diagram has limitations, as any theorist will tell you. Perhaps the most serious is that it stops with modernism: it predates the appearance of such influential postmodern theoretical movements as structuralism, poststructuralism, feminism, queer theory, postcolonial theory, and cultural studies. Abrams maps a progression from mimesis and didacticism to expressionism to formalism, but recent theory and criticism of literature have moved on to cultural critique. In the process, theorists have focused in turn on the imitation of reality and its lessons, on inner truths and visions, on poetic techniques and their orchestrations, and on sociohistorical and political representations and their values. In this historical development the "old" problems recede from view but never disappear; instead, they undergo reconfiguration and occupy new conceptual relations.

Consider, for instance, the structuralist or semiotic theory of literature that fits all literary texts into genre classifications. According to this perspective, a genre is defined by arbitrary sets of conventions, such as those governing the haiku—a poem of seventeen syllables in three lines of five, seven, and five syllables, respectively. These conventions distance literary writing from ordinary reality, even when the conventions are calculated to give the appearance of direct reportage. In seeing literature as genre consisting of complex sets of codes, the structuralist retains the formalist view of literature as a separate mode of discourse that follows its own artistic rules but adds the sociological concept of *convention*. Because conventions are not only literary but also linguistic and cultural, literature and society are reconnected through discourse.

Poststructuralist and deconstructive accounts of literature go one step further by problematizing the notion of mirroring, which, as we have seen, undergirds expressive, didactic, and mimetic theories of literature. They do so through a close and technically complex examination of the workings of language—seen as distant and different from reality, for it necessarily contains distorting rhetorical and genre devices. Language is not a simple transparent medium. Any use of language, no matter how typical or everyday,

employs *some* combination of historical conventions and figurative devices, which compromises its transparency.

Moreover, language separates from “reality” at the very basic level of the sign because, strictly speaking, words are not things. The four letters *b, i, r, d* are not an actual feathered creature. In linguistic terminology, neither *signifiers* (words) nor *signifieds* (concepts) are *referents* (things). Because language consists of “floating signifiers” that are detached from reality, it simulates or summons things. Language deals in effects rather than things. The gaps between signifiers, signifieds, and referents render the truthfulness and reliability of language *undecidable* (a technical term from mathematics borrowed by poststructuralism).

Language is thus, to employ technical deconstructive terms, *text* or *textuality*, meaning a complex interweaving of self-referential, undecidable relationships. In extreme forms, this challenging postmodern theory of literature as textuality views language as thoroughly divorced from reality; in more moderate forms, language maintains a relation to reality, albeit a more or less uncertain one. At stake is literature’s ability to reflect reality or impart reliable knowledge—and the uncertainty raises doubts about its truth claims and about earlier theories of literature. This area of inquiry is commonly labeled the “crisis of reference” (or “referentiality”).

The dizzying deconstructive view of literature as textuality has been opposed by the widespread poststructuralist theory of literature as *discourse*, a term associated with the influential work of Michel Foucault. Discourse theorists trace the language of literature to its source in the spoken language of everyday social life. Conceived by its many advocates as anti-elitist, this materialist theory of discourse—whether it stems from Foucault, Mikhail M. Bakhtin, black aestheticians, New Historicists, cultural materialists, queer theorists, psychoanalytic critics, or cultural studies scholars (all allotted space in this anthology and discussed later in the introduction)—insists that language is uttered by embodied subjects who are situated historically in contentious social spheres that are regulated by powerful institutions. Significantly, this theory of the *social text*—of language use as dialogical—gives new life to earlier views of literature as mimetic, expressive, and didactic.

Literature, according to these recent discourse theories of the social text, re-presents and refracts reality. Indeed, language itself constitutes reality; it also produces distortions. This is mimesis with a difference: literature represents reality; but reality is grounded in convention, not nature, and it is subject to illusion. Similarly, discourse theorists affirm that literature expresses the inner life of authors, but life is understood to be a regulated *social* phenomenon that differs with the time, location, and group of the author. In place of the solitary poet giving unique expression to truths universal to all humankind, we find in recent discourse theories an embattled “scriptor” creatively mixing and matching cultural codes derived from her or his situation, community, and tradition.

In this account literature retains didactic as well as mimetic and expressive powers. In addition, the knowledge it conveys is of the “cultural unconscious”—that is, of the archive of historical words, symbols, codes, instincts, wishes, and conflicts characteristic of a people and its era. To treat discourse as social text pluralizes the theory of literature, making a single universal or

totalizing humanist theory of literature, good for all times and places, appear reductive. In posthumanist thinking, literatures replace literature.

Theories of literature and theories of reading have affinities with one another. Here are four instances. First, the formalist idea of literature as a well-made artistic object corresponds to the notion of reading as careful explication and evaluation of dense poetic style. Second, when viewed as the spiritual expression of a gifted seer, poetry elicits a biographical approach to criticism focused on the poet's inner development. Third, dense historical symbolic works presuppose a theory of reading as exegesis or decipherment. Fourth, literature conceived as social text or dialogical discourse calls for cultural critique. While we can separate theories of literature from theories of interpretation, they often work hand in hand.

CLASSICAL THEORY AND CRITICISM

Anthologies covering the history of theory and criticism usually begin with the classical theorists, and rightly so, because their influence on its development has continued up to the present. The most influential classical theorists in Western culture are Plato and Aristotle, followed distantly by Horace. Recently, a renewed interest in rhetoric has brought Gorgias, Quintilian, and others into the picture—a change that illustrates the mutability of the canon of theory. Taken together, the classical theorists represent a wide range of opinions about literature and its significance developed over a millennium (from the fifth century B.C.E. to the fifth century C.E.). To sample their groundbreaking work, we will consider here some of their opinions on two leading, often interrelated issues of their time: literary mimesis and didacticism.

On these two issues, Plato and his student Aristotle present the best-known views. Both agree that *mimēsis* (imitation or representation) is a key feature of poetry, but they conceive of and evaluate it differently. Plato has his spokesperson Socrates disapprove of poetry's imitation of reality on the grounds that poetry cannot depict truth and teach morality and that it is irrational—based on inspiration, not knowledge. As an idealist philosopher, he locates reality in a transcendent world of eternal Forms or Ideas that only reason can properly apprehend; this world is distinct from the illusory phenomenal world of our senses, which poetry represents. For Plato, the material world is at best an imperfect copy of the original transcendent world of Ideas, and poetry is but a degraded copy of a copy. He concludes that poetic representation threatens social stability by offering false images and unsuitable role models. In *Republic*, therefore, he has Socrates recommend that it be banished from the ideal society, except perhaps for poetry that praises the gods and avoids representing them in an unseemly fashion.

Plato takes this severe position in part because he is reacting against the views of earlier sophists such as Gorgias and Thrasymachus, whom he represents as concerned less with truth than with persuasion. They saw language as not simply representing reality but in effect producing reality by shaping the beliefs of an audience. As a result, in oratory as well as in poetry, what matters most is bringing a particular audience to hold a specific point of view, not imitating an absolute truth. Some sophists even boasted that

in a debate they could argue any side of an issue and win. Later rhetoricians such as Quintilian emphasized that the good orator was also a morally good person, but truth and honesty apparently mattered little to fifth-century Greek sophists, who significantly influenced the formation of Plato's ethical position.

Less transcendental than Plato and Socrates, and more concerned with truth than the sophists, Aristotle asserts that poetic imitation can reveal truth precisely because it does not passively copy appearances: it is a more creative act. Poetry in this view is an organized whole, whose parts are organically related and subordinated to a single objective. Because he focuses on tragic drama, Aristotle takes plot as the major example of the organization of poetry. For him, plot is not a random sequence of incidents but a unified whole with a beginning, middle, and end structured by logical necessity. Unlike history, which is built on accidental details, poetry rises above the description of particulars to represent universal truths about nature. This new view of imitation springs from Aristotle's belief that human beings have a natural instinct for imitation, which is generally pleasurable and connected with learning.

Later developments in classical theory and criticism build on the groundbreaking work of the Greek rhetoricians, Plato, and Aristotle. Horace, a Roman poet, follows Aristotle in asserting that poets can and must imitate nature, adding that it is also important for young poets to imitate great writers. As he approves of poetic imitation, Horace stresses morality and decorum. For him, the pleasures of imitation are best yoked with moral teaching; he declares that the primary function of poetry is to combine "pleasure with usefulness." This famous Horatian maxim has exerted considerable influence on all subsequent theorizing.

MEDIEVAL THEORY AND CRITICISM

Spanning the course of a millennium (from the fifth through the fifteenth century), medieval theory and criticism contain numerous documents related to the practices of reading and interpretation, to the theory of language, and to the nature and use of literature.

Much medieval literary theory evolved out of the interpretation of sacred Scriptures. Drawing on the Neoplatonism of Plotinus and his disciple Proclus, medieval writers explored how to read the Book of God's Word (the Bible) as a divinely authorized representation of the Book of God's Works (nature). Hugh of St. Victor, for instance, describes interpretation as the reflection, or imitation, of God's works in his words. For Hugh, the whole visible world is a book written by the finger of God. Thus, in reading one discovers not a pale imitation of nature, as Plato believed, but the ways in which reading a text and reading the world are parallel activities.

This medieval theory of hermeneutics (the art and science of interpretation) is grounded in Augustine's notion that human language is a divinely ordained reflection of the Logos (the Word of God), which is said to guarantee the unity of meaning in the Bible and the book of nature, even when that meaning is not readily discernible. Language truthfully portrays the world as it is, in spite of the confusion caused by the multiplication of tongues at

Babel. According to Augustine, language exists only to convey a meaning that preexists it; it cannot be reflexive or playful (as it may be in poetry); and it must efface itself in pointing to the preexistent truth it represents. Language is "transparent."

Most medieval writers accepted the Augustinian theory of language, and they also shared Augustine's deep distrust of poetic fables and figurative language. But they faced serious theoretical contradictions. Try as they might to assert the "truth" of language and the uselessness of poetic fictions, medieval writers could not overlook the presence of both poetry and fables in the master text of Christianity, the Bible. The most common if still not entirely satisfactory response was to argue that the transcendental majesty of God could be represented only indirectly, through poetic or figurative language. In this view, the heroic songs and psalms of the Old Testament, as well as Christ's parables in the New Testament, function as metaphoric mediations, creating similitudes between this world and the next. Such similitudes are necessary, Augustine argues, so that "by means of corporeal and temporal things we may comprehend the eternal and spiritual." Ultimately, the medieval defense of poetry was based on Macrobius's distinction between fables that "merely gratify the ear" and those that "encourage the reader to good works."

In exploring such issues, medieval writers relied primarily on the textual techniques of exegesis. Particularly important were the exegetical genres of the gloss and the commentary, derived from the works of ancient grammarians and expanded for explication of the Bible. Glosses are elucidations of individual words or phrases, written in the margins or between the lines of a text; commentaries are much more extensive textual expositions, appearing at first as local and marginal remarks (like footnotes) but later produced as freestanding continuous texts (for example, Bernardus Sylvestris's twelfth-century *Commentary on the First Six Books of Virgil's "Aeneid"*). Known as the *enarratio poetarum* (exposition of the poets), these interpretive genres shaped the basic approach to all authoritative texts, which were transmitted in manuscripts filled with glosses and commentary that retained space for future textual exegesis.

The dominant technique of medieval gloss and commentary is allegory, a method of reading texts for their underlying esoteric meanings. Quintilian's definition of allegory as meaning "one thing in the words, another in the senses" was the basis of medieval definitions of allegory; but what was for him a figure of speech became, when combined with the Augustinian belief that poetry is a revelation of an otherwise inaccessible transcendent world, a critical tool to explain and control the dissemination of meanings in sacred Scriptures. Only later would it become a literary genre. Following Quintilian, medieval writers eventually elaborated four levels of allegorical interpretation to be used in the study of the Bible: the *literal*, or historical; the *allegorical*, or spiritual; the *tropological*, or moral; and the *anagogical*, or mystical. In the New Testament story of Christ's raising of Lazarus from the dead, for example, the medieval exegete would recognize first that, on the literal level, the story is a record of an event that actually took place. On the allegorical level, the story prefigures Christ's death, descent into hell, and resurrection. On the tropological level, it represents the sacrament of Penance, whereby the individual soul is raised from the death of sin. And on the anagogical level, it portrays the resurrection of the body after the Last Judgment.

By the twelfth century, medieval writers had extended allegorical biblical interpretation to the study of pagan mythologies and great classical works of art, such as Virgil's epic poem, the *Aeneid*. Medieval Christians could not literally accept pagan gods, nor could they simply read the stories as "fables," but they could see them as expressions of philosophical ideas. Eventually, allegorical interpretation was applied to contemporary writing, as in Dante's reading of his *Divine Comedy* in "Letter to Can Grande." Although it slowly passed out of favor after the Middle Ages, allegorical interpretation reemerged as a significant influence in the late twentieth century—for example, in the work of Northrop Frye and Fredric Jameson, both of whom developed schemes for interpreting texts based on multiple levels of interpretation.

Medieval theory and criticism, significantly, are also concerned with prescriptive poetics: that is, with how to write poetry. Inspired by Horace's *Ars Poetica*, this pragmatic criticism synthesizes classical views on rhetoric, grammar, and style, often taking the form of guides to composition. For instance, the medieval Horatian poet-critic Geoffrey of Vinsauf adopts and revises Horace's fundamental principle of decorum for a medieval audience. For Geoffrey, the poet's objective is not to invent new subject matter but to develop new ways of treating traditional themes. In this regard, the poet is like the medieval exegete, who preserves the past and develops intricate ways of extending it. The poet has definite roles to play in the pursuit of innovation as well as traditional craft.

RENAISSANCE AND NEOCLASSICAL THEORY AND CRITICISM

While Renaissance and neoclassical literary theory and criticism display a renewed interest in Greek and Latin classics, they also manifest a new concern with vernacular languages and national literatures. Spanning the sixteenth, seventeenth, and eighteenth centuries, the debates between the ancients and the moderns began in Italy and extended throughout western Europe, setting the framework for much of the theory and criticism of the time—and addressing problems that are still with us today.

The defenders of the ancients directed attention to classical genres such as tragic drama and epic, holding them up as models for composition. At first, the ideal was not just to imitate the genres of antiquity but to use their languages, especially Latin. The argument for strictly adhering to classical forms grew out of a unique synthesis of Aristotle's *Poetics* and Horace's *Ars Poetica*. From the *Poetics*, Renaissance critics developed an appreciation for isolating and distinguishing genres, which they tended to treat prescriptively rather than descriptively. The most famous instance is the doctrine of the "three unities" (action, place, and time), which extrapolates from Aristotle's notion of the unity of action to demand that dramas have not only one action but also one setting and a brief span of fictional time (not exceeding one day). Here Aristotle's original description of a body of preexisting Greek tragedies is turned into a set of rules for the writing of plays. This position, which first emerged in the commentaries on Aristotle by the Italian Renaissance critic Ludovico Castelvetro, found its most influential expression a century later in the critical writings of the neoclassical French dramatist

Pierre Corneille and the English poet John Dryden—both of whom in their creative works were dedicated to their native languages and literatures and thus combined modern and ancient perspectives.

Joined to the doctrine of the three unities was a special Horatian concern with “verisimilitude.” In practice, this meant depicting historical realities and facts and excluding fantastic beings and events, except those that could be explained by Christian beliefs, such as the actions of God and demons. Critics often pointed to significant passages in Horace that stressed the importance of decorum and of copying the techniques and strategies of one’s accomplished literary predecessors. The general sense was that by imitating classics, modern Renaissance and neoclassical writers were also imitating nature. This position was strongly advocated by the Italian critic Julius Caesar Scaliger and was later summed up memorably in one of the many witty neoclassical couplets of Alexander Pope’s *An Essay on Criticism*. Pope notes that the youthful poet Virgil scorned to represent anything except nature when he set out to write the *Aeneid*: “But when t’ examine ev’ry Part he came, / *Nature* and *Homer* were, he found, the *same*.” Pope concludes from Virgil’s example, “Learn hence for Ancient *Rules* a just Esteem; / To copy *Nature* is to copy *Them*.”

In contrast to the ancients, the moderns in the debates not only appreciated but championed new literary forms that departed from the various classical genres. One among many examples is Giambattista Giraldi’s defense of the new Renaissance romantic epic, epitomized by Ludovico Ariosto’s *Orlando Furioso* and later by Edmund Spenser’s *Faerie Queene*. Critics of these long poems pointed out that they lacked unity and verisimilitude and that they deviated markedly from the classical epic, but Giraldi praised the variety of Ariosto’s poem as well as its “marvelous” incidents, claiming that it constituted a new genre not subject to classical rules. In a parallel move, Giacompo Mazzoni supported Dante’s dream allegory in the *Divine Comedy*, stressing the importance of purely imaginary imitation. Informing both Mazzoni’s and Giraldi’s arguments is a view of the poet’s creative powers as unbounded. Sir Philip Sidney captured the essence of this position, which set the stage for Shakespeare, when he stated, “Nature never set forth the earth in so rich tapestry as divers poets have done, neither with so pleasant rivers, fruitful trees, sweet-smelling flowers, nor whatsoever else may make the too-much-loved earth more lovely: her world is brazen, the poets only deliver a golden.”

With this defense by the moderns of the unfettered powers of the poet also came a defense of the use of vernacular languages in place of Latin. Critics and poets began to believe that they could rival the great literary achievements of Greece and Rome with their respective native languages. This trend began as early as Dante, whose *Divine Comedy* was composed in Italian, but in the Renaissance it spread across western Europe. The Italian language was defended by Giraldi and Mazzoni, the French language by Joachim du Bellay and Pierre de Ronsard, and the English language by Sidney and George Puttenham. The turn to the vernacular reflected the growing national consciousness of the time and an increasing preoccupation with distinct national literary traditions.

ROMANTIC THEORY AND CRITICISM

The Romantic movement in the arts developed in the latter half of the eighteenth century, inspired in part by the American and French Revolutions, and it flourished in the early nineteenth century, spreading throughout Europe and the New World. Although it manifests a variety of forms in specific social and historical contexts, the major characteristic of Romanticism is arguably its focus on the individual. Romantic theory was influenced by the philosopher Immanuel Kant's attention to the ways in which subjectivity determines our apprehension of the world. It was also influenced by the developing regard for individual sensibility and originality, a concern first manifested during the mid-eighteenth century.

In Romantic theory and criticism, emphasis on the individual led to an unprecedented focus on poetry as the personal expression of the poet—a development that aimed to counter the decorum, traditionalism, and preoccupation with genre that was characteristic of neoclassicism. Romantic poets such as Johann Wolfgang von Goethe, William Wordsworth, and Percy Bysshe Shelley all saw their art as intimately bound up with their personal impressions, moods, feelings, and sentiments, while Romantic critics such as Schleiermacher called for readers' sympathetic identification with the author.

In discussions of poetry, Romantics drew attention to how the imagination transforms and synthesizes discrete sense perceptions, creating unique organic poems. Perhaps the most celebrated instance of this focus appears in *Biographia Literaria*, where Samuel Taylor Coleridge claims that the poet “diffuses a tone and spirit of unity, that blends, and (as it were) *fuses*, each into each, by that synthetic and magical power, to which we have exclusively appropriated the name of imagination.” This Romantic view of the poem as an organic form developed by the individual imagination was contrary to the neoclassical dictate that artists must imitate previous works of art and follow the rules of their genre. As exemplified by Coleridge, Elizabeth Robinson Montagu, and others, it led to a renewed appreciation of the unique creative genius of Shakespeare, whose unusual and irregular plays were often criticized by neoclassical theorists for ignoring the unities of action, time, and place. Later, the Romantic concept of organic form, shorn of theorizing about the author, would inspire early twentieth-century formalist theories of intricate poetic structure and coherence.

The Romantic fascination with the synthesizing power of the imagination paralleled an abiding concern with the symbol, displayed most famously in the writings of Coleridge and Ralph Waldo Emerson. For the Romantics, the poetic symbol expressed universal ideas through particular concrete details, images, and metaphors. Unlike allegory, which they condemned as a mechanical imposition of meaning and morality onto poetry, the poetic symbol manifested its meaning organically, providing aesthetic pleasure and beauty as well as moral truth. According to Friedrich von Schiller, the process of reading a poem was an experience of “play”—a serious play that reconciled the particular and the general and brought an uplifting sense of freedom to the reader and the poet, saving them from the alienation and despair of the modern world. For the Romantics, poetry—through the symbol—humanized an increasingly dehumanized world.

The genre of choice during the Romantic era in England was the lyric poem, which displaced the epic poem favored by neoclassical writers. Long Romantic poems tended to be arrangements of lyric pieces, as in Wordsworth's *Prelude*. Of all the available genres, the lyric poem was best suited for the expression of individual emotion. Not uncommonly, the lyric appeared as a "fragment," a technique that further stressed the break with neoclassicism, which valued unity, wholeness, and rational design. Some lyrics aimed to attain the sublime, associated with robust imaginative grandeur, infinity, irrationality, plus fear and terror, which was achieved less through sophisticated style and rhetoric (as in the classical writer Longinus, the earliest theorist of the sublime) than by the force of individual genius.

The long struggle of the novel to be regarded as a serious literary form as yet had little effect on theory and criticism, though this genre (especially the Gothic novel) thrived during the Romantic period. The classical hierarchy of literary genres—epic followed by tragic drama and then by lyric poetry—left little room for the novel until Victorian times. Even today the novel often cedes pride of place in literary history to epic poetry and tragic drama, though perhaps no longer to lyric poetry.

A final significant trait of Romantic theory was an emphasis on historical stages of development. The changing social, political, and economic conditions around them prompted many thinkers to ponder literary and cultural history. In theory and criticism, such attention led to repeated attempts—by Jean-Jacques Rousseau, G. W. F. Hegel, Germaine de Staël, and others—to correlate specific forms of literature and the arts to specific historical periods. Often, poetry was identified—as it had earlier been by Giambattista Vico—with "primitive" forms of society, in which people were purportedly less rational and more intuitive. This concern with the dynamics of history was to have a significant impact on the influential work of Karl Marx.

MARXISM

From ancient times, literature and the arts have portrayed, and criticism and theory have discussed, differences in people's social class and history. But with the spread and maturation of capitalism through its various stages, economic and other disparities have more visibly polarized wealthy and poor classes, city residents and ghetto dwellers, inhabitants of the first and third worlds, whites and people of color, men and women. Class formations, class consciousness, and class tensions form part of the historical experience of modernization, and theory and criticism have been grappling with these and related issues for several centuries now.

Many of the current concepts, terms, and issues related to social class derive from Marxist criticism, a diverse and influential source for literary and cultural theory that stems from the work of the nineteenth-century German philosopher and economist Karl Marx. One of its grounding concepts is Marx's theory of "modes of production." According to Marxism, human history is divided into seven successive historical modes of production—tribal hordes, Neolithic kinship societies, oriental despotism, ancient slaveholding societies, feudalism, capitalism, and communism. Class conflict within a specific mode of production follows a basic overall pattern. The capitalist

or bourgeois mode of modern times has been characterized mainly by the conflict between the industrial working class (the *proletariat*, or labor) and the owners and manipulators of the means of production (the *bourgeoisie*). Other classes, including the unemployed and criminals (the *lumpenproletariat*) as well as the dwindling aristocracy, watch this conflict from the historical sidelines. Sooner or later, Marx predicted, international labor will win and the communist mode of production will emerge triumphant, leading to a society free from rampant inequality, exploitation, and class struggle.

According to Marxist theory, the socioeconomic elements of society constitute its base (or foundation), while its cultural spheres—specifically its politics, law, religion, philosophy, and arts—compose its superstructure. *Ideology* consists of the ideas, beliefs, forms, and values of the ruling class that circulate through all the cultural spheres. Members of the working class who subscribe to bourgeois ideas and values exhibit “false consciousness,” since such values ignore the socioeconomic realities of their own working-class lives. *Hegemony* designates the continuous ideological domination of all classes by the ruling bloc through such nonviolent stabilizing and consensus-building institutions as church, school, family, the media, the mainstream arts, trade unions, business interests, and technoscientific establishments. These institutions are what Louis Althusser, a leading Marxist theorist, calls “Ideological State Apparatuses” (ISAs): they manage instability and conflict to impose and maintain social order, working for the most part outside of official state power.

Culture and the arts in the Marxist view are neither innocent entertainment nor independent of social forces; they play a significant role in transmitting ideology and shoring up the hegemonic order. This is not to say that artists and intellectuals are merely mouthpieces of the dominant social class or bloc, because many explicitly protest the ruling systems and implicitly address their contradictions and shortcomings. The ideological orientations of a literary work can be complicated: a text often contains mixed and contradictory messages that reflect its broad social milieu rather than simply its author’s personal philosophy. From a Marxist perspective, artistic works frequently present fugitive, alternative, and counterhegemonic images sometimes suggesting liberatory possibilities and lending them a socially critical undertone.

Viewed from the vantage point of stylistics (the branch of linguistics that analyzes literary style), the conflicts of classes and groups in society produce what Bakhtin famously called “heteroglossia”—that is, the complex stratification of a language like English into different dialects, generational slangs, professional argots, speech genres, group codes, literary genres, and class mannerisms. Many novels (for example, James Joyce’s *Ulysses*) incorporate such social conflicts in the form of heteroglot discourse, a carnivalization of different “languages” that revolt against official style.

With the rise of consumer and multinational capitalism, many have found Karl Marx’s concepts of the *commodity*, *commodity fetishism*, and *commodification* increasingly useful for understanding culture and society, and thus the terms often appear in the writings of contemporary critics and theorists. Commodities are goods or services produced primarily for monetary exchange and profit—a carpenter may, for example, build a table to sell, not to use. For him or her, this commodity has exchange value, not use value. Labor

itself has come to be bought and sold in a money economy; rather than being applied by isolated workers during the production of goods for personal use, it is more typically used in the service of another to earn and then exchange money for items necessary for subsistence.

The fetishism of the commodity describes both our fascination as we stand before a glittering array of products in a store and our forgetting the paid labor of workers that went into the products. This displacement of use value from the commodity—its transformation into cash exchange—results in the alienation of workers from their own labor: carpenters in the factory care little about the tables they assemble. Moreover, the extraction of high rates of profit by owners from their workers' labor results in exploitation, which is a key element of commodity exchange. The term *commodification* names this whole accelerating phenomenon of producing goods and services not for their use value but their exchange value, a phenomenon that threatens to overtake every sphere of life in our time. From pollution credits to underground fashion and music to sexual mates, everything and anything can be purchased as a commodity.

Marxist critics complain that commodification promotes reification, the tendency to view people and human relations as things or objects with price tags. In the arts, for instance, commodification leads artists to hawk their works anxiously to gain profits in an impersonal, competitive market, and it has positioned critics as the hired advisers to moneyed collectors. Observing this process, theorists wonder if criticism and the arts can any longer possess a socially critical dimension.

Contemporary Marxist critics and cultural studies scholars (who are indebted to Marxism) increasingly worry about the co-optation by the market (and the media) of every form of resistance, ranging across the arts and popular culture. If outrageous radical vanguard movements such as surrealism, punk, and gangsta rap can become profitable commodities, is opposition to hegemony possible? The agencies of commodification and hegemonic incorporation threaten to defuse the radical force of all subversive artistic practices, transforming them into hot news stories and merchandise destined for the market economy. Marxist criticism and cultural studies aim their critical inquiries at this system and its dynamics.

PSYCHOANALYSIS

It is often said that Sigmund Freud discovered the unconscious, but it is more accurate to say that he and other psychoanalysts mapped its spaces and mechanisms. The findings of psychoanalysis have filtered into literary and cultural criticism and theory, providing a battery of terms, concepts, and problems that reach beyond those critics who describe themselves as psychoanalytic.

According to psychoanalysis, the human psyche consists of unconscious and conscious spheres, with most of its contents lodged out of sight in the unconscious and covered over by a relatively smaller and less dense consciousness. The keys to the dark and inaccessible unconscious lie, psychoanalysts say, in free association, fantasies, slips of the tongue (so-called Freudian slips), and especially dreams, all of which reveal deeply buried,

repressed, and self-censored wishes. The techniques used to interpret such unconscious materials, particularly dreams, have been useful to literary and cultural critics as well as psychoanalysts, since they are all in the business of deciphering cryptic symbolic texts.

The nightly formation of dreams, or the *dream-work* in Freudian terminology, involves the censorship of unconscious wishes (frequently sexual) that undergo four kinds of deliberate, positive distortion on their way to consciousness: condensation, displacement, symbolization, and secondary revision or elaboration. These unconscious processes explain why dreams usually emerge as garbled “nonsense.” The task of the psychoanalyst is, with the help of the patient, to make sense of dream texts. Here, psychoanalysis asserts that nonsense is meaningful and that distortion is inescapable and creative. Both assertions are taken seriously by many critics and theorists as they work to understand texts, especially since literary discourses are sometimes as seemingly nonsensical and distorted as dreams. Psychoanalytic decoding of symbols has proved particularly illuminating to critics, including those followers of Carl Jung who have made inventories of archetypes—universal symbols such as the garden and the desert, water and fire, the hero and the monster, the river journey and the ordeal, birth and death—that they believe are stored in humanity’s collective unconscious.

Many highly influential modern and postmodern theories of literature are indebted to psychoanalysis and its foundational concept of the unconscious. Two examples of such psychopoetics—Harold Bloom’s “anxiety of influence” and French feminism’s *écriture féminine*—illustrate the richness and complexity of psychoanalytic theories. According to Bloom, each major poet in the Anglo-American tradition from the early Romantics to the late modernists has suffered a devastating yet productive anxiety of influence, as the newcomer poet selects a role model both to imitate and to compete against, wishing ultimately to emerge as a major poet who triumphs over (but triumphs because of) the poetic precursor. Prior to the neoclassical and Romantic periods, literary influence was almost entirely beneficial (as in the case, say, of Spenser’s influence on Milton). With the rise of the subjective lyric poem as a major genre, influence became baleful, involving the aspiring poet’s primal repression of the precursor plus a series of later psychological defenses against this parent figure, including masochistic reversals, sublimations, introjections, regressions, and projections. These entail what Bloom calls “misprision” (mistaking, misreading, misinterpreting), the inescapable and necessary creative distortion enacted unconsciously in the newcomer’s poems in imitation of, and competition with, the loved but hated precursor. Bloom has been criticized for focusing on competition instead of collaboration, for favoring canonical poets over less well known poets, and for omitting nearly all writing by women, but Bloom’s critics have rarely questioned the usefulness of his theoretical understanding of distortion or of unconscious repression, two psychoanalytical concepts widely used in the field of theory and criticism.

The literary theory of *écriture féminine* (feminine/female writing) derives from the work of the celebrated psychoanalyst Jacques Lacan, as creatively revised by the French feminist Hélène Cixous. According to Lacan’s challenging theory, an infant moves during its earliest psychosocial development from an “Imaginary order”—a mother-centered, nonsubjugated, presymbolic,

pre-oedipal space of bodily drives and rhythms (linked with the unconscious)—to a “Symbolic order” of separation between self and (m)other, of law and patriarchal social codes, and of loss and associated desire (linked with consciousness). *Écriture féminine* is a radical, disruptive mode of “feminine” writing that is opposed to patriarchal discourse with its rigid grammar, boundaries, and categories; tapping into the Imaginary, it gives voice to the unconscious, the body, the nonsubjective, and polymorphous drives. Even though such feminine writing can be produced by male as well as female writers (for example, by Jean Genet and James Joyce), it is a psychopoetics positioned by Cixous explicitly against patriarchal values and practices.

In both the anxiety of influence and *écriture féminine*, as in psychoanalysis generally, Freud’s theory of the “Oedipus complex” plays a central role. According to this theory, an infant must successfully complete various stages of development (oral, anal, oedipal) to ensure later psychological well-being. In the oedipal stage, the (male) child must separate from the mother and identify with the father on his way to entering the Symbolic order. The Oedipus complex is displayed by those males whose failure to negotiate the oedipal stage of development leaves them deeply attached to their mothers and often feeling rivalry with their fathers. Bloom’s theory of the anxiety of influence presents a parallel rivalry with the father. And *écriture féminine* is a feminist effort to reconceive the pre-oedipal sphere as a highly positive source of creativity and liberation, rather than simply an infantile domain of irrational instincts that we must abandon.

Perhaps the most famous contemporary revision of Freudian oedipal theory appears in Gilles Deleuze and Félix Guattari’s Marxist and psychoanalytical *Anti-Oedipus*, a book that criticizes many aspects of Freud’s work—notably, the bourgeois presupposition that the nuclear family is the universal framework for all normal human development. According to Deleuze and Guattari, Freudian theory subjugates the disruptive unconscious—with its often antisocial desires and flows—to the hegemonic order of the patriarchal family, the rule of law, and the capitalist economy. Freud’s psychoanalysis, focused as it is on the oedipal triangle, is unable to acknowledge the truly complex nature of subjectivity, seen by Deleuze and Guattari as an open-ended process of becoming in which multiple contradictory positions and roles coexist and clash.

FORMALISM

Formalist criticism rose to prominence in the early twentieth century, usually defining itself as objective in opposition to subjectivist theories of literature such as critical impressionism, which was perceived to be both solipsistic and relativistic. Formalist criticism is not interested in the feelings of poets, the individual responses of readers, or representations of “reality”; instead, it attends to artistic structure and form. It privileges the work over against the artist, audience, and universe. The two best-known schools of formalist criticism are Anglo-American New Criticism and Russian formalism.

As discussed above, New Critics approach literature—particularly poetry—as an autonomous entity. They focus on the form of the literary object,

self-consciously separating literary criticism from the study of sources, biography, reception, social and historical contexts, politics, and other “extrinsic” matters. They depersonalize poetry and attribute its speaking not to the poet but to the so-called *persona* (an abstract dramatic character internal to the work). They advocate “intrinsic” analysis or “close reading” (explication) that avoids paraphrase and thematic statements, examining instead the complex stylistic orchestrations that compose poetry. What New Critics seek in their studies of poetic form is a set of “organic” relationships of literary elements (images, symbols, tropes, features of genre and style, settings, and tones), whose overall unity often depends on artful ambiguity, paradox, or irony. This special state of aesthetic suspension that underwrites the all-important unity—reminiscent of Kant’s earlier “purposiveness without purpose” and Coleridge’s “balance or reconciliation of opposite or discordant qualities”—is for them a defining feature of poetry. It distinguishes the literary from the more ordinary uses of language found in journalism, everyday speech, scientific writing, and so on, where direct communication, not highly wrought aesthetic form, is most important.

Similarly, Russian formalist critics such as Roman Jakobson and Boris Eichenbaum distinguish between the literary and the nonliterary. They view literature primarily as a verbal art, rather than as a reflection of reality or an expression of emotions. Separating literary criticism from such fields as psychology, sociology, and intellectual history, they focus on the distinguishing features of literature, its “literariness.” What most separates literature from other modes of discourse is that it draws attention to its own medium, that is, to a complex texture of formal devices and strategies that include versification, style, and narrative structure. Whereas New Critics study the artful convergence of elements in a literary structure (aesthetic unity), Russian formalists examine the creative deviation of elements from the historical background of literary norms and conventions.

The importance of formalism, especially the Anglo-American variety, cannot be underestimated in Anglophone spheres. Because it is a dominant mode of modern criticism against which much later postmodern theory typically defines itself in whole or in part, we refer to it later in this introduction to develop a fuller account.

RECEPTION THEORY AND HERMENEUTICS

Contemporary critical theory offers a rich panoply of types of readers—ideal readers, superreaders, implied readers, virtual readers, real readers, historical readers, resisting readers, critical readers, and more. Such terms are usually found in reader-response theory and reception aesthetics, realms that focus on theories of readers and meaning.

In reading a novel, we can sometimes extrapolate from it an implied reader, a figure whom the text seems to be addressing and who occasionally functions as a character in the work (for example, the characters to whom Marlow tells his story in Joseph Conrad’s *Heart of Darkness*). An implied reader differs both from a virtual reader, to whom the text is vaguely addressed by the author, and from a historical reader, who actually reads the text at the time of its publication. The hypothetical perfect decoder of the work, who knows

everything necessary to make sense of it, is the ideal reader; but the most original and innovative texts require a superreader, a special ideal reader endowed not only with extensive linguistic and literary knowledge but also with superior aesthetic sensibility. Both the critical and the resisting reader, situated in definite historical moments and possessing strong values and interests, find themselves opposing and interrogating texts (imagine an average American or Briton today reading Hitler's *Mein Kampf*). Real readers are people whose actual responses to novels, plays, poems, and other texts have been recorded by theorists and, in some cases, analyzed for their individual styles and for the personal psychological quirks that they reveal.

Theories of meaning accompany these accounts of various readers. Some reader-response theories construe meaning as an entity located in the text or in a paraphrase of the text and thus view readers as discovering objective textual meanings. But other reader-response theories argue that insofar as reading occurs through time and involves the continuous adjustment of perceptions, ideas, feelings, and evaluations, the meaning of a work is the moment-by-moment experience of it, not something separate or left over. Meaning is therefore a process, not a product; it is an event, not a retrospective reconstruction or intellectual reformulation. This subjectivist theory of meaning has limitations, however: it endorses the idea of reading as private consumption, and it construes *experience* as a straightforward, unconditioned, conscious, and knowable process.

Some reception theorists see meaning as a production dependent on pre-existing social codes and protocols of interpretation. In this view, every interpretive community—for example, psychoanalytical critics—employs a particular set of interpretive strategies for (re)writing (that is, producing) texts and for constituting their properties, intentions, and meanings. Such preestablished strategies determine the shape of meaning, which is neither prior to nor independent of the act of interpretation.

The New Critics approach meaning differently. They famously warn against the “heresy of paraphrase,” emphasizing that it is a mistake for a reader to paraphrase a work's content in order to distill its propositional meaning. Textual paraphrases usually end up being moral or utilitarian statements, putting literature on a level and in competition with other disciplines such as philosophy, religion, or politics. By invoking the “affective fallacy” and “intentional fallacy,” two related and equally famous New Critical concepts, they forbid us to locate meaning in the emotional responses of the reader or in the intentions of the author, respectively. According to the New Critics, the literary artifact does not need the support of such external agents if it is well made. The sense of *meaning* becomes complex and abstract for these formalists. On the one hand, it is a secondary, relatively unimportant feature of literary structure; on the other, it is an aesthetic concept of organic unity that reconciles textual incongruities with the aid of irony, paradox, and ambiguity. New Criticism is celebrated for telling us what meaning is not: it is not propositional truth, nor the author's intention, nor a reader's response.

To clarify the concept, some theorists, such as the hermeneuticist E. D. Hirsch Jr., have added the notion of significance. While significance changes, meaning does not. Here meaning is construed as a fixed, self-identical, reproducible object derived from the author's intention. Significance, which builds on meaning, adds the reader's personal associations, interests, values,

and contexts. Over time a text may come to have a different significance but not a different meaning. The reader therefore operates on two levels, one subjective and one objective, with the latter seen as higher according to Hirsch.

Meaning is often understood as having multiple levels, with the reader playing different roles as part of one complicated task. Consider approaches as different as the medieval hermeneutical division of textual meaning into four levels (literal, allegorical, moral, mystical), which emphasizes the spiritual realm, and Fredric Jameson's Marxist attention to three horizons of meaning (social stratification, class struggle, mode of production), which aims to discover the critical utopian elements of cultural texts. Such levels or horizons inevitably are set in hierarchies, a process that leads to disagreements among theorists as they argue over which should take priority.

Hermeneutics is a discipline that studies understanding and textual interpretation, including scriptural, literary, and legal discourses. Though it spans classical to contemporary times, the dominant tradition stems from modern German philosophy, notably the works of Schleiermacher, Dilthey, Heidegger, and Gadamer. The conservative philological tradition of Schleiermacher and Hirsch regards meaning as both stable and changeable, the result of objective and personal interpretations, textual reconstruction, and psychological identifications. But priority is placed firmly on objective historical reconstruction and fixed meaning, not on secondary private associations. The liberal phenomenological tradition, on the other hand, considers meaning an intimate encounter, an open-ended performance, an interested and careful interaction rooted in life experience and expectations. It has interest neither in impersonal, objective textual reconstruction nor in the quest for valid methods to ensure the one correct interpretation.

A very influential contribution of hermeneutics to contemporary theory of interpretation is Paul Ricoeur's distinction between negative suspicious and positive restorative interpretation. Associated with Marxism, psychoanalysis, and poststructuralism, the "hermeneutics of suspicion" aims to demystify illusions—for example, to uncover unconscious motivations, to reveal ideology, to deconstruct traditional binary concepts. Conversely, positive hermeneutics seeks to provide access to essential sources of life, such as utopian impulses, possibilities of happiness, communal dialogue. Near the end of *The Political Unconscious*, Jameson extends Ricoeur and declares that "a Marxist negative hermeneutic, a Marxist practice of ideological analysis proper, must in the practical work of reading and interpretation be exercised *simultaneously* with a Marxist positive hermeneutic, or a decipherment of the Utopian impulses of these same still ideological cultural texts." To the scrupulous, attentive, historically positioned general reader of hermeneutics, philological and phenomenological, Jameson adds the future-oriented political reader.

With the turn of literary studies to cultural studies in recent decades, reader-response criticism and theory morphed into broader reception and audience studies. Here the focus is on nonacademic, nonelite vernacular interpretive communities and the reading strategies they deploy. Typical groups investigated include women's reading clubs dedicated to popular literature (e.g., romance novels), fan subcultures devoted to specific television series or movies such as *Star Trek*, and 'zine communities built up around particular music bands. In this work, cultural studies researchers use ethnographic and participant-observer methods borrowed from sociology, privileging sympa-

thetic insider's views of underground, alternative, and deviant reading communities. In studying a reading club of forty-two lower-middle-class heterosexual women from the Midwest in *Reading the Romance*, Janice Radway documented a wide range of nonacademic reading practices. Consumers of romance novels, it turns out, read rapidly, often skip to the end, pay no attention to literary style, ignore critical distance and objectivity, identify strongly with characters (especially heroines), and care most about story and plot line. They share strong dislikes, which is to say they have prescriptive criteria: no violent heroes, weak heroines, pornography, unhappy or ambiguous endings. Such vernacular readers possess standards that enable them to distinguish good from bad romance. For the members of this group, meaning fuses public and private feelings connected to the compensatory utopian dimensions of romance fiction. This genre of literature is set against a world of often nonexpressive, ungentle husbands preoccupied with work and sports. Here meaning is tied up not only with fantasy, pleasure, escape, and therapy but also with relaxation, restoration, and leisure in the context of being on call 24/7. Speaking hermeneutically, meaning and significance become inseparable in this setting.

At the start of the twenty-first century a number of literary theorists launched complaints about the dominance of suspicious negative hermeneutics and symptomatic reading associated with Marxism, feminism, psychoanalysis, and cultural studies. Especially prominent were various new formalist advocates of "surface reading," who construe cultural critique as paranoid and call for reparative and positive, descriptive and appreciative "looking at" rather than "looking through" literature.

STRUCTURALISM AND SEMIOTICS

Pioneering concepts and methods of structural linguistics and anthropology strongly influenced how modern theory and criticism understand cultural phenomena. From structuralist methodology has come the discipline of semiotics or semiology, a field that studies sign systems, codes, and conventions of all kinds, ranging from human to animal languages, the language of fashion to the lexicon of food, the codes of diagnostic medicine to those of written literature. By extension, literary semiotics construes its primary object of analysis to be literature as a system, while social (or cultural) semiotics explores culture as a set of interlocking systems and subsystems.

The model for structuralist thinking is Ferdinand de Saussure's linguistics, which centers not on individual utterances but on the underlying rules and conventions that enable language to operate. Saussurean structuralism analyzes the social or collective dimensions of language, focusing on grammar rather than usage, rules rather than actual expressions, and *langue* (the system of language) rather than *parole* (actual speech). This linguistics is concerned with the infrastructure of language common to all speakers at a given time (which operates on an unconscious level), and not with surface phenomena or historical change. Thus it attends to the synchronic (that which exists now), not the diachronic (that which exists and changes over time).

In valuing deep structure over surface phenomena, structuralism resembles Marxism and psychoanalysis, both of which examine underlying causes

and transpersonal forces of complex systems, shifting attention away from individual human consciousness and choice. Structuralism thereby shares in the widespread and ongoing modern antihumanism and posthumanism that decenter the individual, portraying the self as a construct and a consequence of impersonal systems. Individuals neither originate nor control the conventions of their social existence, mental life, or mother tongue. Rather, they are created by social and cultural systems, within which they are subjects. For this reason, many contemporary theorists, especially structuralist, Marxist, and psychoanalytical critics, prefer the terms *subject* and *subjectivity* to *person* or *individual*.

To get a sense of the kinds of projects that structuralism and semiotics might undertake, consider the fashion system. As members of a society, people know which items of clothing, textures, colors, and styles go with which. In most Western societies today, sneakers don't properly fit with a tuxedo, a top hat doesn't work with jeans and a T-shirt, and a pair of red shoes, an orange skirt, and a purple blouse simply don't go together. Few people would be able to supply a complete written description of all the unconscious but well-known rules of dress, but such a list could be created—by structuralists and semioticians.

Similarly, sophisticated literary readers as well as authors possess a considerable amount of knowledge in the form of not-quite-explicit conventions and rules of reading, which structuralist poetics aims to chart. Most stories can be reduced to one of a few underlying basic plots, and most characters are variations on a few types, which structuralist narratology aims to inventory. Like language, literature is a system of conventions most noticeable in the rules of genres.

POSTSTRUCTURALISM AND DECONSTRUCTION

In the late twentieth century, poststructuralism set the terms and the agenda for many of the major developments and debates in the field of theory and criticism. It played, and continues to play, a significant role in shaping the direction of other schools and movements, particularly feminist criticism, postcolonial theory, cultural studies, film studies, and queer theory. Originally a vanguard movement of French literary intellectuals and philosophers who came into prominence during the 1960s and 1970s and who were critical of yet indebted to structuralism, it quickly spread to intellectuals around the globe. By the close of the twentieth century, poststructuralism had become the leading edge of postmodernism and was often labeled “post-modern theory.”

We have already touched on many of the main features of poststructuralism. They include the problematizing of linguistic referentiality, an emphasis on heteroglossia, the decentering of the subject, the rejection of “reason” as universal or foundational, the criticism of humanism, a stress on difference over sameness, and the theory of the social text.

Some poststructuralist accounts of literature derive from deconstructive theory, especially its three interconnected concepts of textuality (or floating signifiers), rhetoricity, and intertextuality. Because the signifier (word) is disconnected from the signified (concept) and the referent (thing), language floats or slides in relation to reality, a condition made more severe with the

additional sliding introduced by figurative language, such as metaphors and metonymies. Such rhetoricity adds layers of substitutions and supplements (more differences) to floating signifiers. Textuality and rhetoricity are conditioned by a third sliding or differential element, intertextuality—a text's dependence on prior words, concepts, connotations, codes, conventions, unconscious practices, and texts. Every text is an intertext that borrows, knowingly or not, from the immense archive of previous culture. The term *(inter)textuality*, with the parentheses, captures the sense of textuality as being conditioned by this inescapable historical intertext.

The technical term *dissemination* is commonly employed to name the deconstructive concept of textual meaning; rather than being simply ambiguous or paradoxical, as in earlier New Criticism, meaning here is sliding, abyssal, undecidable. The linguistic, rhetorical, and intertextual properties of language undermine or deconstruct stable meaning. Poststructuralist theories of language, whether they focus on floating signifiers, rhetoricity, intertextuality, dissemination, *écriture féminine*, or elsewhere, bring traditional mimetic, expressive, didactic, and formalist theories into crisis but do not invalidate their claims. This “undecidability,” a hallmark of Jacques Derrida's and Paul de Man's deconstruction, galvanizes opponents—particularly when joined to the related poststructuralist claim of the “death of the author,” which disconnects the text from any sure grounding in authorial intention or psychology.

Deconstructive conceptions of reading as both misreading and misprision, discussed earlier, do not signal an end to textual interpretation but change its grounds. The redoubled reading typical of much deconstruction often rests on claims of interest and insight, not of validity or truth. A reading or interpretation of a text does not prove but persuades: it is more or less compelling, productive, original, or useful.

Deconstruction originated in the name of a special difference (or *différance*), stemming from both structural linguistics and phenomenological philosophy. It denotes the structure of differences that defines both the sliding (differential) operation of the signifier-signified complex and, more abstractly, the existence of entities that are already differentiated and divided because they necessarily exist in space and in time. Each bluebird is singular. Leftist-oriented poststructuralism extends these concepts of ontological difference and differential meaning, adding sociopolitical differences in class, gender, sexuality, race, ethnicity, and nationality. There is no more multifaceted term in contemporary poststructuralist theory than *difference*.

Deconstruction is not just a school and branch of poststructuralism but also an analytic procedure developed by Derrida, a historian of philosophy, that quickly became a methodological instrument widely used by literary and cultural theorists and critics. “A deconstruction” involves *inversion* and *reinscription* of a traditional philosophical opposition. First, one locates in a chosen text a significant conceptual opposition (for example, nature/culture, purity/contamination, animality/humanity, or male/female) at a moment of maximum instability. To invert the binary pair, one shows how the belated second term is actually indispensable and constitutively prior to the primary term. For instance, it is from the vantage point of culture that nature is named and defined; similarly, the idea of purity depends on the prior possibility of contamination. Second, to reinscribe the terms of the

opposition, one must destabilize and transform—deconstruct—the usual understanding of the concepts, especially their temporal and hierarchical relations. Thus Derrida famously deconstructed the speech/writing opposition by showing how writing precedes speech; characteristically, he reinscribes the concept of writing (*écriture* in French) to mean any and all forms of inscription in any medium. In doing so, he undercuts the privileging of speech as face-to-face spontaneous utterance.

Certain branches and strands of poststructuralism focus on desire, the body, and subjectivity rather than on textuality, rhetoricity, and deconstruction. Two cases mentioned earlier (in the discussion of psychoanalytic criticism) are the theories of *écriture féminine* and anti-Oedipus. In this domain—where psychoanalysis, gender studies, cultural studies, and poststructuralism intersect—the problems of subject formation, gender identity, and political resistance link poststructuralism not only with cultural studies and feminist theory but also with postcolonial criticism, queer theory, and related movements and schools. To its opponents, the deconstructive strands of poststructuralism concerned with the rhetoricity and undecidability of literary texts seem narrowly focused, conservative, formalistic, and apolitical. Poststructuralism in its political form is also interested in popular culture, minority literatures, radical politics, “deviant” subjectivities, and the dynamics of hegemonic institutions. A great deal of common ground, therefore, is shared by political poststructuralism, Marxism, and postmodern social activism such as the feminist, lesbian, gay, and ethnic rights movements. The fusion of approaches, disciplines, and movements can be confusing, but it has produced some interesting and original criticism and theory, and is arguably a leading trait of postmodern culture.

FEMINISM

Feminist criticism is part of the broader feminist political movement that seeks to rectify sexist discrimination and inequalities. Its broad goals include exposing masculinist stereotypes, distortions, and omissions in male-dominated literature; studying female creativity, genres, styles, themes, careers, and literary traditions; discovering and evaluating lost and neglected literary works by women; developing feminist theoretical concepts and methods; examining the forces that shape women's lives, literature, and criticism, ranging across psychology and politics, biology and cultural history; and creating new ideas of and roles for women, including new institutional arrangements. Feminist theory and criticism have brought revolutionary change to literary and cultural studies by expanding the canon, by critiquing sexist representations and values, by stressing the importance of gender and sexuality, and by advocating institutional and social reforms.

Theorists of a “feminist aesthetic” argue that women have a literature of their own, possessing its own images, themes, characters, forms, styles, and canons. In Elaine Showalter's pioneering account of British novelists from the early nineteenth century to the 1970s, for example, women writers form a subculture sharing distinctive economic, political, and professional realities, all of which determine specific problems and artistic preoccupations

that mark women's literature. Sandra M. Gilbert and Susan Gubar propose that nineteenth-century women writers had to negotiate alienation and psychological disease in order to attain literary authority, which they achieved by reclaiming the heritage of female creativity, remembering their lost foremothers, and refusing the debilitating cultural roles of *angel* and *monster* assigned to them by patriarchal society. Countering Harold Bloom's masculinist "anxiety of influence," Gilbert and Gubar's "anxiety of authorship" depicts the precursor poet as a sister or mother whose example enables the creativity of the latecomer writer to develop collaboratively against the confining and sickening backdrop of forbidding male literary authority. Diseases common among women in male-dominated, misogynistic societies include agoraphobia, anorexia, bulimia, claustrophobia, hysteria, and madness in general, and they recur in the images, themes, and characters of women's literature.

Judith Fetterley states in *The Resisting Reader: A Feminist Approach to American Fiction* that women read differently than men. She examines classic American fiction from Irving and Hawthorne to Hemingway and Mailer and points out that this is not "universal" but masculine literature, which forces women readers to identify against themselves. Such literature neither expresses nor legitimates women's experiences, and in reading it women have to think as men, identify with male viewpoints, accept male values and interests, and tolerate sexist hostility and oppression. Under such conditions, women must become "resisting readers" rather than assenting ones, using feminist criticism and critique as a way both to challenge male domination of the institutions of literature and to change society.

As concepts such as the anxiety of authorship, *écriture féminine*, and the matriarchal potential of the Imaginary order suggest, psychoanalysis is fundamental to much feminist theory and criticism. However, feminist psychoanalysis is typically revisionist: it has had to work through and criticize the "phallogocentric" presuppositions and prejudices of Sigmund Freud, Jacques Lacan, and other pioneering psychoanalysts. The feminine anxiety of authorship—in its opposition to the masculine anxiety of influence—reconfigures the "oedipal" relationship between writers as cooperative and nurturing rather than competitive and rivalrous. Similarly, *écriture féminine* transforms Lacan's idea of the Imaginary, casting it not simply as an infantile sphere of primary drives superseded on the way to the patriarchal Symbolic order but as a liberating domain of bodily rhythms and pulsations associated with the mother that permeates literature—for example, modern experimental poetry. Moreover, the pre-Symbolic Imaginary order, a realm of bisexual/androgynous/polymorphous sexuality, opens the possibility of sexual liberation from the suffocating confines of the "compulsory heterosexuality" that dominates patriarchal culture.

Within feminist circles, there are political differences and conflicts of interest among women of color and white women, women from different classes, women of different sexualities, women belonging to different nations and regions, and women who are liberals, conservatives, radicals, and revolutionaries. Black women have asserted that white middle-class women, in academia as well as in the mass media, often end up speaking for feminism or for all women, even though they tend to represent only their own interests.

Third world women, abroad and at home (Latinas, Aborigines, Asian women), feel silenced and unrepresented in mainstream social agendas, which rarely consider their needs or issues. Lesbian women have likewise organized themselves to ensure that their voices are heard. The “politics of difference” opens into a world of differences and multiple identities among and within women themselves.

A key flash point among feminist critics has been identity politics, by which is meant a politics of difference based on some fixed or definable feature(s) of identity (as in a middle-class white woman, a working-class black woman, a third world brown woman, and so on). Critics of such identity politics have several major points of contention. To begin with, defining feminist identity by giving priority to race or class or geography tends to essentialize these features, reducing people to social indicators whose “real essence” is determined by race or class or country of origin. Moreover, an emphasis on the multiplicity of female identities undermines the solidarity and united front of feminists. Advocates of the politics of difference respond, in turn, that the act of herding all women into one homogeneous category (Woman) is a reductive totalization and very unlikely to disturb the dominant order. They argue that alliances and coalitions, in strategic cooperation with other new social movements, will best and most democratically address issues of equality and recognition. In the spheres of theory and criticism, the micropolitics of difference challenges universal notions of traditional humanism and promotes two key ideas: there are many women’s literatures across the globe, and there are many modes of resistance and of resisting reading.

QUEER THEORY

An influential field that has built on ideas from feminism, gender studies, women’s studies, and lesbian and gay studies is queer theory. While it is sometimes defined broadly to include all non-straight sexualities, a more focused view exists. It begins by criticizing the dominant heterosexual binary, masculine/feminine, which enthrones “the” two sexes and which casts other sexualities as abnormal, illicit, or criminal. It attacks the homophobic and patriarchal bases of heterosexuality. But it aims beyond lesbian and gay rights philosophies to study other so-called perverse, deviant, and alternative sexualities. For example, queer theorists investigate the historical developments of such categories as *sodomite*, *hermaphrodite*, and *homosexual*, as well as *woman* and *man*, stressing the socially constructed character and hierarchy of sexualities. Of particular interest are transgressive phenomena such as drag, camp, cross-dressing, and transsexuality, all of which highlight the nonbiological, performative aspects of gender construction. To be “masculine” or “feminine” requires practicing an array of rituals, which cross-dressers faithfully mimic and parody in the production of gender identity.

Queer theorists point out that heteronormativity is an ideology embedded in social institutions ranging from the family, church, and school to the law, media, and politics. Its functioning relies on the firmness and continuous policing of the binary opposition normal/abnormal, which enables sexual minorities to be stigmatized and criminalized as well as pathologized. Fou-

cault's work, especially *The History of Sexuality*, highlights the instability and arbitrariness of this crucial binary. In addition, French feminists deconstruct it in their explorations of the pre-oedipal sphere of the Imaginary order, a primordial realm of polysexuality. Like all identity, sexual identity is a social construct subject to regulations and norms set against instabilities and fluidities. It is, moreover, enmeshed with other social differences, including race and ethnicity, social class, and nationality.

Queer theory grapples with internal disputes over politics and activism. Such disputes take various forms—for example, street protest versus ivory tower theory, queer separatism versus assimilation (evident in debates over the “join them” strategy of gay marriage), queers of color versus white queers. At the same time, the ongoing worldwide criminalization of queer sexualities, plus the HIV/AIDS crisis during an era of resurgent religious fundamentalisms, has presented to queer people a threatening and punitive social order, subject to moral panics and waves of intolerance. Not surprisingly, much queer activism and politics rests less on fixed identities than on affinities.

Throughout the history of literature, there have been many queer writers, literary characters, and themes. One of the aims of queer theory and criticism is to recover this literature as well as to criticize omissions, distortions, and stereotypes present in mainstream criticism and literature. Another key aim is the broad critique of heteronormative ideology and culture.

POSTCOLONIAL STUDIES AND RACE AND ETHNICITY STUDIES

Postcolonial studies, an interdisciplinary field, examines the global impact of mainly European colonialism, from its beginnings in the fifteenth century to the present. Broadly speaking, it aims to describe the mechanisms of colonial power, to recover excluded or marginalized “subaltern” voices, and to theorize the complexities of colonial, neocolonial, and postcolonial identity, national belonging, and globalization. In our new century, it has branched out to investigate the long histories of other imperial empires across the globe.

One major issue concerns the nature of representation. Following the groundbreaking example of Edward Said's *Orientalism*, postcolonial critics have investigated the ways in which Western representations of third world countries serve the political interests of their makers. Postcolonial critics problematize “objective” perception, pointing out the unbalanced power relations that typically shape the production of knowledge. They have argued that the West has constructed the third world as an “Other.” Such ideological projections become the negative terms of binary oppositions in which the positive terms are normative representations of the West. Further, these damaging stereotypes continue to circulate through anthropological, historical, and literary texts, as well as mass media such as newspapers, television, and the Internet.

A related line of inquiry in postcolonial theory studies how institutions of education function in the spread of imperialism. Historical documents such as Thomas Babington Macaulay's notorious “Minute on Indian Education”

(1835) show that education—including here the study of English literature and the English language—plays a strategic part in ruling over colonized peoples. As it inculcates Western Eurocentric values, literary education supports a kind of cultural colonization, creating a class of colonial subjects often burdened by a double consciousness and by divided loyalties. It helps Western colonizers rule by consent rather than by violence. The nature of this enterprise has led some—for example, Ngugi wā Thiong’o, Henry Owuor Anyumba, and Taban lo Liyong in “On the Abolition of the English Department”—to call for the dismantling of institutions of Western education in the third world.

The realization of the extent to which the cultures of colonizers and colonized interact has prompted reflections on the hybrid nature of identity and culture. No culture, one argument goes, is ever pure. This insight is everywhere evident in our own era of globalized postindustrial or neoliberal capitalism: the nationalism that undergirds notions of pure culture is daily called into question by the international flows of commodities, money, information, technology, and people. These dynamics of globalization, hybridization, and nationalism preoccupy scholars of postcolonial studies.

Postcolonial literary criticism focuses on literatures produced by subjects in the context of colonial domination: for instance, in Africa, Asia, and the Caribbean. Built on knowledge of the institutions of colonial education and the hybrid nature of culture, the analysis of postcolonial literature explores the complex interactions and antagonisms between native, indigenous, “pre-colonial” cultures and the imperial cultures imposed on them.

The concerns of postcolonial literary studies overlap with those of race and ethnicity studies, a broad field that examines a wide array of topics (including literature) related to minority ethnic groups; in North America, for example, these would include African, Asian, Hispanic, and Native peoples, among others. Consider the case of the 43 million African Americans today, whose history has included deportation, slavery, oppression, and struggle. Some scholars argue that the black community in the United States has evolved a distinctive and separate way of life, neither Anglo-Saxon nor African. The character of African American arts is communal rather than individualistic, the psychology is repudiative rather than accommodative of racism, and the tradition is oral-musical rather than textual. African Americans, the argument goes, possess their own values, styles, customs, themes, techniques, and genres. In the past, mainstream white critics have found the black arts to be grotesque, humorous, entertaining, inferior. African American artists have responded variously—sometimes adopting white values and forms, or rejecting them outright, or blending them into a hybrid. Literary critics engaged in race and ethnicity studies analyze the nature and dynamics of minority literatures, usually focusing on one group’s literature but often in the context of dominant cultures (thereby overlapping with postcolonial studies).

Among the issues of long-standing concern among ethnic and race critics are racial purity (essence) and mixed blood; the status of racial experience and memory; internal differences of class, gender, and sexual orientation; national versus transnational identities and loyalties; the aesthetic as opposed to the sociological value of literature and the arts; and the place of theory. To what extent do differences of class, gender, sexuality, and skin color (or blood quantum), as well as ties to home, internally divide ethnic and racial com-

munities? What roles do political separatism, integrationism, and transnational solidarity play? Is racial experience a personal social construction, an inherited and shared legacy, a paranoid projection? Is it reliable as a basis for solidarity and unity? What is the epistemological status of testimony, autobiography, and biography? A great deal of personal criticism has been written by ethnic intellectuals. Why? Is theory sometimes a tool of white Europeans employed to distract ethnic intellectuals? Do academic ethnic intellectuals have a special obligation to go public and address society rather than remaining in their labs and libraries engaged in professional discourse and advancement? Or must they work on both fronts?

What is perhaps most worth remarking in this context is the pioneering methodological richness of race and ethnicity studies: it draws from historicism, Marxism, psychoanalysis, formalism, structuralism and poststructuralism, feminism, queer theory, postcolonial criticism, and cultural studies. As in so much other contemporary criticism and theory, we encounter in race and ethnic studies innumerable crossovers, the mixing and matching of different strands and traditions of theory.

NEW HISTORICISMS

Those who write contemporary criticism and theory often turn toward history. Among the schools and movements that regularly historicize their topics of inquiry are Marxism, feminism, postcolonial criticism, ethnic and race studies, and queer theory. Reception aesthetics and hermeneutics also construe their objects of study historically. With the contemporary addition to the canon of long-lost literary works by women, people of color, and queers, archival research continues to play a productive role in criticism and theory. A great deal of the social history of minorities is nowadays written from the margins: it is usefully labeled "history from below." Not surprisingly, minorities feel compelled to (re)discover and (re-)create usable pasts. Such work often produces counterhistories set against weighty mainstream traditions and accounts. This is history with a critical edge. Capitalism has a history, dating back to the early Renaissance. So too do colonialisms. New chapters in these histories come forth regularly from contemporary critics and theorists. Jameson's influential story about postmodern third-stage late capitalism and Said's narrative of modern Western Orientalism are two prominent examples of contemporary historicism.

Some contemporary historical critics and theorists exhibit admiration for philology, the study of culture through linguistic analysis. Developed by Vico, Schleiermacher, and others during the Enlightenment, it has been extended in more recent times by Erich Auerbach and Hans Robert Jauss as well as Said and Jameson. Unlike history from below, philologically oriented history aspires to objectivity and uses the broadest possible canvas. Its scope is global rather than regional, and it stands in contrast to more narrowly gauged institutional history, such as we find in Richard Ohmann's account of the postwar New York publishing business and in Terry Eagleton's investigation of the late nineteenth-century British discipline of English studies. On a different note, psychohistory typically creates a sequence of case studies (psychological profiles) strung together to illustrate a historical

thesis. Consider, for instance, the psychohistories of nineteenth- and twentieth-century Anglo-American male poets and women writers produced, respectively, by Bloom and by Gilbert and Gubar. One argues for an epochal anxiety of influence and the other for a countervailing anxiety of authorship. Both are broad historical claims.

Many contemporary literary scholars have fused the concerns of history from below, of Marxist history, of institutional history, and of psychohistory, examining the evolution of racial and gender codes, class conflict, and hegemonic institutions. They turn to such texts as Shakespeare's plays, Dickens's novels, and Whitman's poetry. Noteworthy in this regard is the American critical movement known as New Historicism, a term coined in the 1980s by Stephen Greenblatt.

New Historicists study literary texts not as autonomous objects but as material artifacts made in interaction with specific social, cultural, and political forces. This view of literature breaks down the traditional distinction between literary and nonliterary texts and forms. Inspired by Michel Foucault, New Historicists, who are specialists in traditional literary periods, provide thick descriptions of contending social forces not only surrounding but circulating through cultural discourses, notably literary works. They use literary texts as lenses to focus on social questions of authority, agency, and institutional power. Their major preoccupation is the dynamics of social containment and subversion. A favorite formula is "author and theme"—for instance, Shakespeare and exorcism—as they self-consciously use surprise and provocation in establishing new points of view and in designing innovative critical projects.

CULTURAL STUDIES

Theories concerned with literature and its interpretation inevitably touch on ideas about culture. If we define *culture* as the aggregate of language, knowledge, belief, morality, law, custom, and art collectively acquired by human beings, then it is easy to see how the contents and forms of culture supply the materials and procedures of literature and criticism. As a way of life and sphere of struggle, culture encompasses elements not only of elite but also of popular and mass arts and practices. Yet the contemporary recognition of "low-" and "middle-brow" culture is something new in the long history of Western modern cultural criticism, which for several centuries has focused mainly on exceptional and elite forms. Beginning in the 1960s, cultural critics started to pay serious attention to mass, popular, and everyday materials, usually in the context of their ideologies (dominant ideas and values). Those in the discipline called cultural studies, in particular, study such discourses as television, cinema, advertising, rap music, magazines, minority literatures, and popular literature (thrillers, science fiction, romances, westerns, Gothic fiction), focusing on how such materials are produced, distributed, and consumed.

While researchers in cultural studies employ various methods, including surveys, field-based studies, textual interpretations, historical background studies, and participant observations, institutional analysis and ideology critique have been especially important. Critics interested in present-day

popular romances, for instance, have examined the practices of institutions such as publishing companies in shaping and maintaining the rules of the romance genre as well as in packaging and promoting successful reproductions of the form. Since institutions overlap and connect with satellite institutions, an investigation into one often leads to another. In the case of romance, a critic who began by scrutinizing the genre's presence in television soap operas and women's magazines would soon find links to publishers, literary agents, booksellers, television programmers, magazine editors, and authors. Because circuits of institutions perform such important roles in creating, conditioning, and commodifying cultural discourses, their analysis is central to the enterprise of cultural studies.

Ideology critique critically examines the ideas, feelings, beliefs, values, and representations embedded in, and promoted by, the artifacts and practices of a culture or a group. It overlaps with institutional analysis. In *English in America*, Richard Ohmann describes how the institution of English studies itself disseminates not only the practical skills of analysis, organization, and literacy but also the values of detachment, caution, and cooperation, all of which aid the smooth operation of contemporary capitalist societies. Associated with the professional managerial classes, such attitudes and manners (ideology) are invisible yet ever present in English classrooms, as well as in places of employment.

Some conservative literary critics have opposed cultural studies, criticizing the twin displacements of the canon (the body of works traditionally accepted as "great") by popular culture and of formalist poetic explication by sociological analyses, especially ideology critique. Because cultural studies deals with issues of conflict, domination, class struggle, minorities, state power, and ideology, they fault it for politicizing the field. Often this debate, part of contemporary culture wars, sets multiculturalism and analysis attentive to race, class, and gender against literary appreciation and close reading. Some accuse cultural studies of displaying "political correctness" rather than critical independence.

Cultural studies advocates argue that what counts as literature changes from one time, place, and group to another. Before the eighteenth century in western Europe, the word *literature* designated all books and writing. Only during the late Enlightenment and Romantic eras did literature come to be more narrowly defined as belles lettres. Perhaps postmodern debates over the concept of literature may be seen as staging a return to the older definition; in any case, they explicitly contest the aestheticizing or refining of literature typical of the modern age.

Cultural studies offers distinctive answers to the two key questions with which we began—what is interpretation? what is literature? First, literature consists of popular, mass, and minority genres as well as elite canonical works. It includes a wide array of discourses, from writings in standard literary genres to rap lyrics, blues poems, oral legends, diaries, magazines, movies, posters, romances, soap operas, video games (narratives), and so on. With a different population or in another time or place, literary discourse would be differently defined. There is one constant in this culturally relative definition: literature is symptomatic of the state of its society. Second, interpretation employs institutional analysis, ideology critique, and field-based research, as well as textual explication, exegesis, aesthetic appreciation, and personal response.

For cultural studies, personhood (or subjectivity) involves three things: the operations of our unconscious, the effects of surrounding sociohistorical forces, and the multiple subject positions that each individual occupies. This complex view of subjectivity applies to the author, not just the critic: authored texts by definition contain unconscious and socially symptomatic materials unique to specific times, places, and persons. It is thus no surprise that cultural studies and formalist literary criticisms are sometimes seen as diametrically opposed, antagonistic critical projects—one expansive and wide-ranging, the other contracted and tightly focused; one engaged with psychology, sociology, and politics, the other wedded to aesthetics and poetics and viewing extrinsic concerns as misplaced.

THEORY FRACTALIZED

In the early twenty-first century, theory has increasingly fractalized into niches and now comprises many separate subfields (see Theory Map on pages 34–35). Arguably, among the most noteworthy subfields are body studies, disability studies, ecocritical studies, globalization studies, indigenous studies, media studies, narrative studies, popular culture studies, science and technology studies, transatlantic and transpacific studies, trauma studies, and whiteness studies. Most of these areas are semiautonomous, having their own recognized leading figures, histories and major texts, publication outlets, and repertoires of issues and concepts. Significantly, the studies model is replacing the long-standing schools and movements model in accounts of the structure and history of the domain of contemporary criticism and theory. However, contemporary schools and movements remain important today as sources and resources for practical criticism and for learning theory.

When cultural studies started in the 1990s to replace poststructuralism and deconstruction as the newest thing in Anglophone spheres, some critics began to talk excitedly of a new posttheory moment. The term *posttheory* refers to two concurrent phenomena: the receding of poststructuralism into the background, along with the rise and dissemination of a multifaceted cultural studies across all fields and periods of literary theory and criticism. While posttheory designates a time “after theory,” where *theory* is synonymous with poststructuralism, it does not mean the death of theory or a movement beyond theory if the word retains its usual meanings: presuppositions and principles; modern and contemporary schools, movements, and subfields; critical practices and methods (professional know-how). Theory in these ordinary senses lives on, and it has come to designate via shorthand the field of criticism and theory. In *After Theory*, Terry Eagleton resolutely declares on the opening page: “Those to whom the title of this book suggests that ‘theory’ is now over, and that we can all relievedly return to an age of pre-theoretical innocence, are in for a disappointment. There can be no going back. . . .” Jonathan Culler puts it more tersely near the close of *The Literary in Theory*: “We are inexorably in theory, whether we champion or deplore it.”

There are very good reasons that contemporary theory continues to frame the study of literature and culture in academic institutions. Theory raises and answers questions about a broad array of fundamental issues, some old

and some new, pertaining to reading and interpretive strategies, literature and culture, tradition and nationalism, genre and gender, meaning and paraphrase, originality and intertextuality, authorial intention and the unconscious, literary education and social hegemony, standard language and heteroglossia, poetics and rhetoric, representation and truth, and so on. In addition, theory opens literary and cultural studies to neighboring disciplines and numerous national traditions. It reinvigorates the field not only by reexamining the canonical list of great works and the tool kit of basic concepts and methods but also by recasting the received interpretations of old texts and frameworks and by revealing interesting new zones of meaning and possibilities for future critical inquiry.

Theorists are fond of pointing out that everyone theorizes, about the world as well as about literature and interpretation, and that theories must be examined, debated, and tested. Plato suggested long ago that the unexamined life is not worth living, providing a worthy maxim for philosophers—and for students of theory and criticism.

GORGAS OF LEONTINI

ca. 483–376 B.C.E.

With its observations on the power of speech (*logos*), Gorgias's "Encomium of Helen" develops a classical rhetoric antithetical to Platonic poetics, one that anticipates JACQUES DERRIDA's twentieth-century critique of PLATO. Where Plato commends moral content, Gorgias praises elegant form; where Plato is didactic, Gorgias aims to persuade through performance; where Plato—and those who followed him, like AUGUSTINE—condemns rhetoric as dangerously false, Gorgias embraces it. Speech, Gorgias wrote in another fragment, "summons whoever wishes [to compete], but crowns the one who is able." The highly wrought style for which he is justly famous, with its frequent use of paradox, antithesis, balancing clauses, and rhyme, has its closest modern parallel in OSCAR WILDE's celebrated epigrammatic style. Like Wilde, Gorgias raises significant issues about the radical contingency of all truth claims, issues that have been central to contemporary theoretical debates.

Gorgias came from a Greek colony in Sicily and, by all accounts, lived to be more than one hundred years old. Nothing is known of his life until he came to Athens in 427 B.C.E. as part of an embassy from his native Leontini. There his dazzling oratorical style, whose force is difficult to capture in translation, made him something of a sensation; he quickly became one of the most influential of the sophists, a group of itinerant teachers who went from city to city earning their living by instructing others in subtle argumentation. Although later writers would credit them with philosophical doctrines, in particular a skepticism about the claims of reason to arrive at truth, the sophists were members of a profession and not a school of thought. That we today use the term *sophistry* to refer to plausible but fallacious arguments reflects the influence of the sophists' critics, most notably Plato.

Gorgias confined himself almost exclusively to the teaching of oratory—rhetoric—which was the main road to success in Greek city-states. In the *Meno*, Plato writes that he admired Gorgias because he did not claim to be a teacher of *aretē*, or virtue; "in fact, he laughs at others he hears making such promises. He thinks one should make men skillful at speaking." Only fragments of Gorgias's rhetorical works survive, primarily in the form of commonplaces, or rhetorical exercises that were used to instruct others. The "Encomium of Helen" is an example of this genre, as is the longer fragment in defense of Palamides, a minor Greek hero at Troy. Gorgias concludes his defense of Helen, "I wished to write this speech for Helen's encomium and my amusement," suggesting that like the other fragments of his speeches that survive, it was an epideictic composition—a display piece intended to demonstrate the principles of rhetoric to his pupils, presumably accompanied by a verbal commentary that has not survived.

The extant "Encomium of Helen" illustrates Gorgias's flamboyant style, which Plato later parodied in Agathon's speech in the *Symposium*. The defense of Helen of

Troy, a character long vilified by poets, proves a fitting challenge for even the most accomplished rhetorician. But it also serves as a pretext for a discussion of the power of speech, which Gorgias equates with the force of compulsion—an argument developed in modern times by many critics, most notably FRIEDRICH NIETZSCHE and PAUL DE MAN. Gorgias likens the power of speech to persuade to the power of magical charms or drugs to alter the mind or body. He has none of Plato's firm belief that right reasoning will ultimately lead to truth. Speech is as likely to lead to "evil persuasion" as to correct action. The elaborate antitheses and paradoxes of Gorgias's style may express the belief that since truth exists but is contingent, a clear expression of contrasts and alternatives is needed if one is to sift through the competing claims of persuasive speech. In the history of theory and criticism, rhetoric continually raises such problems as the truth status of language, the power and pleasure of persuasive discourse, and the reliability of figures and tropes.

Encomium of Helen Keywords: Classical Theory, Language, Rhetoric

*From Encomium of Helen*¹

[1] For a city the finest adornment (*kosmos*) is a good citizenry, for a body beauty, for a soul wisdom, for an action *aretē*,² and for a speech truth; and the opposites of these are indecorous. A man, woman, speech, deed, city or action that is worthy of praise should be honored with acclaim, but the unworthy should be branded with blame. For it is equally error and ignorance to blame the praiseworthy and praise the blameworthy. [2] The man who speaks correctly what ought to be said has a duty to refute those who find fault with Helen. Among those who listen to the poets a single-voiced, single-minded conviction has arisen about this woman, the notoriety of whose name is now a reminder of disasters. My only wish is to bring reason to the debate, eliminate the cause of her bad reputation, demonstrate that her detractors are lying, reveal the truth, and put an end to ignorance.

[3] That the woman I speak of is by nature and birth the foremost of the foremost, men or women, is well known by all.³ Clearly her mother was Leda and her father in fact a god, but in story a mortal: Zeus and Tyndareus. One was thought to be her father because he was, the other was reported to be because he said he was; one was mightiest of men, the other tyrant of all. [4] Born from such as these, she equaled the gods in beauty, not concealed but revealed. Many were the erotic passions she aroused in many men, and her one body brought many bodies full of great ambition for great deeds; some had abundant wealth, some the glory of an old noble lineage, some the vigor of personal valor, and some the power of acquired wisdom. All came for love that desires to conquer and from unconquerable

1. Translated by Michael Gagarin and Paul Woodruff, who occasionally include the Greek in parentheses.

2. Excellence or virtue (Greek).

3. According to the Greek myth, Helen was the daughter of Zeus, who took the form of a swan before raping her mother, Leda. Before he would give her in marriage, Helen's human father, Tyndareus, made all the Greek princes swear an

oath that if any wrong were done to her husband they would come to his aid. Thus the Trojan prince Paris's abduction of Helen from her husband, Menelaus, precipitated the Trojan War. Paris had been asked to judge the beauty of three goddesses; he declared the fairest to be Aphrodite, goddess of love, who had promised him the love of the world's most beautiful woman (i.e., Helen) if he chose her.

desire for honor. [5] Who it was or why or how he took Helen and fulfilled his love, I shall not say. For to tell those who know something they know carries conviction, but does not bring pleasure. Now that my speech has passed over the past, it is to the beginning of my future speech that I proceed and propose the likely reasons for Helen's journey to Troy.

[6] Either she did what she did because of the will of fortune and the plan of the gods and the decree of necessity, or she was seized by force, or persuaded by words, <or captured by love>. If she left for the first reason, then any who blame her deserve blame themselves, for a human's anticipation cannot restrain a god's inclination. For by nature the stronger is not restrained by the weaker but the weaker is ruled and led by the stronger: the stronger leads, the weaker follows. Now, a god is stronger than a human in strength, in wisdom, and in other respects; and so if blame must be attached to fortune and god, then Helen must be detached from her ill repute.

[7] If she was forcibly abducted and unlawfully violated and unjustly assaulted, it is clear that her abductor, her assaulter, engaged in crime; but she who was abducted and assaulted encountered misfortune. Thus, the undertaking undertaken by the barbarian was barbarous in word and law and deed and deserves blame in word, loss of rights in law, and punishment in deed. But she who was violated, from her country separated, from her friends isolated, surely (*eikotōs*) deserves compassion rather than slander. For he did and she suffered terrible things. It is right to pity her but hate him.

[8] If speech (*logos*) persuaded and deluded her mind, even against this it is not hard to defend her or free her from blame, as follows: speech is a powerful master and achieves the most divine feats with the smallest and least evident body.⁴ It can stop fear, relieve pain, create joy, and increase pity. How this is so, I shall show; [9] and I must demonstrate this to my audience to change their opinion.

Poetry (*poiēsis*) as a whole I deem and name "speech (*logos*) with meter." To its listeners poetry brings a fearful shuddering, a tearful pity, and a grieving desire, while through its words the soul feels its own feelings for good and bad fortune in the affairs and lives of others. Now, let me move from one argument to another. [10] Sacred incantations with words inject pleasure and reject pain, for in associating with the opinion of the mind, the power of an incantation enchants, persuades, and alters it through bewitchment. The twin arts of witchcraft and magic have been discovered, and these are illusions of mind and delusions of judgment. [11] How many men on how many subjects have persuaded and do persuade how many others by shaping a false speech! For if all men on all subjects had memory of the past, <understanding> of the present, and foresight into the future, speech would not be the same in the same way;⁵ but as it is, to remember the past, to examine the present, or to prophesy the future is not easy; and so most men on most subjects make opinion an adviser to their minds. But opinion is perilous and uncertain, and brings those who use it to perilous and uncertain good fortune. [12] What reason is there, then, why Helen did not

4. Gorgias seems to be describing speech as if it were a physical body, so small it cannot be seen, moving from person to person.

5. Text uncertain, but the sense clearly is "the same as it is now" [translators' note].

go just as unwillingly under the influence of speech as if she were seized by the violence of violators? For persuasion expelled her thought—persuasion, which has the same power, but not the same form as compulsion (*anankē*). A speech persuaded a soul that was persuaded, and forced it to be persuaded by what was said and to consent to what was done. The persuader, then, is the wrongdoer, because he compelled her, while she who was persuaded is wrongly blamed, because she was compelled by the speech. [13] To see that persuasion, when added to speech, indeed molds the mind as it wishes, one must first study the arguments of astronomers, who replace opinion with opinion: displacing one but implanting another, they make incredible, invisible matters apparent to the eyes of opinion. Second, compulsory debates with words,⁶ where a single speech to a large crowd pleases and persuades because written with skill (*technē*), not spoken with truth. Third, contests of philosophical arguments, where it is shown that speed of thought also makes it easy to change a conviction based on opinion. [14] The power of speech has the same effect on the disposition of the soul as the disposition of drugs on the nature of bodies. Just as different drugs draw forth different humors from the body—some putting a stop to disease, others to life—so too with words: some cause pain, others joy, some strike fear, some stir the audience to boldness, some benumb and bewitch the soul with evil persuasion.

[15] The case has been made: if she was persuaded by speech, her fortune was evil, not her action. The fourth reason, I discuss in my fourth argument. If it was love that did all these things, she will easily escape blame for the error that is said to have occurred.

* * *

[19] So if Helen's eye, pleased by Alexander's⁷ body, transmitted to her soul an eagerness and striving for love, why is that surprising? If love is a god, with the divine power of gods, how could a weaker person refuse and reject him? But if love is a human sickness and a mental weakness, it must not be blamed as mistake, but claimed as misfortune. For it came, as it came, snared by the mind, not prepared by thought, under the compulsion of love, not the provision of art (*technē*).

[20] How then can the blame of Helen be considered just? Whether she did what she did, invaded by love, persuaded by speech, impelled by force or compelled by divine necessity, she escapes all blame entirely.

[21] With my speech I have removed this woman's ill repute; I have abided by the rule laid down at the beginning of my speech; I have tried to dispel the injustice of blame and the ignorance of opinion; I wished to write this speech for Helen's encomium and my amusement.

ca. 400 B.C.E.

6. This expression probably designates speeches in law courts [translators' note].

7. Paris's.

PLATO

ca. 427–ca. 347 B.C.E.

A monumental figure in the history of Western philosophy, Plato looms nearly as large in the history of European literary theory. Indeed, for many literary scholars he marks the beginning of the tradition of literary theory, although his choice of the dialogue format, in which historical personages convey particular arguments, suggests that the issues he raises had already been debated before he took them up—as do the extant fragments of the writings of the pre-Socratic philosophers. The several dozen dialogues attributed to Plato engage almost every issue that interests philosophers: the nature of being; the question of how we come to know things; the proper ordering of human society; and the nature of justice, truth, the good, love, and beauty. Although Plato did not set out to write systematic literary theory—unlike his student ARISTOTLE, who produced a treatise on poetics—his consideration of philosophical issues in several of the dialogues leads him to reflect on poetry, and those reflections have often set the terms of literary debate in the West.

What binds together Plato's various discussions of poetry is a distrust of *mimēsis* (representation or imitation). According to Plato, all art—including poetry—is a mimesis of nature, a copy of objects in the physical world. But those objects in the material world, according to the idealist philosophy that Plato propounds, are themselves only mutable copies of timeless universals, called Forms or Ideas. Poetry is merely a copy of a copy, leading away from the truth rather than toward it. Philosophers and literary critics ever since, from Plotinus in the third century C.E. to JACQUES DERRIDA in the late twentieth century, have wrestled with the terms of Plato's critique of poetry, revising it or attempting to point out inconsistencies in his argument.

Plato was born about four years after the beginning of the twenty-five-year-long Peloponnesian War between Athens and Sparta and just after the death of the great Athenian statesman Pericles, who had overseen the city's artistic golden age. His parents both came from distinguished Athenian families, and his stepfather, an associate of Pericles, was an active participant in the political and cultural life of fifth-century Athens. Plato had two older brothers, Glaucon and Adeimantus, who appear as characters in his longest dialogue, *Republic* (ca. 375 B.C.E.). As a young man, growing up in a city at war and in constant political turmoil, he seems to have been destined for a political career. But after the Peloponnesian War ended in 405 with the defeat and humiliation of Athens, the excesses of Athenian political life under the oligarchical rule (404–403) of the so-called Thirty Tyrants and under the restored democracy left Plato disillusioned with political life. The execution in 399 of Socrates, on charges of impiety and corrupting the young, was a turning point in his life. The older philosopher was a close friend of Plato's family, and Plato's writings attest to Socrates' great influence on him. Indeed, the position of Socrates in European philosophy is unique. Though he apparently never wrote a word, his influence on subsequent thought through his followers, Plato in particular, is incalculable.

After Socrates' death Plato retired from Athenian political life and traveled for a number of years. In 388 he journeyed to Italy and Sicily, where he became the friend of Dionysius I, the ruler of Syracuse, and his brother-in-law Dion. The following year Plato returned to Athens, where he founded the Academy, an institution devoted to research and instruction in philosophy and the sciences; he taught there for the rest of his life. Plato envisioned the Academy as a school for statesmen where he could train a new kind of philosopher-ruler (or "guardian") according to the principles set forth in his *Republic*. Unlike the older sophist GORGIAS or Plato's contemporary rival Isocrates, who both taught the arts of rhetoric and persuasion, Plato focused

primarily in the Academy on mathematics, logic, and philosophy. However, when Dionysius died in 367, Dion invited Plato to return to Syracuse to undertake the philosophical education of the new ruler, Dionysius II. Plato went, perhaps with the hope of putting the theory of *Republic* into practice; but philosophy proved no match for local politics and Dionysius's suspicions. Indeed, a return visit resulted in Plato's brief imprisonment; by 360 he was back at the Academy for good.

Plato is recognized as a master of the dialogue form and as one of the great prose stylists of the Greek language. His published writings, apparently all of which are preserved, consist of some twenty-six dramatic dialogues on philosophical and related themes. The central problematic posed by this form is that it becomes virtually impossible to attribute any statement directly to Plato: he never speaks in his own person. The only exceptions are a series of thirteen letters (whose authenticity is still a matter of scholarly debate) written in the last decades of Plato's life, most addressing the political situation in Syracuse. Only the seventh—and longest—letter takes up philosophical issues. For the most part, Plato places his arguments in the mouths of characters who may or may not be based on historical persons. The speakers can never be assumed to be voicing Plato's own views or the views of those whose names they bear. In almost all the dialogues, Socrates is the focal character and Plato's mouthpiece, but Plato's Socrates is not the historical Socrates. These complications, which thwart efforts to fix Plato's thought within a series of propositional statements, have attracted much attention, especially from contemporary Continental philosophers like Derrida.

The chronology of Plato's dialogues is highly controversial, but most scholars divide the works roughly into three periods. The earliest works, begun after 399, include the *Apology of Socrates* and *Crito*, in which Plato defends Socrates against the charges that led to his death; *Gorgias*, in which Socrates' opponent is the sophist Gorgias; and *Ion*, which examines poetry as a kind of divine madness. Characteristic of these early Platonic dialogues is Socrates' disarming claim of ignorance and a formal technique of cross-examination called *elenchus*, a method of questioning designed to lead a learner through stages of reasoning and to expose the contradictions in an opponent's original statement. The middle period, from 380 to 367, includes the *Symposium*, *Cratylus*, and *Republic*, all begun after the founding of the Academy; they develop the theory of Forms or Ideas anticipated in the early dialogues. The Forms constitute a realm of unchanging being to which the world of individual mutable objects is subordinate. Because the Forms are immutable, they are more real—and more true—than the changeable material world. The Form of the Good enjoys a unique status, for it is responsible for the being and intelligibility of the world as a whole. Plato's famous "Allegory of the Cave" in book 7 of *Republic* (one of our selections) provides a memorable introduction to the Platonic theory of Forms, which is reiterated in book 10's equally well known critique of artistic imitation. *Cratylus* is of interest to theorists of language because the dispute in this dialogue concerns the "correctness" of names: do they point unproblematically to the "nature of things"—that is, to the Forms—as Hermogenes contends, or are they merely a matter of convention, as Cratylus argues? Socrates concludes that the matter is unresolvable, but that "no one with any understanding will commit himself or the education of his soul to names, or trust them or their givers to the point of firmly stating that he knows something." To the late period (366–360) belong *Timaeus*, which throughout the Middle Ages was Plato's most widely known work; *Critias*; and *Sophist*. *Phaedrus*, our final selection, with its notorious attack on writing, is usually classified as transitional, falling between the middle and late periods, with themes characteristic of both.

In *Ion*, our opening selection, Plato's Socrates engages Ion in a debate about the nature of the rhapsode's knowledge of poetry, about the nature of poetry, and about the status of knowledge itself. Poetry, Socrates maintains, is not an art but instead a

form of divine madness: “the poet is an airy thing, winged and holy, and he is not able to make poetry until he becomes inspired and goes out of his mind.” This debate between the claims of inspiration and those of art would subsequently have a long history in European literary criticism. Is poetry primarily a craft with a set of rules that can be taught and learned, as HORACE, the medieval rhetorician Geoffrey of Vinsauf (ca. 1200), and ALEXANDER POPE argue, or is it primarily the result of inspiration or genius, as LONGINUS, the Neoplatonist Plotinus (205–270), FRIEDRICH VON SCHILLER, WILLIAM WORDSWORTH, RALPH WALDO EMERSON, and others, following Plato, have maintained?

Plato’s Socrates goes a step further. Not only is poetry a form of divinely inspired madness, but so is criticism. “You are powerless to speak about Homer,” he tells Ion, “on the basis of knowledge or mastery.” Socrates uses the image of a magnet as a metaphor for divine inspiration: as a magnet attracts iron and passes that attraction along, so the gods inspire the artist, who inspires the interpreter, who, in turn, inspires the audience. For Plato’s Socrates, the work of poet and critic is not divided between inspiration and rational analysis, as it is for most modern critics (see, for instance, MATTHEW ARNOLD and the New Critic CLEANTH BROOKS); rather, it lies on a continuum. The work of the critic is no more rational than that of the poet, the critic’s knowledge no more truthful.

However, it is helpful when reading Plato to remember that his dialogues do not always present a straightforward argument or arrive at a single unambiguous conclusion. The process of elenchus and Socrates’ persistent irony often make it difficult to pin him down to any one position. In *Ion*, is Socrates making fun of the pomposity of the rhapsode, or does he seriously believe that whatever truth emerges from poetry and the interpretation of poetry results only from divine madness? This method of “emptying out” the question by Socrates to reveal his opponents’ ignorance is evident in our second selection, which brings together those places in *Republic* in which Plato discusses the “ancient quarrel between philosophy and poetry” (books 2, 3, and 10).

As Socrates and his interlocutors, Adeimantus in book 2 and Glaucon in books 3 and 10, consider the role that literature or “stories” should play in the education of the future rulers or “guardians” of his ideal republic, Plato’s Socrates argues that because poets lie they ought to be banished from the republic—or, at the very least, heavily censored. Plato’s polemic against literature hinges on the nature of its mimesis or imitation of the world. At the simplest level of imitation, Plato raises questions about literature’s content. If it is to be part of the education of young malleable minds, literature must encourage only virtue. It must represent a world in which virtue is rewarded and even the punishment of evil serves virtuous ends. Not surprisingly, whether epic, lyric, or tragedy, the literature Socrates cites falls short of this standard. Literature, however, fails at the level not only of content but also of form. Because its stories are fictional, made up, literature is dangerous; it produces only lies. Furthermore, because mimesis presents us with an inferior copy of a copy, poetry—performed rather than read in Plato’s time—takes its listeners away from rather than toward the ideal Forms.

Both the Allegory of the Cave (book 7) and *Republic* 10’s infamous critique of mimesis explore the nature of knowledge and its proper objects, the Forms. The world we perceive through the senses, the world that poetry imitates, Socrates argues, is illusory and deceptive. It depends on a prior realm of separately existing Forms, organized beneath the Form of Good. The realm of Forms is accessible not through the senses, as is the world of appearances, but only through rigorous philosophic discussion and thought, based on mathematical reasoning. For Plato’s Socrates, measuring, counting, and weighing all bring us closer to the realm of Forms than do poetry’s pale representations of nature. All art and poetry, because they represent what is already an inferior representation of the true original (the Forms), can only lead further away from the truth, and further into a world of illusion and deception. Virtually every

subsequent defense of poetry (memorable examples include those by Aristotle, SIR PHILIP SIDNEY, APHRA BEHN, and PERCY BYSSHE SHELLEY) has had to come to terms with Plato's devastating attack on poetry as inferior and deceptive mimesis.

Plato's *Phaedrus* (from which our final selection is taken) has been of interest to contemporary literary theory for its discussion of the evils of writing. There Plato has Socrates relate the story of the invention of writing by the Egyptian god Theuth (Thoth), who offers it to King Thamus. Thamus declines the offer, deciding that humans are better off without writing because it substitutes an alien inscription—lifeless signs—for the authentic living presence of spoken language. Far from aiding memory, writing will cause it to atrophy. For Plato, the only good memory is *anamnēsis*, the recollection of spiritual truths through genuine, living wisdom: that is, through philosophy. Plato reiterates this point in his Seventh Letter, where he says: “anyone who is seriously studying high matters will be the last to write about them and thus expose his thought to the envy and criticism of men . . . [W]henever we see a book, whether the laws of a legislator or a composition on any other subject, we can be sure that if the author is really serious, the book does not contain his best thoughts; they are stored away with the fairest of his possessions. And if he has committed these serious thoughts to writing, it is because men, not the gods, ‘have taken his wits away.’” Yet Plato's use of a myth in *Phaedrus* to frame his philosophical objections to writing raises questions of its own, since presumably myths suffer from the same defects as the texts of the sophists, rhetoricians, poets, and other purveyors of false wisdom whom Plato criticizes elsewhere. Derrida offers a celebrated unraveling of the logic of Plato's argument against writing in his *Dissemination* (see below), which may be the most significant encounter between a twentieth-century philosopher and Plato.

Plato is the progenitor of Western didactic criticism and theory: the idea that literature should serve moral and social functions. *Republic*, where he describes an ideal well-regulated community in which the educational curriculum promotes respect for law, reason, authority, self-discipline, and piety, has been especially influential. Although Plato's Socrates loves and regularly cites Homer's *Iliad* and *Odyssey*, he calls for the censorship of many passages in these works that represent sacrilegious, sentimental, unlawful, and irrational behavior. Above all else, he requires that literature teach goodness and grace. Plato's relentless application of this standard to all literature marks one of the most noteworthy beginnings of the ancient quarrel between philosophy and poetry.

***Ion* Keywords:** Affect, Classical Theory, Epic, Ethics, Poetry, Representation, Rhetoric

***The Republic* Keywords:** Aesthetics, Affect, Classical Theory, Drama, Epic, Ethics, Poetry, Religion, Representation

***Phaedrus* Keywords:** Classical Theory, Language, Rhetoric

Ion¹

[530] SOCRATES:² Ion! Hello. Where have you come from to visit us this time? From your home in Ephesus?

ION: No, no, Socrates. From Epidaurus, from the festival of Asclepius.³

1. Translated by Paul Woodruff, who sometimes adds clarifying words or phrases in square brackets. Also in square brackets in the text are the Stephanus numbers used almost universally in citing Plato's works: they refer to the pages of a 1578 edition published by Henri Estienne.

2. Greek philosopher (469–399 B.C.E.) and Plato's spokesperson.

3. Greco-Roman hero and god of healing; he had a famous 4th-century B.C.E. temple in Epidaurus, a small Greek state on a peninsula of the Saronic Gulf.

SOCRATES: Don't tell me the Epidaurians hold a contest for *rhapsodes*⁴ in honor of the god?

ION: They certainly do! They do it for every sort of poetry and music.

SOCRATES: Really! Did you enter the contest? And how did it go for you?

ION: First prize, Socrates! We carried it off.

SOCRATES: That's good to hear. Well, let's see that we win the big games at Athens, next.

ION: We'll do it, Socrates, god willing.

SOCRATES: You know, Ion, many times I've envied you rhapsodes your profession. Physically, it is always fitting for you in your profession to be dressed up to look as beautiful as you can; and at the same time it is necessary for you to be at work with poets—many fine ones, and with Homer⁵ above all, who's the best poet and the most divine—and you have to learn his thought, not just his verses! Now that is something to envy! I mean, no one would ever get to be a good rhapsode if he didn't understand what is meant by the poet. A rhapsode must come to present the poet's thought to his audience; and he can't do that beautifully unless he knows what the poet means. So this all deserves to be envied.

ION: That's true, Socrates. And that's the part of my profession that took the most work. I think I speak more beautifully than anyone else about Homer; neither Metrodorus of Lampsacus nor Stesimbrotus of Thasos nor Glaucon⁶ nor anyone else past or present could offer as many beautiful thoughts about Homer as I can.

SOCRATES: That's good to hear, Ion. Surely you won't begrudge me a demonstration?

ION: Really, Socrates, it's worth hearing how well I've got Homer dressed up. I think I'm worthy to be crowned by the Sons of Homer⁷ with a golden crown.

SOCRATES: Really, I shall make time to hear that later. Now I'd just like an answer to this: [531] Are you so wonderfully clever about Homer alone—or also about Hesiod and Archilochus?⁸

ION: No, no. Only about Homer. That's good enough; I think.

SOCRATES: Is there any subject on which Homer and Hesiod both say the same things?

ION: Yes, I think so. A good many.

SOCRATES: Then, on those subjects, would you explain Homer's verse better and more beautifully than Hesiod's?

ION: Just the same Socrates, on those subjects, anyway, where they say the same things.

SOCRATES: And how about the subjects on which they do not say the same things? Divination, for example. Homer says something about it and so does Hesiod.

ION: Certainly.

4. Professional orators who recited poetry, especially that of Homer and the other epic poets.

5. Greek epic poet (ca. 8th c. B.C.E.), to whom the *Iliad* and the *Odyssey* are attributed.

6. Plato had an elder brother with this name. Metrodorus (ca. 330–ca. 277 B.C.E.), a follower and friend of the Athenian philosopher Epicurus and one of the most important teachers of Epicu-

reanism. Stesimbrotus (active late 5th c. B.C.E.), a biographer of Homer.

7. The sons of Homer were a guild of rhapsodes who originally claimed to be descendants of Homer [translator's note].

8. Earliest Greek lyric poet (active ca. 650 B.C.E.). Hesiod (active ca. 700 B.C.E.), Greek epic didactic poet.

SOCRATES: Well. Take all the places where those two poets speak of divination, both where they agree and where they don't: who would explain those better and more beautifully, you, or one of the diviners if he's good?

ION: One of the diviners.

SOCRATES: Suppose *you* were a diviner: if you were really able to explain the places where the two poets agree, wouldn't you also know how to explain the places where they disagree?

ION: That's clear.

SOCRATES: Then what in the world is it that you're clever about in Homer but not in Hesiod and the other poets? Does Homer speak of any subjects that differ from those of *all* the other poets? Doesn't he mainly go through tales of war, and of how people deal with each other in society—good people and bad, ordinary folks and craftsmen? And of the gods, how *they* deal with each other and with men? And doesn't he recount what happens in heaven and in hell, and tell of the births of gods and heroes? Those are the subjects of Homer's poetry-making, aren't they?

ION: That's true, Socrates.

SOCRATES: And how about the other poets? Did they write on the same subjects?

ION: Yes, but Socrates, they didn't do it the way Homer did.

SOCRATES: How, then? Worse?

ION: Much worse.

SOCRATES: And Homer does it better?

ION: *Really* better.

SOCRATES: Well now, Ion, dear heart, when a number of people are discussing arithmetic, and one of them speaks best, I suppose *someone* will know how to pick out the good speaker.

ION: Yes.

SOCRATES: Will it be the same person who can pick out the bad speakers, or someone else?

ION: The same, of course.

SOCRATES: And that will be someone who has mastered arithmetic, right?

ION: Yes.

SOCRATES: Well. Suppose a number of people are discussing healthy nutrition, and one of them speaks best. Will one person know that the best speaker speaks best, and another that an inferior speaker speaks worse? Or will the same man know both?

ION: Obviously, the same man.

SOCRATES: Who is he? What do we call him?

ION: A doctor.

SOCRATES: So, to sum it up, this is what we're saying: when a number of people speak on the same subject, it's always the same person who will know how to pick out good speakers and bad speakers. [532] If he doesn't know how to pick out a bad speaker, he certainly won't know a good speaker—on the same subject, anyway.

ION: That's so.

SOCRATES: Then it turns out that the same person is "wonderfully clever" about both speakers.

ION: Yes.

SOCRATES: Now *you* claim that Homer and the other poets (including Hesiod and Archilochus) speak on the same subjects, but not equally well. *He's* good, and they're inferior.

ION: Yes, and it's true.

SOCRATES: Now if you really do know who's speaking well, you'll know that the inferior speakers are speaking worse.

ION: Apparently so.

SOCRATES: You're superb! So if we say that Ion is equally clever about Homer and the other poets, we'll make no mistake. Because you agree yourself that the same person will be an adequate judge of all who speak on the same subjects, and that almost all the poets *do* treat the same subjects.

ION: Then how in the world do you explain what *I* do, Socrates? When someone discusses another poet I pay no attention, and I have no power to contribute anything worthwhile: I simply doze off. But let someone mention Homer and right away I'm wide awake and I'm paying attention and I have plenty to say.

SOCRATES: *That's* not hard to figure out, my friend. Anyone can tell that you are powerless to speak about Homer on the basis of knowledge or mastery. Because if your ability came by mastery, you would be able to speak about all the other poets as well. Look, there is an art of poetry as a whole, isn't there?

ION: Yes.

SOCRATES: And now take the whole of *any* other subject: won't it have the same discipline throughout? And this goes for every subject that can be mastered. Do you need me to tell you what I mean by this, Ion?

ION: Lord, yes, I do, Socrates. I love to hear you wise men talk.

SOCRATES: I wish that were true, Ion. But wise? Surely you are the wise men, you rhapsodes and actors, you and the poets whose work you sing. As for me, I say nothing but the truth, as you'd expect from an ordinary man. I mean, even this question I asked you—look how commonplace and ordinary a matter it is. Anybody could understand what I meant: don't you use the same discipline throughout whenever you master the whole of a subject? Take this for discussion—painting is a subject to be mastered as a whole, isn't it?

ION: Yes.

SOCRATES: And there are many painters, good and bad, and there have been many in the past.

ION: Certainly.

SOCRATES: Have you ever known anyone who is clever at showing what's well painted and what's not in the work of Polygnotus⁹ but who's powerless to do that for other painters? [533] Someone who dozes off when the work of other painters is displayed, and is lost, and has nothing to contribute—but when he has to give judgment on Polygnotus or any other painter (so long as it's just *one*), he's wide awake and he's paying attention and he has plenty to say—have you ever known anyone like that?

ION: Good lord no, of course not!

9. Greek painter from Thasos (ca. 500—ca. 440 B.C.E.), later an Athenian citizen.

SOCRATES: Well. Take sculpture. Have you ever known anyone who is clever at explaining which statues are well made in the case of Daedalus, son of Metion, or Epeius, son of Panopeus, or Theodorus of Samos,¹ or any other *single* sculptor, but who's lost when he's among the products of other sculptors, and he dozes off and has nothing to say?

ION: Good lord no. I haven't.

SOCRATES: And further, it is my opinion, you've never known anyone ever—not in flute-playing, not in cithara-playing, not in singing to the cithara, and not in rhapsodizing—you've never known a man who is clever at explaining Olympus or Thamyris or Orpheus or Phemius,² the rhapsode from Ithaca, but who has nothing to contribute about Ion, the rhapsode from Ephesus, and cannot tell when he does his work well and when he doesn't—you've never known a man like that.

ION: I have nothing to say against you on that point, Socrates. But *this* I know about myself: I speak about Homer more beautifully than anybody else and I have lots to say; and everybody says I do it well. But about the other poets I do not. Now see what that means.

SOCRATES: I do see, Ion, and I'm going to announce to you what I think that is. As I said earlier, that's not a subject you've mastered—speaking well about Homer; it's a divine power that moves you, as a "Magnetic" stone moves iron rings. (That's what Euripides called it; most people call it "Heracleian."³) This stone not only pulls those rings, if they're iron, it also puts power *in* the rings, so that they in turn can do just what the stone does—pull other rings—so that there's sometimes a very long chain of iron pieces and rings hanging from one another. And the power in all of them depends on this stone. In the same way, the Muse⁴ makes some people inspired herself, and then through those who are inspired a chain of other enthusiasts is suspended. You know, none of the epic poets, if they're good, are masters of their subject; they are inspired, possessed, and that is how they utter all those beautiful poems. The same goes for lyric poets if they're good: just as the Corybantes⁵ are not in their right minds when they dance, [534] lyric poets, too, are not in their right minds when they make those beautiful lyrics, but as soon as they sail into harmony and rhythm they are possessed by Bacchic frenzy. Just as Bacchus worshippers when they are possessed draw honey and milk from rivers,⁶ but not when they are in their right minds—the soul of a lyric poet does this too, as they say themselves. For of course poets tell us that they gather songs at honey-flowing springs, from glades and gardens of the Muses, and that they bear songs to us as bees carry honey, flying like bees. And what

1. Greek architect and sculptor (active ca. 550 B.C.E.). Daedalus: in Greek mythology, a consummately skilled Athenian artisan and artist. Epeius: mythological builder of the Trojan horse.

2. Court singer in the palace of Odysseus, king of Ithaca, in Homer's *Odyssey*. Olympus: Greek mountain, famed as the home of the gods. Thamyris: mythological Thracian bard who challenged the Muses. Orpheus: Greek musician unrivaled among mortals.

3. Natural magnets apparently came from Magnesia and Heraclia in Caria in Asia Minor, and were called after those places [translator's note].

Euripides (ca. 485–ca. 406 B.C.E.), Athenian tragedian; the phrase appears in a fragment of a lost play.

4. One of the 9 daughters of Memory who preside over the arts and all intellectual pursuits.

5. Priests of the goddess Cybele, the Great Mother of the gods (whose worship spread west from Asia Minor); her followers engaged in wild and sometimes bloody dances.

6. Bacchus worshippers apparently danced themselves into a frenzy in which they found streams flowing with honey and milk (Euripides, *Bacchae* 708–11) [translator's note]. Bacchus: another name for Dionysus, god of wine and of fertility.

they say is true. For a poet is an airy thing, winged and holy, and he is not able to make poetry until he becomes inspired and goes out of his mind and his intellect is no longer in him. As long as a human being has his intellect in his possession he will always lack the power to make poetry or sing prophecy. Therefore because it's not by mastery that they make poems or say many lovely things about their subjects (as you do about Homer)—but because it's by a divine gift—each poet is able to compose beautifully only that for which the Muse has aroused him: one can do dithyrambs, another encomia, one can do dance songs, another, epics, and yet another, iambics;⁷ and each of them is worthless for the other types of poetry. You see, it's not mastery that enables them to speak those verses, but a divine power, since if they knew how to speak beautifully on one type of poetry by mastering the subject, they could do so for all the others also. That's why the god takes their intellect away from them when he uses them as his servants, as he does prophets and godly diviners, so that we who hear should know that *they* are not the ones who speak those verses that are of such high value, for their intellect is not in them: the god himself is the one who speaks, and he gives voice through them to us. The best evidence for this account is Tynnichus from Chalcis,⁸ who never made a poem anyone would think worth mentioning, *except* for the praise-song everyone sings, almost the most beautiful lyric-poem there is, and simply, as he says himself, “an invention of the Muses.” In this more than anything, then, I think, the god is showing us, so that we should be in no doubt about it, that these beautiful poems are not human, not even *from* human beings, but are divine and from gods; that poets are nothing but representatives of the gods, possessed by whoever possesses them. To show *that*, the god deliberately sang the most beautiful lyric poem through the most worthless poet. [535] Don't you think I'm right, Ion?

ION: Lord yes, *I* certainly do. Somehow you touch my soul with your words, Socrates, and I do think it's by a divine gift that good poets are able to present these poems to us from the gods.

SOCRATES: And you rhapsodes in turn present what the poets say.

ION: That's true too.

SOCRATES: So you turn out to be representatives of representatives.

ION: Quite right.

SOCRATES: Hold on, Ion; tell me this. Don't keep any secrets from *me*. When you recite epic poetry well and you have the most stunning effect on your spectators, either when you sing of Odysseus⁹—how he leapt into the doorway, his identity now obvious to the suitors, and he poured out arrows at his feet—or when you sing of Achilles charging at Hector, or when you sing a pitiful episode about Andromache or Hecuba or Priam,¹ are you at that time in your right mind, or do you get beside yourself? And doesn't your soul, in its enthusiasm, believe that it is present at the

7. A meter based on the syllabic pattern short-long; iambic trimeter was regularly used in the dialogue and set speeches of tragedy. “Dithyrambs”: choral poems originally sung in honor of Dionysus, later associated with highly excited music and impassioned language. “Encomia”: hymns of praise.

8. Greek poet known solely for his paean to Apollo, which does not survive.

9. The hero of Homer's *Odyssey*; he pours out

arrows in *Odyssey* 22, attacking the men who had been pursuing his wife during his long absence.

1. King of Troy; he appears in Homer's *Iliad*. Achilles: greatest Greek warrior of the Trojan War and central character of the *Iliad*. Hector: oldest son of Priam and Hecuba and the greatest of the Trojan warriors, slain by Achilles (see *Iliad* 22); his wife was Andromache.

actions you describe, whether they're in Ithaca or in Troy or wherever the epic actually takes place?

ION: What a vivid example you've given me, Socrates! I won't keep secrets from *you*. Listen, when *I* tell a sad story, my eyes are full of tears; and when I tell a story that's frightening or awful, my hair stands on end with fear and my heart jumps.

SOCRATES: Well, Ion, should we say this man is in his right mind at times like these: when he's at festivals or celebrations, all dressed up in fancy clothes, with golden crowns, and he weeps, though he's lost none of his finery—or when he's standing among millions of friendly people and he's frightened, though no one is undressing him or doing him any harm? Is he in his right mind then?

ION: Lord no, Socrates. Not at all, to tell the truth.

SOCRATES: And you know that you have the same effects on most of your spectators too, don't you?

ION: I know very well that we do. I look down at them every time from up on the rostrum, and they're crying and looking terrified, and as the stories are told they are filled with amazement. You see I must keep my wits and pay close attention to them: if I start them crying, *I* will laugh as I take their money, but if *they* laugh, I shall cry at having lost money.

SOCRATES: And you know that this spectator is the last of the rings, don't you—the ones that I said take their power from each other by virtue of the Heracleian stone [the magnet]? The middle ring is you, [536] the rhapsode or actor, and the first one is the poet himself. The god pulls people's souls through all these wherever he wants, looping the power down from one to another. And just as if it hung from that stone, there's an enormous chain of choral dancers and dance teachers and assistant teachers hanging off to the sides of the rings that are suspended from the Muse. One poet is attached to one Muse, another to another (we say he is “possessed,” and that's near enough, for he is *held*). From these first rings, from the poets, *they* are attached in their turn and inspired, some from one poet, some from another: some from Orpheus, some from Musaeus,² and many are possessed and held from Homer. You are one of *them*, Ion, and you are possessed from Homer. And when anyone sings the work of another poet, you're asleep and you're lost about what to say; but when any song of that poet is sounded, you are immediately awake, your soul is dancing, and you have plenty to say. You see it's not because you're a master of knowledge about Homer that you can say what you say, but because of a divine gift, because you are possessed. That's how it is with the Corybantes, who have sharp ears only for the specific song that belongs to whatever god possesses them; they have plenty of words and movements to go with *that* song; but they are quite lost if the music is different. That's how it is with you, Ion: when anyone mentions Homer, you have plenty to say, but if he mentions the others you are lost; and the explanation of this, for which you ask me—why it is that you have plenty to say about Homer but not about the others—is that it's not mastering the subject, but a divine gift, that makes you a wonderful singer of Homer's praises.

2. Mythical singer, closely connected with Orpheus.

ION: You're a good speaker, Socrates. Still, I would be amazed if you could speak well enough to convince me that I am possessed or crazed when I praise Homer. I don't believe you'd think so if you heard me speaking on Homer.

SOCRATES: And I really do want to hear you, but not before you answer me this: on which of Homer's subjects do you speak well? I don't suppose you speak well on *all* of them.

ION: I do, Socrates, believe me, on every single one!

SOCRATES: Surely not on those subjects you happen to know nothing about, even if Homer does speak of them.

ION: And these subjects Homer speaks of, but I don't know about—what are they?

[537] SOCRATES: But doesn't Homer speak about professional subjects in many places, and say a great deal? Chariot driving, for example, I'll show you, if I can remember the lines.

ION: No, I'll recite them. I *do* remember.

SOCRATES: Then tell me what Nestor says to his son Antilochus, when he advises him to take care at the turning post in the horse race they held for Patroclus³ funeral.

ION: "Lean," he says,

Lean yourself over on the smooth-planed chariot
Just to the left of the pair. Then the horse on the right—
Goad him, shout him on, easing the reins with your hands.
At the post let your horse on the left stick tight to the turn
So you seem to come right to the edge, with the hub
Of your welded wheel. But escape cropping the stone . . . ⁴

SOCRATES: That's enough. Who would know better, Ion, whether Homer speaks correctly or not in these particular verses—a doctor or a charioteer?

ION: A charioteer, of course.

SOCRATES: Is that because he is a master of that profession, or for some other reason?

ION: No. It's because he's a master of it.

SOCRATES: Then to each profession a god has granted the ability to know a certain function. I mean, the things navigation teaches us—we won't learn them from medicine as well, will we?

ION: Of course not.

SOCRATES: And the things medicine teaches us we won't learn from architecture.

ION: Of course not.

SOCRATES: And so it is for every other profession: what we learn by mastering one profession we won't learn by mastering another, right? But first, answer me this. Do you agree that there are different professions—that one is different from another?

ION: Yes.

3. Achilles' dearest friend, slain by Hector.
Nestor: the oldest of the Greek generals at Troy;

in the *Iliad*, he often gives advice.
4. *Iliad* 23.335–40 [translator's note].

SOCRATES: And is this how you determine which ones are different? When *I* find that the knowledge [involved in one case] deals with different subjects from the knowledge [in another case], then I claim that one is a different profession from the other. Is that what you do?

ION: Yes.

SOCRATES: I mean if there is some knowledge of the same subjects, then why should we say there are two different professions?—Especially when each of them would allow us to know the same subjects! Take these fingers: I know there are five of them, and you know the same thing about them than I do. Now suppose I asked you whether it's the same profession—arithmetic—that teaches you and me the same things, or whether it's two different ones. Of course you'd say it's the same one.

ION: Yes.

[538] SOCRATES: Then tell me now what I was going to ask you earlier. Do you think it's the same way for every profession—the same profession must teach the same subjects, and a different profession, if it is different, must teach not the same subjects, but different ones?

ION: That's how I think it is, Socrates.

SOCRATES: Then a person who has not mastered a given profession will not be able to be a good judge of the things which belong to that profession, whether they are things said or things done.

ION: That's true.

SOCRATES: Then who will know better whether or not Homer speaks beautifully and well in the lines you quoted? You, or a charioteer?

ION: A charioteer.

SOCRATES: That's because you're a rhapsode, of course, and not a charioteer.

ION: Yes.

SOCRATES: And the rhapsode's profession is different from the charioteer's.

ION: Yes.

SOCRATES: If it's different, then its knowledge is of different subjects also.

ION: Yes.

SOCRATES: Then what about the time Homer tells how Hecamede, Nestor's woman, gave barley-medicine to Machaon⁵ to drink? He says something like this—

Over wine of Pramnos she grated goat's milk cheese
With a brazen grater. . . . And onion relish for the drink . . . ⁶

Is Homer right or not: would a fine diagnosis here come from a doctor's profession or a rhapsode's?

ION: A doctor's.

SOCRATES: And what about the time Homer says:

Lead her plunged to the floor of the sea like a weight
That is fixed to a field cow's horn. Given to the hunt
It goes among ravenous fish, carrying death.⁷

5. A fighter and healer in the *Iliad*.

6. *Iliad* 11.639–40 with 630 [translator's note].

7. *Iliad* 24.80–82 [translator's note].

Should we say it's for a fisherman's profession or a rhapsode's to tell whether or not he describes this beautifully and well?

ION: That's obvious, Socrates. It's for a fisherman's.

SOCRATES: All right, look. Suppose you were the one asking questions, and you asked me, "Socrates, since you're finding out which passages belong to each of the professions Homer treats—which are the passages that each profession should judge—come tell me this: which are the passages that belong to a diviner and to divination, passages he should be able to judge as to whether they're well or badly composed?" Look how easily I can give you a true answer. Often, in the *Odyssey*, he says things like what Theoclymenus says—the prophet of the sons of Melampus:⁸

[539] Are you mad? What evil is this that's upon you? Night
Has enshrouded your hands, your faces, and down to your knees.
Wailing spreads like fire, tears wash your cheeks.
Ghosts fill the dooryard, ghosts fill the hall, they rush
To the black gate of hell, they drop below darkness. Sunlight
Has died from a sky run over with evil mist.⁹

And often in the *Iliad*, as in the battle at the wall.¹ There he says:

There came to them a bird as they hungered to cross over.
An eagle, a high-flier, circled the army's left
With a blood-red serpent carried in its talons, a monster,
Alive, still breathing, it has not yet forgotten its warlust,
For it struck its captor on the breast, by the neck;
It was writhing back, but the eagle shot it groundwards
In agony of pain, and dropped it in the midst of the throng,
Then itself, with a scream, soared on a breath of the wind.²

I shall say that these passages and those like them belong to a diviner. They are for him to examine and judge.

ION: That's a true answer, Socrates.

SOCRATES: Well, *your* answers are true, too, Ion. Now *you* tell me—just as I picked out for you, from the *Odyssey* and the *Iliad*, passages that belong to a diviner and ones that belong to a doctor and ones that belong to a fisherman—in the same way, Ion, since you have more experience with Homer's work than I do, you pick out for me the passages that belong to the rhapsode and to his profession, the passages a rhapsode should be able to examine and to judge better than anyone else.

ION: My answer, Socrates, is "all of them."

SOCRATES: That's not *your* answer, Ion. Not "all of them." Or are you really so forgetful? But no, it would not befit a *rhapsode* to be forgetful.

[540] ION: What do you think I'm forgetting?

SOCRATES: Don't you remember you said that a rhapsode's profession is different from a charioteer's?

ION: I remember.

8. Legendary seer who ruled in Argos and progenitor of the so-called Sons of Melampus, one of the four clans of seers in ancient Greece. They included Theoclymenus, seer of Argos; he appears in the *Odyssey*, prophesying for Telemachus,

Odysseus's son.

9. *Odyssey* 20.351–57; line 354 is omitted by Plato [translator's note].

1. The city wall of Troy.

2. *Iliad* 12.200–207 [translator's note].

SOCRATES: And didn't you agree that because they are different they will know different subjects?

ION: Yes.

SOCRATES: So a rhapsode's profession, on *your* view, will not know everything, and neither will a rhapsode.

ION: But things like that are exceptions, Socrates.

SOCRATES: By "things like that" you mean that almost all the subjects of the other professions are exceptions, don't you? But then what sort of thing *will* a rhapsode know, if not everything?

ION: My opinion, anyhow, is that he'll know what it's fitting for a man or a woman to say—or for a slave or a freeman, or for a follower or a leader.

SOCRATES: So—what should a leader say when he's at sea and his ship is hit by a storm—do you mean a rhapsode will know better than a navigator?

ION: No, no. A navigator will know *that*.

SOCRATES: And when he is in charge of a sick man, what should a leader say—will a rhapsode know better than a doctor?

ION: Not that, either.

SOCRATES: But he *will* know what a slave should say. Is that what you mean?

ION: Yes.

SOCRATES: For example, what should a slave who's a cowherd say to calm down his cattle when they're going wild—will a rhapsode know what a cowherd does not?

ION: Certainly not.

SOCRATES: And what a woman who spins yarn should say about working with wool?

ION: No.

SOCRATES: And what a man should say, if he's a general, to encourage his troops?

ION: Yes! That's the sort of thing a rhapsode will know.

SOCRATES: What? Is a rhapsode's profession the same as a general's?

ION: Well, *I* certainly would know what a general should say.

SOCRATES: Perhaps that's because you're also a general by profession, Ion.

I mean, if you were somehow both a horseman and a cithara-player at the same time, you would know good riders from bad. But suppose I asked you: "Which profession teaches you good horsemanship—the one that makes you a horseman, or the one that makes you a cithara-player?"

ION: The horseman, I'd say.

SOCRATES: Then if you also knew good cithara-players from bad, the profession that taught you *that* would be the one which made you a cithara-player, not the one that made you a horseman. Wouldn't you agree?

ION: Yes.

SOCRATES: Now, since you know the business of a general, do you know this by being a general or by being a good rhapsode?

ION: I don't think there's any difference.

[541] SOCRATES: What? Are you saying there's no difference? On your view is there one profession for rhapsodes and generals, or two?

ION: One, I think.

SOCRATES: So anyone who is a good rhapsode turns out to be a good general too.

ION: Certainly, Socrates.

SOCRATES: It also follows that anyone who turns out to be a good general is a good rhapsode too.

ION: No. This time I don't agree.

SOCRATES: But you do agree to this: anyone who is a good rhapsode is a good general too.

ION: I quite agree.

SOCRATES: And aren't you the best rhapsode in Greece?

ION: By far, Socrates.

SOCRATES: Are you also a general, Ion? Are you the best in Greece?

ION: Certainly, Socrates. That, too, I learned from Homer's poetry.

SOCRATES: Then why in heaven's name, Ion, when you're both the best general *and* the best rhapsode in Greece, do you go around the country giving rhapsodies but not commanding troops? Do you think Greece really needs a rhapsode who is crowned with a golden crown? And does not need a general?³

ION: Socrates, *my* city is governed and commanded by you [by Athens]; we don't need a general. Besides, neither your city nor Sparta would choose me for a general. You think you're good enough for that yourselves.

SOCRATES: Ion, you're superb. Don't you know Apollodorus of Cyzicus?

ION: What does *he* do?

SOCRATES: He's a foreigner who has often been chosen by Athens to be their general. And Phanosthenes of Andros and Heraclides of Clazomenae—they're also foreigners; they've demonstrated that they are worth noticing, and Athens appoints them to be generals or other sorts of officials. And do you think that *this* city, that makes such appointments, would not select Ion of Ephesus and honor him, if they thought he was worth noticing? Why? Aren't you people from Ephesus Athenians of long standing?⁴ And isn't Ephesus a city that is second to none?

But *you*, Ion, you're doing me wrong, if what you say is true that what enables you to praise Homer is knowledge or mastery of a profession. You assured me that you knew many lovely things about Homer, you promised to give a demonstration; but you're cheating me, you're a long way from giving a demonstration. You aren't even willing to tell me what it is that you're so wonderfully clever *about*, though I've been begging you for ages. Really, you're just like Proteus,⁵ you twist up and down and take many different shapes, till finally you've escaped me altogether by turning yourself into a general, [542] so as to avoid proving how wonderfully wise you are about Homer.

If you're really a master of your subject, and if, as I said earlier, you're cheating me of the demonstration you promised about Homer, then you're doing me wrong. But if you're not a master of your subject, if you're possessed by a divine gift from Homer, so that you make many lovely speeches about the poet without knowing anything—as *I* said about you—then

3. The memory of Athens' defeat in the Peloponnesian War (which ended in 404 B.C.E.) was perhaps still fresh in Plato's mind when he wrote this dialogue.

4. For most of the 5th century, Ephesus, an important center of trade founded by Ionian col-

onists on the west coast of Asia Minor, belonged to an alliance led by Athens against the Persians. 5. Proteus was a servant of Poseidon [god of the sea]. He had the power to take whatever shape he wanted in order to avoid answering questions (*Odyssey* 4.385ff.) [translator's note].

you're not doing me wrong. So choose, how do you want us to think of you—as a *man* who does wrong, or as someone *divine*?

ION: There's a great difference, Socrates. It's much lovelier to be thought divine.

SOCRATES: Then *that* is how we think of you, Ion, the lovelier way: it's as someone divine, and not as master of a profession, that you are a singer of Homer's praises.

ca. 390 B.C.E.

From The Republic¹

From Book II

* * *

The question of education is clearly relevant to our inquiry.

In that case, my dear Adeimantus,² we must not give up on it even though it should detain us for some time.

Let us face the question.

I suggest we proceed with our guardians' education in a spirit of leisure. We shall tell tales and recount fables that will serve to educate them.

Good.

And what better education than that which has been for so long part of our own heritage? That would mean, I suppose, gymnastic for the body and music for the soul.³

Yes.

And education in music should begin earlier than gymnastic?

It should.

And we understand music to include poetry and stories, do we not?

Of course.

And these, in turn, are of two kinds. They are either true or false.⁴

Yes.

[377] And our students will have to be educated to understand both, beginning with the false?

I don't understand.

But surely you realize that we always begin by telling children fables. Of course, the fables contain some elements of truth, but by and large they are false. And so the child is exposed to fable before he is old enough to learn gymnastic. That is what I meant by saying that we must start with music before taking up gymnastic.

1. Translated by Richard W. Sterling and William C. Scott. The numbers in square brackets are the Stephanus numbers used almost universally in citing Plato's works; they refer to the pages of a 1578 edition published by Henri Estienne.

2. At this point in *Republic*, the philosopher Socrates (469–399 B.C.E., Plato's spokesperson) and Adeimantus are discussing what education the future rulers (or "guardians") of the perfect state should have. Socrates (speaking here) leads the discussion and Adeimantus follows (Socrates'

other interlocutor in our selections from *Republic* books 3 and 7 is Adeimantus's brother Glaucon).

3. The education Plato describes here is consonant with the kind of education available in 5th-century Athens, which would include physical education for the body (gymnastic), education for character through reading, writing, and arithmetic (*grammata*), and music. Poetry would be taught as part of the music curriculum.

4. Either fiction or nonfiction.

I understand now.

Then you will also understand that the most important part of any work is its beginning. This is especially true for the education of young children. At this tender age they are the most impressionable and therefore most likely to adopt any and all models set before them.

True.

Then we can hardly afford to let the children listen to just any tales or fables recounted by just any teachers who happen along. We surely don't want the children to adopt opinions and beliefs that might be largely contrary to the kinds of values we deem desirable for them to have when they become adults.

Certainly not.

Then our program of education must begin with censorship. The censors will approve the fables and stories they deem good and ban those they consider to be harmful. We shall persuade mothers and nurses to tell the children stories from the approved list, assuring them that the training of the soul is far more important than the training of the body. If we apply this criterion, most of the stories they tell now will have to be discarded.

Which stories?

Let us consider the greatest stories; that will help us to understand the less renowned stories as well. The spirit and pattern will be the same in both. Don't you think so?

It is likely. But I have yet to understand what you mean by the greatest stories.

Those that have come down to us from Hesiod and Homer⁵ and the other poets. Men have heard these stories again and again. We still hear them, and I believe that they are false.

Which stories do you mean? What fault do you find in them?

The most serious fault of all. They tell lies. Still worse, the lies they tell are malevolent.

How can we tell when they are lying?

Whenever they tell a tale that plays false with the true nature of gods⁶ and heroes. Then they are like painters whose portraits bear no resemblance to their models.

Such things are surely blameworthy. But be specific. What do you mean in particular?

First of all, I mean the greatest and most malevolent lies about matters of the greatest concern: what Hesiod said Uranus did to his son Cronos and how Cronos revenged himself on his father. [378] Then there is the tale of Cronos's further doings and how he suffered in his turn at the hands of his own son, Zeus.⁷ Even were these stories true, they ought not to be told indis-

5. Greek epic poet (ca. 8th c. B.C.E.), to whom the *Iliad* and the *Odyssey* are attributed. Hesiod (active ca. 700 B.C.E.), Greek epic didactic poet.

6. Because of the basic polytheism of Greek religion, the word for god occurs commonly in both singular and plural. We have consistently spelled the word without capitalization. A reader should be aware that differing conceptions of divinity underlie the ensuing discussion [translators' note].

7. Hesiod tells the story of the cosmic battle among members of three successive generations

of gods in which the sons overthrew their fathers. First, Cronos castrated his father Uranus. Cronos then swallowed each of his children as Rhea gave birth to them. But Zeus she bore secretly and gave him to others to raise. To Cronos she gave a stone wrapped in swaddling clothes to swallow in place of the baby. When fully grown, Zeus forced Cronos to vomit up the stone and his other offspring, who joined with their liberator Zeus to form the final generation of ruling gods (Hesiod, *Theogony* 154–210 and 453–506) [translators' note].

criminally to young and thoughtless persons. It would be best if they could be buried in silence. If they absolutely must be retold, it should be only to a chosen few under conditions of total secrecy. And this only after performing a sacrifice not of an ordinary pig⁸ but of some huge and usually unprocureable victim. That should help cut down the number of listeners.

I must admit that the stories you cite are extremely objectionable.

Yes, they are, Adeimantus, and they are not to be told in our city. No young man should be given to understand that even in the most outrageous crimes there is nothing outrageous. Nor should the child be taught to believe that in abandoning all restraint in order to punish the misdeeds of his father he will only be following the example of the first and greatest gods.

By Zeus, I agree. These stories are not fit to be told.

Nor can we permit it to be said that gods plot against gods and make war upon each other—which is in any case false—if we want our future guardians to abhor even the thought of quarreling among themselves. Still less shall we make up stories of battles among gods or giants; nor shall we permit the various episodes of their wars to be embroidered on our garments.⁹ We shall follow the same policy concerning all the other endless quarrels of gods and heroes with their friends and relatives. If we could get them to believe us, we would tell our future guardians that quarreling is a blasphemy, and we would say that to this day there has never been a quarrel among citizens.

Now this is the sort of thing that the old men and the old women ought to be telling the children right from the start. As the children grow older, the poets must be compelled to write for them in a similar vein. But the story of Hera put in chains by her own son Hephaestus is inadmissible.¹ So is the story of these two on another occasion when Zeus hurled Hephaestus down from heaven for taking his mother's part when she was being beaten.² Once again, the battles of the gods in Homer's verse have no place in our city, whether they purport to be allegories or not. Young minds are not able to discriminate between what is allegorical and what is literal. At that age, whatever their minds absorb is likely to become fixed and unalterable. This may be the most important reason why tales for the very young should epitomize the fairest thoughts of virtue.

I agree with you there. But were someone to ask where we should find these desirable kinds of stories or themes, how should we reply?

Adeimantus, at this particular moment we are not poets but founders of a state. [379] Now it is proper that founders of states should be cognizant of the norms governing the general content of poetic compositions and the limits beyond which the poets must not go. But it is not the business of founders to compose the fables themselves.

Yes, but that's the whole point. What are the norms that should govern the telling of tales about the gods?

8. A sacrifice usual before initiation into the Eleusinian mysteries, secret cults at Eleusis in honor of Demeter, goddess of grain, and her daughter Persephone.

9. The battle of the giants against the gods—the Gigantomachia—was depicted on the robe woven for the statue of Athena at the Parthenon.

1. Hera was bound to a throne containing con-

cealed chains given to her by her son Hephaestus [translators' note], the Greek god of fire and metalworking.

2. According to one legend, Hephaestus was lamed when Zeus cast him out of heaven for defending Hera, queen of the gods (see *Iliad* 1.591–97). Hera was Zeus's wife and sister.

Well, they should be something like this. Whether portrayed in epic, lyric, or tragic form, deity should always be depicted as it truly is.

Agreed.

And is god not always good? Should he not always be represented as such?

Yes.

Further, no good thing is harmful?

No.

And what is not harmful cannot harm?

Of course not.

And that which does no harm also does no evil?

It does no evil.

Can that which does no evil itself cause evil?

Impossible.

Then good produces good and is the source of happiness.

Yes.

It follows that the good is not the cause of all things but only of good things. It cannot be blamed for those things which are evil.

Quite right.

If god is good, then, he cannot be the source of all things, as the multitude is prone to say. In the affairs of men god acts as cause but rarely; of most things he is not the cause. This must be true because in human life good things are few and evils are many. The good we receive we must attribute to god alone; for the causes of evil we must look elsewhere.

I think what you say is true.

Then we cannot countenance the follies and errors in the poets' descriptions of the gods. Homer, for instance, says:

Two urns stand on the palace floor of Zeus
filled with destinies he allots,
one containing good things and the other evil.

He who receives from Zeus both kinds

chances upon evil one day and good the next.

But when Zeus does not blend the lots and instead gives a man unmixed evil,

Hunger drives him, a wanderer everywhere on earth.

So we must not have it said that

good and evil are alike bestowed by Zeus.³

Nor shall we approve if anyone tries to saddle Zeus or Athena with blame for the broken oaths and treaties that were really Pandarus's own doing.⁴ Further, it is inadmissible to assert that Zeus and Themis⁵ fomented discord

3. *Iliad* 24.527–32.

4. During a truce in the Trojan War, Athena, disguised as Laodocus [a Trojan warrior], appeared to Pandarus, another Trojan warrior, and persuaded him to shoot an arrow at Menelaus—an action that broke the truce and re-ignited the war (*Iliad* 4.86–103) [translators' note]. Athena:

Greek goddess of wisdom and war, and the patron god of Athens. Menelaus: king of Sparta, and a central figure in the Trojan War as Helen of Troy's husband.

5. Greek goddess of justice, wisdom, and good counsel.

and strife among the gods. [380] And our young people must not be permitted to hear these words of Aeschylus:

When a god would utterly destroy a house
he implants in men the guilty cause.

Such verse the poet uses in writing of the sorrows of Niobe.⁶ But if he or any poet must concern himself with these and similar themes when recalling the house of Pelops⁷ or the Trojan War, we must make him conform to one of two requirements. Either he agrees not to ascribe the woes of men to the acts of gods, or he must provide some such explanation as we now are looking for ourselves. That is, what the gods did was just and righteous punishment, and those mortals upon whom it was inflicted benefited from it. But if instead they are portrayed as having been made miserable by the penalty and the gods declared to be the authors of their misery, this is something no poet will be allowed to say. On the other hand, if a poet should say that the wicked are miserable because they need to be punished and that the gods benefit them by providing the penalty, that we shall allow.

The proposition that a god, who is good, should cause evil to anyone is something we must strenuously deny. In a well-governed city it is something neither young nor old will assert or listen to. It must not be said or sung in verse or prose. It is a contradictory, profitless, and impious fiction.

I agree. I would vote to make your words law.

Then let this be one of the laws and principles in our city concerning the gods to which our speakers and poets must conform: a god is not the author of all things but only of good things.

Good.

We must consider a further proposition. Do you think that god is a wizard? Do you think he would play insidious games with us, assuming one shape at one time and another at another? Would he actually change himself and pass from his own form into many forms? Or would he deceive us by sometimes only feigning such transformations? Or is god simple? In that case, he would be less likely than any other being to depart from his own true form.

I shall need to think about that.

But what do you say to this? If something changes its form, it must either have changed itself or else there must have been some external cause.

Necessarily.

And is it not also true that things in their best condition are least likely to be affected or changed by external causes? The healthy human body, for example, is least likely to suffer adverse effects from food or drink or exer-

6. Niobe had boasted that she, with her twelve children, was the equal of Leto, who had only two divine children, Apollo and Artemis. The two gods killed all twelve of Niobe's children and left her sorrowing for her lost family [translators' note]. Aeschylus (525–456 B.C.E.), Greek tragedian; the quotation is from his *Niobe* (a lost play).

7. The curse on the house of Pelops was applied to successive generations. Myrtilus, Hermes' son, cursed Pelops as he threw him into the sea, and this curse was carried out first upon Pelops's sons, Atreus and Thyestes. Thyestes seduced Atreus's wife, but Atreus chopped up several of

Thyestes' children and served them to their father in a stew. Atreus's children are Menelaus, whose wife Helen is given to Paris by Aphrodite, the extramarital gift that provoked the Trojan War; and Agamemnon, who is slain by his wife Clytemnestra and her lover Aegisthus (a surviving son of Thyestes). The children of Agamemnon and Clytemnestra are Orestes and Electra, who must arrange the murder of their mother at the command of Apollo [translators' note]. When writing plays, many Greek tragedians drew on this complex of myths.

tion. With plants it is the same. Those in full vigor will be the last to be damaged by high winds or the heat of the sun [381] or any other cause.

I agree.

Then we can adduce that the soul that is bravest and wisest will be least vulnerable to confusion or disorders originating from external sources?

Yes.

By analogy, I suppose, the same principle applies to men's artifacts—furniture, clothing, and houses. Those that are well made are least liable to be changed by time and other influences.

True.

Then we ought to be able to assert a universal truth: everything that is well made in nature or in art is best able to withstand change from without.

Apparently.

Now, could we agree that god, and everything that belongs to him, is in every way perfect?

Of course.

It follows that it would be the least of all possibilities that god should be compelled by external pressures to take on many forms.

Least indeed.

Still, he could will to change and transform himself?

Of course.

Will he change himself into something better and more beautiful or will the change be in the direction of the bad and the ugly?

If god changes, it must necessarily be for the worse, for we cannot suppose him to be initially deficient in any way in either goodness or beauty.

Well said, Adeimantus. Now another question: would anyone, whether god or man, willingly make himself worse?

Impossible.

Then it is impossible for a god even to wish to change himself. Intrinsically good and beautiful, a god abides simply and forever in his own form.

I think that is an unavoidable conclusion.

Then, my good friend, we must not suffer any poet to tell us that

The gods appear as strangers from far lands
and roam men's cities in many guises.⁸

Let no one fabricate falsehoods about Proteus and Thetis.⁹ Neither let anyone in tragic or other kind of verse introduce Hera disguised as a priestess appealing for alms for the life-giving sons of Inachos,¹ the river of Argos. Many other such lies must also be suppressed. Further, we must not permit mothers under the influence of poets to frighten their children with wrong versions of myths that say certain gods masquerade as strangers from strange lands and haunt the night. Instead, we will make them take heed lest they speak evil of the gods and make cowards of their children.

8. *Odyssey* 17.485–86.

9. Proteus, the old man of the sea, is able to change into a variety of shapes. In the *Odyssey* (4.455–59) he turns into a lion, a snake, a leopard, a boar, flowing water, a tree, and finally back into a man. Thetis [mother of the hero Achilles] turned into a fire, a lion, and several more elusive forms in order to escape the embrace of Peleus

[Achilles' father] (Pindar, *Nemean Ode* 4.62ff., and Ovid, *Metamorphoses* 9.238–46) [translators' note].

1. Both a river in Argos, a city-state on the Peloponnese, and a river god. The "sons" are presumably the river's tributaries with their "life-giving" water.

There can be no sanction for any such behavior.

Well, then, another question. If we are agreed that the gods are unchanging and do not will to change, could it nonetheless be true that by witchcraft and sorcery they could make us believe the illusion that they do indeed appear in many forms?

Perhaps.

[382] But do you really believe that a god would lie in word or deed or would seek to victimize us with illusions?

I don't know.

Don't you know that the true lie, if one can use such an expression, is hated by men and gods alike?

What do you mean?

I mean the lie that finds lodging in the inmost part of men's souls and remains there to deceive them about all the things most important to their lives. This is the lie that has no friends. Men hate and fear it above all others.

I still don't understand.

That is because you think I am trying to say something profound. All I mean is that every man loathes the thought that he might be taken captive by a lie which would prevent him from distinguishing between reality and unreality. That his soul should be possessed by a lie whereby he is continually deceived and irrevocably ignorant is something no man wants to accept.

Now I understand, and I agree.

Then it must be correct to say that what I have called the true lie is ignorance in the soul of the man deceived. The lie in words, on the other hand, does no more than imitate what the true lie does to the soul. It bears only a somewhat shadowy resemblance to the true lie and is not altogether false. Is that not right?

Quite right.

We have said, then, that the true lie is hated by both gods and men.

I agree.

Now what about the lie in words? Could it sometimes be useful to some people and therefore not be considered hateful? Would it be advantageous in dealing with enemies? And how about those we call friends? Should any of these be bent on doing wrong by some act of folly or madness, might not the lie in words be helpful as a sort of medicine, as a means by which we try to divert them and prevent the deed from being done? Consider also the fables and stories from the past that we have just been discussing. Because of our ignorance of the truth about the ancient times, our only recourse is to tell fables, patterning the false on the true as best we can so that our stories may have some use.

Yes, we men do all these things.

But would god find these kinds of lies useful? Would he lie about the past, for example, because he does not know the truth about it?

Such a notion would be absurd.

Then in god there is no lying poet.

No.

Well, then, would he lie because he fears his enemies?

Inconceivable.

But he may have friends who are mad or given over to folly?

Fools and madmen are not friends of god.

Then god has no motive for lying?

None.

May we conclude that in all things deity and the divine are entirely free from falsehood?

Yes.

Then god is simple and true in deed and word. He is unchanging and unchangeable. He doesn't lie. Whether men wake or whether men dream, god never deceives them with visions or with words or by signs.

[383] This is also what I think, when I hear you say it.

You would also concur, I assume, in a second law or principle to govern representations of the gods in poetry and prose. That is, the gods are neither wizards who confound us by transformations, nor do they deceive us by word or deed.

I concur.

Despite our esteem for Homer, then, we cannot admire the dream of lies that Zeus imparts to the sleeping Agamemnon.² Nor can we commend the verse of Aeschylus wherein Thetis alleged that Apollo sang at her wedding,

Foretelling the fair fortunes of her progeny:
Long would be their days and free from pain and ills.
He made complete the tale of heaven's blessings,
singing a joyous hymn and gladdening my heart.
I believed that Phoebus would not lie,
that a prophet would utter only truth.
But he himself who sang that wedding night,
he himself who feasted with us,
he himself who promised these fair things,
himself is now the slayer of my son.³

We shall be angry with a poet who writes such lines about the gods and shall forbid their presentation in public. Nor can we permit teachers to make use of such poets in instructing the young if our guardians are to become god-fearing men, and indeed godlike, insofar as that is possible for men.

I agree. I accept these laws and principles.

* * *

From *Book III*

[386] From childhood onward, then, these are the kinds of things we shall permit or forbid our guardians to hear about the gods, so that they will honor the gods and their mothers and fathers, and be true friends to each other.

I think these are good principles.

What next? If they are to be courageous they must learn still other lessons. They must learn not to fear death—or do you think anyone could be brave who is afraid of death?

No, I don't.

2. The dream deceiving Agamemnon tells him to muster the Greeks for battle because the gods have not agreed that Troy can be taken (*Iliad* 2.1–15) [translators' note]. Agamemnon: king of

Mycenae and commander of the Greek expedition against Troy.

3. From a lost play. Phoebus: Apollo, god of prophecy as well as healing and music.

What about any man who believes the underworld is real and terrible? Will he be likely to be fearless? In battle, will he prefer death to defeat and slavery?

He will not.

Then we must expand our supervision to those who write and tell stories about these matters, too. We must ask them to speak better of Hades⁴ rather than worse, for what they tell us now is not true, nor is it edifying for those who are going to be warriors.

You are right.

Let us begin, then, by expunging the verse that follows and all other writings and sayings of the same ilk:

I would rather be a poor serf
on the land of one himself penurious,
than be monarch of all who ever died.

and this:

Lest to mortals and immortals
the houses of the dead be conjured up,
dark, hideous, dank,
and abhorrent to the gods themselves.

and this:

Ah, woe! So it is true:
in Hades' house are souls and apparitions,
but all intelligence is gone.

and:

He was alone with his wisdom and wit.
All the others were shadows and wraiths.

and:

Unwillingly his soul went forth from his body
to bewail its doom in Hades
and lament lost manliness and youth.

[387] and:

Shrilling and gibbering,
the soul slipped down like a vapor
and vanished underneath the earth.

and:

Like bats hanging in a darkened cave
will cling to a rock together and shriek
for the one that falls from the cluster,
so their souls will screech and falter.⁵

4. The Greek underworld.

5. From *Odyssey* 11.489–91; *Iliad* 20.64–66,

23.103–4; *Odyssey* 10.495; *Iliad* 16.856–57,
23.100–101; and *Odyssey* 24.6–9.

We shall beg Homer and the other poets not to be angry if we ban these and all similar passages. Our objection is not that they are not poetic; nor is it that they do not please most hearers. Rather it is because the more poetic they are, the less they are suited to the ears of boys and men being schooled to be free and so to fear slavery more than death.

Further, we must suppress the entire vocabulary of terror and fear customarily used to describe the world below. Styx, the tide of hate, Cocytus, the river of lamentation,⁶ charnel house, withered shades—all such terms that make men tremble will have to go. Horror stories may be all right for other purposes, but our purpose is to prevent our guardians becoming hot-headed from such stories or else degenerate in nerves and heart.

Your concern is well taken.

Then let us do away with them.

Agreed.

And we must require the contrary sentiments in poetry and prose?

Clearly.

Surely we should expunge the wailing and laments of famous men?

They must go with the rest.

Consider, however, whether we shall indeed do right in getting rid of them. Our purpose is to affirm that a good man will not think death a terrible thing even should it befall another good man and comrade.

That is our purpose.

Then he would not lament his friend as if something terrible had happened to him.

No.

Further, we would say of him that of all men he is most sufficient to himself in leading the good life. He has least need of anybody else.

True.

So he finds it less terrible than others to endure the loss of a son, a brother, a fortune, or anything else?

That follows.

And when misfortune overtakes him, he will lament but little and bear his sorrow in moderation?

Yes.

Then we shall do well to delete the lamentations of famous men. We can attribute them to women—and not to the better sort of women either—and to men of lesser account. [388] We do this so that those we educate to be guardians of the city will disdain such behavior.

We shall be right in doing so.

Then we must turn once again to Homer and the other poets and ask them not to portray Achilles, himself the son of a goddess,

lying on his side, then on his back,
and again face down,
then rising up distraught and quivering
on a beach of the waste and barren sea,

6. Two of the four rivers of Hades.

nor scooping up ashes with both hands and pouring them on his head,⁷ nor giving way to grief and tears in Homer's various descriptions. Neither should Priam, close kin to the gods, be described in supplication,

calling aloud and rolling in the dung,
entreating each man by name.⁸

Most particularly shall we entreat Homer and the others at least to spare us from those descriptions that have the gods themselves given over to lamentation and wailing:

Alas! Ah, woe is me, unhappy mother,
who gave birth to the bravest, and now to my sorrow.⁹

If they insist on characterizing the gods in this way, they should at least not dare to misrepresent Zeus, greatest of the gods, by putting such words as these into his mouth:

Oh, woe! My heart is afflicted
that I should behold a man most dear to me
being chased around the city of Troy.

or these:

Oh, Sarpedon, dearest of men to me.
Oh, sorrow, he is fated to be slain
by Patroclus, Menoetius's son.¹

Now, my dear Adeimantus, supposing our youth should take seriously such nonsense about the gods instead of laughing at it? Would any of them in that case be likely to think such conduct unworthy of themselves? Would they not reflect that they are only men and therefore have no cause to rebuke themselves for behaving in the way the gods themselves behave? Would they not be likely to abandon shame and self-control, starting to wail and chant dirges at the slightest provocation?

Without doubt.

But our previous reasoning has shown that this is the sort of thing we ought not to permit. And I think we better stick to this position until somebody shows us a better one.

I agree.

Nor must our young men be too fond of laughter. Anyone who gives way to excessive laughter almost always provokes a violent reaction.

So it seems.

It follows that persons of importance ought not to be described as overcome by laughter. [389] Still less should we sanction similar representations of the gods.

7. *Iliad* 24.10–13 and 18.23–24. Achilles: the greatest of the Greek warriors at Troy and the central figure of the *Iliad*.

8. *Iliad* 22.414–15. Priam: the last king of Troy, descended from Zeus.

9. *Iliad* 18.54. The speaker is Thetis.

1. *Iliad* 22.168–69 (Hector is being chased by Achilles), 16.433–34. Sarpedon: a son of Zeus who fought with the Trojans. Patroclus: the dearest friend of Achilles.

Just as you say: such representations of the gods are still less acceptable.

Then these sayings of Homer about the gods are also unacceptable:

Irrepressible laughter spread among the blessed gods
as they saw their Hephaestus bustling about the palace.²

No, we cannot accept them, according to your view.

If you choose to call it my view. At any rate, we must repudiate them.

Further: we must prize truth. We said before that gods have no use for lies. If that is right, and if it is also right that lies are useful to men only as a kind of medicine or remedy, then only doctors should be permitted to use them. Lay persons have no business lying.

Obviously.

Only the rulers of the city—and no others—may tell lies. And their lies, whether directed to enemies or citizens, will be legitimate only if their purpose is to serve the public interest. But no private person may tell lies to rulers. To do so would be a great transgression—greater even than if a patient were to deceive his doctor about the true condition of his body, or if an athlete were to practice a like deception with his trainer. Or, to draw a further analogy, we may liken it to a case where a man conceals from the captain the true conditions prevailing aboard the ship and lies about how he and his fellow sailors fare.

I agree.

Now if the ruler of a city catches anybody lying—besides himself—any of the craftsmen,

whether priest, carpenter, or doctor of medicine,³

he will punish them for subversive practice, as damaging to a city as to a ship.

He will, if words are as good as deeds.

Next, our young people must learn moderation.

Certainly.

And would you agree that the main issues for the multitude concerning moderation are obedience to the rulers and self-rule in regard to the bodily appetites?

I think so.

Then we shall commend what Homer has Diomedes say:

Friend, be quiet and obey my word,⁴

and also what follows:

The Greeks marched forward with valor,
silent, in fear of their captains,⁵

and all similar passages.

2. *Iliad* 1.599–600.

3. *Odyssey* 17.383–84.

4. *Iliad* 4.412. Diomedes: a lord of Argos who

was one of the best Greek fighters at Troy.

5. This couplet combines *Iliad* 3.8 and 4.431.

Yes, these are well said.

But what of these lines and those following them?

Oh, you, heavy with wine, timorous as a deer,
cringing like a dog—⁶

[390] Are these and similar impertinences addressed to rulers by private citizens well said or ill?

They are ill said.

Certainly they are ill suited to prepare the young for the practice of moderation and self-control. But, on the other hand, if listening to such things provides some pleasure, we ought not to be surprised. Or what is your opinion?

The same as yours.

And here we have the wisest of men saying what he thinks the fairest thing in all the world:

Tables laden with bread and meat,
the cup bearer drawing wine from the bowl
and filling our goblets.⁷

Will these words be conducive to temperance in a young man? Or these?

Hunger is the worst of destinies and deaths.⁸

The same question applies to the tale of Zeus, alone and awake, devising plans while men and the other gods slept, only to forget them in a moment when roused by his lust for Hera. So overcome was he by the sight of her that he did not even want to go to the house, and they made love right there upon the ground. Zeus said to Hera he had not felt so fierce a passion even during their courting days when “deceiving their dear parents.”⁹

Nor will self-control among our youth be strengthened if they hear the same theme recounted in the story of Hephaestus fastening together the bodies of Ares and Aphrodite.¹

By Zeus, I think you are right.

But, ah, the words and deeds of famous men enduring against great odds—these are the kinds of things suitable for our young people to see and hear. Consider this example:

He smote his breast and admonished thus his heart:
Endure, my heart; far worse hast thou endured.²

Excellent.

Next, our men ought not to covet gifts or money.

Certainly not.

Then they must not hear it sung that

6. These words of insult are spoken by Achilles to Agamemnon, the leader of the Greeks at Troy (*Iliad* 1.225) [translators' note].

7. *Odyssey* 9.8–10. The lines are spoken by Odysseus, who is often described as clever or scheming.

8. *Odyssey* 12.342.

9. See *Iliad* 14.294–351 (quotation, 296).

1. The story of Hephaestus's magical bed which entrapped Ares [god of war] and Aphrodite in the act of adultery is told in Book 8 of Homer's *Odyssey* [translators' note]. Aphrodite, the goddess of love and beauty, was Hephaestus's wife.

2. *Odyssey* 20.17–18.

Gifts persuade the gods, gifts persuade dread kings.³

Neither can we endorse the counsel Phoenix urged upon his pupil Achilles: that he should accept gifts from the Greeks and help them, but if they offered no gifts, he should continue to show them his anger. Neither shall we say or believe of Achilles himself that he was so greedy as to accept gifts from Agamemnon or that he demanded payment to yield up a corpse [391] and would otherwise refuse to do so.⁴

Such conduct must not be condoned.

My regard for Homer makes me hesitate to charge him with outright impiety when he imputes such deeds and sentiments to Achilles. But he does not persuade me. Nor do others who say the same things. I cannot believe, for example, that Achilles would say to Apollo:

You have impeded me, O most malignant of the gods.
King of the bowmen, I would take revenge upon you,
had I the power.⁵

Neither do I trust those stories of his disobedience to the river god and his readiness to fight with him.⁶ Nor will I credit the allegation that he promised and consecrated the locks of his hair to the other river god, Spercheus, and then offered them up instead to the dead Patroclus.⁷

That Achilles actually did all these things is something we must not believe. We shall reject the charges that he dragged Hector's body around the tomb of Patroclus and slew living victims on the funeral pyre.⁸ We must not suffer our youth to suppose that Achilles, pupil of the most wise Chiron⁹—Achilles, son of a goddess and of Peleus, the most chaste of men and grandson of Zeus—could be so at odds with himself as to suffer from two contradictory maladies: greed such as becomes no free man and a brazen arrogance toward both gods and men.

No. These sorts of things we shall neither sanction nor believe.

Let us also adopt the same posture concerning those dreadful stories of rape that are told about Theseus, son of Poseidon, and Pirithous, the son of Zeus himself.¹ Let us refuse to believe that any other child of a god—or any hero—would dare to do such wicked deeds as people tell us nowadays. What we must do is either to require our poets to deny that such deeds were ever done or else to deny that children of the gods did them. They may speak of the deeds or of the doers, but must not join one to the other. We will not have poets attempting to persuade our youth that the gods beget evil and that heroes are no better than men. As we said earlier, such views are both sacrilegious and false. Or am I not right in saying we have already proved that gods cannot possibly cause evil?

3. A proverb.

4. The incident alluded to is Achilles' agreement to release the body of Hector to his father Priam, a story told in Book 24 of the *Iliad*. It should be noted, however, that Achilles does not demand gifts; he is prepared to return the body in response to the command of the gods [translators' note].

5. *Iliad* 22.15, 20.

6. Homer relates that Achilles ignored the urging of the Scamander River to stop bloodying its waters by the slaughter of so many Trojans (*Iliad* 21.214ff.) [translators' note].

7. Achilles' father Peleus had vowed to offer locks of hair from his son's head when Achilles returned from Troy safely. Instead Achilles placed them on the pyre of his fallen friend Patroclus because he knew that he would never return home (*Iliad* 23.138–51) [translators' note].

8. *Iliad* 24.14–18, 23.175–77.

9. A wise centaur, whose pupils included many great heroes of Greek mythology.

1. Theseus and Pirithous joined to carry off Helen, Menelaus's wife, and Persephone, the queen of the underworld [translators' note].

You are right.

Furthermore, these views are harmful to those who hear them. A person will not fail to be lenient with himself and his own trespasses if he believes that the kinds of shameful deeds we have just been discussing are acts of

the gods' own kin, the relatives of Zeus,
of those whose ancestral altar
flames high atop Mount Ida
and in whose blood line courses still
the flame of immortality.²

So let us put an end to all these stories lest our youth [392] sink into moral turpitude.

Yes, let us do so.

Well, then, what is there still to talk about in the matter of censorship and storytelling? Have we omitted anything? We have already considered gods, daemons, heroes, and the netherworld.

We have.

Then what we have still to discuss are the stories about men.

Right.

But, my friend, this is something we cannot possibly do at this point.

Why not?

Because I suppose we shall again be saying that writers of both poetry and prose speak falsely of men, and in matters of the greatest moment. They will offer numerous examples of unjust men who are happy and just men who are wretched. They will assert that there is profit in injustice if it can be concealed, while justice is invariably your loss and another man's gain. I presume that we shall forbid them to say these things and then compel them to say and sing to the contrary. Do you concur?

I am sure of it.

* * *

Then we can say that good words, good harmony, good grace, and good rhythm follow from the good order and disposition of the soul. By "good disposition" we don't mean "good-natured," a term so often used as indulgent description of someone who is simple-minded. We mean to describe instead a soul in which reason has been educated to govern in goodness and truth.

I agree.³

Are these not the things our youth must strive for if they are to fulfill their own true purposes?

This is what they must do.

[401] And are not many of these things to be found in painting and in all similar arts—weaving, embroidery, furniture making, and architecture? So too in the natural world of animals and plants. In all of these we can find grace and gracelessness. Gracelessness, disharmony, and discord are closely linked to evil words and an evil temper. The opposite qualities are bound together in the same way.

You are right.

2. From the *Niobe* of Aeschylus.

3. Glaucon is speaking here.

Should we conclude, then, that our supervision should be confined only to poets, compelling them to summon up the image of goodness in their poems or else to forgo writing poetry among us? Or should we extend our guidance to those in the other arts and forbid representations of any kind of evil disposition—of what is licentious, illiberal, and graceless—whether in living creatures, in buildings, or in any other product of the arts of man? Here, too, we would penalize disobedience by excluding them from the practice of their art in our city. In this way we could protect our guardians from growing up in the presence of evil, in a veritable pasture of poisonous herbs where by grazing at will, little by little and day by day, they should unwittingly accumulate a huge mass of corruption in their souls.

By the same token, we should seek out artists and craftsmen whose natural gifts enable them to discern true beauty and grace. Then we shall have a salubrious climate in which our young may dwell and benefit from all their surroundings, where works of beauty are conveyed to eye and ear like breezes bringing health from wholesome places. In this way, from early childhood on, they would easily live in harmony and friendship with beauty and reason, coming finally to resemble them.

A truly noble concept of education.

That is why education in poetry and music is first in importance, Glaucon. Rhythm and harmonies have the greatest influence on the soul; they penetrate into its inmost regions and there hold fast. If the soul is rightly trained, they bring grace. If not, they bring the contrary. One who is properly educated in these matters would most quickly perceive and deplore the absence or perversion of beauty in art or nature. With true good taste he would instead delight in beautiful things, praising them and welcoming them into his soul. He would nourish them and would himself come to be beautiful and good. [402] While still young and still unable to understand why, he will reject and hate what is ugly. Then, later, when reason comes to one so educated, his affinity for what is good and beautiful will lead him to recognize and welcome her.

You have given the best possible reasons for studying poetry and music.

Do you also see that this way of studying them resembles the way we learned to read? We could not become proficient in reading until we knew the individual letters of the alphabet and recognized each of them in all the various word combinations in which they appear. So we learned that it was necessary to pay attention to everything—great or small—and disregard nothing in our texts if we were ever to become letter-perfect and so fully literate.

True.

Supposing we had seen some letters reflected in a mirror or in water? We should never have known what they were unless we had previously come to know them in their original forms. But is it not also true that knowledge of both original and likeness is attained through one and the same kind of study and discipline?

Yes.

By the gods, then, I am right. We can have no truly educated men—no true musicians whether we speak of ourselves or of those we want to train to be guardians—unless we can understand the nature of such things as courage,

temperance, generosity, or nobility, both in their original essential forms and in the resemblances of the forms. We must understand their opposites as well, also in form and image. We must understand them in all the combinations in which they appear—great or small—paying attention to everything and disregarding nothing. And once again we must recognize that we attain this kind of understanding through one and the same kind of study and discipline.

You make a compelling case.

Then wherever there is a correspondence between beauty in the soul and in the body, both reflecting beauty in its original form, will that not be the fairest sight of all for those who can see?

Surely the fairest.

And the fairest is the most beloved?

Of course.

Then the well-educated man, the true musician, would love this kind of person. But where there is disharmony, there he would not love.

He would not love if the defect were in the soul. But if it were a defect of the body, he would not turn away; he would love nonetheless.

I understand. You know whereof you speak, and I agree. But let me put another question: can there be any connection between temperance and the extremes of pleasure?

How could there be? After all, we know that extreme pleasure drives a man out of his mind no less than extreme pain.

And his bonds with virtue are severed?

[403] Yes.

But there are links between pleasure, insolence, and license?

Yes.

Do you know of any pleasure more exciting and sensuous than sex?

No. Nor any more likely to drive a man mad.

But is not true love temperate and harmonious, a love of beauty and order?

Indeed.

So nothing of madness or license must be allowed to intrude upon true love?

No.

Then mad or intemperate pleasure cannot be sanctioned. Lover and beloved who love rightly must not have anything to do with it.

No, Socrates, they must not.

I assume, then, that in the city we are founding you would propose a law whereby a lover is permitted to kiss and touch his beloved with honorable purpose like a father would his son, if the beloved consents thereto. But he would be allowed to go no further; otherwise, by manifesting a want of taste and culture, he would court disgrace.

Quite right.

Would you also agree that our discussion of music is now finished? What could be more fitting than to complete our analysis by showing that the purpose of poetry and music is to cultivate the love of beauty?

It is a fitting conclusion.

From *Book VII*

[514] Here allegory may show us best how education—or the lack of it—affects our nature. Imagine men living in a cave with a long passageway stretching between them and the cave's mouth, where it opens wide to the light. Imagine further that since childhood the cave dwellers have had their legs and necks shackled so as to be confined to the same spot. They are further constrained by blinders that prevent them from turning their heads; they can see only directly in front of them. Next, imagine a light from a fire some distance behind them and burning at a higher elevation. Between the prisoners and the fire is a raised path along whose edge there is a low wall like the partition at the front of a puppet stage. The wall conceals the puppeteers while they manipulate their puppets above it.

So far I can visualize it.⁴

Imagine, further, men behind the wall carrying all sorts of objects along its length and holding them above it. The objects include human and animal images made of stone and wood [515] and all other material. Presumably, those who carry them sometimes speak and are sometimes silent.

You describe a strange prison and strange prisoners.

Like ourselves. Tell me, do you not think those men would see only the shadows cast by the fire on the wall of the cave? Would they have seen anything of themselves or of one another?

How could they if they couldn't move their heads their whole life long?

Could they see the objects held above the wall behind them or only the shadows cast in front?

Only the shadows.

If, then, they could talk with one another, don't you think they would impute reality to the passing shadows?

Necessarily.

Imagine an echo in their prison, bouncing off the wall toward which the prisoners were turned. Should one of those behind the wall speak, would the prisoners not think that the sound came from the shadows in front of them?

No doubt of it.

By every measure, then, reality for the prisoners would be nothing but shadows cast by artifacts.

It could be nothing else.

Imagine now how their liberation from bondage and error would come about if something like the following happened. One prisoner is freed from his shackles. He is suddenly compelled to stand up, turn around, walk, and look toward the light. He suffers pain and distress from the glare of the light. So dazzled is he that he cannot even discern the very objects whose shadows he used to be able to see. Now what do you suppose he would answer if he were told that all he had seen before was illusion but that now he was nearer reality, observing real things and therefore seeing more truly? What if someone pointed to the objects being carried above the wall, questioning him as to what each one is? Would he not be at a loss? Would he not

4. Glaucon is Socrates' interlocutor here.

regard those things he saw formerly as more real than the things now being shown him?

He would.

Again, let him be compelled to look directly at the light. Would his eyes not feel pain? Would he not flee, turning back to those things he was able to discern before, convinced that they are in every truth clearer and more exact than anything he has seen since?

He would.

Then let him be dragged away by force up the rough and steep incline of the cave's passageway, held fast until he is hauled out into the light of the sun. Would not such a rough passage be painful? Would he not resent the experience? [516] And when he came out into the sunlight, would he not be dazzled once again and unable to see what he calls realities?

He could not see even one of them, at least not immediately.

Habituation, then, is evidently required in order to see things higher up. In the beginning he would most easily see shadows; next, reflections in the water of men and other objects. Then he would see the objects themselves. From there he would go on to behold the heavens and the heavenly phenomena—more easily the moon and stars by night than the sun by day.

Yes.

Finally, I suppose, he would be able to look on the sun itself, not in reflections in the water or in fleeting images in some alien setting. He would look at the sun as it is, in its own domain, and so be able to see what it is really like.

Yes.

It is at this stage that he would be able to conclude that the sun is the cause of the seasons and of the year's turning, that it governs all the visible world and is in some sense also the cause of all visible things.

This is surely the next step he would take.

Now, supposing he recalled where he came from. Supposing he thought of his fellow prisoners and of what passed for wisdom in the place they were inhabiting. Don't you think he would feel pity for all that and rejoice in his own change of circumstance?

He surely would.

Suppose there had been honors and citations those below bestowed upon one another. Suppose prizes were offered for the one quickest to identify the shadows as they go by and best able to remember the sequence and configurations in which they appear. All these skills, in turn, would enhance the ability to guess what would come next. Do you think he would covet such rewards? More, would he envy and want to emulate those who hold power over the prisoners and are in turn revered by them? Or would he not rather hold fast to Homer's words that it is "better to be the poor servant of a poor master,"⁵ better to endure anything, than to believe those things and live that way?

I think he would prefer anything to such a life.

Consider, further, if he should go back down again into the cave and return to the place he was before, would not his eyes now go dark after so abruptly leaving the sunlight behind?

They would.

Suppose he should then have to compete once more in shadow watching with those who never left the cave. And this before his eyes had become accustomed to the dark [517] and his dimmed vision still required a long period of habituation. Would he not be laughed at? Would it not be said that he had made the journey above only to come back with his eyes ruined and that it is futile even to attempt the ascent? Further, if anyone tried to release the prisoners and lead them up and they could get their hands on him and kill him, would they not kill him?

Of course.

Now, my dear Glaucon, we must apply the allegory as a whole to all that has been said so far. The prisoners' cave is the counterpart of our own visible order, and the light of the fire betokens the power of the sun. If you liken the ascent and exploration of things above to the soul's journey through the intelligible order, you will have understood my thinking, since that is what you wanted to hear. God only knows whether it is true. But, in any case, this is the way things appear to me: in the intelligible world the last thing to be seen—and then only dimly—is the idea of the good. Once seen, however, the conclusion becomes irresistible that it is the cause of all things right and good, that in the visible world it gives birth to light and its sovereign source, that in the intelligible world it is itself sovereign and the author of truth and reason, and that the man who will act wisely in private and public life must have seen it.

I agree, insofar as I can follow your thinking.

Come join me, then, in this further thought. Don't be surprised if those who have attained this high vision are unwilling to be involved in the affairs of men. Their souls will ever feel the pull from above and yearn to sojourn there. Such a preference is likely enough if the assumptions of our allegory continue to be valid.

Yes, it is likely.

By the same token, would you think it strange if someone returning from divine contemplation to the miseries of men should appear ridiculous? What if he were still blinking his eyes and not yet readjusted to the surrounding darkness before being compelled to testify in court about the shadows of justice or about the images casting the shadows? What if he had to enter into debate about the notions of such matters held fast by people who had never seen justice itself?

It would not be strange.

[518] Nonetheless, a man with common sense would know that eyesight can be impaired in two different ways by dint of two different causes, namely, transitions from light into darkness and from darkness into light. Believing that the soul also meets with the same experience, he would not thoughtlessly laugh when he saw a soul perturbed and having difficulty in comprehending something. Instead he would try to ascertain whether the cause of its faded vision was the passage from a brighter life to unaccustomed darkness or from the deeper darkness of ignorance toward the world of light, whose brightness then dazzled the soul's eye. He will count the first happy, and the second he will pity. Should he be minded to laugh, he who comes from below will merit it more than the one who descends from the light above.

A fair statement.

From *Book X*

[595] Indeed. And many other things about our city convince me that we have built it truly. When I say this, I think particularly of the role we assigned to poetry.

What do you mean?⁶

We barred any kind of poetry that is imitative;⁷ under no circumstances can it be admitted to the city. The reason for excluding it should be still more evident than before now that we have examined the soul's several parts.

What do you mean?

Well, don't go tattling to the tragic poets and all the other mimics. But, between ourselves, it appears to me that their art corrupts the minds of all who hearken to them, save only those whose knowledge of reality provides an antidote.

What do you have in mind when you say that?

My love and reverence for Homer since I was a boy makes me hesitate. Yet I must speak out: he seems to have been the first teacher and originator of all these beautiful tragedies. Honoring truth must take precedence over honoring the man. Hence my conviction that one must speak his mind.

That much is certain.

Then listen. Or, rather, answer.

Then ask.

Could you tell me in general what imitation is? I myself am hardly able to understand its nature and purpose.

Then how should I be able to understand it?

Nothing to wonder at. You know that men with duller vision [596] often see things before those with keener sight.

True. But in your presence I find myself unwilling to say just anything that occurs to me. So speak up yourself.

Very well. Shall we begin the inquiry by following our customary procedure? I think we have generally followed the practice of subsuming multiplicities under a single form or idea and then calling them collectively by a single name.⁸ Do you understand?

I understand.

Then consider some multiplicity of your choice. For example, there are many beds and tables.

Of course.

But among these furnishings, I suppose, there are only two forms: one of a bed and one of a table.

Agreed.

Is it not also our custom to say that the carpenter who makes a bed or table or some other piece of useful furniture looks to the form of each? Presumably no craftsman produces the form itself. How could he?

He could not.

Now, what would you call this next kind of craftsman?

What kind?

6. Glaucon is Socrates' interlocutor here.

7. Tragedy and epic; insofar as they are imitative, they are by definition removed from reality. The total ban here seems to contradict *Republic* 2

and 3, where Socrates encourages literary representation of behavior that is appropriate and good.

8. That is, the Idea or Form.

The one who can make all the things that each class of artisan considers its own specialty.

I would call him a clever and wonderful man.

Wait. Soon you will say even more. Not only is this craftsman able to construct all practical contrivances. He also breeds all plants and animals, including himself. Still more, he creates the earth and sky, the gods and all things in heaven and in Hades under the earth.

Now I would call him a wonderful sophist.⁹

Are you skeptical? Tell me, do you think no such craftsman could exist? Or do you think it possible that in some sense there could be one who makes all these objects but in another sense not? Or don't you realize that in a certain way you yourself could be the maker of all things?

And what way is that?

The way is not difficult. It can be quickly managed anywhere on earth—most quickly if you are prepared to carry a mirror with you wherever you go. Quickly you will produce the sun and the things of heaven; quickly the earth; quickly yourself; quickly all the animals, plants, contrivances, and every other object we just mentioned.

But only in appearance; not in reality.

Excellent. You advance the argument at just the right moment. Now, the painter is one kind of craftsman, is he not?

Of course.

I suppose you will say that what he creates is unreal. Still, in a certain way, he does make a bed, doesn't he?

Yes. He makes something resembling a bed.

[597] Once again, how about the carpenter? Weren't you just saying that he also does not make a real bed? He simply makes a particular bed and not what we call the real bed, the form of a bed.

Yes. I said that.

Then he is not making something real but only a facsimile. That is not reality. So if someone should say that the carpenter's work (or that of other artisans) is the same as reality, he could hardly be called truthful.

At least, that would be the view of people who devote their time to these kinds of arguments.

No wonder, then, that the one who makes beds also offers only a dim reflection of the truth.

No wonder.

Shall we now apply these examples to aid us in finding out what an imitator really is?

If you wish.

Well, then, it turns out there are three kinds of beds. One exists in nature. I suppose we would say god created it. Who else could?

No one else, I should think.

And then the bed the carpenter made.

Yes.

And the one made by the painter. Right?

All right.

9. An itinerant teacher of the 5th century B.C.E.; sophists were Greece's first professional teachers (see GORGAS).

So we have the painter, the carpenter, and god. These three produce three kinds of beds.

Three. Right.

God, then, whether he willed it or because he felt some constraint not to make more than one bed, did in fact make only one bed, the real bed. Never were two or more beds made by god, nor would they ever be.

Why not?

I shall explain. Even if he had made only two beds, a third would unavoidably appear. That would be the real bed, of which the other two would only be copies.

Right.

God, I suppose, knowing this and wishing to be the real creator of the real bed and not some particular craftsman making some particular bed, wrought in nature only one bed.

Apparently.

Shall we call him something like its true and natural creator?

That would be fitting since he has created this and everything else in nature.

What about the carpenter? Does he not make a bed?

Yes.

And the painter? Does he not also create a bed?

Certainly not.

Then what relationship does he have with the bed?

I think it would be most fair to call him an imitator of things that others create.

So one who makes something at third remove from nature you call an imitator?

Indeed I do.

And the maker of tragedies is also thrice removed, as it were, from the king and the truth. He is therefore an imitator like all other imitators?

It seems so.

Then we agree about the imitator. Now let us return to the painter. [598] Is it his habit to imitate the original in nature or the craftsmen's products?

What the craftsmen make.

As they are or as they appear to be? This is a distinction still to be made.

What do you mean?

This. If you look at a bed from the side or the front or from any other angle, is it any different? Or does it remain the same in fact but different in appearance—and does this not hold for everything else?

The latter is true. It looks different, but it's not different.

This, then, is the point we want to consider. Does painting imitate reality or appearance? Does it imitate illusion or truth?

Illusion.

Then imitation is surely far from truth. This probably explains why the imitator will put his hand to anything; he grasps only a small fragment of whatever it is he works with, and even that is unreal. The painter, for example, will portray a shoemaker, a carpenter, or other craftsmen without any understanding of the arts they use. Nonetheless, if he is a good artist and displays his portrait of the carpenter from a distance, he would deceive children and unreasoning men into believing that they were seeing a real carpenter.

Why not?

At any rate, my friend, I think this is what we should keep in mind in all such matters. When anyone tells us that he has met some person who knows all the arts and everything else known to man—that there is nothing he does not know better than everybody else—we must tell him that he is gullible and must have met a magician and been deceived. He was duped into thinking such a person omniscient because of his own inability to test and verify the difference between knowledge, ignorance, and imitation.

That is certain.

Now let us consider tragedy and Homer as its master. Some say the tragic poets know all the arts, all things human, all things pertaining to virtue and vice, all things divine. They claim that the good poet writing good poetry must know what he is writing about; otherwise he would not be able to be a poet. Therefore we must ask whether those who talk this way may have been keeping company with imitators who deceived them; whether, in consequence, they looked at the works of poets [599] but did not understand that they were thrice removed from reality and could easily be produced without any knowledge of truth. For poets contrive appearances and not reality. Or is there something in what they say? Do good poets really know what many think they say so well?

The question certainly requires examination.

Then if a man were able to produce both realities and illusions, do you think he would choose to work with illusions and devote himself to them as the best that life could offer?

No.

I would suppose, if he actually knew the things he imitates, he would do those things and leave off imitating. Would he not try to leave as his memorial a tangible record of many splendid deeds? Would he not rather be the one who is praised than the one who praises?

I should think he would. In deeds there is far greater honor and profit.

Well, let us not demand an accounting from Homer or any of the other poets whether any of them were really doctors or whether they merely copied off medical language. Nor will we ask whether any poet, past or present, has ever healed men as Asclepius¹ healed them; nor whether he has left behind heirs to his medical knowledge the way Asclepius did. And we shall forgo questions about any of the other arts. But surely it is fair to inquire of Homer concerning the greatest and most estimable things he undertook to speak of: wars, military skills, the governing of cities, and the education of men.

“Beloved Homer,” we could say, “if your words about virtue are not at third remove from the truth, if you don’t fit our definition of the imitator as an inventor of dreams—if you are instead next neighbor to truth and can identify the kinds of behavior that make men better or worse in both private and public life—then tell us what city has ever been better governed thanks to you. Sparta owes thanks to Lycurgus. Many other cities, small and great, owe a similar debt of thanks.² What city gives you credit for having been a

1. Hero and god of healing (in the *Iliad*, a mortal).

2. The next several lines contain the names of a series of lawgivers who gained fame for their suc-

cess in designing successful constitutions [translators’ note]. Lycurgus: traditional founder of the Spartan political, social, and legal systems.

good lawgiver or benefactor? In Italy and Sicily, Charondas is so credited; among us it is Solon.³ Who credits you?" Will there be any he can name?

I don't suppose so. Even Homer's followers have never mentioned any.

[600] Can we recall any war in Homer's time won under his command or as a result of his advice?

None.

What about the inventions and practical devices that we expect from men skilled in crafts? Thales the Milesian and Anacharsis from Scythia are credited with many.⁴ How about Homer?

None.

Well, if Homer has no record of public service, what report do we have of him as a private educator around whom men gathered because they cherished his teachings? Did he and they pass on to posterity a kind of Homeric way of life after the manner of Pythagoras?⁵ Such a legacy is counted among Pythagoras's greatest achievements. Even now his successors use the term *Pythagorean* to denote a certain way of life that many of our contemporaries look upon with respect.

Once again, Socrates, there is no report. To look on his companion Creophylus as representative of Homeric culture might turn out to be a more promising subject for ridicule than the name Creophylus itself.⁶ For if the things said about Homer are true, he was neglected by that child of the flesh during most of his lifetime.

So tradition tells us. Don't you suppose then, Glaucon, that if Homer had really been able to educate men and make them better because he was a man of real knowledge and not an imitator, he would have had many companions and been loved and honored by them? After all, Protagoras of Abdera and Prodicus of Ceos⁷ and others are able to attract many of their contemporaries to their private lessons, where they impress upon their listeners that without instruction from them they will be able to govern neither their cities nor their own homes. This is the wisdom that makes them so beloved that their students all but carry them about on their shoulders. If Homer had helped men to achieve excellence, surely his contemporaries would not have let him and Hesiod live as itinerant reciters of poetry. Would they not sooner have parted with gold than with their poets? Would they not have insisted that they stay with them and dwell in their homes? Failing that, would they not have followed and attended them until they were able to receive from them an adequate education?

I think your questions are to the point, Socrates.

Then we should be prepared to declare that the entire tribe of poets—beginning with Homer—are mere imitators of illusions of virtue and imita-

3. Athenian statesman and poet (ca. 638–559 B.C.E.), who reformed the city's constitution. Charondas (6th c. B.C.E.), lawgiver of Catana and other colonies of Chalcis in Sicily.

4. Thales and Anacharsis are both counted among the seven sages of antiquity. Thales was a philosopher, statesman, and mathematician; his most famous exploit was his calculation of an eclipse that occurred on May 28, 585 B.C.E. Anacharsis is reported to have invented the anchor and the potter's wheel [translators' note].

5. Pythagoras [6th c. B.C.E.] based his philosophi-

cal and religious beliefs on mathematical formulations. He provided an education for his followers based on his "way of life." In southern Italy he founded a religious brotherhood in the city of Croton [translators' note].

6. Creophylus literally means "of the beef tribe"; he is supposed to have been a friend of Homer and an epic poet [translators' note].

7. Greek sophist, a contemporary of Socrates. Protagoras (5th c. B.C.E.), Greek philosopher, one of the most successful of the sophists.

tors as well of the other things they write about. They don't lay a hand on truth. Instead, as we said a moment ago, they are like the painter who knows nothing about cobbling [601] but who creates what seems to be a shoemaker in the eyes of those who also know nothing of the subject and who judge simply in terms of shape and color.

You are right.

I suppose we may say the same of the poet himself. He only knows how to imitate, daubing the several arts with words and phrases but understanding nothing. His imitations speak to those who are equally ignorant and who see things only through words. The poet will use meter, rhythm, and harmony; and no matter whether his subject matter concerns generals or shoemakers, his hearers will call everything praiseworthy. It is true that these embellishments have great charm. But once the poet's words are said alone, without the accompanying music and color, I think you know what kind of showing they make. Surely you have observed for yourself.

I have.

Are his words not like faces that once were young but never beautiful and from which youth is now departed?

Exactly.

Now consider still another proposition: The imitator, the one who creates illusions, does not understand reality but only what reality appears to be. Would you agree to that?

Yes.

All right. But we mustn't leave the matter at midpoint. It ought to be discussed fully.

Go ahead.

Well, we might say that the painter paints reins and a bit.

Yes?

But they are manufactured by a cobbler and a smith?

Of course.

Does the painter know the true characteristics of reins and bit? Or is it not true that even the artisans, the cobbler and the smith, fail to understand their nature? Is it not true that only the horseman understands how to use them?

That is true.

Then we can say that the same holds true for everything.

What?

Everything finds expression in three arts: the art that uses, the art that creates, and the art that imitates.

Yes?

But judgments about what is true, beautiful, or good in any living thing, any human action, or any human art ought to be made only in terms of the use that nature or the artisan intended them for.

True.

Then the conclusion must necessarily follow that he who uses anything is the one who knows most about it. He draws on his experience in reporting its merits and defects to the maker. For example, a flutist will tell the flute maker which of his flutes performs best in concert; he will order accordingly, and the flute maker will do his bidding.

You are right.

He who possesses knowledge, then, will make judgments concerning the degree of excellence of the flutes; the other will heed him and make the flutes accordingly.

Yes.

So the user will have true knowledge. But the maker will also trust his own judgment concerning the merits and defects of the instrument because he associates with, [602] and hence is compelled to listen to, the man who knows.

True.

But what about the imitator? Will experience or application teach the painter what is beautiful and real? Were he compelled to keep company with the man who knows and who tells him what to paint, would he be persuaded?

No.

Then neither knowledge nor opinion can help the imitator to arrive at valid judgments about his own imitations.

It seems not.

So far as understanding his own work, then, the situation of poet and imitator must be truly delightful.

Not at all. Quite the reverse.

Nonetheless, he will keep on imitating, and never will he understand why something is bad or good. And what he will imitate is all too evident: whatever pleases the ignorant masses.

Of course.

So it seems that we are all but agreed on these matters: the imitator knows hardly anything about the things he imitates; imitation is a kind of game and not to be taken seriously; and those who write tragedies, either in iambic or heroic verse,⁸ are the most extravagant of all the imitators.

Agreed.

By heaven, then, it follows that imitation must be concerned with things at the third remove from truth.

Agreed.

And which part of man responds to imitation's power?

What do you mean?

Let me illustrate. I assume you would agree that the mass of any magnitude looks different when viewed from near and then from far?

I agree.

And that straight things appear bent when seen underwater? And that color can distort our vision so that concave becomes convex? The source of all these illusions is plainly to be found in some part of our souls. There is where we shall find the flaw in our nature that the imitators exploit, where they manipulate light and dark so that their conjuror's tricks and marionette shows appear to be nothing short of magic.

True.

Now the full beauty of man's capacity to weigh, to measure, and to number comes to light. All are antidotes to error. They liberate our souls from illusory perceptions of what is greater or less or more or heavier, so that we may be governed by those things that we can weigh, measure, and reckon.

That is unquestionably true.

8. The meter of epics (heroic verse) is dactylic hexameter (a 6-foot line based on the syllabic patterns long-short-short); iambic trimeter (a

3-foot line based on the syllabic pattern short-long) was the most common meter of dialogue and set speeches in tragedies.

And these would obviously be functions of that part of the soul that reasons and calculates.

Clearly.

But when the reasoning part measures and demonstrates that some things are equal, some are larger, and some smaller, won't it often be contradicted by appearance, by the way these same things seem to be?

Yes.

And didn't we judge it impossible that one could simultaneously hold contradictory opinions about the same thing?

We did, and rightly so.

[603] Then that part of the soul that rejects the evidence of measurement and the part that affirms it cannot be the same.

True.

Further: the best part of the soul is that which relies on calculation and measurement?

Clearly.

And the contrary part is to be found among the lesser elements of the soul? Necessarily.

This is the point I was getting at when I said that the works produced by painting and imitation are generally far from truth. Such arts appeal to that part in us which is far removed from intelligence. They cannot be our companions or friends for any good or healthy purpose.

Very true.

Hence imitation is a defective art. It mates with what is also defective, and so it produces defective offspring as well.

Apparently.

Does all this apply only to vision? Or does it also apply to hearing and hence to poetry?

It probably applies to both.

But we ought not to rely only on the plausibility of the analogy we drew from painting. Let us instead consider directly that part of the mind to which imitative poetry makes its specific appeal. We must discover whether this part of the mind is superior or inferior.

We have an obligation to try.

Put it this way. Let us say that imitation simulates the actions of human beings, whether the acts be freely willed or performed under compulsion. It also reports the actors' judgments whether the results were good or ill, and whether they felt joy or sorrow. Is there anything else to say?

Nothing.

In all of this, then, is any man of one mind? Or are confusion and contradiction evident here just as they were when we were discussing the phenomenon of vision? Is a man ever of two minds about the same thing? When it comes to action, is he divided against himself? Does he experience internal strife? But I realize that there is now no need for us to come to an agreement about these matters. We found sufficient agreement in previous discussions⁹ that our souls are always teeming with ten thousand such contradictions.

We were right in making the agreement.

9. In *Republic* 4.439b–444a, where Socrates argues that each mind or soul is divided into three distinct and sometimes warring parts (the rational, the spirited, and the desiring).

Yes. But I think we omitted something then that must be considered now. What is it?

We surely said it before this: a good man who has the misfortune to lose a son or suffer some other kind of loss of something most dear to him will bear what he has to bear with greater composure than others.

Of course.

Now consider this. Will he feel no pain? Or, since that could not be, will he be temperate in giving vent to his grief?

The latter is closer to truth.

[604] Now tell me this. When will he make the greater effort to fight back and endure the pain? When he is among others or when he is by himself?

His struggle will be greater when he is seen by others.

But when he is alone, I should think he would dare to utter many things he would be ashamed of were others to hear them? He would do many things that he would rather not have others see him do?

True enough.

Do not law and reason sustain the will to endure? Is it not the suffering itself that goads a man to give way to his grief?

Yes.

So when we observe two contradictory impulses simultaneously at work within a man, must we not infer the presence of two distinct motives?

Clearly.

One of which is ready to follow the precepts of the law?

What do you mean?

The law, I should imagine, admonishes us to maintain our equanimity in adversity, insofar as that is possible. It bids us shun discontent because we cannot know what is truly good or evil in such situations. No one benefits from despondency, and nothing in mortal life deserves that much concern. Finally, grief prevents us from attaining the thing we need the most and as quickly as possible.

What is that?

Thought. We need to think about what has happened to us. One must accept the way the dice fall and then order one's life according to the dictates of reason. One ought not to behave like children who have stumbled, wasting time wailing and pressing one's hands to the injured part. Instead, the soul should learn to remedy the hurt forthwith, to restore what has fallen, and to remedy the complaint with the appropriate medicine.

Surely that is the best way to deal with whatever chance may bring.

The best part of us, we have said, is willing to follow these rules of reason?

Clearly.

Then must we not also say that the part of us which leads us to dwell on past sufferings and positively revels in lamentation is our idle and irrational side and the very author of cowardice?

We will say that.

Then that part of our personality given to despondency presents many and diverse occasions for imitation. Much different is our disposition to be reasonable and intelligent. It remains relatively constant and is not easy to imitate. Nor would the imitation be easy to understand (especially by some disorderly mob in a theater) because it would be reflecting a disposition alien to the crowd.

[605] Very true.

It should be evident that the imitative poet is far removed from the better disposition of our souls. Since he covets applause from the multitude, his pursuit of wisdom leads in a different direction. He devotes himself to unstable or choleric characters because they are easier to imitate.

That is also true.

Hence we would be justified in laying hold of the poet and setting him down as the counterpart of the painter. Like the painter, his works are distant from reality. Poet and painter also resemble one another in their appeal to the inferior part of the soul and their neglect of the best part. At last, then, we have arrived at a justification for not admitting the poet to a well-ordered state. Because he calls forth the worst elements in the soul and then nourishes them and makes them strong, he destroys the soul's reasoning part. All this finds a parallel in any city where someone makes the wicked mighty, appoints them the city's governors, and corrupts the city's best elements. The imitative poet has exactly the same impact on the private individual. He corrupts the individual's character with fabrications far removed from reality and panders to the soul's fool that cannot even distinguish big from little.

Well said.

But the gravest indictment remains to be discussed. The poet's power to corrupt even the best men—with rare exceptions—is surely the most serious cause for alarm.

If the effect is what you say, it surely is.

Listen and consider this. When Homer or one of the other tragic poets imitates a grieving hero and causes him to utter extended lamentations or has him chant and beat his breast, you know that even the best of us enjoy it. We are held captive by the imitation; we suffer with the hero, and whoever can most powerfully evoke this mood in us we call the best poet.

Of course. I know that.

When we experience personal sorrow ourselves, however, quite the contrary occurs. We pride ourselves if we are able to maintain our equanimity and bear the burden. We reckon this to be a man's behavior. But what we found favor with just now in the poem we generally consider to be the behavior of women.

I recognize that.

Is it right that we should respond in this manner? We see a man impersonate the kind of character that we would despise and reject in ourselves. Yet we do not disapprove; instead, we enjoy ourselves and praise the performance.

By Zeus! That certainly doesn't seem reasonable.

[606] It will seem reasonable enough if we consider what follows.

What?

Consider how in our own misfortunes we forcibly constrain that part of our soul that hungers for tears and the satisfaction of a cry. This is the part whose nature it is to desire these things; this is the part that finds satisfaction and enjoyment in the poets. And the best part of us, when it observes the suffering of others and has not been sufficiently educated by either reason or habit, will relax its control over the sentiments. After all, there is no disgrace in comforting and pitying what is evidently a good man when he gives way to an excess of grief. Instead, to do so would be counted as a

vicarious pleasure and pure gain, something one would not willingly forgo by disdaining to hear the whole poem. That happens, I suppose, because only a few men will reflect that the vicarious enjoyment of other people's sufferings has an effect upon one's own. Lavishing pity on others makes it hard to contain pity when it comes to our own sufferings.

That is true.

Must we not apply the same principle to the things that make us laugh? Are there not jokes you would be ashamed to repeat but which provide you with much amusement when you hear them privately or at a comedy? In these circumstances you see no disgrace in laughing at them just as in the other example there seemed no cause for disgrace in giving vent to pity. Here, too, your reason is at work admonishing the comic in you so that you will not gain the reputation of a buffoon. But when others joke, you let your comic sense run loose. Indulging it, you return to your own affairs and discover that you have unwittingly become a comic poet.

Right again.

Sex, anger, and all the desires, as well as all the pleasures and pains that make their presence felt in whatever we do—on all these poetry has the same effect. It makes them grow great instead of drying them up. It establishes them as our governors when instead they should be the ones governed if we are to become men who are better and happier instead of worse and more miserable.

I can't dispute you.

So then, Glaucon, when you encounter admirers of Homer who say that this poet is the tutor of Greece, that to study him is to refine human conduct and culture, and that we should order our entire lives in accordance with his precepts, [607] you must welcome them and love them as people who are doing the best they can. You can certainly agree that Homer is the greatest of poets and first among tragedians. But you must hold firm to the position that our city will admit no poetry except hymns to the gods and fair words about good men. Once entry is permitted to the honey-tongued Muse, whether in lyric or epic form, pleasure and pain will become kings of the city, law will be displaced, and so will that governing reason which time and opinion have approved.

I concur.

Having returned to the subject of poetry, let us make her an apology: we acted properly when we exiled her from the city earlier on. Reason constrained us to do so. And lest we be convicted of a certain harshness and parochialism, let us remind her that there is an old quarrel between philosophy and poetry. "The bitch that yelps and bays at her master," "great in the conversation of simpletons," "a company of overwise fools," and "refined thinkers who are really beggars"—these and many other reproaches mark the ancient antagonism.¹ Even so, we shall declare that if poetry that is imitative and aims to provide pleasure can show cause why it should find a place in a well-governed city, we should be glad to welcome its return from exile. We, too, are very aware of its charms. Of course, we must not be guilty of impiety by betraying what we think is true. But don't you yourself feel the magic of poetry, especially when Homer is the poet?

1. The identity of these poets who attacked philosophy is unknown [translators' note].

It affects me deeply.

Then if poetry, in turn, would make her defense in lyric or some other meter, would it not be just if she should return to us from exile?

It certainly would be.

And we would certainly offer her partisans—not poets themselves but those who love poetry—an opportunity to plead her case in prose without meter and to argue that poetry is not only delightful but also a blessing to the life of men and well-governed cities. And we shall hear them kindly, for we shall surely be the gainers if the case can be made that poetry is a source of goodness as well as pleasure.

It would be a very great gain.

But, my friend, if the verdict goes the other way, we must be like men who once loved but now know that their love has played them false. Hard though it is, they will hold themselves aloof. So we, loving this kind of poetry bred into us by the education we have received from our noble cities, [608] will rejoice if poetry appears at its best and truest. But so long as she is unable to offer a tenable defense, we shall chant to ourselves the arguments we have already considered. They will serve as a talisman to protect us from being seduced once again by the rude passions of the masses. In any case, we have learned that this kind of poetry does not deserve to be taken seriously in any meaningful effort to seek truth. On the contrary, one who listens to it must fear for the governance of his soul and must hold to all we have said about poetry.

You are right. I agree.

My dear Glaucon, we are engaged in a great struggle, a struggle greater than it seems. The issue is whether we shall become good or bad. And neither money, office, honor, nor poetry itself must be allowed to persuade us to neglect justice or any other virtue.

After all that we have discussed I am ready to join you in saying that. I should think anyone else would do the same.

* * *

ca. 375 B.C.E.

*From Phaedrus*¹

* * *

SOCRATES: Is this enough on the subject of rhetorical expertise and its lack?

PHAEDRUS: Of course.

SOCRATES: But don't we still have to discuss whether or not writing is desirable—what makes it acceptable and what makes it undesirable?

1. Translated by Robin Waterfield. The participants in the dialogue are the philosopher Socrates (469–399 B.C.E., Plato's spokesperson) and Phaedrus (ca. 450–400 B.C.E.), a Socratic philosopher. The numbers in square brackets are

the Stephanus numbers used almost universally in citing Plato's works; they refer to the pages of a 1578 edition published by Henri Estienne. Except as indicated, all subsequent notes are Waterfield's, abridged.

PHAEDRUS: Yes.

SOCRATES: So do you know the best way for either a theoretical or a practical approach to speech to please god?

PHAEDRUS: No, I don't. Do you?

SOCRATES: Well, I can pass on something I've heard from our predecessors. Only they know the truth of the matter, but if we had made this discovery by ourselves, would we any longer have the slightest interest in mere human conjectures?

PHAEDRUS: What an absurd question! Please tell me what you say you've heard.

SOCRATES: All right. The story I heard is set in Naucratis in Egypt,² where there was one of the ancient gods of Egypt—the one to whom the bird they call the 'ibis' is sacred, whose name is Theuth.³ This deity was the inventor of number, arithmetic, geometry, and astronomy, of games involving draughts and dice—and especially of writing. At the time, the king of the whole of Egypt around the capital city of the inland region (the city the Greeks call 'Egyptian Thebes'⁴), was Thamous, or Amon, as the Greeks call him.⁵ Theuth came to Thamous and showed him the branches of expertise he had invented, and suggested that they should be spread throughout Egypt. Thamous asked him what good each one would do, and subjected Theuth's explanations to criticism if he thought he was going wrong and praise if thought he was right. The story goes that Thamous expressed himself at length to Theuth about each of the branches of expertise, both for and against them. It would take a long time to go through all Thamous' views, but when it was the turn of writing, Theuth said, 'Your highness, this science will increase the intelligence of the people of Egypt and improve their memories. For this invention is a potion for memory and intelligence.' But Thamous replied, 'You are most ingenious, Theuth. But one person has the ability to bring branches of expertise into existence, another to assess the extent to which they will harm or benefit those who use them. The loyalty you feel to writing, as its originator, [275] has just led you to tell me the opposite of its true effect. It will atrophy people's memories. Trust in writing will make them remember things by relying on marks made by others, from outside themselves, not on their own inner resources, and so writing will make the things they have learnt disappear from their minds. Your invention is a potion for jogging the memory, not for remembering. You provide your students with the appearance of intelligence, not real intelligence. Because your students will be widely read, though without any contact with a teacher, they will seem to be men of

2. The story is another Platonic invention. He sets it in Egypt because the Egyptians were famous for their records of the ancient past. Naucratis was a Greek trading station in Egypt, established in the sixth century according to Herodotus [Greek historian (ca. 484–ca. 425 B.C.E.), chiefly of the Persian Wars; sometimes called "the father of history"—editor's note].

3. Better known as Thoth (or Tahuti), the ibis-headed Egyptian equivalent to the god Hermes, in his capacity as god of scribes and communica-

tion. Plato perhaps uses the name "Theuth" to remind his readers of the end of the Greek name "Prometheus," because Prometheus was the inventor of writing in Greek myth.

4. To distinguish it from the main city of Boeotia on the Greek mainland, which had (and still has) the same name.

5. Not the name of any known Egyptian king, and perhaps a corruption of "Amous" or Amon (Amun), the god who became identified with Ra, the Sun-god, and became the chief deity of Egypt.

wide knowledge, when they will usually be ignorant. And this spurious appearance of intelligence will make them difficult company.'

PHAEDRUS: Socrates, it doesn't take much for you to make up stories from Egypt and anywhere else in the world you feel like.

SOCRATES: Well, my friend, the people at the sanctuary of Zeus at Dodona say that the original prophecies there were spoken by an oak.⁶ In those days people weren't as clever as you young ones nowadays, and they were so foolish that they happily listened to oak and rock, as long as they told the truth. But perhaps it matters to you who the speaker is, or what country he's from, because you are not concerned only with whether or not he is right.

PHAEDRUS: You're right to have told me off—and, yes, I think the Theban king was correct about writing.

SOCRATES: So anyone who thinks he can get a branch of expertise to survive by committing it to writing—and also anyone who inherits the work with the assumption that writing will give him something clear and reliable—would be behaving in a thoroughly foolish manner and really would be ignorant of Amon's prediction, if he supposed that written words could do more than jog the memory of someone who already knows the topic that has been written about.

PHAEDRUS: Quite so.

SOCRATES: Yes, because there's something odd about writing, Phaedrus, which makes it exactly like painting. The offspring of painting stand there as if alive, but if you ask them a question they maintain an aloof silence.⁷ It's the same with written words: you might think they were speaking as if they had some intelligence, but if you want an explanation of any of the things they're saying and you ask them about it, they just go on and on for ever giving the same single piece of information. Once any account has been written down, you find it all over the place, hobnobbing with completely inappropriate people no less than with those who understand it, and completely failing to know who it should and shouldn't talk to. And faced with rudeness and unfair abuse it always needs its father to come to its assistance, since it is incapable of defending or helping itself.

PHAEDRUS: Again, you're quite right.

[276] SOCRATES: Well, is there any other way of using words? Does the written word have a legitimate brother? Can we see how it is born, and how much better and stronger it grows than its brother?

PHAEDRUS: What is this way of using words? How is it born, do you think?

SOCRATES: It is the kind that is written along with knowledge in the soul of a student. It is capable of defending itself, and it knows how to speak to those it should and keep silent in the company of those to whom it shouldn't speak.

PHAEDRUS: You're talking about the living, ensouled speech of a man of knowledge. We'd be right to describe the written word as a mere image of this.

SOCRATES: Absolutely. So here's another question for you. Consider a sensible farmer who cares for his seeds and wants to see them come to

6. In a trance, the priestesses would interpret the rustling of the leaves of an oak tree. [Dodona: town in Epirus, in northwest Greece—editor's note.]

7. One might also add that the written word ignores all the unspoken aspects such as body language, tone of voice, and so on, which constitute a major proportion of communication.

fruition. Do you think he'd happily spend time and effort planting them in the summer in gardens of Adonis,⁸ and watch them grow up in eight days, or would he do this, if at all, as a diversion and for the sake of a festival? Don't you think that for seeds he was serious about he'd draw on his skill as a farmer, sow them in the appropriate soil, and be content if what he sowed reached maturity in the eighth month?

PHAEDRUS: Yes, that's what he'd do, Socrates. He'd take care of the one lot of seeds and treat the others differently, just as you said.

SOCRATES: So are we to say that someone who knows about right and fine and good activities is less sensible than our farmer where his own seeds are concerned?

PHAEDRUS: Of course not.

SOCRATES: Then he won't spend time and effort writing what he knows in water—in black water⁹—and sowing them with his pen by means of words which can neither speak in their own defence nor come up with a satisfactory explanation of the truth.

PHAEDRUS: No, it's hardly likely that he will.

SOCRATES: No. He'll probably sow and write his gardens of letters for amusement, if at all, as a way of storing up things to jog his own memory when 'he reaches the age of forgetfulness', and also the memory of anyone else who is pursuing the same course as him. He'll happily watch these delicate gardens growing, and he'll presumably spend his time diverting himself with them rather than the symposia¹ and so on with which other people amuse themselves.

PHAEDRUS: What a wonderful kind of diversion you're describing, Socrates—that of a person who can amuse himself with words, as he tells stories about justice and the other things you mentioned—compared with the trivial pastimes of others!

SOCRATES: Yes, that's right, my dear Phaedrus. But it's far better, in my opinion, to treat justice and so on seriously, which is what happens when an expert dialectician takes hold of a suitable soul and uses his knowledge to plant and sow the kinds of words which are capable of defending both themselves and the one who planted them. So far from being barren, [277] these words bear a seed from which other words grow in other environments. This makes them capable of giving everlasting life to the original seed, and of making the man who has them as happy as it is possible for a mortal man to be.

PHAEDRUS: Yes, this is certainly far better.

SOCRATES: With this conclusion in place, Phaedrus, we are at last in a position to reach a verdict about the other issue.

PHAEDRUS: What other issue?

SOCRATES: The one that brought us here. We wanted to investigate why Lysias² was abused for writing speeches, and the expert or inexpert

8. "Gardens of Adonis" were pots in which plants were forced to mature in time for his festival, when they would wither and die in the midsummer sun to represent the death of Adonis, or the passing of youth. [Adonis: a Greek mythological figure whose cult was associated with vegetation and fertility—editor's note.]

9. To write in or on water was proverbially futile. "Black water" is of course ink.

1. Drinking parties [editor's note].

2. Athenian orator (ca. 456–ca. 380 B.C.E.), whose oration on love provides the occasion for the discussion in *Phaedrus* [editor's note].

composition of the actual speeches. Well, I think we've made it fairly clear what makes for expertise and its lack.

PHAEDRUS: I thought so, but could you remind me again?

SOCRATES: First, someone has to know the truth of every matter he's speaking or writing about, which is to say that he has to be capable of defining a whole as it is in itself and then know how to divide it up class by class until he reaches something indivisible. He also has to be able to distinguish souls in the same sort of way, discover the kind of speech which naturally fits each kind of soul, and organize and arrange his speeches accordingly—offering a complex soul a complex speech which covers the whole range of modes, and a simple soul a simple speech. Until he can do all this he will be incapable of tackling speeches in as much of a professional manner as their nature allows, either for teaching or for persuasion. This is what the whole of our earlier discussion has shown us.

PHAEDRUS: Yes, absolutely. That's pretty much what we found.

SOCRATES: So what about the question whether or not it is acceptable to deliver or write speeches, and under what circumstances it would or would not be fair to describe it as a shameful activity? Haven't our recent conclusions shown . . .

PHAEDRUS: What conclusions?

SOCRATES: . . . that if Lysias or anyone else who has in the past written a speech, or will write one in the future, for private or public consumption—that is, in the latter case, when proposing legislation and so composing a political speech—thinks there is any great degree of reliability and clarity in it, this is a source of shame for the author, whether or not anyone has ever said as much to him. For, awake or asleep, ignorance about what activities are right and wrong and good and bad cannot, when seen aright, fail to be a matter for reproach, even if the general mass of people approve of it.

PHAEDRUS: I quite agree.

SOCRATES: But consider someone who thinks that, whatever the subject, a written speech is bound to be largely a source of amusement, and that no speech which has ever been written in verse or in prose deserves to be taken seriously; that the same goes for the declamations of rhapsodes,³ which are designed to produce conviction, but allow no cross-examination and contain no element of teaching; that in actual fact [278] the best speeches do no more than jog the memories of men of knowledge; that clarity and perfection and something worth taking seriously are to be found only in words which are used for explanation and teaching, and are truly written in the soul, on the subject of right and fine and good activities; that, while he ignores all the rest, words of this kind should be attributed to him as his legitimate sons—above all the words within himself, if he has found them and they are there, but secondly the words that are at once the offspring and the brothers of these internal ones of his, and have duly grown in others' souls. It looks, Phaedrus, as though anyone with these views has attained the condition you and I can only pray for.

PHAEDRUS: I have no hesitation at all in wishing and praying for what you've said.

3. Professional reciters of poetry, especially the Homeric epics, and lecturers on the topic.

SOCRATES: So now we've diverted ourselves for long enough on the subject of speeches. It's up to you to go and tell Lysias of our excursion to the Nymphs' spring and the Muses'⁴ shrine. Explain to him how we listened to speeches which commanded us to tell Lysias (and any other composer of speeches), Homer (and any other author of poetry, whether accompanied or unaccompanied by music), and thirdly Solon⁵ (and anyone else who writes legislation, as he calls it—which is to say, written compositions in the form of political speeches) that if he has written from a position of knowledge of how things truly are, if he can mount a defence when challenged on the content of his work, and if he can produce arguments of his own to prove the unimportance of what he has written, then he does not deserve a title derived from these pursuits,⁶ but a description based on the things he takes seriously.

PHAEDRUS: What names are you thinking of giving him?

SOCRATES: I think it's too much to call him 'wise', Phaedrus: only the gods deserve that label. But it would suit him better and be more appropriate to call him a lover of wisdom,⁷ or something like that.

PHAEDRUS: Yes, that would fit the bill.

SOCRATES: On the other hand, wouldn't you be right to use the titles 'poet' or 'speech-writer' or 'law-writer' for someone who has nothing more valuable than the composition or piece of writing he has arrived at by a lengthy process of turning upside down, and by cutting and pasting the various parts into different relations with one another?

PHAEDRUS: Of course.

SOCRATES: Then this is what you should tell your friend.

PHAEDRUS: And what about you? What are you going to do? After all, we surely shouldn't ignore your friend as well.

SOCRATES: Who's that?

PHAEDRUS: The beautiful Isocrates.⁸ What are you going to tell him, Socrates? What shall we call him?

SOCRATES: Isocrates is still young, Phaedrus, but I'd like to tell you what I guess [279] the future holds for him.

PHAEDRUS: What?

SOCRATES: He strikes me as being naturally more talented than Lysias and his crowd, and also to have a nobler temperament. So it wouldn't surprise me at all if, as he matured, he came to stand out among everyone else who has ever undertaken speech-writing, as an adult among children and more so—and that's considering the kinds of speeches he is currently engaged on. I think he'd stand out even more if he wasn't content with his present work, and some more divine impulse were to guide him towards greater things. For he does innately have a certain philosophical cast to his mind, my friend. So that's the message I shall

4. In Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits. Nymphs: goddesses of lower rank, often associated with aspects of nature (the ocean, trees, etc.) [editor's note].

5. Athenian statesman and poet (ca. 638–559 B.C.E.), who reformed the city's constitution. Homer (ca. 8th c. B.C.E.), Greek epic poet to whom the *Iliad* and *Odyssey* are attributed [edi-

tor's note].

6. That is, he should not be called a "speech-writer," for instance, which Phaedrus said earlier was used as a term of abuse.

7. In Greek, *philosophos*—a philosopher.

8. Athenian orator, rhetorician, and teacher (436–338 B.C.E.), whose school attracted pupils from all over Greece and greatly influenced later methods of education [editor's note].

bring Isocrates, as my beloved, from the gods of this place, and you already know what to tell your beloved Lysias.

PHAEDRUS: All right. But let's go, now that the weather has cooled down.

SOCRATES: Shouldn't one first pray to the gods here before setting off?

PHAEDRUS: Of course.

SOCRATES: Dear Pan⁹ and all gods here, grant that I may become beautiful within and that my external possessions may be congruent with my inner state. May I take wisdom for wealth, and may I have just as much gold as a moderate person, and no one else, could bear and carry by himself. Have I missed anything out, Phaedrus? This prayer will do for me.

PHAEDRUS: Say the prayer for me too. For friends share everything.¹

SOCRATES: Let's go.

370 B.C.E.

9. God of shepherds and small-game hunting, a pastoral deity, and therefore named earlier as one of the deities who might have inspired Socrates

in these rural surroundings.

1. A proverb quite often quoted by Plato.

ARISTOTLE

384–322 B.C.E.

Alongside his teacher PLATO, Aristotle is the great founding figure of Western philosophy and literary theory. Aristotle invented the scientific method of analysis and, in a wide-ranging series of treatises, codified the divisions of knowledge into disciplines and subdisciplines that carry on to the present day, such as physics, chemistry, zoology, biology, botany, psychology, politics, logic, and epistemology. Unlike Plato, who uses the dialogue to dramatize paths of thinking in a conversational literary form, Aristotle relies in his extant works on categorization and logical differentiation in a straightforward propositional manner. He focuses on the distinctive qualities of any given object of study, whether of plants or of plays, systematically describing their specific features and construction.

Plato and other ancient writers often commented on literary works, but Aristotle inaugurated the systematic discipline of literary criticism and theory with the *Poetics*. It is perhaps the most influential work in the history of criticism and theory, shaping future considerations of genre, prosody, style, structure, and form. Its modern impact began in the Renaissance, when it was rediscovered from fragmentary manuscript sources and taken as a rule book for literary composition. Its descriptions of formal unity influenced seventeenth-century European writers, such as the French dramatist PIERRE CORNEILLE, and eighteenth-century writers reviving its precepts as “neoclassicism.” In twentieth-century literary theory the *Poetics* was foundational for formalist methods, which apply objective modes of analysis to linguistic artifacts and discern the structural attributes of literary works; it influenced a wide array of critics, such as the American New Critics (like WILLIAM K. WIMSATT JR. and MONROE C. BEARDSLEY), the archetypal critics (notably NORTHROP FRYE), and the French structuralists (like TZVETAN TODOROV).

Aristotle's *On Rhetoric* suggests a different avenue for the study of literature. Rather than seeing literary works in terms of their distinctive features and internal construction, it opens for consideration their affective and political dimensions as

forms of public speech. Because of its focus on types of public speaking, *Rhetoric's* influence on literary study has been less direct than that of the *Poetics*, but its emphasis on audience response undergirds subsequent theoretical approaches concerned with the reader, interpretation, and the political effects of literature. Although Aristotle himself does not favor one avenue of investigation over another, his distinction between poetics and rhetoric reflects a perennial division in literary theory: the split between theories concerned with the internal properties of literature and those concerned with literature's external effects, especially on readers and society.

Aristotle was born in Stagira in northern Greece, which was under the rule of Macedonia. His father, Nicomachus, was the personal physician to and a friend of Amyntus II, the king of Macedonia. Scholars speculate that his father's practice as a physician inculcated in Aristotle a pragmatic interest in biology and the natural world, and Aristotle's ties to the Macedonian court affected his subsequent career. In 367 B.C.E. Aristotle went to study at Plato's Academy in Athens, where he distinguished himself as one of Plato's best students and eventually became a teacher himself. In 347, around the time of Plato's death, Aristotle left Athens; he traveled first to Assos in Asia Minor, where he taught in a colony of Platonists for three years, and then to the island of Lesbos, where he did the biological research that grounded his later scientific treatises. In 344 or 343, Amyntas's son, King Philip, invited Aristotle to tutor his heir, Alexander (later known as Alexander the Great), who was then about thirteen years old. While he had contact with and received the patronage of Alexander until his death, Aristotle concluded his tutoring in 340, after which he probably lived in Macedonia or Stagira, perhaps then completing *On Rhetoric*. In 335, when Alexander acceded to the throne and departed for his campaigns in Asia, Aristotle returned to Athens and began his own school at the Lyceum. He taught poetics, rhetoric, politics, ethics, and metaphysics, and probably at this time worked on his famous treatises, including the *Politics*, the *Nicomachean Ethics*, and the *Poetics*. After the death of Alexander in 323, when public sentiment against Macedonia was rising, Aristotle left Athens to live in Chalcis on the island of Euboea, where he died in 322. For Aristotle the life of the philosopher was not reclusive but unfolded in the midst of public affairs.

Only about a fifth of Aristotle's 150 reported works survive—transmitted, usually imperfectly, through manuscript copies in the Middle Ages. His treatises are known as "esoteric" works, because they were not copied by scribes to be distributed but were available only in libraries for study by others; some seem to be lecture notes or study guides rather than polished works. This accounts for their compressed style and sometimes abrupt transitions, frequent repetitions, and short-hand references to other works or writers. It also makes the works particularly difficult to date, since they were probably composed and revised over a period of time. The *Poetics*, very likely gathered from a set of incomplete notes, survived only in a few faulty copies. Scholars speculate that we have just half the original text and that the missing second half dealt with comedy.

Aristotle's early writings, now known only by the reports of ancient writers, were written in the form of dialogues, obviously showing the influence of Plato. His more mature works, however, depart from his teacher's model in a number of significant ways. Stylistically, he replaces the literary approach with systematic expositions of particular subjects, more in the form of technical manuals than dramatic accounts. Methodologically, Aristotle operates through analysis, which in its root sense entails examining objects by studying their component parts, and through differentiation and classification. For instance, in biology Aristotle starts with the most general category—living organisms; he then examines them according to what differentiates them—as plants, animals, and so on; further classifies them into particular species; and catalogues their distinctive traits. Philosophically, Aristotle grounds his research on a more empirical basis than Plato, looking at nature and

the objects of the real world. In so doing, he tacitly rejects Plato's fundamental concept of transcendent Ideas or Forms that govern and generate reality. In his own terms, Aristotle often works from induction, drawing his general conclusions from the particular objects he observes, whereas Plato usually works from deduction, drawing particular conclusions from his general metaphysical concept of being.

The *Poetics*, our first selection, demonstrates Aristotle's analytical method, which parallels that of his examinations of biology or zoology. Aristotle turns to the various categories of human artifacts, differentiating those made in language and eventually focusing on poetry and especially on the species-specific traits of epic and tragedy. He assumes a distinction between the wide class of objects that are humanly made and those that are naturally produced—between, say, a chair and a tree. (The Greek word for “poetry,” *poiēsis*, is itself based on the verb “to make.”) In treating poetry as a craft, Aristotle differs from Plato, who discusses poetry in terms of inspiration and the emotive transport of the poet—a strain that continues in nineteenth-century Romanticism, exemplified by WILLIAM WORDSWORTH's definition of poetry as “the spontaneous overflow of emotion.” Aristotle limits his study of poetry to its observable kinds and its formal construction, more or less ignoring questions about its affective origins, which he regards as falling under the auspices of other pursuits, such as psychology or rhetoric.

Drawing on a wide range of literary examples, especially Sophocles' celebrated tragedy *Oedipus Rex*, Aristotle adduces six salient parts of tragedy, in order of their importance—plot, character, thought, diction, music, and spectacle. He spends the most time on the first, specifying the key features of good plots. Central to Aristotle is imitation (*mimēsis*), and he judges the best plots to have verisimilitude: they must be plausible (even if impossible). He also stresses a logically connected order (an appropriate starting point, elaboration, and a dramatic end or resolution), centered on one unified action rather than depicting multiple, divergent, or unnecessary actions. The best kind of resolution is one that shows a reversal (*peripeteia*) of position for the main character, as well as the character's recognition (*anagnōrisis*) of his or her fate. Aristotle reasons that the characters in tragedy should come from high positions, otherwise their tragic circumstances would not be remarkable; he also prescribes that their fates be linked to their own error (*hamartia*, literally “missing the mark,” though frequently translated as “flaw”), rather than from some accident or wickedness. Aristotle concludes somewhat technically by classifying parts of speech (in his discussion of diction), sketching solutions to problems of interpretation, and comparing the genres of tragedy and epic.

Though rooted in the literature of its time (and focusing especially on a form of drama quite different from ours), the extant *Poetics* has continued to influence criticism. Aristotle's systematic categorization of genus and species and his comparison of tragedy and epic underlie all genre theory. Notably, they undergird modern considerations of the historical movement from epic to the novel, such as those of GYÖRGY LUKÁCS and MIKHAIL M. BAKHTIN. Perhaps most decisively, Aristotle's systematic description of plot and its component parts ground contemporary narrative theory, in particular the technical field of narratology.

His scientific examination of poetry has been championed by the New Critics Wimsatt and CLEANTH BROOKS as “Aristotle's answer” to Plato, responding both to Plato's view of poetry as a degraded imitation twice removed from the reality of eternal Ideas or Forms and to his suspicion of poetry as stirring emotions in a way that is dangerous for society. Instead of directly disagreeing with Plato, Aristotle implicitly validates poetry by examining it as a legitimate branch of study. Countering Plato's notion of poetry as degraded imitation, Aristotle sees poetry as a source of universal knowledge of human behavior: unlike history, which produces knowledge only of specific situations, poetry describes the actions of characters who might be any humans. Moreover, he claims that good poetry has a positive emotional

effect on its audience, which he calls *katharsis*—perhaps the most important and variously interpreted word in the *Poetics*. Some commentators have interpreted the term in a medical sense, as a purgative that flushes out the audience's unwieldy emotion; others see it in terms of moral purification. More recently, critics have equated catharsis with ethical and intellectual clarification.

In other treatises, Aristotle analyzes natural objects in terms of four component “causes,” schematized as material, formal, efficient, and final. If we apply this rubric to poetry, the material cause of a poem would be its raw material—language; the formal cause, the shape of the resulting object—the poem; its efficient cause, what makes it—the poet; and the final cause, the end use—its effects on an audience, emotionally as well as educationally and politically. Although Aristotle alludes to audience response in his discussion of catharsis, in the *Poetics* he is most concerned with the material and formal causes of poetry. This concentrated focus has strongly marked modern literary criticism—notably that of the New Critics, who explicitly disallow considerations of the audience as “the affective fallacy,” in the phrase of Wimsatt and Beardsley. However, Aristotle is by no means so dismissive. Instead, he treats considerations of the audience—the final cause—as a different line of research, taken up in his *On Rhetoric*.

We have come to understand rhetoric as the study of figures of speech, following the medieval and Renaissance traditions (and the modern practice of writers like PAUL DE MAN), but Aristotle defines it more broadly as the ability to see the available means of persuasion. In typical Aristotelian fashion, *On Rhetoric* begins in book 1 by differentiating three elements of persuasion in public speech: the arguments a speaker uses, the *ēthos* or character of the speaker, and the disposition of the audience. Additionally, it differentiates three species of public speeches: deliberative, which deal with future events, as in politics; judicial, which concern past events, as in law courts; and epideictic, which are concerned with the present as they praise or blame a person, as in a eulogy or declamatory attack. Aristotle stresses the importance of argument in part to challenge the then prevalent teachings of the sophists, such as GORGAS in an earlier generation, who he believed used rhetoric irresponsibly, lacking concern for valid reasoning.

However, Aristotle also acknowledges the elements of persuasion outside the realm of reasoning, paying particular attention to the emotions that speeches induce in their audiences. In book 2, he adduces the first systematic study of affect, differentiating emotions such as anger, calmness, fear, confidence, shame, pity, indignation, envy, and emulation. In book 3, paralleling his examination of diction in the *Poetics*, Aristotle concludes with a discussion of *lexis* (variously translated as “style,” “word choice,” or “form of expression”). Perhaps the most important term in *On Rhetoric* is *telos*—the final cause, end, objective, or goal of persuasion—effected through emotion and style as well as argument. *On Rhetoric* highlights the public ends of language rather than its formal properties.

Although its influence has not been as sustained or decisive as that of the *Poetics*, *On Rhetoric* considers how response is a factor in interpretation. In its delineations of emotions, it presages the aesthetic tradition, whose concern is the affective dimensions of literary works, and it provides a grounding for reader-response theory, which centers on subjective audience interaction rather than the objective features of the work itself. Perhaps most significantly, it suggests the historical and political significance of literature in its role as public discourse.

Whether acknowledged or not, Aristotle's seminal distinction between poetics and rhetoric has been crucial in contemporary debates over the proper object of literary criticism. Against the tendency fostered by the New Critics and later by certain deconstructive critics who advocated a narrow linguistic study of literature, recent decades have witnessed a “rhetorical turn” toward methods favoring attention to the personal, historical, and social effects of literary texts. Some object that such approaches address topics outside the purview of literary study. That is, they urge a strict poetic view,

arguing that literary criticism should focus on the distinctive attributes of literary works. But when we take account of *On Rhetoric* alongside the *Poetics*, we see that Aristotle does not disallow these other topics; he opens literary study to a consideration of its pedagogical and social ends as well as its distinctive formal properties.

***On Rhetoric* Keywords:** Affect, Classical Theory, Language, Reception Theory, Rhetoric

Poetics¹

[1, 1447a] The art of poetry, both in its general nature and in its various specific forms, is the subject here proposed for discussion. And with regard to each of the poetic forms, I wish to consider what characteristic effect it has, how its plots should be constructed if the poet's work is to be good, and also the number and nature of the parts of which the form consists. Such other matters as may be relevant to this field of study will likewise be included. Let us, then, follow the order of nature, and begin by taking up that which is by nature first.

Epic poetry and Tragedy, also Comedy, the Dithyramb,² and most of the music performed on the flute and the lyre are all, in a collective sense, Imitations.³ However, they differ from one another in three ways—either (1) by using different means [or media] of imitation; or (2) by imitating different objects; or (3) by imitating in a different manner and not in the same mode of presentation.

Just as certain persons, by rule of art or mere practice, make likenesses of various objects by imitating them in colors and forms, and others again imitate by means of the voice, so, taken as a whole, the arts I have mentioned have as their means of imitation rhythm, language, and melody. These, however, they employ either separately or in combination. For example, the arts of the flutist and citharist employ only rhythm and melody, as do other arts of similar effect such as that of the panpipes; and rhythm alone without melody is the medium of the dance—dancers simply by means of a rhythmical pattern of movement succeed in imitating men's characters, emotions, and actions.

The art that imitates in language alone, in prose or in [nonlyrical] verse [1447b] (whether combining different meters or using only one of them), remains to this day without a name. For there is no common name under which we can bring the prose mimes of Sophron and Xenarchus and the Socratic dialogues,⁴ nor would there be even if the imitation they embody

1. Translated by James Hutton, who adds clarifying words or phrases in square brackets and includes Greek terms in parentheses. Also in square brackets in the text are both the traditional chapter divisions inserted by Renaissance editors and the Bekker numbers, used almost universally in citing Aristotle's works; they refer to the page numbers and columns of an 1831 edition by Immanuel Bekker.

2. Greek choral poetry originally sung in honor of Dionysus, the god of wine and fertility wor-

shipped in an ecstatic cult.

3. From the Greek *mimēsis*, translated as "imitation" or "representation."

4. The philosophical works of PLATO (ca. 427–ca. 347 B.C.E.), which are written as dialogues usually featuring his teacher, Socrates (469–399 B.C.E.), and one or more interlocutors. "Mimes": imitative performances usually featuring short scenes from daily life. Sophron of Syracuse (5th c. B.C.E.) wrote mimes in rhythmic prose; his son Xenarchus also wrote mimes.

were made in iambic trimeters, elegiac couplets,⁵ or any other such verse—except, indeed, that people in general attach the word “poet” to the name of a particular meter and speak, for example, of elegiac poets and epic poets, calling them poets, not on the basis of imitation, but indiscriminately according to the meter they use. This is customary even when what is produced is a versified treatise on medicine or natural science. But Homer and Empedocles⁶ have nothing in common except just their meter, and it is right, therefore, to call the one a poet and the other a physical philosopher rather than a poet. Similarly, anyone who produces an imitation, even if it is in a mixture of all the verse forms, as in the case of Chaeremon’s⁷ *Centaur*, which is a mixed rhapsody in all the meters, must in virtue of his imitation be called a poet. In these matters, then, the distinctions thus made may suffice.

There are, however, certain arts that make use of all the stated media, viz., rhythm, song, and metrical language, and among these are dithyrambic poetry, nomic poetry,⁸ tragedy, and comedy. Here the distinction is that dithyramb and nome employ all three media continuously throughout, while tragedy and comedy employ first one means and then the other.

This completes what I have to say about the differences among the arts in respect to the means they employ in effecting the imitation.

[2, 1448a] Since the objects that the imitators represent are persons engaged in action, and since these persons will necessarily be persons of either a higher or a lower moral type (for this is the one division that characters submit to almost without exception, goodness and badness being universal criteria of character), they represent them accordingly as either better than we are or worse or about the same. For example, among painters, Polygnotus portrayed men better than we are, Pauson men inferior to the norm, and Dionysius⁹ men like ourselves. And clearly, each of the aforementioned kinds of imitation will have these variations, and will be different by virtue of imitating objects that differ in this way. Thus it is possible for these differences to arise in dancing and in flute and lyre playing, and also in the art that employs prose and unsung verse. Homer, for example, represents men better than we are, Cleophon men like ourselves, and Hegemon of Thasos, the inventor of parodies, and Nicochares,¹ author of the *Deiliad*, men worse than the norm. Similarly, one could represent different types in dithyrambs and nomes, as . . . Timotheus and Philoxenus do in their treatment of the Cyclops.² And it is upon the same point of difference also that tragedy parts company with comedy, since comedy prefers to imitate persons who are worse, tragedy persons who are better, than the present generation.

5. A verse form consisting of couplets whose first line is in dactylic hexameter (i.e., a 6-foot line based on the syllabic pattern long-short-short), the meter of epic, and whose second line replaces the 3rd and 6th foot with one long syllable. “Iambic trimeters”: the verse form of most dialogue and set speeches in tragedies (a 3-foot line based on the syllabic pattern short-long).

6. Pre-Socratic Greek natural philosopher (ca. 493–433 B.C.E.), who wrote in epic meter (dactylic hexameter). Homer (ca. 8th c. B.C.E.), Greek epic poet to whom is attributed the *Iliad* and the *Odyssey*; the ancient Greeks also credited him with a number of lost shorter epics, including the comic *Margites*.

7. Greek tragedian (mid-4th c. B.C.E.).

8. Originally, melodies (for lyre or flute) created to accompany epic texts; later, choral compositions.

9. Painter from Colophon. Polygnotus (ca. 500–ca. 440 B.C.E.), one of the first great Greek painters. Pauson (late 5th c. B.C.E.), Athenian caricaturist.

1. Athenian comic poet (active ca. 390 B.C.E.), whose *Deiliad* (*deilos* means “cowardly”) parodied heroic epic. Cleophon (4th c. B.C.E.), Athenian tragic poet. Hegemon (5th c. B.C.E.), poet whose parodies won competitions in Athens.

2. Mythical one-eyed giants. Timotheus of Miletus (ca. 450–ca. 360 B.C.E.) and Philoxenus of Cythera (ca. 435–ca. 380 B.C.E.) were both Greek dithyrambic poets.

[3] The third difference in these arts has to do with the manner in which any one of these objects may be imitated; for it is possible to represent the same objects in the same medium but in different modes. Thus they may be imitated either in narration (whether the narrator speaks at times in an assumed role, which is Homer's way, or always in his own person without change) or in a mode in which all the characters are presented as functioning and in action.

It is in these three ways, then, as we said at the beginning, that imitation is differentiated—by the means, by the objects, and by the manner of presentation. So in one way Sophocles would be the same kind of imitator as Homer, in that both represent noble characters, and in another way the same as Aristophanes,³ since both present their characters as acting and doing.

Indeed, some say that dramas are so called, because their authors represent the characters as “doing” them (*drôntes*). And it is on this basis that the Dorians⁴ lay claim to the invention of both tragedy and comedy. For comedy is claimed by the Megarians⁵ here in Greece, who say it began among them at the time when they became a democracy, and by the Megarians of Sicily on the grounds that the poet Epicharmus came from there and was much earlier than Chionides and Magnes;⁶ while tragedy is claimed by certain Dorians of the Peloponnese. They offer the words as evidence, noting that outlying villages, called *dêmoi* by the Athenians, are called *kômai* by them, and alleging that *kômôdoi* [comedians] acquired their name, not from *kômazein* [to revel], but from the fact that, being expelled in disgrace from the city, they wandered from village to village. [1448b] The Dorians further point out that their word for “to do” is *drân*, whereas the Athenians use *prattein*.

Let this be our account, then, of the number and nature of the differences imitation admits of.

[4] For the beginnings of poetry in general, there appear to have been two causes, both rooted in human nature. Thus from childhood it is instinctive in human beings to imitate, and man differs from the other animals as the most imitative of all and getting his first lessons by imitation, and by instinct also all human beings take pleasure in imitations. We have evidence of this in actual experience, for the forms of those things that are distressful to see in reality—for example, the basest animals and corpses—we contemplate with pleasure when we find them represented with perfect realism in images. For this again the reason is that the experience of learning things is highly enjoyable, not only for philosophers but for other people as well, only their share in it is limited; when they enjoy seeing images, therefore, it is because as they look at them they have the experience of learning and reasoning out what each thing represents, concluding, for example, that “this figure is so and so”; for if the image depicts something one has not seen before, the pleasure it gives will not be that of an imitation but will come from its workmanship or coloring or some other such source. Imitation, then, being something that we have by nature, and the

3. Greatest poet of Greek Old Comedy (450–385 B.C.E.). Sophocles (ca. 496–406 B.C.E.), great Greek tragedian.

4. A people (probably originally from southwest Macedonia) that invaded Greece ca. 1100–1000 B.C.E., reaching south into the Peloponnese.

5. Residents of a Dorian city on the Isthmus of

Corinth (west of Athens); it was a democracy in the 6th century B.C.E.

6. Aristotle names three early comic poets: Epicharmus was Sicilian (active early 5th ca. B.C.E.) and wrote in Doric Greek, while Chionides (active ca. 485 B.C.E.) and Magnes (active ca. 470 B.C.E.) were Athenian.

same being true of melody and rhythm (verses clearly are segments of the various rhythms), at the outset, persons who had a special aptitude for these things, making improvements bit by bit, produced out of their improvisations the beginnings of poetry.

And in accordance with their individual types of character, poetry split into two kinds; for the graver spirits tended to imitate noble actions and noble persons performing them, and the more frivolous poets the doings of baser persons, and as the more serious poets began by composing hymns and encomia, so these began with lampoons. To be sure, we cannot mention any poem of this type by a pre-Homeric poet, though doubtless many composed them, but beginning with Homer we can—his own *Margites*, for example, among other similar works. In these invectives the iambic meter came into use as something suited to their character—in fact, we now call this particular meter iambic because it was the meter in which men lampooned (iambized) one another.

Thus among the early poets, some became poets of heroic verse and others again of iambic verse. Homer was not only the master poet of the serious vein, unique in the general excellence of his imitations and especially in the dramatic quality he imparts to them, but was also the first to give a glimpse of the idea of comedy by avoiding personal abuse and giving dramatic treatment to the ridiculous; for his *Margites* is analogous to the comedies just as the *Iliad* and the *Odyssey* are to the tragedies. [1449a] And once tragedy and comedy had made their appearance, those who were drawn to one or the other of the branches of poetry, true to their natural bias, became either comic poets instead of iambic poets or tragic poets instead of epic poets because the new types were more important—i.e., got more favorable attention, than the earlier ones.

Whether tragedy has, then, fully realized its possible forms or has not yet done so is a question the answer to which both in the abstract and in relation to the audience [or the theater] may be left for another discussion. Its beginnings, certainly, were in improvisation, as were also those for comedy, tragedy originating in impromptu by the leaders of the dithyrambic chorus, and comedy in those of the leaders of the phallic performances which still remain customary in many cities. Little by little tragedy grew greater as the poets developed whatever they perceived of its emergent form, and after passing through many changes, it came to a stop, being now in possession of its specific nature.

It was Aeschylus⁷ who first increased the number of the actors from one to two and reduced the role of the chorus, giving first place to the dialogue. Sophocles [added] the third actor and [introduced] painted scenery. Again, [there was a change] in magnitude; from little plots and ludicrous language (since the change was from the satyr play⁸), tragedy came only late in its development to assume an air of dignity, and its meter changes from the trochaic tetrameter⁹ to the iambic trimeter. Indeed, the reason why they

7. The earliest of the 3 great Greek tragedians (525–456 B.C.E.).

8. A type of play that formed part of the spring festival of Dionysus in early 5th-century B.C.E. Athens. Each of the poets competing wrote three tragedies and one satyr play; the latter presented grotesque versions of ancient legends, with the

chorus dressed as satyrs (half-man, half-goat, and wearing a phallus).

9. A 4-foot line based on the syllabic pattern long-short; though occasionally used for dialogue in tragedies, this fast-moving line was thought less stately than iambic meter. The choruses in tragedies used other meters.

used the tetrameter at first was that their form of poetry was satiric [i.e., for “satyrs”] and hence more oriented toward dancing; but as the spoken parts developed, natural instinct discovered the appropriate meter, since of all the metrical forms the iambic trimeter is best adapted for speaking. (This is evident, since in talking with one another we very often utter iambic trimeters, but seldom dactylic hexameters, or if we do we depart from the tonality of normal speech. Again, [there was a change] in the number of episodes¹—but as for this and the way in which reportedly each of the other improvements came about, let us take it all as said, since to go through the several details would no doubt be a considerable task.

[5] Comedy, as we have said, is an imitation of persons worse than the average. Their badness, however, does not extend to the point of utter depravity; rather, ridiculousness is a particular form of the shameful and may be described as the kind of error and unseemliness that is not painful or destructive. Thus, to take a ready example, the comic mask is unseemly and distorted but expresses no pain.

(While the changes marking the development of tragedy, and the persons responsible for them, did not pass unnoticed, no attention was paid to comedy in its early stages because comedy was not regarded as important; [1449b] only rather late in its history did the archon² begin granting a chorus of comedians, the performers having previously been volunteers. Thus when there begins to be any record of comic poets, so designated, comedy already possessed its general outlines, and we do not know who introduced masks or prologues or the accepted number of actors or anything of that sort. However, the practice of composing comic plots originally came from Sicily, and in Athens Crates³ was the first to discard the abusive mode and construct a universalized type of plot or fable.)

Epic poetry followed tragedy to the extent of being an imitation of good men in the medium of metrical language; where they differ is in the narrative manner of epic and its use of a single meter. There is also a difference in length: tragedy endeavors as far as possible to keep within one revolution of the sun, or to exceed this limit but little, whereas the epic is without restriction as to time and herein differs from tragedy, although at first the treatment of time in tragedies was just the same as in epic poems. Their constituent parts are the same, except that there are two [Music and Spectacle] which are peculiar to tragedy; and consequently anyone who knows how to distinguish good tragedy from bad can do the same with epic, since tragedy has all the parts that epic has, but epic not all those that make up tragedy.

[6] The mimetic art in hexameters [epic poetry] and comedy will be discussed later on; but at this point I wish to speak about tragedy and to begin by gathering up from what I have already said the definition of its nature that emerges from that. Thus, Tragedy is an imitation of an action that is serious, complete, and possessing magnitude; in embellished language, each kind of which is used separately in the different parts, in the mode of action and not narrated; and effecting through pity and fear [what we call] the *catharsis*⁴ of

1. The sections of a tragedy that are positioned between two choruses.

2. The chief magistrate in ancient Greek city-states.

3. Athenian comic poet (active ca. 450–ca. 430

B.C.E.).

4. A much-debated Greek term, related to a verb meaning “to cleanse” or “purify”; usually left untranslated and understood as “purgation”; it can also mean “clarification.”

such emotions. By “embellished language” I mean language having rhythm and melody, and by “separately in different parts” I mean that some parts of a play are carried on solely in metrical speech while others again are sung.

Since the imitation is carried out in the dramatic mode by the personages themselves, it necessarily follows, first, that the arrangement of Spectacle will be a part of tragedy, and next, that Melody and Language will be parts, since these are the media in which they effect the imitation. By “language” I mean precisely the composition of the verses, by “melody” only that which is perfectly obvious. And since tragedy is the imitation of an action and is enacted by men in action, these persons must necessarily possess certain qualities of Character and Thought, since these are the basis for our ascribing qualities to the actions themselves [1450a]—character and thought are natural causes of actions—and it is in their actions that men universally meet with success or failure. The imitation of the action is the Plot. By plot I here mean the combination of the events; Character is that in virtue of which we say that the personages are of such and such a quality; and Thought is present in everything in their utterances that aims to prove a point or that expresses an opinion. Necessarily, therefore, there are in tragedy as a whole, considered as a special form, six constituent elements, viz. Plot, Character, Language, Thought, Spectacle, and Melody. Of these elements, two [Language and Melody] are the *media* in which they effect the imitation, one [Spectacle] is the *manner*, and three [Plot, Character, Thought] are the *objects* they imitate; and besides these there are no other parts. So then they employ these six forms, not just some of them so to speak; for every drama has spectacle, character, plot, language, melody, and thought in the same sense, but the most important of them is the organization of the events [the plot].

For tragedy is not an imitation of men but of actions and of life. It is in action that happiness and unhappiness are found, and the end we aim at is a kind of activity, not a quality, in accordance with their characters men are of such and such a quality, in accordance with their actions they are fortunate or the reverse. Consequently, it is not for the purpose of presenting their characters that the agents engage in action, but rather it is for the sake of their actions that they take on the characters they have. Thus, what happens—that is, the plot—is the end for which a tragedy exists, and the end or purpose is the most important thing of all. What is more, without action there could not be a tragedy, but there could be without characterization. In fact, the tragedies of most of our recent playwrights are lacking in the ethical element, and generally speaking many poets [of all kinds] show a similar tendency. So too among painters, Zeuxis⁵ stands in contrast with Polygnotus, the latter being an excellent portrayer of character, whereas there is no delineation of character at all in the painting of Zeuxis. And again, merely by stringing together a succession of speeches full of character and well composed in point of language and thought, one will never create the effect we said was proper to tragedy, but this effect is much more apt to be achieved with a tragedy possessing a plot and coordinated events, even though it may be relatively deficient in its treatment of these other elements.

A further point: the principal means by which tragedy exerts its fascination are parts of the plot, that is to say reversals and recognitions. Finally, it

5. Greek painter from Heraclea in southern Italy; he was in Athens ca. 400 B.C.E.

is significant that beginning authors are able to attain proficiency in language and character portrayal sooner than in plot construction—a point that may also be illustrated from nearly all the early dramatists. Clearly, then, the first principle and, as it were, the soul of tragedy is the plot, and second in importance is character. In painting, too, it is much the same [1450b]—a painter who smeared on the most beautiful colors at random would give less pleasure than he would by making a likeness of something in black and white. Tragedy is an imitation of an action, and it is an imitation of the agents chiefly owing to the action.

Third in order of importance comes the element of Thought. This is the ability to say what it is possible and appropriate to say [on any subject], which in oratory is the function of the arts of statesmanship and rhetoric. [I name both], since the early poets made their personages speak in the manner of statesmen, whereas those of our time make theirs speak rhetorically. [Thought must be distinguished from Character.] “Character” is whatever reveals a person’s habit of moral choice—whatever he tends to choose or reject when the choice is not obvious—and this element is, therefore, absent from speeches in which there is absolutely no choosing or rejecting of anything by the speaker. “Thought,” on the other hand, is present whenever speakers are engaged in proving that something is so or not so, or when they are making some general pronouncement.

The fourth element is Language. I define Language, as I said earlier, to be the expression of meaning by the use of words, and the definition is as valid for verse as for prose. Of the remaining elements, Melody is the most important of the pleasurable accessories, while Spectacle, though fascinating in itself, is of all the parts the least technical in the sense of being least germane to the art of poetry. For tragedy fulfills its function even without a public performance and actors, and, besides, in the realization of the spectacular effects the art of the property man counts for more than the art of the poets.

[7] Now that the parts are established, let us next discuss what qualities the plot should have, since plot is the primary and most important part of tragedy. I have posited that tragedy is an imitation of an action that is a whole and complete in itself and of a certain magnitude—for a thing may be a whole, and yet have no magnitude to speak of. Now a thing is a whole if it has a beginning, a middle, and an end. A beginning is that which does not come necessarily after something else, but after which it is natural for another thing to exist or come to be. An end, on the contrary, is that which naturally comes after something else, either as its necessary sequel or as its usual [and hence probable] sequel, but itself has nothing after it. A middle is that which both comes after something else and has another thing following it. A well-constructed plot, therefore, will neither begin at some chance point nor end at some chance point, but will observe the principles here stated.

Now as for magnitude: In order to be beautiful, a living creature or anything else made up of parts not only must have its parts organized but must also have just the size that properly belongs to it. Beauty depends on size and order; hence an extremely minute creature could not be beautiful, for our vision becomes blurred as it approaches the point of imperceptibility, nor could an utterly huge creature be beautiful, for, [1451a] unable to take it in all at once, the viewer finds that its unity and wholeness have escaped

his field of vision—if, for example, it were an animal a thousand miles long. Therefore, just as organized bodies and animals, if they are to be beautiful, must have size and such size as to be easily taken in by the eye, so plot, for the same reason, must have length and such length as to be easily held in the memory. The limit of length considered in relation to the public contests and production in sensible form has nothing to do with the art of poetry—if a hundred tragedies had to be presented in the contest, the performance would be timed by water clocks, as was actually done at one time, they say. But considered in relation to the very nature of the thing itself, the limit is this: Invariably, the larger the plot is, while still remaining perspicuous, the more beautiful it is in virtue of its magnitude. Or, to express it in a simple formulation: If the length is sufficient to permit a change from bad fortune to good or from good fortune to bad to come about in an inevitable or probable sequence of events, this is a satisfactory limit of magnitude.

[8] Contrary to what some people think, a plot is not ipso facto a unity if it revolves about one man. Many things, indeed an endless number of things, happen to any one man some of which do not go together to form a unity, and similarly among the actions one man performs there are many that do not go together to produce a single unified action. Those poets seem all to have erred, therefore, who have composed a *Heracleid*, a *The-seid*,⁶ and other such poems, it being their idea evidently that since Heracles was one man, their plot was bound to be unified. But Homer, just as he excels in every other respect, seems in this matter also, either by art or natural instinct, to have taken the right view. In composing his *Odyssey*, he did not put into it every event that had befallen Odysseus⁷—his being wounded on Mount Parnassus, for example, and his feigning madness when the host was assembling, neither of which events was at all a necessary or probable consequence of the other—but instead he constructed the *Odyssey* around a single action such as I am describing, and he did the same with the *Iliad*. Consequently, just as in the other mimetic arts an imitation is unified when it is the imitation of a unified object, so in poetry the plot, since it is the imitation of an action, must be the imitation of a unified action comprising a whole; and the events which are the parts of the plot must be so organized that if any one of them is displaced or taken away, the whole will be shaken and put out of joint; for if the presence or absence of a thing makes no discernible difference, that thing is not part of the whole.

[9] From what has already been said, it will be evident that the poet's function is not to report things that have happened, but rather to tell of such things as might happen, things that are possibilities by virtue of being in themselves inevitable or probable. Thus the difference between [1451b] the historian and the poet is not that the historian employs prose and the poet verse—the work of Herodotus⁸ could be put into verse, and it would be no less a history with verses than without them; rather the difference is that the one tells of things that have been and the other of such things as might be. Poetry, therefore, is a more philosophical and a higher thing than

6. In ancient Greece, there were several epic *Heracleids* and *Theseids*—poems depicting, respectively, the heroes Heracles and Theseus.

7. The wily king of Ithaca whose efforts to return home to Greece after the Trojan War are chron-

clered in the *Odyssey*.

8. Greek historian (ca. 484—ca. 425 B.C.E.), chiefly of the Persian Wars; sometimes called “the father of history.”

history, in that poetry tends rather to express the universal, history rather the particular fact. A universal is: The sort of thing that (in the circumstances) a certain kind of person will say or do either probably or necessarily, which in fact is the universal that poetry aims for (with the addition of names for the persons); a particular, on the other hand is: What Alcibiades⁹ did or had done to him. This [generalizing tendency] has now come out clearly in the case of comedy, where the poets, having constructed their plots out of probable incidents, then supply any names that may occur to them, and do not, like the iambic poets, take a particular individual as their subject. In tragedy, however, the historical names are retained. Basically this is because possibility means credibility; until something happens we remain uncertain of its possibility, but what has happened obviously is possible, since if impossible, it would not have happened. Yet as a matter of fact there are some tragedies in which only one or two of the well-known names occur, the rest being invented, and other tragedies again in which there are no famous names at all. An example is Agathon's¹ *Antheus*. In this play, plot and names alike are invented, and yet it gives no less pleasure on that account. So there certainly is no need to make a point of adhering to the traditional stories on which tragedies are based. Indeed, it would be absurd to do so, since the well-known tales are well known only to a few, and nevertheless they give pleasure to all.

It is clear, then, from the foregoing remarks that the poet should be a maker of plots more than a maker of verses, in that he is a poet by virtue of his imitation and he imitates actions. So even if on occasion he takes real events as the subject of a poem, he is none the less a poet, since nothing prevents some of the things that have actually happened from being of the sort that might probably or possibly happen, and it is in accordance with this that he is their poet.

Among plots and actions of the simple type, the episodic form is the worst. I call episodic a plot in which the episodes follow one another in no probable or inevitable sequence. Plots of this kind are constructed by bad poets on their own account, and by good poets on account of the actors; since they are composing entries for a competitive exhibition, they stretch the plot beyond what it can bear and [1452a] are often compelled, therefore, to dislocate the natural order. And it is not only an action complete in itself that tragedy represents; it also represents incidents involving pity and fear, and such incidents are most effective when they come unexpectedly and yet occur in a causal sequence in which one thing leads to another. For occurring in this way, they will have more of the marvelous about them than if they came to pass of themselves and by accident. (Indeed, things that actually do happen by accident seem most marvelous when they appear to be intentional, as when at Argos the statue of Mity's² killed the man who had caused Mity's death by falling down on him as he stood looking at it. It is hard to believe that such things happen without design.) Plots of this kind, therefore, are necessarily better than others.

[10] Some plots are simple, others complex; indeed the actions of which the plots are imitations are at once so differentiated to begin with. Assuming the action to be continuous and unified, as already defined, I call that action

9. Athenian politician and general (ca. 450–404 B.C.E.).

1. Innovative Athenian tragedian (d. ca. 401

B.C.E.); fewer than 40 lines of his works remain.

2. Mity's murderer was killed in this fashion ca. 374 B.C.E.

simple in which the change of fortune takes place without a reversal or recognition, and that action complex in which the change of fortune involves a recognition or a reversal or both. These events [recognitions and reversals] ought to be so rooted in the very structure of the plot that they follow from the preceding events as their inevitable or probable outcome; for there is a vast difference between following from and merely following after.

[11] Reversal (Peripety) is, as aforesaid, a change from one state of affairs to its exact opposite, and this, too, as I say, should be in conformance with probability or necessity. For example, in *Oedipus*,³ the messenger comes to cheer Oedipus by relieving him of fear with regard to his mother, but by revealing his true identity, does just the opposite of this. In *Lynceus*⁴ again, Lynceus is brought on expecting to die and Danaüs follows intending to put him to death, but as a result of what has gone before, it turns out that Danaüs is put to death and Lynceus is saved.

Recognition, as the word itself indicates, is a change from ignorance to knowledge, leading either to friendship or to hostility on the part of those persons who are marked for good fortune or bad. The best form of recognition is that which is accompanied by a reversal, as in the example from *Oedipus*. There are, to be sure, other forms of recognition—and, indeed, what I have just said may occur in reference to inanimate objects or anything whatever, and it is possible to discover that someone has or has not done something—but the form that has most to do with the plot, and most to do with the action, is the one I have mentioned; for a recognition joined thus with a reversal [1452b] will be fraught with pity or with fear (the type of action tragedy is presumed to imitate) because misery and happiness alike will come to be realized in recognitions of this kind. Now since recognition involves more than one person, there are cases in which one of two persons already knows the other and the recognition is on one side only, and other cases in which recognition has to take place on both sides. Iphigeneia, for example, was recognized by Orestes⁵ from the sending of her letter, but a second recognition was required to reveal his identity to her.

Two elements of the tragic plot, then, are Reversal and Recognition. A third element is Suffering (*pathos*). We have said what reversal and recognition are; Suffering is an action of a destructive or painful description, such as the deaths that take place in the open [and not behind the scenes], agonies of pain, wounds, and so on.

[12] Earlier I spoke of the parts of tragedy that are to be employed as formative elements. The following are the parts or separate sections into which it is divided quantitatively: Prologue, Episode, Exode, and Choral part, this last again being divided into Parodos and Stasimon, which are found in all tragedies, and songs from the stage⁶ and Kommoi, found only in some. The

3. *Oedipus Rex* (ca. 430 B.C.E.), by Sophocles—a play to which Aristotle frequently refers as a model for his definition of tragedy. Unknowingly, Oedipus kills his father, Laius; takes his father's place as king of Thebes; and marries his mother, Jocasta. When he learns that he has not escaped the fate foretold, he gouges out his eyes and banishes himself, hence undergoing a reversal from king to outcast.

4. Lost tragedy by the orator and tragic poet Theo-

doctes (ca. 375–334 B.C.E.), about the daughters of King Danaus of Argos, who ordered them to kill their husbands (all obeyed except Hypermnestra, whose husband was Lynceus).

5. In *Iphigenia in Tauris* (ca. 413 B.C.E.), by Euripides (ca. 485–ca. 406 B.C.E.), the youngest of the three great Greek tragedians; the two are siblings.

6. That is, songs sung by the actors (not the chorus).

Prologue is the whole section preceding the entrance song (Parodos) of the chorus; an Episode a whole section between two complete choral odes; and the Exode the whole section after which there is no choral ode. In the choral part, the Parodos is the first continuous utterance of the chorus; a Stasimon is a choral ode without anapaestic and trochaic lines;⁷ a Kommos is a lament in which chorus and actors both take part. Earlier I spoke of the parts of tragedy that are to be employed as formative elements; these are the parts or separate sections into which it is divided quantitatively.

[13] Next in order after the points I have just dealt with, it would seem necessary to specify what one should aim at and what avoid in the construction of plots, and what it is that will produce the effect proper to tragedy.

Now since in the finest kind of tragedy the structure should be complex and not simple, and since it should also be a representation of terrible and piteous events (that being the special mark of this type of imitation), in the first place, it is evident that good men ought not to be shown passing from prosperity to misfortune, for this does not inspire either pity or fear, but only revulsion; nor evil men rising from ill fortune to prosperity, for this is the most untragic plot of all—it lacks every requirement, in that it neither elicits human sympathy nor stirs pity or fear. [1453a] And again, neither should an extremely wicked man be seen falling from prosperity into misfortune, for a plot so constructed might indeed call forth human sympathy, but would not excite pity or fear, since the first is felt for a person whose misfortune is undeserved and the second for someone like ourselves—pity for the man suffering undeservedly, fear for the man like ourselves—and hence neither pity nor fear would be aroused in this case. We are left with the man whose place is between these extremes. Such is the man who on the one hand is not pre-eminent in virtue and justice, and yet on the other hand does not fall into misfortune through vice or depravity, but falls because of some mistake, one among the number of the highly renowned and prosperous, such as Oedipus and Thyestes⁸ and other famous men from families like theirs.

It follows that the plot which achieves excellence will necessarily be single in outcome and not, as some contend, double, and will consist in a change of fortune, not from misfortune to prosperity, but the opposite, from prosperity to misfortune, occasioned not by depravity, but by some great mistake on the part of one who is either such as I have described or better than this rather than worse. (What actually has taken place confirms this; for though at first the poets accepted whatever myths came to hand, today the finest tragedies are founded upon the stories of only a few houses, being concerned, for example, with Alcmeon, Oedipus, Orestes, Meleager, Thyestes, Telephus,⁹ and such others as have chanced to suffer terrible things or to do them.) So, then, tragedy having this construction is the finest kind of tragedy from an

7. Lines based on the syllabic pattern short-short-long (often used in the parados) or long-short.

8. Like Oedipus, a popular subject for Greek tragedy, though none survives; his story has numerous variants. He unknowingly ate the flesh of his own sons, served by his brother Atreus; and following the advice of an oracle, he committed incest with his daughter to beget the son who would avenge him.

9. Few of the tragedies involving these charac-

ters survive. Telephus, fated to kill his great-uncles, is exposed by his grandfather (a tragedy by Euripides told of Telephus's wound, received from Achilles as the Greeks were preparing to sail for Troy, that would not heal); Alcmeon and Orestes kill their mothers, Eriphyle and Clytemnestra, to avenge their fathers' deaths and are driven mad by the Furies (female demons who punish kin-murderers); and Meleager kills his uncles, and as a result his mother kills him.

artistic point of view. And consequently, those persons fall into the same error who bring it as a charge against Euripides that this is what he does in his tragedies and that most of his plays have unhappy endings. For this is in fact the right procedure, as I have said; and the best proof is that on the stage and in the dramatic contests, plays of this kind seem the most tragic, provided they are successfully worked out, and Euripides, even if in everything else his management is faulty, seems at any rate the most tragic of the poets.

Second to this is the kind of plot that some persons place first, that which like the *Odyssey* has a double structure and ends in opposite ways for the better characters and the worse. If it seems to be first, that is attributable to the weakness of the audience, since the poets only follow their lead and compose the kind of plays the spectators want. The pleasure it gives, however, is not that which comes from tragedy, but is rather the pleasure proper to comedy; for in comedy those who in the legend are the worst of enemies—Orestes and Aegisthus,¹ for example—end by leaving the scene as friends, and nobody is killed by anybody.

[14, 1453b] The effect of fear and pity may be created by spectacle; but it may also be created by the very structure of the events, and this method has priority and is the way of a better poet. For the plot should be so constructed that even without seeing the play, anyone who merely hears the events unfold will shudder and feel pity as a result of what is happening—which is precisely what one would experience in listening to the plot of *Oedipus*. To procure this effect by means of spectacle is less artistic in that it calls for external apparatus, while those who produce through spectacle something that is not terrifying but only portentous in effect have no part in tragedy at all, for not every sort of pleasure is to be sought from tragedy, but only that which properly belongs to it. And since the pleasure the poet is to provide is that which comes from pity and fear through an imitation, clearly this effect must be embodied in the events of the plot.

Let us consider, therefore, the kinds of occurrences that seem terrible or pitiful. Actions of this sort must, of course, happen between persons who are either friends to one another or enemies or neither. Now if enemy harms enemy, there is nothing to excite pity either in his doing the deed or in his being on the point of doing it—nothing, that is, but the actual suffering; and the same is true if the parties are neither friends nor enemies. When, however, the tragic event occurs within the sphere of the natural affections—when, for instance, a brother kills or is on the point of killing his brother, or a son his father, or a mother her son, or a son his mother, or something equally drastic is done—that is the kind of event a poet must try for. There is, of course, no possibility of altering the traditional stories—I mean Clytemnestra being murdered by Orestes and Eriphyle by Alcmeon—but it is the poet's duty to find a way of using even these traditional subjects well.

Let me say more clearly what I mean by using them well. It is possible to have the action occur with full knowledge and awareness on the part of those involved, as the early poets used to do and as Euripides does when he has Medea² kill her children. It is possible also to do the awful thing, but to

1. Clytemnestra's lover (and Agamemnon's cousin), whom (in the version told in Aeschylus's *Agamemnon*) Orestes also kills.

2. A sorceress from Colchis. In *Medea* (431 B.C.E.),

to avenge herself on Jason, who has deserted her for the daughter of a king, she kills his—and her—children.

do it in ignorance and then discover the relationship of the victim later, as Sophocles' Oedipus does. In this case, to be sure, the deed is done outside the play, but it is done in the tragedy itself, for example, by the Alcmeon of Astydamos and by Telegonus in *Odysseus Wounded*.³ A third possibility is for one who is about to do one of these atrocious deeds in ignorance to discover the relationship before he does it. There are no other possibilities, for the deed has either to be done or not done and with knowledge or without knowledge. Of these situations, the worst is for someone to be on the point of doing the deed with knowledge, and then not do it. This is revolting in itself, and is not tragic, since no suffering is involved. It is not employed, therefore, by the poets [1454a] except occasionally, as when Haemon in *Antigone*⁴ fails to kill Creon. The doing of the deed comes next in order. The better way is for it to be done in ignorance, with the recognition following afterward; there is then nothing revolting in the act, and the recognition astounds us. The best situation, however, is the last mentioned. It is exemplified in *Chresphontes*, where Merope is on the point of murdering her son, when she recognizes him and desists, and in *Iphigeneia*, where the sister is about to slay her brother; and in *Helle*,⁵ where the son is about to give his mother up to the enemy when he learns who she is.

These considerations account for the fact mentioned earlier, that not many families provide subjects for tragedies. The poets, that is, in seeking out tragic situations, discovered more by luck than lore how to contrive in their plots the kind of situation we have described. And this obliges them to keep returning for subjects to those few houses that have had such dire events befall them.

Enough, then, has now been said about the construction of the events and what the plots should be like in tragedy; [and hence we turn next to Character].

[15] With regard to the Characters there are four things to aim at. First and foremost is that the characters be good. The personages will have character if, as aforesaid, they reveal in speech or in action what their moral choices are, and a good character will be one whose choices are good. It is possible to portray goodness in every class of persons; a woman may be good and a slave may be good, though perhaps as a class women are inferior and slaves utterly base. The second requisite is to make the character appropriate. Thus it is possible to portray any character as manly, but inappropriate for a female character to be manly or formidable in the way I mean. Third is to make the characters lifelike, which is something different from making them good and appropriate, as described above. Fourth is to make them consistent. Even if the person being imitated is inconsistent and this is what the character is supposed to be, he should nevertheless be portrayed as consistently inconsistent.

There is an example of unnecessary baseness in the character of Menelaus in *Orestes*,⁶ of the unsuitable and inappropriate in the lamentation of Odysseus

3. A lost play by Sophocles in which Telegonus, the son of Odysseus and Circe, fatally wounds his father without knowing his victim's identity. Astydamos (active ca. 390 B.C.E.), a prolific Athenian tragedian; *Alcmeon* (and all but a few lines of his works) is lost.

4. By Sophocles (ca. 441 B.C.E.). Haemon, who loves Antigone, tries to kill his father (Creon,

king of Thebes), who is responsible for her suicide.

5. Nothing more is known of this play. The *Chresphontes* (now lost) and *Iphigeneia in Tauris* are both by Euripides.

6. In Euripides' play *Orestes* (408 B.C.E.), Menelaus basely refuses to help his nephew.

in *Scylla* and in the declamation of Melanippe;⁷ and of inconsistency in *Iphigeneia in Aulis*,⁸ where the Iphigeneia who begs to be spared bears no resemblance to the Iphigeneia who appears thereafter.

In the characters and the plot construction alike, one must strive for that which is either necessary or probable, so that whatever a character of any kind says or does may be the sort of thing such a character will inevitably or probably say or do and the events of the plot may follow one after another either inevitably or with probability. (Obviously, then, the denouement of the plot should arise from the plot itself and not be brought about "from the machine," [1454b] as it is in *Medea* and in the embarkation scene in the *Iliad*.⁹ The machine is to be used for matters lying outside the drama, either antecedents of the action which a human being cannot know, or things subsequent to the action that have to be prophesied and announced; for we accept it that the gods see everything. Within the events of the plot itself, however, there should be nothing unreasonable, or if there is, it should be kept outside the play proper, as is done in the *Oedipus* of Sophocles.)

Inasmuch as tragedy is an imitation of persons who are better than the average, the example of good portrait painters should be followed. These, while reproducing the distinctive appearance of their subjects in a recognizable likeness, make them handsomer in the picture than they are in reality. Similarly, the poet when he comes to imitate men who are irascible or easygoing or have other defects of character should depict them as such and yet as good men at the same time. An example involving harshness is the way Agathon and Homer portray Achilles.¹

These, then, are matters to be carefully observed, as also are matters appertaining to the sense perceptions that the poet's art necessarily entails, for in respect to these, too, it is often possible to miss the mark. A sufficient account of them has been given in my published discourse.²

[16] What Recognition is in general has already been explained. To turn now to its several species, first (1) there is the form that is least artistic and, from poverty of invention, the one they use most—that is, recognition by marks or tokens. Such marks are sometimes congenital, as "the lance the earth-born bear," or the "stars" in Carcinus³ *Thyestes*, and sometimes acquired, either something on the person, like a scar, or external tokens such as necklaces or the boat in *Tyro*.⁴ Even these, however, can be used in better or worse ways. Thus Odysseus is recognized by means of his scar in one way by the nurse and in another way by the swineherds.⁵ The recognitions by the herdsmen, and

7. In *Melanippe the Wise*, a lost play by Euripides, the heroine apparently argues with a philosophical sophistication inappropriate for a woman. *Scylla*: a lost dithyramb by Timotheus, in which Odysseus weeps in an unmanly way for his crew members killed by the monster Scylla.

8. A play by Euripides set at Aulis (ca. 405 B.C.E.), depicting Iphigenia about to be sacrificed by her father, Agamemnon, so that the Greeks may have fair winds as they sail to Troy; according to one version of the myth, she was saved by Artemis and transported far away to Tauris, where she becomes high priestess (and where Orestes later arrives).

9. In *Iliad* 8.155–81, only the arbitrary intervention of the goddess Athena prevents the Greeks from giving up the fight at Troy and going home. In *Medea*, after killing her children Medea flies off in the chariot of the sun god Helios, her grandfather; this is the "god from the (theatrical)

machine" (in Latin, the *deus ex machina*), an unexpected event that resolves the plot.

1. The greatest warrior among the Greeks and the central character of the *Iliad*.

2. Presumably referring to the dialogue *On Poets*, esp. fragments 4–7.

3. Prolific Greek tragic poet (early 4th c. B.C.E.). The preceding quotation may be from Euripides' lost *Antigone*.

4. A lost play by Sophocles; Tyro's sons are abandoned in a small boat that leads to their later recognition.

5. Odysseus is recognized artfully (because inevitably) by his nurse when she notices his scar in the "bath scene" (*Odyssey* 19.386–475); but his declaration of his identity to the swineherds, when he shows them the scar as proof (21.205–25), is manufactured by the poet.

all such recognitions as use tokens as proofs of identity, are artistically worse, while those that occur spontaneously like the one in the Bath Scene are better. Second (2) are recognitions obviously managed by the poet and inartistic for that reason. An instance is the way Orestes in *Iphigeneia* gets himself recognized as Orestes: Iphigeneia is spontaneously recognized through the letter, but Orestes speaks for himself in terms imposed by the poet and not by the plot. The fault here is close to the one just mentioned, since he might just as well have had a few marks or tokens on him. Another example is the "voice of the shuttle" in Sophocles' *Tereus*.⁶ A third type of recognition (3) is that which comes about through memory—i.e., a person's reaction upon seeing something. [1455a] Thus in Dicaeogenes' *Cyprians*, the hero bursts into tears upon seeing the picture, and in the Alcinous⁷ episode Odysseus, when he hears the minstrel, is reminded of the past and weeps, therewith in both cases they are recognized. Fourth (4) is recognition through reasoning. This is exemplified in the *Choephoroi*:⁸ "Someone resembling me has come; no one but Orestes resembles me; therefore Orestes has come." Another example is the recognition suggested for *Iphigeneia* by Polyidus the Sophist.⁹ It would be natural, he said, for Orestes to reflect that his sister had been sacrificed and here he was himself about to be sacrificed in turn. Again, in the *Tydeus* of Theodectes, the father says that he had come in search of his son only to meet with death himself. In the *Phinidae*,¹ the women upon seeing the place drew this conclusion about their fate: that here they were doomed to die, since this was the place where they had been exposed in infancy. There is also (5) a composite kind of recognition resulting from faulty inference by one party or the other. For instance, in *Odysseus the False Messenger*,² the point that Odysseus and no one else can string the bow³ is something set up by the poet and is the basic premise, [and it remains so] even if the messenger did say that he would know the bow which he had not seen; but having him gain recognition by this second means [i.e., by identifying the bow] on the assumption that he was going to be recognized by the first means [stringing the bow] is a fallacy.

Of all the forms of recognition, however, the best is that which springs from the events themselves, the shock of surprise having thus a probable basis. Such are the recognitions in the *Oedipus* of Sophocles and in *Iphigeneia*: it is probable that Iphigeneia should wish to send a letter. Only recognitions of this kind escape the artificiality of tokens and necklaces. Next best are recognitions that result from reasoning.

[17] The poet, as he constructs his plots and is working them out complete with language, should as far as possible place the action before his eyes; for in this way, seeing the events with the utmost vividness, as if they were taking place in his very presence, he will discern what is appropriate and will be least likely to overlook discrepancies. Witness to this point is the mistake that brought censure upon Carcinus. Amphiarus came back

6. A lost play. Philomela tells her sister the story of her rape by Tereus—her brother-in-law, who has torn out her tongue to silence her—by weaving a picture of it.

7. King of the Phaeacians and Odysseus's host in *Iliad* 7–12 (for the telltale weeping, see 8.521–34). Dicaeogenes (late 5th c. B.C.E.), a minor Greek tragedian.

8. Aeschylus's *Choephoroi*, or *Libation Bearers* (458 B.C.E.), lines 168–234.

9. Polyidus (early 4th c. B.C.E.), perhaps the poet and critic Polyidus of Selymbria.

1. Lost, as is *Tydeus*.

2. A lost play by an unknown author.

3. For Odysseus's bow, see *Odyssey* 21.

from the sanctuary.⁴ This was not noticed if one did not visualize the action, but on the stage the play collapsed when the audience would not tolerate the oversight. Also the poet should as far as possible work out the play with the appropriate dramatic gestures, for among poets of equal ability, those who themselves are in the emotional states they depict are the most convincing; that is, one who is in the throes of distress conveys distress and one who is in a rage conveys anger most truthfully and accurately. For this reason, poetry is the art of a man of genius or of one having a touch of madness—the first sort are versatile, the second excitable.

Whether one is using a traditional story or an invented story and composing it oneself, [1455b] one should first set it down in a general outline, and only then proceed to expand it by fashioning the episodes. What I mean by taking this general view of the whole may be illustrated from *Iphigeneia*, thus:

A certain young girl who had been offered in sacrifice vanished mysteriously from the sight of the sacrificers, and having been set down in another country where it was the custom to sacrifice foreigners to the goddess, became the priestess of this rite. Some time later it happened that the priestess's brother arrived. (The fact that he went there because the oracle for a certain reason commanded it, and what he went for, are matters external to the plot.) Upon his arrival, he was seized and was on the point of being sacrificed when he revealed who he was (either in Euripides' way of managing it, or in that of Polyidus with the quite natural remark that evidently not only his sister but he also had to be sacrificed); and thereby his life was saved.

This done, it is now time to put in the characters' names and to fashion the episodes, taking care to see that the episodes are appropriate, as are, for example, in *Orestes* the fit of madness that leads to Orestes' capture and the ritual cleansing that leads to the escape. Note that in drama the episodes are short, whereas in epic poetry episodes are used to give the poem length. Thus the argument of the *Odyssey* is not long:

A certain man has been absent from home for many years; he is kept under hostile surveillance by Poseidon;⁵ and he is alone. Besides, the situation at home is that suitors are dissipating his property and plotting against his son. But after suffering from storms at sea, the man returns, reveals himself to certain persons, and attacking his enemies comes off safe himself and destroys them.

This is the essential story; and all the rest consists of episodes.

[18] In every tragedy there is first the Complication and then the Denouement. The complication comprises the events outside the play itself and often also some of the events within the play, and the remainder is the denouement. I mean that the complication extends from the beginning up to the last moment before the change to good or bad fortune occurs, and that the denouement begins with that change and extends to the end of the

4. In a lost play; Amphiaraus, a ruler in Argos, was a seer and was one of the Seven against Thebes, who unsuccessfully sought to help one of Oedipus's sons take the rule of Thebes from the

other.

5. Greek god of the sea and the father of the Cyclops, whom Odysseus blinded and mocked.

play. For example, in the *Lynceus* of Theodectes, the complication includes the antecedent events and, within the play, the seizure of the child and that in turn of [the parents]; the denouement extends from the indictment for murder to the end.

There are four types of tragedy, corresponding in number to the “parts” already mentioned. There is complex tragedy, the whole of which consists of reversal and recognition; tragedy of passion—for example, the various plays entitled *Ajax* or [1456a] *Ixion*;⁶ tragedy of character, such as the *Women of Phthia* and *Peleus*;⁷ and fourth ***, such as the *Daughters of Phorcys* and *Prometheus*⁸ and all plays the scene of which is in Hades. One should by all means endeavor to have all these types at his command, or at least most of them and the most important—especially in view of the way they harass the poets nowadays; good poets having existed in each case in the past, they now expect the single poet to surpass each one of these in his point of excellence.

The right way to compare tragedy with tragedy is to consider no feature so much as the plot—that is, in plays having the same complication and denouement. Many poets do well with the complication, only to fail with the denouement, but the one capacity should be brought into line with the other.

One must bear in mind also what has been said repeatedly, and not construct a tragedy on the plan of an epic poem (by epic I mean, having a multiplicity of stories)—as if, for example, someone were to dramatize the story of the *Iliad* in its entirety. In the epic, thanks to the length of the poem, the parts all assume their due proportions, but in plays the result of such a multiplicity is far from what was expected. One has only to note that those who have dramatized the *Sack of Troy* entire, instead of taking one part at a time as Euripides did, or the whole Niobe story⁹ instead of doing as Aeschylus did, invariably either have their plays hissed off or make but a poor showing in the competition. In fact, the one occasion when even Agathon was driven from the stage was when he did this.

It is remarkable how both in peripeties [i.e., complex plots] and in simple plots the poets keep their aim fixed on the effects they wish to produce—the tragic effect, that is, and the effect of human sympathy. The latter is our feeling when a clever but villainous man is outwitted, Sisyphus¹ for example, or when a brave but unjust man is defeated. This even has a kind

6. No play of this name survives. In Greek mythology, Ixion was the first to murder kin and attempted to rape Hera, queen of the gods; as punishment for the second crime, he is chained forever to a wheel in Hades, the underworld. *Ajax*: Sophocles' play (ca. 445 B.C.E.) tells the story of the Greek warrior who, after being driven mad by Athena, commits suicide out of shame.

7. Both lost works revolve around the family of Achilles, who was the son of Peleus and came from Phthia. *Women of Phthia* is by Sophocles; both Sophocles and Euripides wrote plays titled *Peleus*.

8. Perhaps Aeschylus's *Prometheus Bound*, whose hero speaks while bound to the rocks in the Caucasus. *Daughters of Phorcys*: perhaps by Aeschylus. Phorcys was a sea god, and his daughters

were monsters: the 3 Graeae, old women who shared one tooth and one eye, and the 3 serpent-haired Gorgons, the sight of whom turned humans to stone.

9. There are no known epics concerning Niobe; Aeschylus's *Niobe* is lost. *Sack of Troy*: a poem in the epic cycle, by Lesches of Mytilene (ca. 7th c. B.C.E.) or Arctinus of Miletus (ca. 8th c. B.C.E.). Euripides treated some of the same events in his *Trojan Women* and *Hecuba*.

1. A sly trickster who murdered travelers and once even chained the god of death, he is punished eternally for betraying Zeus's secrets; he tries to roll a stone over the top of a steep hill, but always fails and must try again from the bottom. Aeschylus, Sophocles, and Euripides all wrote plays on Sisyphus.

of probability, if only in the sense of Agathon's comment,² for it is probable that many improbable things will happen.

The chorus ought to be regarded as one of the actors, and as being part of the whole and integrated into performance, not in Euripides' way but in that of Sophocles. In the other poets, the choral songs have no more relevance to the plot than if they belonged to some other play. And so nowadays, following the practice introduced by Agathon, the chorus merely sings interludes. But what difference is there between the singing of interludes and taking a speech or even an entire episode from one play and inserting it into another?

[19] Now that the other elements have been discussed, it remains to speak of Language and Thought. As for Thought, this subject may best find its place in my discussion of rhetoric,³ since it belongs more properly to that field of study. Under Thought come all the effects that are to be obtained through speech, and these fall under the heads of proving and refuting, stirring up emotions [1456b] (pity, fear, anger, and the rest), and enlarging or belittling the importance of things. Obviously, in their actions as well as in their utterances, the personages will employ Thought in these same categories whenever they have to inspire pity or terror or convey a sense of importance or plausibility simply by what they do; the only difference being that the acts must make their impression immediately without verbal explanation, while the effects of the speech must be procured by the speaker and be the result of what he says, for if the intended impression were to be made independently of the speech and not by means of it, what need would there be for the speaker?

To come to Language, one technical study relating to it concerns the Forms of Expression, knowledge of which properly belongs to the art of Elocution and to the specialist in that sort of thing—what is a command, what is a prayer, a statement, a question, an answer, and the like. A poet's knowledge or ignorance of these matters is not a point on which criticism of any consequence is directed against his art. For what error would anyone suppose there to be in the words "Sing, goddess, the wrath," which Protagoras,⁴ however, criticizes on the grounds that Homer thinks he is uttering a prayer when he is really giving an order. According to Protagoras, to bid someone do or not do something is a command. Let us, therefore, leave this technicality aside as belonging to some other art and not to the art of poetry.

[20] Language, taken as a whole, is divisible into the following parts: the single letter, the syllable, the connective particle, the article[?], the noun, the verb, the inflection, the unified utterance.

A letter is an indivisible sound—not every such sound, however, but one capable of uniting with others in a complex sound; the lower animals utter indivisible sounds, but not what I call a letter. These primary sounds are divided into vowels, semivowels, and mutes. A vowel is a letter having audible sound without the application [of the tongue or lips]; a semivowel is one having audible sound with such application—e.g., S and R; a mute—e.g., G and D—is one which, though made by application [of these organs], has no

2. Agathon's comment occurred in a play, and is quoted in its original form in Aristotle's *On Rhetoric* 1402a: "Perhaps someone may say that this is probable, that many things may befall mortals that are not probable" [translator's note].

3. For Aristotle's discussion of types of argu-

ment, see *On Rhetoric* 1356a–1358a (see below).

4. Pre-Socratic philosopher (5th c. B.C.E.), who was one of the most successful of the sophists, or itinerant teachers. "Sing . . .": the first words of the *Iliad*.

sound by itself but becomes audible when combined with letters having a sound. The letters owe their variety to their being produced by different conformations of the mouth or the different parts of it, to their being aspirated or not aspirated, to their being long or short, and, finally, to their being uttered with acute, grave, or intermediate tones. Detailed study of these matters belongs to the subject of metrics.

A syllable is a nonsignificant sound composed of a mute and a letter having sound [vowel or semivowel]; for GR without A is a syllable as well as GRA. But differences of syllables is also a subject for metrics.

The Connective Particle is (a) a nonsignificant sound—e.g. *men*, *êtoi*, *de*—which neither prevents [1457a] nor causes formation of one significant sound [expression] out of two or more others, and which cannot correctly stand by itself at the beginning of a phrase; or (b) it is a nonsignificant sound, such as *amphi*, *peri*,⁵ etc., which functions to make one significant sound [expression] out of two or more significant sounds.

An Article[?] is a nonsignificant sound which marks the beginning or end or a division [of an expression].

A Noun is a composite significant sound, not indicating time, no part of the composite being by itself significant; for even when a noun is composed of two others we do not treat these as separately significant; e.g., in the name Theodore *-dore* ["gift"] is not significant.

A Verb is a composite significant sound, indicating time, no part of the composite being by itself significant, just as in nouns. Thus "men" or "white" gives no indication of "when," but "walks" and "has walked" add to their meaning the indication respectively of present and past time.

Inflection applies to nouns or verbs, as when the meaning is "of" or "to" something, and so forth; or when the reference is to one or more than one, as "man" and "men"; or again it may be a mode of utterance, for example, a question or a command: "walked?" and "Walk!" being inflections of the verb in these two forms of utterance.

A unified utterance is a composite significant sound, some parts of which have independent meaning. Not every such utterance is a combination of nouns and verbs; it can exist without verbs, as, for example, the definition of man. However, it will always include a member having independent meaning, as "Cleon" in "Cleon walks." The unified utterance is a unit in either of two ways, either because what it signifies is itself a unit or because it is a combination of several parts. Thus the *Iliad* is unified by combination, the definition of man by signifying one thing.

[21] Words are of two kinds, simple words—those like *gê* (earth) that are not compounds of significant parts—and double words. The latter are compounds consisting either of a significant and a nonsignificant part (though in the compound these are not recognized as significant or nonsignificant), or of two parts both of which have meaning. There may also be triple and quadruple words and indeed multiple words, as, for example, most of the names of the people of Marseilles [? in a mock heroic poem]—Hermocaicoxanthus.⁶ [1457b]

5. Around, about; in Greek, these are both prepositions and prefixes.

6. A comical name compounded from the names

of three rivers (Hermus, Caïcus, and Xanthus) in western Asia Minor, where the founders of Marseilles (then called Massalia) originated.

Every word is either (1) the ordinary current word, or (2) a foreign word, or (3) a metaphor, or (4) an ornamental word, or (5) a coined word, or a word (6) lengthened or (7) curtailed or (8) otherwise altered in form.

By “current word” I mean a word used by everyone [in any particular region], and by “foreign word” a word used by others elsewhere. Obviously, the same word may be both current and foreign, but not for the same people; *sigynon* (lance) is a current word in Cyprus but a foreign word for us.⁷

Metaphor is the application to one thing of the name belonging to another. We may apply (a) the name of a genus to one of its species, or (b) the name of a species to its genus, or (c) the name of one species to another of the same genus, or (d) the transfer may be based on a proportion. Examples:

(a) From genus to species: “Here stands my ship,” since *to be at anchor* is a special form of *standing still*.

(b) From species to genus: “Truly *ten thousand* noble deeds hath Odysseus done,” for *ten thousand* is a large number and is here used in place of the generic *many*.

(c) From species to species: “*drawing off* the life with bronze” and “*cutting off* [streams of water?] with unwearied bronze [vessels?],” where “drawing off” is put for “cutting off” and “cutting off” for “drawing off,” both expressions being species of the genus “take away.”

(d) The meaning of metaphor by analogy [or proportional metaphor] is that when among four things the second is related to the first as the fourth is related to the third, one may substitute the fourth for the second or the second for the fourth. And sometimes the term related to the proper term in the analogy is added to the metaphor, thus: The wine cup is to Dionysus as the shield is to Ares,⁸ and therefore one may call a wine cup “the shield of Dionysus” and the shield “the wine cup of Ares.” Again, old age is to life what evening is to day; and one may speak of evening as “the old age of the day” (either thus or as Empedocles puts it) and of old age as “the evening of life” or “the sunset of life.” In some cases there are terms of the proportion for which actually we have no word but which nevertheless will find expression in metaphor. Thus to cast seed is to sow, but there is no special word for the casting of its rays by the sun; this, however, is to sunlight what sowing is to seed, and hence the expression: “sowing a god-created flame.” There is still another way in which this type of metaphor may be used. Having called one thing by the name of another, we can deny it some special attribute of this thing—as one might call a shield not the wine cup “of Ares,” but the “wineless” wine cup.

A coined word is a word not used at all by any group of speakers but simply invented by the poet; for apparently there are some words of this kind, as *ernygas* (“sprouters”?) for *kerata* (“horns”) and *arêtêr* (“supplicator”) for *hierus* (“priest”).

An Expanded [1458a] Word is one in which a vowel that is usually short is treated as long, or one in which an extra syllable has been inserted. A Curtailed Word is one from which some part has been taken away. Examples of expanded words: *polêos* for *poleôs*, *Pêlêïadeô* for *Pêleidou*; of curtailed words: *kri* (for *krithe*), *dô* (for *dôma*), and *ops* (for *opsis*) in *mia ginetai amphoterôn*

7. That is, though speaking Greek, those on the island of Cyprus speak a different dialect.

8. Greek god of war.

ops.⁹ A word is Altered when part of the usual form is kept and part is refashioned. Example, *dexiteron kata mazon for dexion*.¹

Nouns themselves are masculine or feminine, or else intermediate between these.² Masculine [and not feminine] are all that end in nu, rho, or sigma or compounds of sigma (i.e., psi and ksi); feminine are those ending in vowels that are always long (i.e., eta and omega) or in alpha among vowels that may be long or short. Thus the masculine and feminine terminations are equal in number, the compounds psi and ksi counting as sigma. No noun ends in a mute or in an invariably short vowel [epsilon or omicron]; only three end in iota, namely *meli* (honey), *kommi* (gum), and *peperi* (pepper); and five end in upsilon: <*pôu* (flock), *nâpu* (mustard), *gonu* (knee), *doru* (spear), *astu* (town)>. The intermediates end in these vowels and in nu and sigma.

[22] Of Diction the prime virtue is to be clear without being commonplace. Diction is at its clearest when composed of words in everyday use, but then it is commonplace, as is exemplified by the poetry of Cleophon and Sthenelus.³ On the other hand, an impressive diction, one that escapes the ordinary, results from the use of strange words, by which I mean foreign words, metaphors, expanded words, and whatever departs from normal usage. However, anything composed entirely in such language will either be a riddle or a barbarism—a riddle if composed in metaphors, a barbarism if in foreign words alone. In fact, the very idea of a riddle is to describe a given object by means of a string of absurdities, a thing that cannot of course be done by any combination of the proper terms, but can be done if you combine the corresponding metaphors, as in “I saw a man welding bronze on another man with fire,”⁴ and similar riddles. In like manner, a combination of foreign words produces a barbarism.

What is needed, therefore, is a blend, so to speak, of these ingredients, since the unfamiliar element (the foreign word, the metaphor, the ornamental word, and the other types mentioned) will save the diction from being commonplace and drab, while the colloquial element will ensure its clarity. [1458b] By no means least important in what they contribute at once to clarity and to unfamiliarity are the expanded, curtailed, and altered forms of words. These will provide the element of unfamiliarity insofar as deviation from the normal forms makes them unusual, while the fact that they are in part ordinary words will ensure clarity. Unwarranted, therefore, are the objections of those who censure this kind of expression and hold the poet up to ridicule for using it, as for instance the elder Eucleides⁵ does. Making poetry is easy, he says, if they let you stretch out the words as much as you please, and therewith he produces some burlesque lines in the style in question.

Epicharên eidon Marathônade badizonta,

and

9. One vision (*ops*, “face,” “eye”) comes into being from two [eyes] (quoted from a fragment of Empedocles). The expanded words mean “of the city,” “son of Peleus”; the curtailed words mean “barley,” “mansion,” and “seeing.”

1. The Greek literally means “in the right(er) [instead of ‘right’] breast” (*Iliad* 5.393).

2. Some editors condemn this paragraph (which contains much that is inaccurate) as spurious.

3. Probably a tragic poet whose poor style is ridiculed by Aristophanes.

4. In *On Rhetoric* 1405b, Aristotle uses the same example and explains that it refers to the process of cupping.

5. Identity unknown, although both an Athenian magistrate and a Megaran philosopher of that name were active ca. 400 B.C.E.

Ouk an g'eramēnos [?] ton ekeinou elleboron.⁶

Agreed that too obvious a use of lengthened words becomes ridiculous, but moderation has its place in all the stylistic devices, and Eucleides might have achieved the same effect with metaphors, foreign words, and the rest, if he had treated them abusively with the express purpose of raising a laugh. Try substituting the normal words in a verse of epic poetry, and you will realize what a difference the lengthened forms make when handled properly. The same with foreign words, metaphors, and the other forms, anyone who replaced them with the regular words would see that what I say is right.

To illustrate: The same iambic line is found both in Aeschylus and in Euripides, but Euripides has altered just one word, putting a strange word in place of a common everyday one, and as a result his line seems fine and the other poor in comparison. Aeschylus in his *Philoctetes* has it thus:

phagedaina hê mou sarkas esthieî podos⁷

and what Euripides did was to change ἐσθίει (“eats”) to θοινᾶται (“feasts on”). Again, in the line,

nun de m'eôn oligos te kai outidanos kai aeikês⁸

suppose one were to substitute the ordinary words and say:

nun de m'eôn mikros te kai asthenikos kai aeikês⁹

and similarly in

diphron aeikelion katatheis oligên te trapezan

Say:

diphron mochthêrou katatheis mikran te trapezan.¹

And suppose *êiones boôsin* (“the sea beaches bellow”) to be replaced by *êiones krazousin* (“the sea beaches cry out”). Also, Ariphrades² made fun of the tragic poets for using locutions that no one would employ in ordinary speech, such as *dômatôn apo* (“from the houses away”) instead of *apo dômatôn* (“away from the houses”) and *sethen* (“of thine”) and *ego de nin* [where *nin* is an archaic third-person pronoun] [1459a] and *Achilleôs peri* (“Achilles about”) for *peri Achilleôs* (“about Achilles”), and so on. But all such expressions, just because they are not in the current vocabulary, give distinction to the poet’s language; and that is what Ariphrades failed to understand.

To give appropriate treatment to the kinds of words here discussed, including compounds and foreign words, is in every case important, but

6. The first line translates as “I saw Epichares walking to Marathon” and the second, only fragmentary, “would not, in love(?) . . . that man’s hellebore.” The two phrases are unrelated; both contain words with arbitrarily lengthened syllables. Epichares: a common name in Athens. Marathon: a large Attic city on the northeast coast. “Hellebore”: an herb thought to be a cure for madness.

7. “The gnawing ulcer that eats the flesh of my foot,” from a lost play by Euripides. The *Philoctetes* of Sophocles but not Euripides survives, in which Philoctetes, an outstanding archer who used the

bow and arrows of Heracles, sailed with Greeks for Troy but was left behind on an island because a wound on his foot, caused by snakebite, produced a horrible smell.

8. “But now a paltry man, a weakling, in aspect ill-favored (has blinded me)” (*Odyssey* 9.515).

9. “But now a little man, a man who is weak and unpleasing.”

1. “A wretched stool and a little table”; the first line, “Having placed (for him) an unseemly stool and a paltry table,” is from *Odyssey* 20.259.

2. An unknown comic poet.

most important by far is to have an aptitude for metaphor. This alone cannot be had from another but is a sign of natural endowment; since being good at making metaphors is equivalent to being perceptive of resemblances. And among these verbal forms, compounds are best fitted for dithyrambs, foreign words for heroic verse,³ and metaphors for iambic verse. In heroic verse all the forms may be used; but in iambic verse, where the aim is to imitate the spoken language as closely as possible, only those forms are appropriate which would also be used in prose—that is, the current word, the metaphor, and the ornamental word.

Let us regard the foregoing as a sufficient account of tragedy and of imitation in the mode of direct action.

[23] But as for the imitative art that is narrative [in manner] and employs metrical language [as its medium],⁴ it is evident that, just as in tragedies, its plots should be dramatic in structure—that is, should involve a single action, whole and complete in itself, having a beginning, a middle, and an end, so that like one whole living creature it may produce its appropriate pleasure—and that its structure should not resemble histories, which necessarily present not a single action but a single period of time with all that happened therein to one or more persons, no matter how little relation one event may have had with another. (Thus though occurring at the same time, the naval battle at Salamis and the battle with the Carthaginians in Sicily did not converge to a common end,⁵ and similarly in a time sequence there are cases in which one event follows another without uniting in a single issue.) Yet perhaps the majority of the poets do precisely that. Hence on this point also, Homer, as we have said of him before, might seem divine compared with the others, in that, though the war had indeed a beginning and an end, even so he did not attempt to make the whole of it the subject of his poem, since he realized that if he did so, the narrative was going to be too vast to be easily embraced in one view, or if he limited its extent, the variety of incidents would make it too complicated. As it is, he has selected one part of the war as his theme and used many of the other parts as episodes, the Catalogue of Ships,⁶ for example, and the other episodes with which he spaces out his poem. The others make their poems about one man, or about one period of time, or else about one action that has many parts, as is done by the authors of the [1459b] *Cypria* and the *Little Iliad*.⁷ And so, while the *Iliad* and the *Odyssey* each furnish the subject for but a single tragedy, or at most for two, the *Cypria* has furnished themes for many tragedies and the *Little Iliad* themes for more than eight—an *Award of the Arms*, a *Philoctetes*, a *Neoptolemus*, a *Eurypylos*, a *Beggary*, a *Laconian Women*, a *Sack of Troy*, a *Sailing of the Fleet*, a *Sinon*, and a *Trojan Women*.⁸

[24] Likewise, epic poetry should include the same types as tragedy—the simple, the complex, the poem of character, and the poem of passion; and should have the same essential elements, except music and spectacle, since an epic poem needs reversals and recognitions and sufferings, and ought

3. That is, verses in the meter of epic (dactylic hexameter).

4. Aristotle turns here from drama to epic.

5. According to Herodotus (7.166.1), the victory of the Greek fleet over the Persians at Salamis and the victory of the Sicilian Greeks led by Gelon over the Carthaginians occurred on the same day in 480 B.C.E.

6. *Iliad* 2.484–759.

7. Poems in the epic cycle, of unknown authorship: the *Cypria* related the origins of the Trojan War; the *Little Iliad*, events after the end of the *Iliad*.

8. Only Sophocles' *Philoctetes* and Euripides' *Trojan Women* are extant; some editors doubt that Aristotle is responsible for all the titles in this list.

also to have a good quality of thought and language. All these things Homer was the first to use, and he used them fully; for his two poems are complementary in structure, the *Iliad* being simple in plot and a poem of passion, and the *Odyssey* complex (it has recognitions throughout) and a poem of character; moreover they surpass all other poems in excellence of language and thought.

However, epic poetry differs from tragedy in the length of the composition and in meter. As to length, the formulation we have already made is valid—that it should be possible to embrace the beginning and the end in one view. Such would be the case if the poems were shorter than the old epic poems and approached the length of the group of tragedies presented at a single hearing. Yet relative to its extension in magnitude, epic poetry has a very distinct advantage in that in tragedy it is not possible to represent various parts [of the story] as being enacted simultaneously, but only the one that the players have in hand on the stage, whereas in epic the narrative form makes it possible to describe many parts as completed within the same time, and through these, if they are appropriate, the bulk of the poem is enlarged. This, accordingly, is an advantage that epic poetry has, making for grandeur and the diversion of the hearer through the introduction of episodes of dissimilar character; for uniformity soon palls and is a reason for failure in the case of tragedies.

As for the meter, the heroic [hexameter] proved, as the result of trial, to be the fitting one. Indeed, it would seem out of keeping if anyone were to compose a narrative imitation in some other meter or in a combination of meters, since in comparison with the other verse forms the heroic [hexameter] is the most deliberate and weighty. (These qualities make it especially receptive of foreign words and metaphors—for in this respect narrative imitation goes beyond the other kinds.) The iambic trimeter and the trochaic tetrameter, [1460a] on the other hand, are verses of movement, the latter being proper to the dance and the former to [dramatic] action. To combine these meters, as Chaeremon does, would be still more out of place in epic. No one, therefore, has ever composed a long poem in any other meter than the heroic; but nature herself, as we have said, teaches us to choose the meter appropriate to it.

In addition to the many other reasons why Homer deserves admiration, there is this in particular, that he alone among the epic poets has not failed to understand the part the poet himself should take in his poem. The poet should, in fact, speak as little as possible in his own person, since in what he himself says he is not an imitator. Now the other poets are themselves on the scene throughout their poems, and their moments of imitation are few and far between, but Homer, after a few introductory words, at once brings on a man or a woman or some other personage, and not one of them characterless but each with a character of his own.

The marvelous is an element that should of course be embodied in tragedies, but that which is a prime source of the marvelous—namely, the irrational—can be more freely introduced in epic poetry where we do not have the performer of the act directly before our eyes; for the Pursuit of Hector⁹ would seem ridiculous if it took place on the stage—the army just standing by and taking no part in the chase and Achilles shaking his head

9. *Iliad* 22.131–207; Hector, eldest son of the king of Troy and the greatest Trojan warrior, initially flees Achilles.

at them—but in the poem the absurdity goes unnoticed. And the marvelous is enjoyable; note how everyone in reporting a piece of news adds his own embellishments with the idea of pleasing the listener.

It is Homer especially who has taught the other poets how to tell lies as they should be told. This is done by the use of paralogism. That is, when the existence of one thing entails the existence of a second thing, or one occurrence entails a second occurrence, people assume that if this second thing exists, the antecedent also exists or occurs; but this is not so. If, then, the antecedent is a lie, but there is something else that would necessarily exist or happen if it were the truth, one should add this thing to the lie, for knowing this second thing to be true, our mind wrongly infers that the antecedent is true also. The Bath Scene provides an example.¹

What is impossible yet probable should be preferred to that which is possible but incredible; plots should never be constructed out of irrational parts. Best that there should not be anything irrational in them at all, but if there is, let it be outside the story told, as, in *Oedipus Tyrannus*, Oedipus's not knowing how Laius died, and not something in the play, as their reporting of the Pythian Games in *Electra* or in the *Mysians*² the man's having come all the way from Tegea to Mysia without uttering a word. To argue that without the part in question the plot would be ruined is ridiculous; no such plots should be constructed in the first place. If, however, such a part has been included, and is made to appear relatively plausible, it may be accepted in spite of its absurdity; since, even in the *Odyssey*, the irrational features of the Landing Scene³ would in themselves not have been tolerable, [I460b] as would be apparent if a bad poet were to handle them, but as it is, with the aid of the other good features, the poet obliterates these and mitigates the absurdity.

The place for elaborate diction is in the less vital passages—that is, passages not intended to reveal either character or thought; for, the other way round, where character and thought are to be revealed, too brilliant a diction will obscure them.

[25] Critical problems and their solutions fall into different classes, the number and nature of which will be made clear by the considerations that follow.

Since the poet is an imitator, exactly like a painter or any other maker of images, he must necessarily in every case be imitating one of three objects: things as they once were or now are; or things as people say or suppose they were or are; or things as they ought to be. The language in which these things are narrated will include foreign words and metaphors and various abnormalities of diction, for this is a license we grant to the poets. And further, correctness in politics is not the same thing as correctness in poetry, nor is correctness in any other art the same as in poetry, but in poetry itself error is of two kinds, that which involves the art itself and that which is incidental. Thus the art itself is involved if one has decided to imitate [a certain object

1. That is, Penelope's false inference, from the disguised Odysseus's accurate description of some clothing, that his tale of being a Cretan who met her husband Odysseus is true (*Odyssey* 19.165–250).

2. A play of Aeschylus or Sophocles; Tegea in the Peloponnese is distant from Mysia in northwest Asia Minor. *Electra*: Sophocles' tragedy (ca. 414

B.C.E.) contains a false account (lines 680–763) of Orestes' death in a chariot crash in the Pythian Games, which were founded centuries after the events of the play.

3. *Odyssey* 13.116–25. After the Phaeacians rowed the sleeping Odysseus home to Ithaca with magical speed, he remained asleep as they lifted him out of the ship when it landed.

and fails to represent it correctly through] incompetence; but it is a nonessential error if one decides by mistake to represent a horse with both right legs thrown forward, or if the fault involves a particular art, medicine, for example, or any other art whatsoever. So then, it is in the light of the foregoing postulates that one should examine the criticisms that fall within the general problems, and find the answers to them.

First, criticisms relating to the art itself:

1. "The thing represented is impossible." That is indeed a fault, but it is justified if doing so achieves the artistic purpose—this has already been stated: if doing so makes this or some other part of the poem more exciting. An example is the Pursuit of Hector. It is not justified, however, if the end could have been achieved equally well or better in strict conformity with the special art there relevant; for, if possible, no mistakes should be made at all.

2. Also we should inquire whether the mistake involves the art itself or is incidental. Thus, the error is less if the artist did not know that female deer have no horns than if he failed to draw a recognizable picture.

3. Again, if something is criticized as not being true to fact, the answer may be: Yes, but that is how it ought to be—just as Sophocles, too, said that he portrayed men as they ought to be, while Euripides portrayed them as they are.

4. But if the representation is neither true to fact nor an idealization, the solution may be that it accords with what men say. So with what [the poets] tell about the gods; this is perhaps neither the better way of speaking about them, nor the truth; it may be [as reprehensible; 1461a] as Xenophanes⁴ thought it was—still, it is what men say.

5. In other cases, perhaps not "better than mere fact" but "thus it once was" is the answer. So in the problem about the arms—"Their spears stood pointed upward, butts in the ground"⁵ that was the custom in those days—and still is the custom in Illyria.

6. In dealing with the question whether that which has been said or done by someone is right or wrong, we must not only have regard to the moral quality, good or bad, of the act or utterance in and for itself, but must consider who says or does it, to whom it is said or done, on what occasion, how, and from what motive—whether, for example, the purpose is to bring about a greater good or to avert a greater evil.

In meeting other criticisms, one should pay attention to the use of language.

7. The criticism may be met by applying the category "foreign word." Thus in *οὐρῆας μὲν πρῶτον* [the mules first of all], perhaps by *οὐρῆας* Homer does not mean "mules" but "sentinels."⁶ And his description of Dolon,⁷ ὅς ῥ' ἦ τοι εἶδος μὲν ἔην κακός [who indeed was ill favored in form], may mean, not misshapen in body, but having an ugly face, since in Crete "well formed" (*εὐειδής*) is the regular word for "fair-faced" (*εὐπρόσωπος*). And "mix the drink" (*ζωρότερον*) may not mean to mix it "stronger," as for heavy drinkers, but "faster."

4. Pre-Socratic philosopher and poet (ca. 570–ca. 480 B.C.E.) who denounced immoral tales of Greek gods.

5. *Iliad* 10.152–53.

6. *Iliad* 1.50, where the Greek word *ourēas* may derive either from *oreus* (mule) or from *ouros* (sen-

tinel). All the following examples in this passage come from the *Iliad*, sometimes abbreviating the original.

7. A Trojan scout killed by the Greeks (*Iliad* 10.314–457).

8. Again, the expression may be explained as metaphorical. So in “Now all the gods and men slept throughout the night” followed presently by “when-ever he [Agamemnon] looked toward the Trojan plain, [he was amazed at] the din of flutes and pipes,” the word “all” is used metaphorically for “many,” since “all” is a species of the genus “many.” And “alone without a share” is metaphorical, since the best-known instance is taken for the only one.

9. The solution may lie in a change of accent. In this way, Hippias of Thasos solved the difficulty in *δίδομεν δέ οἱ ἐνχος ἀρέσθαι* and again in *τὸ μὲν οὐ καταπύθεται ὄμβρω*.⁸

10. In other cases, punctuation may provide the answer, as in Empedocles’ sentence: “Suddenly things became mortal that before had learnt to be immortal and things unmixed before mixed.”

11. In others, we must take account of an ambiguity, as in “night is more than two thirds gone and a third remains,” where “more than” is ambiguous, [since the word *πλέω* may also mean “fully”].

12. In others again, we may appeal to a habitual mode of speech. As a mixture of wine and water is called simply “wine,” so, analogously, the poet speaks of “a greave of newly wrought tin.” And on the same principle by which iron workers are always called “braziers,” Ganymede⁹ is said to be “the wine pourer of Zeus,” though gods do not drink wine. But this might also be explained as metaphorical.

Whenever a particular word involves an apparent contradiction, the thing to do is to consider all the possible meanings it may have in the passage in question. For example, in “there the brazen spear was stopped” we should consider all the possible meanings “to be checked there” admits of, trying it in this sense and that sense, for the best understanding of it. This method of procedure is just the opposite of that which [1461b] Glaucon¹ describes. Certain critics, he says, begin with an unlikely assumption about some point, then condemn the meaning they have themselves assumed and give reasons against it, and they censure the poet for having said what they imagine he has said, if this is in contradiction to what they and only they have thought. The question of Icarius has been treated in this way. They assume that Icarius was a Laconian; therefore it is an absurdity that Telemachus,² on his visit to Lacedaemon, does not meet him there. But perhaps it is rather as the Cephalonians say, for by their account it was in their country that Odysseus married and the name is not Icarius but Icadus; and hence very likely the problem arises from a [textual] error.

In general, we should justify the Impossible by referring it to poetic effect, or to the principle of enhancement, or to received opinion. Thus in reference to poetic effect, a convincing impossibility is preferable to that which, though possible, is unconvincing. And [in reference to enhancement, if it is impossible] that there should be men such as, for example, Zeuxis portrayed, then it may be a case of betterment—the ideal should surpass the reality. The Improbable [or Irrational] should be justified by “what men say,” and also by the fact that sometimes the thing in question is not improbable—“it is probable that

8. The phrases translate as “but grant that he gain his prayer” and “part rotted by rain.” Hippias of Thasos: an unknown figure (possibly an individual who died in Athens in 404 B.C.E.).

9. A beautiful young Trojan prince seized and carried to Olympus by Zeus’s eagle; he became a

minor Greek god.

1. Perhaps the interpreter of Homer named by Plato in *Ion* 530d; see above.

2. Odysseus’s son (for this visit, see *Odyssey* 4). Icarius: Penelope’s father, from Sparta (Lacedaemonia).

something improbable will happen.” In examining Contradictions we should proceed as one does when testing [possible fallacious] refutations in a debate—i.e., “whether the same thing and in relation to the same thing and in the same sense”—applying these tests to the poet also [as well as to the debater] either in reference to the things he actually says or to what a reasonable person would suppose him to mean. But censure on the grounds of Improbability or of Depravity is justified if the poet brings them in when there is no need for them at all, as Euripides’ Aegeus³ is needlessly improbable and his Menelaus in the *Orestes* needlessly base.

Thus there are just five classes of problems from which critics draw their strictures, since whenever they object to something it is always because they find it either (1) Impossible, or (2) Improbable, or (3) Immoral, or (4) Contradictory, or (5) Incorrect as regards a special art. And we in turn must proceed from the same five classes of objections when we look for solutions. The solutions themselves are twelve in number.

[26] Someone might raise the question whether the epic or the tragic form of imitation is better. Thus:—if the less vulgar form is the better and that form which is addressed to the better audience is always the less vulgar, clearly the form that relies entirely on imitation is too vulgar by far; for convinced that the spectators never comprehend what is meant unless the actor adds something on his own, the players keep up a vast stir of activity and common flutists, for example, will go reeling about if they have to represent the throwing of a discus, or will clutch at the chorus leader if their music depicts Scylla. Tragedy, then, is of such a character; it is like what the older generation of actors thought about those who came after them—Mynniscus used to call Callipides an ape for what he regarded as his extravagant style of acting, while much the same was said of Pindarus,⁴ [1462a] and as these later actors stand in relation to the earlier ones, so the tragic art as a whole stands in relation to epic. In short, epic poetry, they tell us, is addressed to a superior audience who have no need of gestures and postures, tragedy to the common crowd. Therefore, if tragedy is vulgar, obviously it will be inferior.

Now in the first place, the complaint does not bear on the art of poetry, it bears on the art of acting, since it is also possible for a rhapsode to overdo the gesticulation when reciting epic poetry, as Sosistratus did, and for the singer in a singing contest to do so, as did Mnasiheus of Opus.⁵ Then, too, not every form of bodily movement is to be condemned, unless we are to condemn the dance itself, but only the attitudes and gestures of ignoble persons—which is just the objection formerly made to Callipides and repeated nowadays about other actors, that their women are anything but ladies. And again, tragedy succeeds in producing its proper effect even without any movement at all, just as epic poetry does, since when it is merely read the tragic force is clearly manifested. So then, if it is superior in all other respects, this at least is no necessary part of it.

In the next place, [tragedy is in fact the better form] because (1) it has everything that epic poetry has (for it can even employ the epic meter), and

3. In *Medea* (lines 663–758). Aegeus, king of Athens, happens to pass through Corinth and see *Medea*; he promises her future asylum.

4. Presumably an actor. Mynniscus of Chalcis

(active ca. 460–420 B.C.E.), an actor known for roles in Aeschylus’s plays. Callipides (active ca. 427–400 B.C.E.), a Greek actor.

5. Both unknown.

has in addition an element of no small importance in its music, which intensifies our pleasure in the highest degree, then also (2) it has the advantage of vividness both when read and when acted; again (3) it excels because in tragedy the imitation fulfils its purpose [1462b] in shorter compass—that which is more concentrated gives greater pleasure than that which is dispersed over a great length of time: I mean, for example, if someone were to lay out the *Oedipus* of Sophocles in the same number of lines as the *Iliad*; and again (4) the epic poets have a less unified type of imitation (witness the fact that any such poem supplies subjects for several tragedies), and consequently if ever they do make a poem of unified plot, either the tale will be concisely told and create a sense of abruptness, or it will conform to the normal epic length and seem watery; and I mean that the latter will be the case if the poem is put together out of a plurality of actions, as, for example, the *Iliad* has many such parts, and the *Odyssey* also, each part having a magnitude of its own; and yet these particular poems are as well constructed as an epic poem can be, and come as near as possible to being imitations of a single action. So, then, if tragedy is superior to epic poetry in all these respects, and excels it besides in [performing] the function for which the art exists (for these imitations should give us not just any pleasure but precisely the pleasure we have indicated), it is clear that tragedy is the better form of the two inasmuch as it succeeds better than the epic in achieving the end in view.

Let this then be our account of Tragedy and Epic Poetry—their general nature; the number and variety of their species and constituent parts; the causes of success or failure; and critical problems with their solutions . . .

ca. 330 B.C.E.

From On Rhetoric¹

From Book I

FROM CHAPTER 2

Let rhetoric be [defined as] an ability, in each [particular] case, to see the available means of persuasion. This is the function of no other art;² for each of the others is instructive and persuasive about its own subject: for example, medicine about health and disease and geometry about the properties of magnitudes and arithmetic about numbers and similarly in the case of the other arts and sciences. But rhetoric seems to be able to observe the persuasive about “the given,” so to speak. That, too, is why we say it does not include technical knowledge of any particular, defined genus [of subjects].

Of the *pisteis*,³ some are atechnic (“non-artistic”), some entechnic (“embodied in art, artistic”). I call *atechnic* those that are not provided by “us” [i.e.,

1. Translated by George A. Kennedy, who sometimes adds clarifying words or phrases in square brackets. Also in square brackets in the text are the Bekker numbers used almost universally in citing Aristotle's works; they refer to the page numbers and columns of an 1831 edition by

Immanuel Bekker.

2. In Greek, *technē*. Aristotle distinguishes between human arts, such as rhetoric or poetics, and sciences, such as physics or logic, which adduce verifiable results.

3. Proofs or means of persuasion (Greek).

the potential speaker] but are preexisting: for example, witnesses, testimony from torture, contracts, and such like; and *entechnic*⁴ whatever can be prepared by method and by “us”; thus, one must use the former and invent the latter. [1356a] Of the *pisteis* provided through speech there are three species; for some are in the character [*ēthos*] of the speaker, and some in disposing the listener in some way, and some in the speech [*logos*] itself, by showing or seeming to show something.

[There is persuasion] through character whenever the speech is spoken in such a way as to make the speaker worthy of credence; for we believe fair-minded people to a greater extent and more quickly [than we do others], on all subjects in general and completely so in cases where there is not exact knowledge but room for doubt. And this should result from the speech, not from a previous opinion that the speaker is a certain kind of person; for it is not the case, as some of the handbook writers propose in their treatment of the art, that fair-mindedness on the part of the speaker makes no contribution to persuasiveness; rather, character is almost, so to speak, the most authoritative form of persuasion.

[There is persuasion] through the hearers when they are led to feel emotion [*pathos*] by the speech; for we do not give the same judgment when grieved and rejoicing or when being friendly and hostile. To this and only this we said contemporary technical writers try to give their attention. The details on this subject will be made clear when we speak about the emotions.

Persuasion occurs through the arguments when we show the truth or the apparent truth from whatever is persuasive in each case.

* * *

FROM CHAPTER 3

The species of rhetoric are three in number; for such is the number [of classes] to which the hearers of speeches belong. A speech consists of three things: a speaker and a subject on which he speaks and someone addressed, [1358b] and the objective⁵ of the *speech* relates to the last (I mean the hearer). Now it is necessary for the hearer to be either an observer or a judge, and [in the latter case] a judge of either past or future happenings. A member of a democratic assembly is an example of one judging about future happenings, a juror an example of one judging the past. An observer is concerned with the ability [of the speaker]. Thus, there would necessarily be three genera of rhetorics: deliberative, judicial, demonstrative.⁶ Deliberative advice is either protreptic [“exhortation”] or apotreptic [“dissuasion”]; for both those advising in private and those speaking in public always do one or the other of these. In the law courts there is either accusation or defense; for it is necessary for the disputants to offer one or the other of these. In epideictic, there is either praise or blame. Each of these [species] has its own “time”; for the deliberative speaker, the future (for whether exhorting or dissuading he advises about future events); for the speaker in court, the past (for he always prosecutes or defends concerning what has been done); in epideictic the present is the most important; for all

4. Also translated as “artistic,” made by men.

5. In Greek, *telos*, also translated as “end” or “goal.”

6. In Greek, *epideiktikon*, also translated as “epideictic.”

speakers praise or blame in regard to existing qualities, but they often also make use of other things, both reminding [the audience] of the past and projecting the course of the future. The “end” of each of these is different, and there are three ends for three [species]: for the deliberative speaker [the end] is the advantageous and the harmful (for someone urging something advises it as the better course and one dissuading dissuades on the ground that it is worse), and he includes other factors as incidental: whether it is just or unjust, or honorable or disgraceful; for those speaking in the law courts [the end] is the just and the unjust, and they make other considerations incidental to these; for those praising and blaming [the end] is the honorable and the shameful, and these speakers bring up other considerations in reference to these qualities. Here is a sign that the end of each [species of rhetoric] is what has been said: sometimes one would not dispute other factors; for example, a judicial speaker [might not deny] that he has done something or done harm, but he would never agree that he has [intentionally] done wrong; for [if he admitted that,] there would be no need of a trial. Similarly, deliberative speakers often advance other facts, but they would never admit that they are advising things that are not advantageous [to the audience] or that they are dissuading [the audience] from what is beneficial; and often they do not insist that it is not unjust to enslave neighbors or those who have done no wrong. And similarly, those who praise or blame do not consider whether someone has done actions that are advantageous or harmful [to himself] [1359a] but often they include it even as a source of praise that he did what was honorable without regard to the cost to himself; for example, they praise Achilles because he went to the aid of his companion Patroclus⁷ knowing that he himself must die, though he could have lived. To him, such a death was more honorable; but life was advantageous.

* * *

From *Book II*

FROM CHAPTER 1

These [topics, set forth in book I] are the proper sources of exhortation and dissuasion, praise and blame, and prosecution and defense, and the kinds of opinions and propositions useful for their persuasive expression; for enthymemes⁸ are concerned with these matters and drawn from these sources, so the result is speaking in a specific way in each genus of speeches. But since rhetoric is concerned with making a judgment (people judge what is said in deliberation, and judicial proceedings are also a judgment), it is necessary not only to look to the argument, that it may be demonstrative and persuasive but also [for the speaker] to construct a view of himself as a certain kind of person and to prepare the judge; for it makes much difference in regard to persuasion (especially in deliberations but also in trials) that the speaker seem to be a certain kind of person and that his hearers suppose him to be disposed toward them in a certain way and in addition if

7. In stories of the Trojan War, Achilles' closest friend; Achilles rejoined the battle to avenge his death at the hands of the Trojan hero Hector.

8. Rhetorical arguments by deduction, applying general principles to specific cases, that leave one

of their premises unstated. Enthymemes use a looser form of reasoning than syllogisms, which are technical logical arguments that follow a rigid 3-part procedure.

they, too, happen to be disposed in a certain way [favorably or unfavorably to him]. For the speaker to seem to have certain qualities is more useful in deliberation; for the audience to be disposed in a certain way [is more useful] in lawsuits, for things do not seem the same to those who are friendly and those who are hostile, nor [the same] to the angry and the calm but either altogether different or different in importance: [1378a] to one who is friendly, the person about whom he passes judgment seems not to do wrong or only in a small way; to one who is hostile, the opposite; and to a person feeling strong desire and being hopeful, if something in the future is a source of pleasure, it appears that it will come to pass and will be good, but to an unemotional person and one in a disagreeable state of mind, the opposite.

There are three reasons why speakers themselves are persuasive; for there are three things we trust other than logical demonstration. These are practical wisdom [*phronēsis*] and virtue and good will, for speakers make mistakes in what they say through [failure to exhibit] either all or one of these; for either through lack of practical sense they do not form opinions rightly; or though forming opinions rightly they do not say what they think because of a bad character; or they are prudent and fair-minded but lack good will, so that it is possible for people not to give the best advice although they know [what] it [is]. These are the only possibilities. Therefore, a person seeming to have all these qualities is necessarily persuasive to the hearers. The means by which one might appear prudent and good are to be grasped from analysis of the virtues; for a person would present himself as being of a certain sort from the same sources that he would use to present another person; and good will and friendliness need to be described in a discussion of the emotions.

The emotions are those things through which, by undergoing change, people come to differ in their judgments and which are accompanied by pain and pleasure, for example, anger, pity, fear, and other such things and their opposites. There is need to divide the discussion of each into three headings. I mean, for example, in speaking of anger, what is their *state of mind* when people are angry and against *whom* are they usually angry and for what sort of *reasons*; for if we understood one or two of these but not all, it would be impossible to create anger [in someone]. And similarly, in speaking of the other emotions.

* * *

From Book III

FROM CHAPTER 2

[1404b] Let the matters just discussed be regarded as understood, and let the virtue of style⁹ be defined as “to be clear” (speech is a kind of sign, so if it does not make clear it will not perform its function)—and neither flat nor above the dignity of the subject, but appropriate. The poetic style is hardly flat, but it is not appropriate for speech.

The use of nouns and verbs in their prevailing meaning makes for clarity; other kinds of words, as discussed in the *Poetics*,¹ make the style ornamented rather than flat. To deviate [from prevailing usage] makes language seem more elevated; for people feel the same in regard to word usage as they do in

9. In Greek, *lexis*, literally “speech”; the word is variously translated “language,” “word choice,”

and “expression,” as well as “style.”

1. See *Poetics* 21–22, 1457a–1459a (above).

regard to strangers compared with citizens. As a result, one should make the language unfamiliar, for people are admirers of what is far off, and what is marvelous is sweet. Many [kinds of words] accomplish this in verse and are appropriate there; for what is said [in poetry] about subjects and characters is more out of the ordinary, but in prose much less so; for the subject matter is less remarkable, since even in poetry it would be rather inappropriate if a slave used fine language or if a man were too young for his words, or if the subject were too trivial, but in these cases, too, propriety is a matter of contraction or expansion [of what is being said]. As a result, authors should compose without being noticed and should seem to speak not artificially but naturally. (The latter is persuasive, the former the opposite; for people become resentful, as at someone plotting against them, just as they are at those adulterating wines.) An example is the success of Theodorus'² voice when contrasted with that of other actors; for his seems the voice of the actual character, but the others' those of somebody else. The "theft" is well done if one composes by choosing words from ordinary language. Euripides'³ does this and first showed the way.

HORACE

65–8 B.C.E.

It would be impossible to overestimate the importance of Horace's *Ars Poetica* (*Art of Poetry*) for the subsequent history of literary criticism. Since its composition in the first century B.C.E., this epigrammatic and sometimes enigmatic critical poem has exerted an almost continual influence over poets and literary critics alike—perhaps because its dicta, phrased in verse form, are so eminently quotable. Horace's injunction that poetry should both "instruct and delight" has been repeated so often that it has come to be known as the Horatian platitude. His practical approach to poetry as a craft, or *ars*, contrasts markedly with the more theoretical bent of his predecessors, especially ARISTOTLE and PLATO. In fact, unlike Plato, Horace holds the poet in very high regard, as his "Epistle to Augustus" suggests: "The poet forms the young child's stammering mouth, and turns his ear at a timely hour from obscene discourse; next he also shapes his heart with friendly precepts, castigating harshness, resentment, and wrath. He tells of deeds honorably done, instructs rising generations by the examples of famous men, and consoles the sick and helpless."

Horace describes himself in his youth as the impoverished son of a freed slave, yet he rose to great prominence in Rome, becoming both a leading member of the illustrious circle of poets patronized by the emperor Augustus (63 B.C.E.–14 C.E.) and one of Rome's greatest poets and satirists. Quintus Horatius Flaccus was born in Venusia, a Roman military colony in southeastern Italy on the border between Apulia and

Lucania. His father worked as an auctioneer and had a small landholding. It is possible that in his poetry (our main source for his biography) Horace somewhat exaggerates his family's poverty. His father was apparently wealthy enough to send his son to Rome for his schooling. At the age of nineteen Horace went to Athens to the university. There Marcus Brutus convinced him to join in his futile attempt to re-establish the Republic. He accompanied Brutus to Asia Minor and was appointed to the high post of military tribune. After the defeat of Brutus and Cassius at Philippi in 42 B.C.E. at the hands of Octavian—the future Augustus who would one day be the poet's patron—Horace returned to Rome, to find that his father's home and land had been confiscated. Despite this setback, he was able to obtain a pardon for his part in the rebellion and to purchase a position as *scriba quaestorius*, a keeper of records in the treasury. At this time, he also began his career as a poet. His abilities were recognized by Gaius Maecenas, a wealthy aristocrat and the most prominent literary patron in Rome, to whom he was introduced by the poet Virgil. He maintained a close friendship with Maecenas until the latter's death. Around 38 B.C.E., through Maecenas, Horace became a member of the small circle of writers who enjoyed the patronage of Octavian, whose power was growing; he would take full control (and the title "Augustus") in 27 B.C.E. Though he declined an offer to become the emperor's secretary, the emperor's support enabled Horace to do nothing but write poetry for the rest of his life. He died of a sudden illness on November 27, 8 B.C.E., only two months after the death of his patron and friend Maecenas, next to whose tomb he was buried.

Horace is celebrated for his poetry; between 39 and 10 B.C.E., he produced numerous epodes (lyric poems), odes, satires, and verse epistles (letters). Many of the epistles deal with the subject of poetry: the best-known are the "Epistle to Florus"; the "Epistle to Augustus," which examines the role of poetry in the state and asserts the merits of contemporary (that is, Augustan) poetry; and the famous "Epistle to the Pisones."

The Roman rhetorician Quintilian (ca. 30/35–ca. 100 C.E.) was the first to give the title *ars poetica* (art of poetry) or *liber de arte poetica* (book of the poetic art) to Horace's letter to the Pisones, a prominent Roman family with interests in poetry and literary criticism. The *Ars Poetica* was written perhaps as late as 10 B.C.E., although the date remains controversial, as do the identities of the members of the Piso family—father and sons—whom the poem addresses. Most likely the senior Piso is Lucius Calpurnius Piso (48 B.C.E.–32 C.E.); the sons have not been identified. The *Ars Poetica* is less a formal verse epistle, however—the trappings of the letter form are superficial at best—than a long conversational poem about poetry, written by an experienced and famous poet of the day. This form was widely imitated by later poets—most notably by Geoffrey of Vinsauf in the twelfth century, Pierre de Ronsard in the sixteenth, Nicolas Boileau in the seventeenth, ALEXANDER POPE in the eighteenth, Lord Byron in the nineteenth, and Wallace Stevens in the twentieth. The genre of literary theory in verse form presents many challenges. Because of the requirements of versification, the structure of Horace's text—its organization and transitions—is often dictated less by logical argumentation than by verbal association and rhetorical tone. Translation of the *Ars Poetica* (476 lines long) is notoriously difficult. Many English translations imitate Horace's hexameter lines by using rhymed couplets, which tend to reduce Horace's urbane wit at best to a string of epigrammatic statements held together by the meter, at worst to doggerel. For this reason, we have chosen a prose translation here.

While heavily indebted to Greek literature, and in particular to Aristotle (especially the *Poetics* and *On Rhetoric*), the *Ars Poetica* is neither a systematic exposition of a coherent theory of poetic composition nor a comprehensive textbook for aspiring writers. Instead, it is an argument for poetry as a craft. Poetry is not merely inspired madness (as in Plato) or genius; it is an art and, as such, has rules and conventions that require both instruction and practice. Horace understands the concept of *ars* in three ways: as a practiced mastery of a craft, as a systematic knowledge of theory

and technique, and as a capacity for objective self-criticism. His urbane text counsels the aspiring young poet, in this case probably the elder Piso son, that the craft of poetry will require painstaking work and self-sacrifice to acquire.

Another key principle that dominates the whole of the *Ars Poetica* is decorum. Briefly defined, decorum is the discernment and use of appropriateness, propriety, proportion, and unity in the arts, whether in painting, sculpture, or poetry. This is the Horatian principle that most appealed to later French and English neoclassical critics (see, for example, Pope, below), who often applied standards of decorum more rigidly than Horace himself would have. For Horace, decorum required that the poet fit the part to the whole, the subject to the appropriate genre, and meter and language to both character and circumstance. A skillful poet, knowledgeable in the craft of poetry and observant of the principles of decorum, would produce the kind of poetry able to “delight and instruct” its audiences.

Among the many dicta for which Horace’s text is most famous are the warning against the “purple patch” (*purpureus pannus*) and the declarations that “poetry resembles painting” (*ut pictura poesis*), “even Homer sometimes sleeps” (*idem dormitat Homerus*), and poetry should be “pleasing” and “useful” (*dulce et utile*). Purple patches are inappropriately placed ornate passages that violate the principle of decorum and thus should be avoided by writers. Later critics have built on Horace’s likening of poetry to painting to explore the spatial as well as the temporal dimensions of literature (see below, for example, SIR PHILIP SIDNEY, G. E. LESSING, and ERICH AUERBACH). Because sometimes even a poet as great as Homer errs, Horace counsels tolerance of occasional small faults. The pleasures of poetry for readers and theater audiences should be joined to practical and moral instruction embodied in the work, though Horace seems more preoccupied with delight and careful craft than with moral uplift. It is to these and other pithy and suggestive observations that modern critics often turn when considering Horace.

Horace’s critics have complained that the long epistle is disorganized, that it sometimes sacrifices sense for the sake of wit, and that it lacks grandeur, being preoccupied with audience response. Since its appearance, however, the *Ars Poetica* has appealed to those literary critics interested in codifying the principles of poetic composition, in arguing the relative merits of craft and genius in poetry, and in debating whether the primary goal of literature is pleasure or instruction.

***Ars Poetica* Keywords:** Aesthetics, Authorship, The Canon/Tradition, Classical Theory, Drama, Literary History, Poetry

Ars Poetica¹

Imagine a painter wanting to attach a horse’s neck to a human head, assemble limbs from everywhere, and add feathers of various colours, so that a woman beautiful above the waist tailed into a revolting black fish! Could you hold back your laughter, my friends, if admitted to view it? Believe me, Pisos, a book could be very like such a canvas, its images just empty inventions like a sick man’s dreams: neither foot nor head would be rendered in a single form.—“Painters and poets alike have always had an equal prerogative to venture anything,” you say?—We know. This is a concession we both ask for,

1. Translated by Ross S. Kilpatrick. Numbers in square brackets refer to line numbers in Horace’s Latin poem. Horace addresses this epistle to the Piso family, father and sons; scholars largely agree

on the identification of the elder Piso as Lucius Calpurnius Piso (48 B.C.E.–32 C.E.), though none of the sons has been positively identified.

and make in return. But not to the point where savage beasts mate with the meek, where serpents twin with birds and lambs with tigers! When weighty works professing greatness are under way, one or two purple patches are stitched in to give them far-seen brilliance, as when the grove and altar of Diana² are described, and the windings of water rushing through pleasant fields, or the River Rhine, or a rainbow. (But this is not the place for such considerations). Perhaps you do know how to draw a cypress tree. What is the good of that, if what's wanted is a man (painted *ex voto*³ for a fee) swimming hopelessly away from his shattered ships? An amphora⁴ began to take shape. So why does a jug emerge as the wheel races on? The point is, whatever you're making, it should be unified and coherent.

[21] The majority of us bards, Father (and you, young men, so worthy of your father), are taken in by what appear to be correct principles. I strive for brevity only to become obscure; I pursue smoothness but nerve and spirit fail me. Aiming at grandeur, you become turgid; over-cautious and fearful of the storm, you creep along the ground. One who lavishes variety on a single subject paints a dolphin in the woods or a boar in the waves. In avoiding blame you produce a flaw, if *ars*⁵ is lacking. Down near the school of Aemilius,⁶ one workman will mould fingernails and represent the softest hair, both in bronze. But the sum total is unhappy, since he won't ever know how to lay out his entire work. As for me, if I wanted to compose something I would no more desire to be that man than go through life with a crooked nose—though I might attract glances with my black eyes and hair!

[38] When you write, choose material to match your strengths, and long consider what your shoulders refuse to bear and what they will. The writer who selects according to his abilities will lack neither style nor a clear arrangement. The virtue and charm of arrangement will be found, if I'm not mistaken, here: in saying right now what ought to be said right now, and deferring the rest for later. In weaving words together be sparing and careful. Let the author of a promised poem favour one approach, and scorn another. You will have spoken in an uncommon way if a clever collocation renders a familiar word new. Should it be necessary to explain obscure matters in fresh terms (and give shape to matters unheard of by the loinclad Cethegi⁷), such licence is available, and will be given if exercised with restraint. New and recently fashioned words will gain acceptance if they tumble from the well-spring of Greek by judicious diversion. But why will a Roman grant Caecilius and Plautus what he denies to Vergil and Varius?⁸ Why is it I am begrudged the few words I can garner, when the tongue of Cato, and of Ennius,⁹ has enriched our native speech and endowed it with

2. Roman goddess of the hunt, the moon, and childbirth.

3. Literally "from the vow" (Latin), an offering to a divinity to fulfill a vow.

4. A type of container, usually for wine, often with a pointed base to allow upright storage.

5. Art (Latin).

6. A school for gladiators, near the shops of bronze workers.

7. An old patrician family that persisted in wearing old-fashioned garb.

8. Roman poet (ca. 74–14 B.C.E.), friend of Vergil and Horace; his works included the tragedy

Thyestes. Caecilius Statius (d. ca. 168 B.C.E.), former slave from Gaul who wrote Latin comedies. Plautus (d. ca. 184 B.C.E.), Roman comic dramatist whose plays were modeled on Greek New Comedy originals (the social satires of ca. 320–mid-3d c. B.C.E.). Vergil or Virgil (70–19 B.C.E.), Roman poet, author of the *Aeneid* and friend of Horace.

9. Roman tragic and epic poet (ca. 239–169 B.C.E.) who tried to refine the Latin language according to Greek example. Cato (234–149 B.C.E.), Roman statesman, moralist, and prolific writer of treatises and history.

new names for things? It has always been permissible and always will be, to produce a word stamped with today's date.

[60] Just as woods change their leaves in the fullness¹ of the years, falling one by one . . . so perish words with age, after flourishing and thriving when newly born, like youths. We ourselves, and our works, are debts owed to death. Whether Neptune² protects the fleets in the land's embrace from the North Winds, a kingly task, or the marsh, long-unproductive and suitable for oars, sustains cities nearby and feels the weight of a plough, or the stream (now taught a better course) has changed a course threatening crops, such things made by mortal men shall perish. Much less likely is it that the esteem and favour granted to modes of speech could live and endure [69]. Many terms shall grow back which now have fallen away, and those now held in esteem shall fall, if our poetic practice so approves. Such is the criterion by which the judgement, rules, and standards for speech expression are to be discovered.

[73] The metre for handling the exploits of captains and kings and grim wars has been shown by Homer.³ Lamentation was the first to be couched in verses unequally linked, then afterward the expression of prayer as well.⁴ But as for who originated the slender elegy, well, the critics are debating this and the case is awaiting their judgement. Rage armed Archilochus with his characteristic iambus,⁵ the foot which comic socks and grand tragic buskins⁶ seized upon as suited to argument and the suppression of popular clamour. It was born to represent action. The Muse assigned the gods and sons of gods to the lyre, along with the victorious boxer, winning race-horse, youthful longings and wine's liberating power. If in producing my works I cannot observe (and don't know) the required genres and styles, why am I hailed as "Poet"? Why prefer wanton ignorance to learning?

[87] Comic material resists presentation in tragic verse. Likewise the "Feast of Thyestes"⁷ resents poetry that is conversational and worthy almost of the comic sock. Let each discrete detail keep the place allotted. From time to time, though, comedy does raise its voice too, as Chremes⁸ delivers accusations with his swollen mouth. A tragic actor frequently grieves in plain discourse; Telephus and Peleus,⁹ both poor and exiled, cast aside bombast and foot-and-a-half words if concerned to touch the heart of the spectator effectively with their lamentation.

1. Several markings denoting editorial emendations of the Latin text have been deleted.

2. Roman god of the sea.

3. Greek epic poet (ca. 8th c. B.C.E.) to whom the *Iliad* and *Odyssey* are traditionally attributed. The meter of epic is dactylic hexameter (a 6-foot line based on the syllabic pattern long-short-short).

4. Inscriptions accompanying dedications or prayers to gods, which, like lamentation, are written in elegiac couplets: a line of dactylic hexameter followed by a line replacing the 3d and 6th foot with one long syllable. The shorter second line gives the couplet a sense of falling off, thought to impart melancholy.

5. Metrical foot made of one short and one long syllable; iambic trimeter was the measure used in dialogue in both Greek comedies and Greek tragedies. Archilochus (ca. 7th c. B.C.E.), Ionian

lyric poet thought to be the earliest writer of iambic verse.

6. Symbols of comedy and tragedy. In Greek theater, tragic actors wore a boot that elevated them, while comic actors wore a thin shoe called a sock.

7. In Greek mythology, Atreus murdered the sons of his brother Thyestes and served them to Thyestes, who had seduced Atreus's wife.

8. Miserly character in the comedies of Terence (Roman dramatist, ca. 190–ca. 159 B.C.E.).

9. Father of the Greek hero Achilles, the central character in the *Iliad*; as a young man, Peleus was banished from his homeland. Telephus: son of Heracles and Auge, wounded by Achilles' spear and cured by its rust. Both are characters in plays by the Greek tragedian Euripides (ca. 485–ca. 406 B.C.E.).

[99] It is not enough that poetry be noble: it should impart delight, and transport the listener as it likes. As people's faces respond with laughter to those who laugh, so do they cry in response to those who cry. If you want me to cry, you must first cry yourself. Then, Telephus (or you, Peleus), will your misfortunes make me suffer. If you speak your assigned parts badly I shall either nod or laugh. Grim words are appropriate to a gloomy countenance; words full of threat, to the angry; wanton, to the playful; serious in delivery, to the severe. First, you see, Nature shapes us within for every aspect of life's fortunes. She gives us pleasure, or drives us to wrath, or brings us to earth with the profound anguish of grief. Afterwards she brings out the heart's emotions with the tongue as their interpreter. If a speaker's words are not consonant with his fortunes, the people (both horse and foot)¹ will burst out laughing!

[114] It will make a lot of difference whether a god is speaking or a hero; a mature old man or one still in flower of youth; a strong-minded dame or a busy nurse, a far-travelled merchant or a cultivator of a green farm, a Colchian or Assyrian, or someone reared at Thebes or Argos.²

[119] Either follow a legend when writing, or make up details consistent with themselves. If, say, you are putting the illustrious Achilles back on stage, let him be unyielding, wrathful, inexorable, savage; have him say that by nature laws are not for him, never failing to appeal to a judgement of arms. Medea should be fierce and invincible, Ino tearful, Ixion faithless, Io wandery, Orestes grim.³ If you are putting something untried on stage, and trying to shape a new character, let him be the same from the beginning to the last detail, just as he was when he entered, and remain true to himself.

[127] It is hard to make unique poetry out of the commonplace; you do better if you spin out a canto of the *Iliad* into episodes than be the first to present something unfamiliar and unworked.

[131] Public domain will become private right if you don't dally on the trivial and broad track, faithfully rendering word for word like a translator, leaping in your imitation into some narrow hole from which propriety or the law of the genre forbids you even to budge. You don't begin this way (as a cyclic writer⁴ once did): "Priam's fortune shall I sing, and a war far-famed." What will he produce by promising something worthy of so great an utterance? The mountains shall labour—a ridiculous mouse come forth! How much better did he begin who constructed nothing ineptly: "Tell me, O Muse, of the man who after the time of Troy's capture saw the manners of many men as well as their cities."⁵ His plan is not to give out smoke from the flash but light from the smoke, to produce striking tales of wonder from it:

1. The Latin here, *equites peditesque*, refers to soldiers, mounted and on foot, and by extension to people high- and lowborn.

2. The Argive Agamemnon shows reserve and dignity, while the Theban Creon is a headstrong tyrant. The Assyrian would be effeminate, as compared with the Colchian, but both would be barbarians (Assyria was an ancient empire of west Asia; Colchis bordered the Black Sea).

3. Son of Agamemnon and Clytemnestra who avenges his father's murder by killing his mother and her lover; he is gloomy because the Furies hound him for the crime of matricide. Medea: enchantress of Greek myth who helps Jason gain the Golden Fleece and, after he abandons her,

murders their children in revenge. Ino: daughter of Cadmus, wife of Athamas; pursued by her enraged husband after plotting against her stepchildren, she leaped into the sea with her son. Ixion: king who slew his father-in-law and is bound to a perpetually revolving wheel in the underworld as punishment for his attempted seduction of Hera, Zeus's wife. Io: daughter of Inachus who was loved by Zeus and subsequently transformed into a cow, goaded by gadflies sent by the angry Hera.

4. That is, one of the writers of the epic cycle, writing works that complete the story told by Homer.

5. The opening lines of the *Odyssey*.

Antiphates, and Scylla and Charbydis along with the Cyclops!⁶ He doesn't begin "The Return of Diomedes" with the death of Meleager, or "The Trojan War" with the twin egg!⁷ He is ever rushing towards the issue, carrying the listener into the midst of events as if they were known to him. He leaves out what he despairs of handling with brilliance, telling his lies and mixing the true with the false in such a way that the middle harmonizes with the beginning, and the end with the middle.

[153] Listen to what I long for (and the public along with me), if you wish someone to stay in the hall to applaud, sitting till that moment when the piper says: "Applause, please!"⁸ You have to observe the characteristics of each age, and attribute proper behaviour to impulsive natures and years. The boy who now knows how to respond in words and press the earth with steady foot loves to play with his mates; he gathers his rage only to lay it aside again, and changes by the hour. The beardless youth, free from watchful eye at last, rejoices in horses and hounds and the sunny campus turf. He can be shaped to vice like wax; caustic with those who give him advice, slow to look ahead to future advantage, wasteful of money, high-spirited, passionate in his desires, and quick to abandon his fancies. When his pursuits change, the age and spirit of manhood seeks out wealth and friendships, pays service to honour, and is wary of doing what he may soon strive to change. Many handicaps swarm around an old man, whether he is seeking gain (but wretched even when he finds what he wants, for he shuns it and is afraid to enjoy it) or managing all his affairs with numbing fear—a putter-off of hope, tedious, helpless, fearful of the future, difficult, complaining, praising the good old days when he was a lad, correcting and censuring the young. The years bring many blessings with them as they come, and bear many away as they go. So don't let the part of an old man be assigned to a youth, and that of a man to a boy. A character will always dwell upon what is inseparable from, and suited to, his age.

[179] Action either takes place on stage or is narrated afterward.⁹ Those actions that reach us via the ear strike the mind less forcefully than what comes before our trusty eyes and what the spectator conveys to himself. But actions which ought to be performed off stage you must not bring on stage, and many you'll remove from view so that the full force of eloquence may relate them. Medea is not to slay her boys in public, nor the wicked Atreus cook human entrails in full view, nor Procne turn into a bird or Cadmus¹ into a snake! Whatever you show me thus I view with disbelief and revulsion.

6. Characters from Homer's *Odyssey*: Antiphates, king of the Laestrygonians; Cyclops, Greek mythological giant with one eye; Scylla, half-human sea monster that takes men from passing ships; Charbydis, a dangerous whirlpool in the waters between Sicily and Italy, personified as a female monster.

7. The offspring of Leda and Zeus were twins, Clytemnestra and Helen (born from an "egg" because Zeus came to Leda in the form of a swan); the seizure of Helen, taken from her husband by the Trojan prince Paris, is usually considered by poets to be the immediate cause of the Trojan War. Meleager: uncle of Diomedes, a Greek hero in the *Iliad*; his death years before had no bearing on the Diomedes' difficulties in return-

ing home from Troy.

8. The comedies of the Roman playwrights Plautus and Terence close with *plaudite* (applaud!) or an equivalent request.

9. Most of the precepts enumerated in this section may be found in ARISTOTLE'S *Poetics* (see above).

1. In Greek mythology, the founder of Thebes; both Cadmus and his wife were changed into serpents at the end of their lives. Atreus: father of Agamemnon and Menelaus; he arranged the feast of Thyestes. Procne: wife of Tereus, who punished him for raping her sister by killing her own child and serving him to her husband; as he pursued the sisters, all three were turned into birds.

[189] A play that really seeks to be in demand and then, once seen, revived, is not to be shorter or more extended than five acts.² And a god is not to intervene unless a knot be encountered worthy of such a deliverer.³ A fourth actor is not to attempt to speak.

[193] Let the chorus preserve its role and forceful function as an actor, and not break in between acts with a song contributing nothing to the plot, nor fitting properly. Let it favour the good, and give friendly advice; control the angry and support those afraid to hope. Let it praise the modest table, the benefits of justice and laws, and Peace with her opened gates; let it conceal acts done, and pray to the gods that Fortune may return to the wretched and depart from the proud. A simple, slender pipe⁴ with only a few holes used to support choruses effectively, accompanying them with its breath and filling the seats (not as yet too crowded) with its blast. (It was not, as now, bound with orichalc,⁵ rivaling trumpets.) It was for that kind of performance, of course, that the people would gather in manageable numbers (only a few, one might guess), honest, righteous, and modest. After they began to extend their domains victoriously, with a wider wall on the way to embracing the city and their Genius⁶ lawfully placated with wine each day in daytime festivals, a greater licence was added to rhythms and modes. For what discernment would they, untaught, have had in their leisure, as rustic mingled with urban, base with honourable? So the piper added movement (and decadence) to an ancient art, and he wandered over the stage with his robe trailing behind. So also did notes increase on the austere lyres, and forceful eloquence bring an unwonted style of delivery. And keen on the scent of useful information, and prophetically inspired, choral utterance rivaled that of Delphic oracles.⁷

[220] Next, someone competing in tragic song for a paltry goat⁸ stripped down his rustic satyrs,⁹ and in rough manner (but with some dignity intact) tried some jokes. The reason was that the listener had to be caught by enticements and novel delights when the rituals were over and he was tipsy and free of the law's restraint. But it will be appropriate to present your mocking chattering satyrs agreeably, and relieve the serious with the playful. Let no god or hero, once introduced in royal gold and purple, move into shady taverns with vulgar speech. Nor is he to grasp at clouds and nonsense in contempt for the earth. Tragedy despises all chatter in light verses, and will be too ashamed (like a matron bidden to dance on holidays) to mix with wanton satyrs! If I compose "Satyrs" I won't be one to favour only unadorned and prevailing words and expressions, Pisos. Nor will I so strive to avoid a

2. This 5-act structure is not Aristotelian but may have developed from Greek New Comedy, especially from the comedies of Menander (ca. 342–ca. 292 B.C.E.).

3. The *deus ex machina* (literally, "god from the machine"; Latin) was a divine character lowered from above the stage to resolve the action at the end of a play.

4. That is, a flute.

5. Yellow copper ore (a precious and highly prized metal), and the brass made from it. Horace describes here more than one pipe bound together with metal, creating a sound to rival trumpets.

6. The guardian deity of a place.

7. Pronouncements of the oracle of Apollo at

Delphi, the most important oracle in ancient Greece.

8. Horace believes that the Greek term *tragoidia*—literally, "goat song"—took its name from the prize of a goat.

9. Woodland spirits, usually part human, part goat. Horace is describing satyr plays, a type of Greek drama that featured choruses of satyrs and made fun of episodes from myths. Although their style and meter were those of tragedy rather than comedy, the plays included drunkenness, phallic sexuality, pranks, and jokes. At Greek festivals a satyr play was commonly performed after three tragedies.

tragic tone that it makes no difference whether Davus is speaking or bold Pythias (having bilked a talent out of the sharp-scented Simo)¹ or Silenus,² the guardian and personal servant of his divine charge. My object will be poetry so fashioned from the familiar that anyone may hope to achieve the same for himself—and in vain attempt waste much sweat and labour! This shows how important are poetic texture and combination, and how much honour accrues to material drawn from the common store. When Fauns³ are brought out from the woods they should, in my view, avoid acting as if born at some crossroads, regular denizens of the forum, or forever playing some adolescent part with vapid verses, or babbling in filthy and ignominious speech. For some people take offence at it (those with steed,⁴ ancestry and property). If some individual buying shelled peas and nuts expresses approval of a work, they don't just suffer it gladly and give it the crown!

[251] A long syllable following closely upon a short is called an iambus, a rapid foot; hence its name was also extended to iambic trimeters, though for not that long a time. It had been producing six pulses, each first to last like itself. To bring itself a little more slowly and sedately to the ear it admitted a steadying spondee⁵ with obliging tolerance to its adoptive rights, but not to the point of yielding the second and fourth place in the partnership. This foot rarely appears even in Accius' noble trimeters; and the verses of Ennius,⁶ when put ponderously upon the stage, are condemned on the serious charge of either too much hasty and careless work, or an ignorance of craft.

[263] Not every critic sees faulty rhythm in poetry, and favour has been given undeservedly to poets who are Roman. Am I therefore to hive off and write as I please? Or suppose that everyone will see my mistakes, but still be less watchful and cautious because they will (I hope) make allowances? In short, while avoiding censure, I earn no praise. You must unroll Greek originals in your hand night and day. (You say your forebears praised Plautine⁷ metres and wit? They admired both with an excess of tolerance, not to say foolishness, if you and I know how to separate coarseness from refinement in speech, and our fingers and ears are trained in the laws of sound!)

[275] They say the unknown genre of the tragic Muse was discovered by Thespis,⁸ who wheeled his poems about on wagons for men to sing and act, their faces well stained with lees.⁹ After him, as inventor of the mask and the noble robe, Aeschylus¹ laid out a stage with modest-sized beams, producing plays which resounded grandly and strode on the buskin.² Old Comedy³ succeeded that, meeting with much approval. But excessive freedom led to abuse

1. Three common names of type characters in New Comedy, representing respectively the slave, maid or prostitute, and old man. "Talent": an ancient denomination of money (of varying but high value).

2. A satyr, later represented as a cheerful old drunk, who was the adviser and instructor of Dionysus, god of wine (his "divine charge").

3. That is, satyrs.

4. The *equites* (horsemen or "knights"), who in the Roman Republic formed a wealthy class almost equal to senators in social standing.

5. A metrical foot formed by two long syllables.

6. Quintus Ennius (ca. 239–ca. 169 B.C.E.), early Roman poet and dramatist. Lucius Accius (170–

90 B.C.E.), Roman playwright and literary critic.

7. Characteristic of the Roman comic playwright Plautus.

8. Pioneer of Greek tragedy (6th c. B.C.E.), credited with introducing the actor's reply to the chorus.

9. Sediment remaining after the fermentation of wine.

1. Greek dramatist (525–456 B.C.E.) who introduced the third actor to the Greek stage.

2. Knee- or calf-length boot worn by actors in tragedies.

3. The first phase of ancient Greek comedy (ca. 5th c. B.C.E.); its greatest writer was Aristophanes (ca. 450–ca. 385 B.C.E.).

and a degree of violence that deserved to be curbed by law. The law was enforced, and the chorus fell basely silent, its right to injure removed.

[285] Our poets have left nothing untried, and not the least glory is due to those with the courage to abandon the Greeks' footsteps and celebrate things done at home, or produce either *praetextae* or *togatae*.⁴ Nor would Latium⁵ have greater might in virtue's field or arms' renown than with its tongue, if all our poets were not repelled by labour and patience with the file. As for you, O offspring of Pompilian⁶ blood, rebuke the poem not disciplined through many a day and many an erasure, and not trimmed off and ten times smoothed to the nail!

[295] Democritus⁷ believed that talent is a more fortunate thing than base craftsmanship, and because he excluded the "sane" from Helicon,⁸ a good part of our poets ignore fingernails and beard, heading for secret haunts and avoiding the baths. It seems that the prize and the name of "poet" will be gained by the one who does not entrust his head (three Anticyras full of hellebore⁹ could not cure it!) to Licinus the barber. (Oh how gauche am I then, purging *my* bile just before the spring season! No one else could have made better poetry—but it's not worth all that!) My function shall be that of a whetstone, therefore, able to render iron sharp, while not endowed itself for cutting. Though not engaged in writing myself, I shall teach its function and obligations; where its stores are secured, what fosters and shapes the poet; what is appropriate for him, what is not; where excellence takes him, where error.

[309] Correct writing finds its beginning and source in discernment. Socratic scrolls¹ can show you your subject matter, and when that has been planned ahead, the words will follow without reluctance. The person who has learned what he owes to country and friends—what regard he should have for parent, brother, and guest, what a senator's duty is and a judge's, the role of a general sent into battle—certainly knows how to assign the appropriate qualities to each character. When he's trained in imitation I'll advise him to examine a pattern of life and mores, and draw living voices from this. From time to time a piece which has splendid maxims and a fine moral tone, even though lacking charm and without weight and craftsmanship, will give more pleasure and interest to people than verses devoid of substance, and musical trifles. To the Greeks the Muse gave talent and a full-throated utterance. (The Greeks are a people greedy for nothing if not praise.) *Roman* children learn to divide a copper into a hundred parts with lengthy calculations: "Albinus² Minor! Take one-twelfth from five-twelfths! What's the difference?—"One third."—"Très bien!"³ You'll know how to preserve your capital. Now add one-twelfth. What's the answer?—"One half!"

4. Plays on themes drawn from common life; the term refers to the toga worn by ordinary people. *Praetextae*: a Roman dramatic genre that dealt with Roman historical figures rather than Greek myth; the term refers to the type of toga worn by Roman magistrates.

5. Area of central Italy that included Rome.

6. Descendants of Numa Pompilius, half-legendary second king of Rome (traditional dates, 715–673 B.C.E.).

7. Greek philosopher (460–370 B.C.E.).

8. Mountain sacred to the Muses (in Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits) in

Boeotia, northwest of the Gulf of Corinth.

9. Proverbially a cure for madness; a major source of hellebore in antiquity was the Greek port city of Anticyra, on the north coast of the Gulf of Corinth.

1. The Greek philosopher Socrates (469–399 B.C.E.) left no writings, but he was the most important speaker in the dialogues of his greatest pupil, PLATO (ca. 427–ca. 347 B.C.E.).

2. Roman family name; the translator adds "minor" to stress the boy's youth.

3. Excellent (French; in Horace, this interjection is in Greek).

When such corroding concern for private hoard has stained their hearts, can there be any hope of our fashioning poems worth dressing with cedar oil and storing in smooth cypress?

[333] Poets wish either to benefit or delight, or else say things at once pleasant and suited to life. Whatever your precepts, be brief, so that people's minds may grasp what you say quickly and easily and retain it faithfully. All excess overflows from a mind that's full. Things fashioned to give pleasure should be very close to reality. A story should not demand belief in absolutely anything, or draw a live boy out of a Lamia's⁴ belly after lunch! Our divisions of elder citizens condemn anything devoid of "profit"; the disdainful Ramnes⁵ pass rough poetry by. Mingling the "useful" with the "sweet" wins every point, by alike delighting and advising the reader. That is a book worth its price at the shop of the Sosii;⁶ there is the one to cross the sea too, and greatly prolong the life of its author's fame.

[347] Some offences, though, we are willing to forgive. For instance, a string does not render the sound wanted by hand and brain [and when you demand a flat it quite frequently gives a sharp];⁷ nor will the bow always strike the target it points at. But when the bright places in a poem are more numerous I am not one to be offended by a few blemishes that carelessness has let in or human nature failed to avoid. What am I getting at? Just as a copyist is not to be excused if he persistently makes the same mistake in spite of being warned, and a lyrist is laughed to scorn if he makes a series of blunders on the same string, so, in my view, one who fails badly becomes a "Choerilus."⁸ I greet his one or two nice touches with laughter and astonishment! Yet I am the very one to resent it whenever good Homer nods. The fact remains, sleep is ordained to steal over a long work.

[361] A poem is like a picture. One will captivate you if you stand closer, one if you stand further away. This one favours shadow; that one will want to be seen in daylight if it is not to dread the edge of a critic's tongue. This one pleased just once, this one will after ten visits.

[365b] O elder youth,⁹ though bred to the true by your father's words and possessing a natural sense of discernment, take hold of what I say to you here and remember it. An average and an adequate quality is rightly allowed in certain things. The average barrister and attorney is far removed from the force of Messalla's eloquence and lacks the knowledge of Cascellius Aulus¹—but he does have his value, nonetheless. That poets should ever be "average" is not a concession allowed by man, gods, or the stalls. As an out-of-tune orchestra, and gooey unguent, and poppy seed with Sardinian honey² spoil the pleasure of banquet tables (the dinner could have gone on without them), so a poem, created and revealed to give our hearts delight, approaches the worst if it falls short of the best.

4. A mythical female monster of Libya who ate children; ancient Greek parents invoked her name to scare their children into good behavior.

5. Young nobles.

6. Brothers who were well-known booksellers and Horace's publishers.

7. The square brackets here indicate a corrupted manuscript line.

8. Minor epic poet of the 4th c. B.C.E. who accompanied Alexander the Great on his campaigns and

was paid to celebrate him.

9. Another reference to the Pisos, to whom the poem was addressed.

1. Famous lawyer of Horace's time. Messalla Corvinus (64 B.C.E.—8 C.E.), Roman political leader, orator, author, soldier, and a patron of the arts.

2. Poppy seeds, when roasted and served with honey, were considered a delicacy; but they were spoiled if the honey had a bitter flavor.

[379] A man who does not know how to compete stays clear of athletic gear, and if he has no training in ball, discus and hoop, stays on the sidelines, so the encircling crowd won't be entitled to break out laughing. Yet one who doesn't have the knowledge still has the audacity to fashion verses! (So what? you say? He is free—and free-born—and most of all, given equestrian rank by his cash. And he's far removed from every vice!)

[385] Don't utter or fashion anything over Minerva's³ objections. There's a criterion. There's an attitude of mind. But if you do write something, let it find the ears of Maecius⁴ to be judged, and your father's, and mine. And keep it shut up for nine years right inside its parchment wrapper. What you haven't published may be destroyed: the uttered word is beyond recall!

[391] Woodland folk were frightened away from their slaughtered fare by Orpheus,⁵ a holy man and a prophet of the gods. Hence his reputation for taming tigers and furious lions. So too was Amphion, founder of the city of Thebes, described as moving rocks by the sound of his tortoise⁶ and the charm of his entreaty, leading them wherever he wished. Once upon a time such things as these were counted for discernment: distinguishing public from private, sacred from profane; restraining promiscuity, giving rules for marriage, building towns, carving laws on wood. Honour and renown came thus to inspired bards and their songs. After them came renowned Homer and Tyrtæus,⁷ whetting manly hearts for martial wars with their verses. Oracles were told through poems; a way of life was shown, and the favour of kings sought through Pierian⁸ measures. And play was discovered, and an end to lengthy labours. So don't be ashamed of the lyre-skilled Muse and Apollo⁹ the singer!

[408] The question was raised whether a praiseworthy poem comes about by nature or by craft. For my part I don't see what dedication can achieve without a rich vein of talent—or, for that matter, untrained inspiration. The one calls for the resources of the other and makes a friendly collaboration with it. A youthful runner dedicated to touching the longed-for goal has endured and achieved much: sweating and shivering, abstaining from women and wine. Any piper who plays at the Pythian games¹ first learned how, trembling in fear of his master. These days, it seems, one may just say, "I compose marvellous poetry. Let the devil take the hindmost! I would be ashamed to be left behind, and forced to admit complete ignorance of what I have not learned!"

[419] Like a hawk collecting a crowd to buy his wares, the poet for his own profit—though wealthy in property and capital put out at interest—orders his claquees² to show up. Even if he is one who can afford a rich spread (and do it right) and put up a bond for some poor nobody and rescue

3. Roman goddess of handicrafts and war, whose attributes became conflated with those of the Greek goddess Athena.

4. Roman author of 12 epigrams of whom nothing else is known except his name. The sense here is that Maecius is a judicious critic, worthy of imitation.

5. A holy man because he was credited with founding a Greek mystery religion, Orphism. His extraordinary musical powers—said to be able to charm not only wild beasts but also rocks and trees—made Orpheus a model of the poet.

6. That is, his lyre, which was fashioned from tortoise shell. Amphion: son of Zeus and Antiope, responsible in part for the miraculous construction of the walls of Thebes.

7. Poet of the 7th c. B.C.E.—according to tradition, a lame Attic schoolmaster—who composed war songs and martial elegies for the Spartans, who sang them while marching.

8. Belonging to a spring sacred to the Muses, so a source of knowledge. See, for instance, ALEXANDER POPE in "An Essay on Criticism" (below): "A little Learning is a dang'rous Thing; / Drink deep, or taste not the Pierian Spring."

9. Son of Zeus and Leto, god of music and poetry.

1. Quadrennial competitions held at Delphi in honor of Apollo; they included musical as well as athletic contests.

2. Groups hired to applaud at a performance.

one entangled in an awkward court case, I'll be surprised if (for all his blessings) he knows how to distinguish a false friend from a true. So whether you've presented a gift to someone or will intend to give one, don't introduce him to your verses when he's sated with happiness. "Beautiful! Fine! Excellent!" he'll shout. He'll grow pale over them, and trickle dew from his dear eyes, leap up, thump the earth with his foot! Just as hired mourners at a funeral say and do more than those who are grieving from the heart, in the same way a mocker makes more of a show than the man whose praise is sincere. Kings are said to ply with many a goblet someone whose worthiness of their friendship they are striving to assess, and rack him with strong wine. If you compose poems, the sentiments that lurk beneath the skin should never deceive you.

[438] Whenever you recited something to Quintilius,³ he would say: "Correct this, please, and that." If, after two or three vain attempts you continued to insist that you could do no better, he would just tell you to delete it and put your ill-turned verses back on the anvil. If you preferred to defend a mistake, rather than change it, he would not burden himself with any further word or useless effort to stop you being sole unchallenged lover of yourself and your work! The good and wise man will rebuke verses lacking craftsmanship, fault harsh ones, put a black oblique stroke of the pen next to your sloppy ones, cut back ambitious adornment, force you to illuminate what is unclear, reproach you for an ambiguous statement, censure what should be altered. He will become an "Aristarchus,"⁴ and will not say, "Why offend a friend in trifles?" Such "trifles" will get that friend into serious trouble once he has been laughed at and unfavourably received!

[453] Like one attacked by a bad case of scabies, or the royal disease, or aberrant frenzy and a wrathful Diana,⁵ men of discernment are afraid to touch a "mad" poet and they avoid him. The young and impetuous flush him out and chase after him. If thus belching and raving sublime verses he falls down a well or pit like a fowler intent on blackbirds, let him long shout, "Help, Citizens! Save me!" But no one will be bothered to lift him out. If someone should be concerned enough to bring help and let down a rope, I would suggest that he just may have thrown himself down there on purpose, and not want to be saved!—and recount the demise of the poet of Sicily.

[464b] In the throes of passion for immortality, Empedocles leapt in cold blood into Aetna's⁶ flames. Poets should have that right—*let* them perish! To save someone against his will is like murder. Not just once has he done this, nor will he behave normally if he is restrained and lays aside his passion for a glorious death. Nor is it quite clear why he goes on scribbling verses. He may have pissed on his father's ashes or disturbed some grim enclosure in an unholy way! He is unquestionably mad, and like a bear whose might has smashed the confining bars of his cage he routs the unlearned and learned alike with fierce recitation! Anyone he seizes he

3. Quintilius Varus (d. 24 B.C.E.), native of Cremona and an eminent critic, was a friend of both Horace and Virgil; the name is used here to denote someone with taste.

4. Aristarchus of Samothrace (ca. 220–145 B.C.E.), distinguished Alexandrian scholar, particularly known for his scrupulous work marking spurious or doubtful lines in Homer.

5. Lunacy (as the word's derivation from *luna* suggests) was supposed to be caused by the moon goddess, Diana. "Royal disease": jaundice.

6. Mount Etna in Sicily, Europe's highest active volcano. Empedocles (ca. 493–ca. 433 B.C.E.), Greek philosopher, poet, and statesman born in Sicily; the actual place and manner of his death is disputed.

grips and murders with his reading—a leech with no intention of letting go his skin, until he’s full of gore!

ca. 10 B.C.E.

LONGINUS

first century C.E.

Since the eighteenth century, the ancient Greek text *On Sublimity* has maintained a reputation as one of the most influential classical works in the tradition of European criticism, despite the uncertainty that surrounds its authorship and date of composition. A distinctive feature of this famous treatise is its favorable commentary on the role of emotion (*pathos*) in the practices of writing, oratory, and reading. According to the author of *On Sublimity* (*Peri Hupsous* in Greek), whom critics refer to as “Longinus,” the presence of noble passion is essential for achieving sublimity (*hupsos*), by which he means an elevated and lofty style of writing that rises above the ordinary. From Longinus’s author-centered perspective, writers and orators achieve greatness not just by rhetorical techniques but also by deep feelings, profound thoughts, and natural genius: “Sublimity is the echo of a noble mind.” Often the experience of reading a great author or listening to a great speech leads us to a feeling of ecstasy or transport (*ekstasis*), which is distinct from the more rational effects of persuasion, the goal of rhetoric. For Longinus, sublimity uplifts the spirit of the reader, filling him or her with unexpected astonishment and pride, arousing noble thoughts, and suggesting more than words can convey.

The extant text of *On Sublimity* derives from a tenth-century medieval manuscript that offers conflicting statements as to the identity of the treatise’s creator. For unknown reasons, the table of contents attributes the text to either “Dionysius or Longinus,” while the title of the manuscript itself simply indicates that a certain “Dionysius Longinus” is the author. The first attribution suggests that the author is either the Augustan Age Dionysius of Halicarnassus or Cassius Longinus, the third-century pupil of Plotinus. For various detailed reasons, neither of these alternatives has convinced scholars. The principal argument against Dionysius is that *On Sublimity* does not comport with the style and general approach of his other works, whose authorship is not in question. The main point of contention against Longinus, who in the eighteenth century was universally held to be the author, is that textual evidence taken from the concluding chapter on the decline of literature suggests a date of composition no later than 100 C.E., thus ruling out a third-century author. The title of the manuscript offers no solution either, for nothing is known of a Dionysius Longinus. One of the few things that can be determined with some certainty is that the author must have been a Hellenized Jew or at least in contact with Jewish culture, since the opening of Genesis is cited as a worthy example of sublimity. Such a reference is quite distinctive: no other known pagan writer employs the Bible in this manner. While scholars continue to attribute *On Sublimity* to Cassius Longinus, they do so as a matter of convenience.

Despite seven lengthy gaps that make up approximately one-third of the original text, the intended organization of *On Sublimity* is reasonably certain. After the formal preface addressed to Postumius Terentianus (about whom we know nothing) and the enumeration of common faults that arise when authors attempt to achieve

sublimity, Longinus provides some general marks of true sublimity. Then, in the eighth chapter, he proceeds to enumerate the five sources of sublimity: great thoughts, strong emotion, certain figures of thought and speech, noble diction, and dignified word arrangement. The remainder of the treatise, except for the anomalous short final chapter on the decline of literature (not included in our selection), concerns itself with detailed analytical discussion of each source in the order in which they are first listed, with illustrative digressions on Homer (8th c. B.C.E.), Demosthenes (384–322 B.C.E.), and PLATO (ca. 427–ca. 347 B.C.E.), among others. While the text on the second source, strong emotion, is no longer extant, the author's understanding of it is clear from many comments scattered throughout the treatise.

Often cited as a peak moment in *On Sublimity* is the digression on Plato and the orator Lysias (ca. 459–ca. 380 B.C.E.) near the end of the treatise, following the discussion of metaphors. The digression on genius, as it is known, is important because it provides a detailed and eloquent account of sublimity through a series of concise comparisons in which Homer, Plato, and Demosthenes figure as exemplary geniuses. (Many other classical writers are mentioned in the text.) Longinus is prompted by the preference of Caecilius, a rival theorist of the sublime (1st c. C.E.), for Lysias over Plato. Lysias, Caecilius claims, is a more faultless, pure, and correct writer than Plato, who often gets carried away with his metaphors. Longinus responds by saying that flawless or impeccable mediocrity, which never reaches the heights of sublimity, is not to be preferred over erratic genius. The former, which concerns itself with exactitude, minutia, and correctness, remains within the domain of the familiar, the humble, the charming, and the customary; the latter ranges freely over the grandeur, the loftiness, and the vastness of nature, admiring such awe-inspiring phenomena as the Nile, the Danube, the Rhine, or indeed the ocean, rather than the lesser streams. For Longinus, the faults that geniuses sometimes manifest are excusable because they are inevitable in the pursuit of sublimity, which expresses the boundless thought of human beings and raises them to the “spiritual greatness of god.” Freedom from error, per se, Longinus concludes, does not achieve the emotional intensity of sublimity, which strikes suddenly like the brilliance of lightning. Because of the grand manner in which Longinus makes his case here and throughout the treatise, ALEXANDER POPE would later say that Longinus “*Is himself that great Sublime he draws.*”

On Sublimity differs fundamentally from Platonic doctrine, which distrusted the frenzied and irrational flights of poetic inspiration and banned poetry from the ideal republic. Cleverly, Longinus points out that Plato does not practice what he preaches. In citing Plato as an example of a sublime writer, Longinus reinterprets the philosopher, highlighting the unconscious ways in which he too is “carried away by a sort of literary madness.” *On Sublimity* also differs from HORACE, who in the *Ars Poetica* coolly stresses rhetorical strategies rather than the erratic genius of authors; Horace would have felt comfortable with the last three sources of the sublime, centered as they are on rhetoric, but probably not with the first two, which depend on the mind and heart of the author. In some respects, Longinus's treatise is more like ARISTOTLE's *Poetics*, for they both take note of the formal techniques and psychological effects of literature, Aristotle famously focusing on the emotional “catharsis” that an audience experiences during the performance of a tragedy. An important distinction between the two is that Longinus considers the emotional psychology of the author as well as that of the audience.

Longinus's text appears not to have been read during ancient or medieval times, perhaps because it was lost. It reemerged as an important text first in the Renaissance, with the Italian translation of Niccolò da Falgano in 1560, but especially with Nicolas Boileau's 1674 French rendering. The latter made *On Sublimity* a central text in European criticism throughout the eighteenth century and set the stage for many discussions of the sublime, including those by JOSEPH ADDISON, EDMUND BURKE, and,

most notably, IMMANUEL KANT. With Kant's *Critique of Judgment* (1790), the theory of the sublime reached a level of analytical rigor considerably beyond that of Longinus, who, by comparison, is content merely to enact the sublime and work intuitively. Still, Longinus manages to anticipate many of Kant's major themes, especially his fascination with the uplifting sense of the "supersensible" (the transcendent). He also anticipates Romantic theories of literature, which focus on the creative genius of the author.

From a contemporary perspective, Longinus's view of the sublime has limitations. It focuses mainly on the profound feelings and thoughts of geniuses and audiences, without attending to the ways in which they are structured or determined by language. Longinus does discuss figurative language, rhetoric, and composition, but the ideas and emotions of the genius precede such linguistic "ornamentation." The audience's experience, moreover, is said to transcend words. Such a view contrasts with the influential rhetorical reading of the sublime by the deconstructive theorist PAUL DE MAN, who—especially in his "Phenomenality and Materiality in Kant" (1984)—underscores the figurative or topological determination of consciousness. For some schools of contemporary theory, Longinus's emphasis on spiritual transcendence would also be considered a limitation. For example, late twentieth-century theorists of postmodern culture, including FREDRIC JAMESON and JEAN-FRANÇOIS LYOTARD, conceive the sublime in materialist cultural terms—as disorienting experiences of unrepresentable new global systems and networks and as inconceivable cataclysmic modern historical events (such as the Holocaust). Such theorizing, however, could not have taken place without Longinus's groundbreaking analysis in *On Sublimity*, which thus will continue to be a key text for understanding the sublime.

*From On Sublimity*¹

Preface

My dear Postumius Terentianus,²

[1.1] You will recall that when we were reading together Caecilius's³ monograph *On Sublimity*, we felt that it was inadequate to its high subject, and failed to touch the essential points. Nor indeed did it appear to offer the reader much practical help, though this ought to be a writer's principal object. Two things are required of any textbook: first, that it should explain what its subject is; second, and more important, that it should explain how and by what methods we can achieve it. Caecilius tries at immense length to explain to us what sort of thing 'the sublime' is, as though we did not know; but he has somehow passed over as unnecessary the question how we can develop our nature to some degree of greatness. [1.2] However, we ought perhaps not so much to blame our author for what he has left out as to commend him for his originality and enthusiasm.

1. Translated by D. A. Russell, who has also supplied the headings in the text. The chapter and section numbers, included in square brackets, date to the 16th century.

3. Caecilius of Calacte in Sicily (1st c. C.E.), Greek rhetorician. His monograph on sublimity

is lost, but later references in Longinus's text suggest that the author neglected the role of strong noble emotion and generous use of metaphor, valuing the even tone of impeccably correct and faultless writers over the ecstasy, wonder, and astonishment of erratic geniuses.

You have urged me to set down a few notes on sublimity for your own use. Let us then consider whether there is anything in my observations which may be thought useful to public men. You must help me, my friend, by giving your honest opinion in detail, as both your natural candour and your friendship with me require. It was well said that what man has in common with the gods is 'doing good and telling the truth'.

[1.3] Your education dispenses me from any long preliminary definition. Sublimity is a kind of eminence or excellence of discourse. It is the source of the distinction of the very greatest poets and prose writers and the means by which they have given eternal life to their own fame. [1.4] For grandeur produces ecstasy rather than persuasion in the hearer; and the combination of wonder and astonishment always proves superior to the merely persuasive and pleasant. This is because persuasion is on the whole something we can control, whereas amazement and wonder exert invincible power and force and get the better of every hearer. Experience in invention and ability to order and arrange material cannot be detected in single passages; we begin to appreciate them only when we see the whole context. Sublimity, on the other hand, produced at the right moment, tears everything up like a whirlwind, and exhibits the orator's whole power at a single blow.

[2.1] Your own experience will lead you to these and similar considerations. The question from which I must begin is whether there is in fact an art of sublimity or profundity. Some people think it is a complete mistake to reduce things like this to technical rules. Greatness, the argument runs, is a natural product, and does not come by teaching. The only art is to be born like that. They believe moreover that natural products are very much weakened by being reduced to the bare bones of a textbook.

[2.2] In my view, these arguments can be refuted by considering three points:

(i) Though nature is on the whole a law unto herself in matters of emotion and elevation, she is not a random force and does not work altogether without method.

(ii) She is herself in every instance a first and primary element of creation, but it is method that is competent to provide and contribute quantities and appropriate occasions for everything, as well as perfect correctness in training and application.

(iii) Grandeur is particularly dangerous when left on its own, unaccompanied by knowledge, unsteadied, unballasted, abandoned to mere impulse and ignorant temerity. It often needs the curb as well as the spur.

[2.3] What Demosthenes⁴ said of life in general is true also of literature: good fortune is the greatest of blessings, but good counsel comes next, and the lack of it destroys the other also. In literature, nature occupies the place of good fortune, and art that of good counsel. Most important of all, the very fact that some things in literature depend on nature alone can itself be learned only from art.

If the critic of students of this subject will bear these points in mind, he will, I believe, come to realize that the examination of the question before us is by no means useless or superfluous.

* * *

4. *Orations* 23.113 [translator's note]. Demosthenes (384–322 B.C.E.), the greatest Athenian orator.

Some Marks of True Sublimity

At this stage, the question we must put to ourselves for discussion is how to avoid the faults which are so much tied up with sublimity. [6.1] The answer, my friend, is: by first of all achieving a genuine understanding and appreciation of true sublimity. This is difficult; literary judgement comes only as the final product of long experience. However, for the purposes of instruction, I think we can say that an understanding of all this can be acquired. I approach the problem in this way:

[7.1] In ordinary life, nothing is truly great which it is great to despise; wealth, honour, reputation, absolute power—anything in short which has a lot of external trappings—can never seem supremely good to the wise man because it is no small good to despise them. People who could have these advantages if they chose but disdain them out of magnanimity are admired much more than those who actually possess them. It is much the same with elevation in poetry and literature generally. We have to ask ourselves whether any particular example does not give a show of grandeur which, for all its accidental trappings, will, when dissected, prove vain and hollow, the kind of thing which it does a man more honour to despise than to admire. [7.2] It is our nature to be elevated and exalted by true sublimity. Filled with joy and pride, we come to believe we have created what we have only heard. [7.3] When a man of sense and literary experience hears something many times over, and it fails to dispose his mind to greatness or to leave him with more to reflect upon than was contained in the mere words, but comes instead to seem valueless on repeated inspection, this is not true sublimity; it endures only for the moment of hearing. Real sublimity contains much food for reflection, is difficult or rather impossible to resist, and makes a strong and ineffaceable impression on the memory. [7.4] In a word, reckon those things which please everybody all the time as genuinely and finely sublime. When people of different trainings, ways of life, tastes, ages, and manners all agree about something, the judgement and assent of so many distinct voices lends strength and irrefutability to the conviction that their admiration is rightly directed.

The Five Sources of Sublimity; The Plan of the Book

[8.1] There are, one may say, five most productive sources of sublimity. (Competence in speaking is assumed as a common foundation for all five; nothing is possible without it.)

(i) The first and most important is the power to conceive great thoughts; I defined this in my work on Xenophon.⁵

(ii) The second is strong and inspired emotion. (These two sources are for the most part natural; the remaining three involve art.)

(iii) Certain kinds of figures. (These may be divided into figures of thought and figures of speech.)

(iv) Noble diction. This has as subdivisions choice of words and the use of metaphorical and artificial language.⁶

5. Athenian historian and essayist (ca. 428–ca. 354 B.C.E.).

6. Or “and coined words” [translator’s note].

(v) Finally, to round off the whole list, dignified and elevated word-arrangement.

Let us now examine the points which come under each of these heads.

I must first observe, however, that Caecilius has omitted some of the five—emotion, for example. [8.2] Now if he thought that sublimity and emotion were one and the same thing and always existed and developed together, he was wrong. Some emotions, such as pity, grief, and fear, are found divorced from sublimity and with a low effect. Conversely, sublimity often occurs apart from emotion. Of the innumerable examples of this I select Homer's bold account of the Aloadae:⁷

Ossa upon Olympus they sought to heap; and on Ossa
Pelion with its shaking forest, to make a path to heaven—

and the even more impressive sequel—

and they would have finished their work . . .⁸

[8.3] In orators, *encomia*⁹ and ceremonial or exhibition pieces always involve grandeur and sublimity, though they are generally devoid of emotion. Hence those orators who are best at conveying emotion are least good at *encomia*, and conversely the experts at *encomia* are not conveyers of emotion. [8.4] On the other hand, if Caecilius thought that emotion had no contribution to make to sublimity and therefore thought it not worth mentioning, he was again completely wrong. I should myself have no hesitation in saying that there is nothing so productive of grandeur as noble emotion in the right place. It inspires and possesses our words with a kind of madness and divine spirit.

(i) *Greatness of Thought*

[9.1] The first source, natural greatness, is the most important. Even if it is a matter of endowment rather than acquisition, we must, so far as is possible, develop our minds in the direction of greatness and make them always pregnant with noble thoughts. You ask how this can be done. [9.2] I wrote elsewhere something like this: 'Sublimity is the echo of a noble mind.' This is why a mere idea, without verbal expression, is sometimes admired for its nobility—just as Ajax's silence in the *Vision of the Dead* is grand and indeed more sublime than any words could have been.¹ [9.3] First then we must state where sublimity comes from: the orator must not have low or ignoble thoughts. Those whose thoughts and habits are trivial and servile all their lives cannot possibly produce anything admirable or worthy of eternity. Words will be great if thoughts are weighty.

* * *

7. In Greek mythology, two giants: the sons of Poseidon (god of the sea) and Iphimedeia, wife of Aloeus.

8. *Odyssey* 11.315–17 [translator's note]. Ossa, Olympus, and Pelion are all mountains in north-eastern Greece. The *Odyssey* and *Iliad* (ca. 8th c. B.C.E.) are epic poems attributed to Homer.

9. Formal poems (odes) or speeches in praise of a living person, object, or event, but not a god, delivered before a special audience. See, for example, GORGAS's *Encomium of Helen* (above).

1. *Odyssey* 11.563. Note that this is not an example, but a simile illustrating the point that ideas in themselves can be grand [translator's note].

Selection and Organization of Material

[10.1] Now have we any other means of making our writing sublime? Every topic naturally includes certain elements which are inherent in its raw material. It follows that sublimity will be achieved if we consistently select the most important of these inherent features and learn to organize them as a unity by combining one with another. The first of these procedures attracts the reader by the selection of details, the second by the density of those selected.

Consider Sappho's² treatment of the feelings involved in the madness of being in love. She uses the attendant circumstances and draws on real life at every point. And in what does she show her quality? In her skill in selecting the outstanding details and making a unity of them:

[10.2] To me he seems a peer of the gods, the man who sits facing you and hears your sweet voice
and lovely laughter; it flutters my heart in my breast. When I see you only for a moment, I cannot speak;
my tongue is broken, a subtle fire runs under my skin; my eyes cannot see, my ears hum;
cold sweat pours off me; shivering grips me all over; I am paler than grass; I seem near to dying;
but all must be endured . . .³

[10.3] Do you not admire the way in which she brings everything together—mind and body, hearing and tongue, eyes and skin? She seems to have lost them all, and to be looking for them as though they were external to her. She is cold and hot, mad and sane, frightened and near death, all by turns. The result is that we see in her not a single emotion, but a complex of emotions. Lovers experience all this; Sappho's excellence, as I have said, lies in her adoption and combination of the most striking details.

A similar point can be made about the descriptions of storms in Homer, who always picks out the most terrifying aspects. [10.4] The author of the *Arimaspea* on the other hand expects these lines to excite terror:

This too is a great wonder to us in our hearts:
there are men living on water, far from land, on the deep sea:
miserable they are, for hard is their lot;
they give their eyes to the stars, their lives to the sea;
often they raise their hands in prayer to the gods,
as their bowels heave in pain.⁴

Anyone can see that this is more polished than awe-inspiring. Now compare it with Homer [10.5] (I select one example out of many):

He fell upon them as upon a swift ship falls a wave,
huge, wind-reared by the clouds. The ship

2. Greek lyric poet (b. ca. 612 B.C.E.).

3. Sappho, frag. 31 Lobel-Page.

4. From a lost poem attributed to Aristeas of Proconnesus, a prophet of Apollo said to have traveled

in Siberia in the 7th c. B.C.E. The lines perhaps express the surprised comment of innocent continental, deep in Asia, on the tales they have heard about ships and seagoing [translator's note].

is curtained in foam, a hideous blast of wind
 roars in the sail. The sailors shudder in terror:
 they are carried away from under death, but only just.⁵

[10.6] Aratus⁶ tried to transfer the same thought:

A little plank wards off Hades.

But this is smooth and unimpressive, not frightening. Moreover, by saying 'a plank wards off Hades', he has got rid of the danger. The plank *does* keep death away. Homer, on the other hand, does not banish the cause of fear at a stroke; he gives a vivid picture of men, one might almost say, facing death many times with every wave that comes. Notice also the forced combination of naturally uncompoundable prepositions: *hupek*, 'from under'. Homer has tortured the words to correspond with the emotion of the moment, and expressed the emotion magnificently by thus crushing words together. He has in effect stamped the special character of the danger on the diction: 'they are carried away from under death'.

[10.7] Compare Archilochus on the shipwreck, and Demosthenes on the arrival of the news ('It was evening . . .').⁷

In short, one might say that these writers have taken only the very best pieces, polished them up and fitted them together. They have inserted nothing inflated, undignified, or pedantic. Such things ruin the whole effect, because they produce, as it were, gaps or crevices, and so spoil the impressive thoughts which have been built into a structure whose cohesion depends upon their mutual relations.

Amplification

[11.1] The quality called 'amplification' is connected with those we have been considering. It is found when the facts or the issues at stake allow many starts and pauses in each section. You wheel up one impressive unit after another to give a series of increasing importance. There are innumerable varieties of amplification: [11.2] it may be produced by commonplaces, by exaggeration or intensification of facts or arguments, or by a build-up of action or emotion. The orator should realize, however, that none of these will have its full effect without sublimity. Passages expressing pity or disparagement are no doubt an exception; but in any other instance of amplification, if you take away the sublime element, you take the soul away from the body. Without the strengthening influence of the sublimity, the effective element in the whole loses all its vigour and solidity.

[11.3] What is the difference between this precept and the point made above about the inclusion of vital details and their combination in a unity?

5. *Odyssey* 15.624–28 [translator's note].

6. *Phaenomena* 299 [translator's note]. Aratus (ca. 315–ca. 240 B.C.E.), Greek poet who often wrote on philosophy and natural science.

7. The example from Archilochus cannot be certainly identified. That from Demosthenes (*On the Crown* 169) describes the alarm at Athens when news arrived of Philip's occupation of Elatea (339 B.C.E.): "It was evening when somebody brought the *prutaneis* [city magistrates] the news that

Elatea was captured. Some of them got up in the middle of dinner and began to drive the traders from the stalls in the *agora* [marketplace] and burn the wicker hurdles. Others sent for the generals and gave instructions to the trumpeter. The town was full of uproar" [translator's note]. Archilochus (7th c. B.C.E.), earliest Greek lyric poet whose work survives. Philip II (reigned 359–336 B.C.E.), king of Macedon. Elatea: strategically located town, three days' march from Athens.

What in general is the difference between amplification and sublimity? I must define my position briefly on these points, in order to make myself clear.

[12.1] I do not feel satisfied with the definition given by the rhetoricians: 'amplification is expression which adds grandeur to its subject'. This might just as well be a definition of sublimity or emotion or tropes. All these add grandeur of some kind. The difference lies, in my opinion, in the fact that sublimity depends on elevation, whereas amplification involves extension; sublimity exists often in a single thought, amplification cannot exist without a certain quantity and superfluity. [12.2] To give a general definition, amplification is an aggregation of all the details and topics which constitute a situation, strengthening the argument by dwelling on it; it differs from proof in that the latter demonstrates the point made . . .

* * *

Imitation of Earlier Writers as a Means to Sublimity

[13.2] Plato,⁸ if we will read him with attention, illustrates yet another road to sublimity, besides those we have discussed. This is the way of imitation and emulation of great writers of the past. Here too, my friend, is an aim to which we must hold fast. Many are possessed by a spirit not their own. It is like what we are told of the Pythia⁹ at Delphi: she is in contact with the tripod near the cleft in the ground which (so they say) exhales a divine vapour, and she is thereupon made pregnant by the supernatural power and forthwith prophesies as one inspired. Similarly, the genius of the ancients acts as a kind of oracular cavern, and effluences flow from it into the minds of their imitators. Even those previously not much inclined to prophesy become inspired and share the enthusiasm which comes from the greatness of others. [13.3] Was Herodotus the only 'most Homeric' writer? Surely Stesichorus¹ and Archilochus earned the name before him. So, more than any, did Plato, who diverted to himself countless rills from the Homeric spring. (If Ammonius² had not selected and written up detailed examples of this, I might have had to prove the point myself.) [13.4] In all this process there is no plagiarism. It resembles rather the reproduction of good character in statues and works of art.³ Plato could not have put such a brilliant finish on his philosophical doctrines or so often risen to poetical subjects and poetical language, if he had not tried, and tried wholeheartedly, to compete for the prize against Homer, like a young aspirant challenging an admired master. To break a lance in this way may well have been a brash and contentious thing to do, but the competition proved anything but valueless. As Hesiod says, 'this strife is good for men.'⁴ Truly it is a noble contest and prize of honour, and one well worth winning, in which to be defeated by one's elders is itself no disgrace.

8. Greek philosopher (ca. 427–ca. 347 B.C.E.). For PLATO's comments on poetry, see above.

9. A priestess of Apollo and the most famous of his oracles (located on the slopes of Mt. Parnassus near the Greek city Delphi).

1. Greek choral poet (ca. 630–555 B.C.E.) who wrote narratives on epic themes. Herodotus (ca. 484–ca. 425 B.C.E.), Greek historian.

2. Head of the Alexandrian library (2d c. B.C.E.)

and author of commentaries on Homer and other Greek authors.

3. Text uncertain: perhaps "the reproduction of beauty of form . . ." [translator's note].

4. *Works and Days* 24: healthy rivalry contrasted with the strife that produces war [translator's note]. Hesiod (active ca. 700 B.C.E.), Greek didactic poet.

[14.1] We can apply this to ourselves. When we are working on something which needs loftiness of expression and greatness of thought, it is good to imagine how Homer would have said the same thing, or how Plato or Demosthenes or (in history) Thucydides⁵ would have invested it with sublimity. These great figures, presented to us as objects of emulation and, as it were, shining before our gaze, will somehow elevate our minds to the greatness of which we form a mental image. [14.2] They will be even more effective if we ask ourselves 'How would Homer or Demosthenes have reacted to what I am saying, if he had been here? What would his feelings have been?' It makes it a great occasion if you imagine such a jury or audience for your own speech, and pretend that you are answering for what you write before judges and witnesses of such heroic stature. [14.3] Even more stimulating is the further thought: 'How will posterity take what I am writing?' If a man is afraid of saying anything which will outlast his own life and age, the conceptions of his mind are bound to be incomplete and abortive; they will miscarry and never be brought to birth whole and perfect for the day of posthumous fame.

Visualization (*Phantasia*)

[15.1] Another thing which is extremely productive of grandeur, magnificence and urgency, my young friend, is visualization (*phantasia*). I use this word for what some people call image-production. The term *phantasia* is used generally for anything which in any way suggests a thought productive of speech;⁶ but the word has also come into fashion for the situation in which enthusiasm and emotion make the speaker *see* what he is saying and bring it *visually* before his audience. [15.2] It will not escape you that rhetorical visualization has a different intention from that of the poets: in poetry the aim is astonishment, in oratory it is clarity. Both, however, seek emotion and excitement.

Mother, I beg you, do not drive them at me,
the women with the blood in their eyes and the snakes—
they are here, they are here, jumping right up to me.⁷

Or again:

O! O! She'll kill me. Where shall I escape?⁸

The poet himself saw the Erinyes,⁹ and has as good as made his audience see what he imagined.

* * *

[15.8] The poetical examples, as I said, have a quality of exaggeration which belongs to fable and goes far beyond credibility. In an orator's visualizations, on the other hand, it is the element of fact and truth which makes for success; when the content of the passage is poetical and fabulous and does

5. Greek historian (ca. 455–ca. 400 B.C.E.).

6. A Stoic definition [translator's note]. The philosophical school of Stoicism, founded in Athens by Zeno of Citium (335–263 B.C.E.), had widespread influence in Greece and Rome.

7. Euripides, *Orestes* 255–57. Orestes sees the Furies [translator's note]. The Furies: hideous

spirits who avenge wrongs done to kindred, especially murder; Orestes has killed his mother, Clytemnestra, Euripides (ca. 485–ca. 406 B.C.E.), Greek tragedian.

8. Euripides, *Iphigenia in Tauris* 291. Again Orestes and the Furies [translator's note].

9. That is, the Furies.

not shrink from any impossibility, the result is a shocking and outrageous abnormality. This is what happens with the shock orators of our own day; like tragic actors, these fine fellows *see* the Erinyes, and are incapable of understanding that when Orestes says

Let me go; you are one of my Erinyes,
you are hugging me tight, to throw me into Hell,¹

he visualizes all this *because he is mad*.

[15.9] What then is the effect of rhetorical visualization? There is much it can do to bring urgency and passion into our words; but it is when it is closely involved with factual arguments that it enslaves the hearer as well as persuading him. 'Suppose you heard a shout this very moment outside the court, and someone said that the prison had been broken open and the prisoners had escaped—no one, young or old, would be so casual as not to give what help he could. And if someone then came forward and said "This is the man who let them out", our friend would never get a hearing; it would be the end of him.'² [15.10] There is a similar instance in Hyperides' defence of himself when he was on trial for the proposal to liberate the slaves which he put forward after the defeat.³ 'It was not the proposer', he said, 'who drew up this decree: it was the battle of Chaeronea.' Here the orator uses a visualization actually in the moment of making his factual argument, with the result that his thought has taken him beyond the limits of mere persuasiveness. [15.11] Now our natural instinct is, in all such cases, to attend to the stronger influence, so that we are diverted from the demonstration to the astonishment caused by the visualization, which by its very brilliance conceals the factual aspect. This is a natural reaction: when two things are joined together, the stronger attracts to itself the force of the weaker.

[15.12] This will suffice for an account of sublimity of thought produced by greatness of mind, imitation, or visualization.⁴

(iii) *Figures: An Example to Illustrate the Right Use of Figures*⁵

[16.1] The next topic is that of figures. Properly handled, figures constitute, as I said, no small part of sublimity. It would be a vast, or rather infinite, labour to enumerate them all; what I shall do is to expound a few of those which generate sublimity, simply in order to confirm my point.

[16.2] Here is Demosthenes putting forward a demonstrative argument on behalf of his policy.⁶ What would have been the natural way to put it? 'You have not done wrong, you who fought for the liberty of Greece; you have examples to prove this close at home: the men of Marathon, of Salamis, of Plataea did not do wrong.' But instead of this he was suddenly inspired to give voice to the oath by the heroes of Greece: 'By those who risked their lives at Marathon, you have not done wrong!' Observe what he effects by this single

1. Euripides, *Orestes* 264–65 [translator's note].

2. Demosthenes, *Orations* 24.208 [translator's note].

3. I.e., after Philip's victory at Chaeronea (338 B.C.E.). The speech is not extant [translator's note]. Hyperides (389–322 B.C.E.), Greek orator, professional speech writer, and prosecutor. Chaeronea: northernmost town of Boeotia, where

Philip defeated the Athenians and the Thebans.

4. Note that this is not a complete summary of chaps. 9–15 [translator's note].

5. The section on the second source of the sublime, strong emotion, is missing from the extant Greek manuscript.

6. The passage discussed is in *Orations* 18.208 [translator's note].

figure of conjuration, or 'apostrophe' as I call it here. He deifies his audience's ancestors, suggesting that it is right to take an oath by men who fell so bravely, as though they were gods. He inspires the judges with the temper of those who risked their lives. He transforms his demonstrations into an extraordinary piece of sublimity and passion, and into the convincingness of this unusual and amazing oath. At the same time he injects into his hearers' minds a healing specific, so as to lighten their hearts by these paeans of praise and make them as proud of the battle with Philip as of the triumphs⁷ of Marathon and Salamis. In short, the figure enables him to run away with his audience.

* * *

The Relation between Figures and Sublimity

[17.1] At this point, my friend, I feel I ought not to pass over an observation of my own. It shall be very brief: figures are natural allies of sublimity and themselves profit wonderfully from the alliance. I will explain how this happens.

Playing tricks by means of figures is a peculiarly suspect procedure. It raises the suspicion of a trap, a deep design, a fallacy. It is to be avoided in addressing a judge who has power to decide, and especially in addressing tyrants, kings, governors, or anybody in a high place. Such a person immediately becomes angry if he is led astray like a foolish child by some skilful orator's figures. He takes the fallacy as indicating contempt for himself. He becomes like a wild animal. Even if he controls his temper, he is now completely conditioned against being convinced by what is said. A figure is therefore generally thought to be best when the fact that it is a figure is concealed.

[17.2] Thus sublimity and emotion are a defence and a marvellous aid against the suspicion which the use of figures engenders. The artifice of the trick is lost to sight in the surrounding brilliance of beauty and grandeur, and it escapes all suspicion. 'By the men of Marathon . . .' is proof enough. For how did Demosthenes conceal the figure in that passage? By sheer brilliance, of course. As fainter lights disappear when the sunshine surrounds them, so the sophisms of rhetoric are dimmed when they are enveloped in encircling grandeur. [17.3] Something like this happens in painting: when light and shadow are juxtaposed in colours on the same plane, the light seems more prominent to the eye, and both stands out and actually appears much nearer. Similarly, in literature, emotional and sublime features seem closer to the mind's eye, both because of a certain natural kinship and because of their brilliance. Consequently, they always show up above the figures, and overshadow and eclipse their artifice.

* * *

7. At Marathon, the Athenians aided by the Plataeans became the first Greeks to defeat the Persians (490 B.C.E.); near the island of Salamis, the

Persian fleet was routed by combined Greek forces (480 B.C.E.).

Hyperbaton

* * *

[22.1] Hyperbaton is an arrangement of words or thoughts which differs from the normal sequence . . .⁸ It is a very real mark of urgent emotion. People who in real life feel anger, fear, or indignation, or are distracted by jealousy or some other emotion (it is impossible to say how many emotions there are; they are without number), often put one thing forward and then rush off to another, irrationally inserting some remark, and then hark back again to their first point. They seem to be blown this way and that by their excitement, as if by a veering wind. They inflict innumerable variations on the expression, the thought, and the natural sequence. Thus hyperbaton is a means by which, in the best authors, imitation approaches the effect of nature. Art is perfect when it looks like nature, nature is felicitous when it embraces concealed art. Consider the words of Dionysius of Phocaea in Herodotus:⁹ 'Now, for our affairs are on the razor's edge, men of Ionia, whether we are to be free or slaves—and worse than slaves, runaways—so if you will bear hardships now, you will suffer temporarily but be able to overcome your enemies.' [22.2] The natural order of thought would have been: 'Men of Ionia, now is the time for you to bear hardships, for our affairs are on the razor's edge.' The speaker has displaced 'men of Ionia'; he begins with the cause of fear, as though the alarm was so pressing that he did not even have time to address the audience by name. He has also diverted the order of thought. Before saying that they must suffer hardship themselves (that is the gist of his exhortation), he first gives the reason why it is necessary, by saying 'our affairs are on the razor's edge'. The result is that he seems to be giving not a premeditated speech but one forced on him by the circumstances.

[22.3] It is even more characteristic of Thucydides to show ingenuity in separating by transpositions even things which are by nature completely unified and indivisible.

Demosthenes is less wilful in this than Thucydides, but no one uses this kind of effect more lavishly. His transpositions produce not only a great sense of urgency but the appearance of extemporization, as he drags his hearers with him into the hazards of his long hyperbata. [22.4] He often holds in suspense the meaning which he set out to convey and, introducing one extraneous item after another in an alien and unusual place before getting to the main point, throws the hearer into a panic lest the sentence collapse altogether, and forces him in his excitement to share the speaker's peril, before, at long last and beyond all expectation, appositely paying off at the end the long due conclusion; the very audacity and hazardousness of the hyperbata add to the astounding effect. There are so many examples that I forbear to give any.

9. *Histories* 6.11 [translator's note]. Dionysius of Phocaea: commander of the Greek fleet in the

battle of Lade (494 B.C.E.), which the Persians won. In the ancient world, defeated peoples were often enslaved.

Conclusion of the Section on Figures

[29.2] So much, my dear Terentianus, by way of digression on the theory of the use of those figures which conduce to sublimity. They all make style more emotional and excited, and emotion is as essential a part of sublimity as characterization is of charm.

(iv) Diction: General Remarks

[30.1] Thought and expression are of course very much involved with each other. We have therefore next to consider whether any topics still remain in the field of diction. The choice of correct and magnificent words is a source of immense power to entice and charm the hearer. This is something which all orators and other writers cultivate intensely. It makes grandeur, beauty, old-world charm, weight, force, strength, and a kind of lustre bloom upon our words as upon beautiful statues; it gives things life and makes them speak. But I suspect there is no need for me to make this point; you know it well. It is indeed true that beautiful words are the light that illuminates thought.

[30.2] Magniloquence, however, is not always serviceable: to dress up trivial material in grand and solemn language is like putting a huge tragic mask on a little child. In poetry and history, however . . . ¹

Use of Everyday Words

* * *

[31.1] Theopompus² much-admired phrase seems to me to be particularly expressive because of the aptness of the analogy, though Caecilius manages to find fault with it: 'Philip was excellent at stomaching facts.' An idiomatic phrase is sometimes much more vivid than an ornament of speech, for it is immediately recognized from everyday experience, and the familiar is inevitably easier to credit. 'To stomach facts' is thus used vividly of a man who endures unpleasantness and squalor patiently, and indeed with pleasure, for the sake of gain. [31.2] There are similar things in Herodotus: 'Cleomenes in his madness cut his own flesh into little pieces with a knife till he had sliced himself to death', 'Pythes continued fighting on the ship until he was cut into joints.'³ These phrases come within an inch of being vulgar, but they are so expressive that they avoid vulgarity.

Metaphors

[32.1] As regards number of metaphors, Caecilius seems to agree with the propounders of the rule that not more than two or at most three may be used of the same subject. Here too Demosthenes is our canon. The right occasions are when emotions come flooding in and bring the multiplication of

1. Lacuna equivalent to about four pages [translator's note].

2. Greek historian (b. ca. 378 B.C.E.).

3. *Histories* 6.75, 7.181 [translator's note].

Cleomenes: king of Sparta (reigned ca. 519–480 B.C.E.). Pythes: soldier who fought against the Persians ca. 480 B.C.E.

metaphors with them as a necessary accompaniment. [32.2] 'Vile flatterers, mutilators of their countries, who have given away liberty as a drinking present, first to Philip and now to Alexander, measuring happiness by the belly and the basest impulses, overthrowing liberty and freedom from despotism, which Greeks of old regarded as the canons and standards of the good.'⁴ In this passage the orator's anger against traitors obscures the multiplicity of his metaphors.

[32.3] This is why Aristotle and Theophrastus⁵ say that there are ways of softening bold metaphors—namely by saying 'as if', 'as it were', 'if I may put it so', or 'if we may venture on a bold expression'. Apology, they say, is a remedy for audacity. [32.4] I accept this doctrine, but I would add—and I said the same about figures—that strong and appropriate emotions and genuine sublimity are a specific palliative for multiplied or daring metaphors, because their nature is to sweep and drive all these other things along with the surging tide of their movement. Indeed it might be truer to say that they *demand* the hazardous. They never allow the hearer leisure to count the metaphors, because he too shares the speaker's enthusiasm.

[32.5] At the same time, nothing gives distinction to commonplaces and descriptions so well as a continuous series of tropes.⁶ This is the medium in which the description of man's bodily tabernacle is worked out so elaborately in Xenophon and yet more superlatively by Plato.⁷ Thus Plato calls the head the 'citadel' of the body; the neck is an 'isthmus' constructed between the head and the chest; the vertebrae, he says, are fixed underneath 'like pivots'. Pleasure is a 'lure of evil' for mankind; the tongue is a 'taste-meter'. The heart is a 'knot of veins' and 'fountain of the blood that moves impetuously round', allocated to the 'guard-room'. The word he uses for the various passages of the canals is 'alleys'. 'Against the throbbing of the heart,' he continues, 'in the expectation of danger and in the excitation of anger, when it gets hot, they contrived a means of succour, implanting in us the lungs, soft, bloodless, and with cavities, a sort of cushion, so that when anger boils up in the heart, the latter's throbbing is against a yielding obstacle, so that it comes to no harm.' Again: he calls the seat of the desires 'the women's quarters', and the seat of anger 'the men's quarters'. The spleen is for him 'a napkin for the inner parts, which therefore grows big and festering through being filled with secretions'. 'And thereafter', he says again, 'they buried the whole under a canopy of flesh', putting the flesh on 'as a protection against dangers from without, like felting.' Blood he called 'fodder of the flesh'. For the purpose of nutrition, he says also, 'they irrigated the body, cutting channels as in gardens, so that the streams of the veins might flow as it were from an incoming stream, making the body an aqueduct'. Finally: when the end is at hand, the soul's 'ship's cables' are 'loosed', and she herself 'set free'.

[32.6] The passage contains countless similar examples; but these are enough to make my point, namely that tropes are naturally grand, that metaphors conduce to sublimity, and that passages involving emotion and description are the most suitable field for them. [32.7] At the same time, it is plain without my saying it that the use of tropes, like all other good things in lit-

4. Demosthenes 18.296 [translator's note].

erature, always tempts one to go too far. This is what people ridicule most in Plato, who is often carried away by a sort of literary madness into crude, harsh metaphors or allegorical fustian. 'It is not easy to understand that a city ought to be mixed like a bowl of wine, wherein the wine seethes with madness, but when chastened by another, sober god, and achieving a proper communion with him, produces a good and moderate drink.'⁸ To call water 'a sober god', says the critic, and mixture 'chastening', is the language of a poet who is far from sober himself.

Digression: Genius versus Mediocrity

[32.8] Faults of this kind formed the subject of Caecilius' attack in his book on Lysias,⁹ in which he had the audacity to declare Lysias in all respects superior to Plato. He has in fact given way without discrimination to two emotions: loving Lysias more deeply than he loves himself, he yet hates Plato with an even greater intensity. His motive, however, is desire to score a point, and his assumptions are not, as he believed, generally accepted. In preferring Lysias to Plato he thinks he is preferring a faultless and pure writer to one who makes many mistakes. But the facts are far from supporting his view.

[33.1] Let us consider a really pure and correct writer. We have then to ask ourselves in general terms whether grandeur attended by some faults of execution is to be preferred, in prose or poetry, to a modest success of impeccable soundness. We must also ask whether the greater *number* of good qualities or the greater good qualities ought properly to win the literary prizes. These questions are relevant to a discussion of sublimity, and urgently require an answer.

[33.2] I am certain in the first place that great geniuses are least 'pure'. Exactness in every detail involves a risk of meanness; with grandeur, as with great wealth, there ought to be something overlooked. It may also be inevitable that low or mediocre abilities should maintain themselves generally at a correct and safe level, simply because they take no risks and do not aim at the heights, whereas greatness, just because it is greatness, incurs danger.

[33.3] I am aware also of a second point. All human affairs are, in the nature of things, better known on their worse side; the memory of mistakes is ineffaceable, that of goodness is soon gone. [33.4] I have myself cited not a few mistakes in Homer and other great writers, not because I take pleasure in their slips, but because I consider them not so much voluntary mistakes as oversights let fall at random through inattention and with the negligence of genius. I do, however, think that the greater good qualities, even if not consistently maintained, are always more likely to win the prize—if for no other reason, because of the greatness of spirit they reveal. Apollonius makes no mistakes in the *Argonautica*; Theocritus¹ is very felicitous in the *Pastorals*, apart from a few passages not connected with the theme; but would you rather be Homer or Apollonius? [33.5] Is the Eratosthenes² of that

8. *Laws* 773c–d [translator's note].

9. Greek orator (ca. 459–ca. 380 B.C.E.) who reacted against the grandiose manner of Gorgias, striving for common language, pure diction, and lucidity rather than powerful emotional appeals.

1. Greek poet (ca. 300–ca. 260 B.C.E.) whose works

are the earliest example of pastoral poetry. Apollonius of Rhodes (b. ca. 295 B.C.E.), head of the Alexandrian library and poet; his *Argonautica* is the great epic of the Alexandrian period.

2. Eratosthenes of Cyrene (ca. 275–194 B.C.E.), Greek poet, critic, geographer, and astronomer.

flawless little poem *Erigone* a greater poet than Archilochus, with his abundant, uncontrolled flood, that bursting forth of the divine spirit which is so hard to bring under the rule of law? Take lyric poetry: would you rather be Bacchylides or Pindar?³ Take tragedy: would you rather be Ion of Chios or Sophocles?⁴ Ion and Bacchylides are impeccable, uniformly beautiful writers in the polished manner; but it is Pindar and Sophocles who sometimes set the world on fire with their vehemence, for all that their flame often goes out without reason and they collapse dismally. Indeed, no one in his senses would reckon all Ion's works put together as the equivalent of the one play *Oedipus*.

[34.1] If good points were totted up, not judged by their real value, Hyperides would in every way surpass Demosthenes. He is more versatile, and has more good qualities. He is second-best at everything, like a pentathlon competitor; always beaten by the others for first place, he remains the best of the non-specialists. [34.2] In fact, he reproduces all the good features of Demosthenes, except his word-arrangement, and also has for good measure the excellences and graces of Lysias. He knows how to talk simply where appropriate; he does not deliver himself of everything in the same tone, like Demosthenes. His expression of character has sweetness and delicacy. Urbanity, sophisticated sarcasm, good breeding, skill in handling irony, humour neither rude nor tasteless but flavoured with true Attic salt,⁵ an ingenuity in attack with a strong comic element and a sharp sting to its apt fun—all this produces inimitable charm. He has moreover great talents for exciting pity, and a remarkable facility for narrating myths with copiousness and developing general topics with fluency. For example, while his account of Leto is in his more poetic manner, his Funeral Speech is an unrivalled example of the epideictic style.⁶ [34.3] Demosthenes, by contrast, has no sense of character. He lacks fluency, smoothness, and capacity for the epideictic manner; in fact he is practically without all the qualities I have been describing. When he forces himself to be funny or witty, he makes people laugh at him rather than with him. When he wants to come near to being charming, he is furthest removed from it. If he had tried to write the little speech on Phryne or that on Athenogenes,⁷ he would have been an even better advertisement for Hyperides. [34.4] Yet Hyperides' beauties, though numerous, are without grandeur: 'inert in the heart of a sober man', they leave the hearer at peace. Nobody feels frightened reading Hyperides.

But when Demosthenes begins to speak, he concentrates in himself excellences finished to the highest perfection of his sublime genius—the intensity of lofty speech, living emotions, abundance, acuteness, speed where

3. Major Greek lyric poet (518–438 B.C.E.), known for his elaborate odes (encomia) celebrating victories in athletic and music contests. Bacchylides (ca. 524–ca. 452 B.C.E.), Greek lyric poet also known for his odes.

4. One of the great Greek tragedians (ca. 496–406 B.C.E.), best known for his *Oedipus* trilogy. Ion of Chios (ca. 490–ca. 421 B.C.E.), Greek poet famed chiefly for his tragedies, none of which has survived.

5. Elegant wit.

6. The speech (*Deliacus*) in which the myth of

Leto was told is lost; the Funeral Speech is extant (*Oration 2*) [translator's note]. "The epideictic style": speech designed for delivery at festivals and funeral orations; it is distinguished from forensic oratory (for law courts) and deliberative (political) oratory. Leto: the mother of the Greek deities Apollo and Artemis.

7. The first is lost; the second is *Oration 3* (5) [translator's note]. Phryne (4th c. B.C.E.), celebrated Greek courtesan. Athenogenes: Athenian businessman who was the subject of Hyperides' "Against Athenogenes."

speed is vital, all his unapproachable vehemence and power. He concentrates it all in himself—they are divine gifts, it is almost blasphemous to call them human—and so outpoints all his rivals, compensating with the beauties he has even for those which he lacks. The crash of his thunder, the brilliance of his lightning make all other orators, of all ages, insignificant. It would be easier to open your eyes to an approaching thunderbolt than to face up to his unremitting emotional blows.

[35.1] To return to Plato and Lysias, there is, as I said, a further difference between them. Lysias is much inferior not only in the importance of the good qualities concerned but in their number; and at the same time he exceeds Plato in the number of his failings even more than he falls short in his good qualities.

[35.2] What then was the vision which inspired those divine writers who disdained exactness of detail and aimed at the greatest prizes in literature? Above all else, it was the understanding that nature made man to be no humble or lowly creature, but brought him into life and into the universe as into a great festival, to be both a spectator and an enthusiastic contestant in its competitions. She implanted in our minds from the start an irresistible desire for anything which is great and, in relation to ourselves, supernatural.

[35.3] The universe therefore is not wide enough for the range of human speculation and intellect. Our thoughts often travel beyond the boundaries of our surroundings. If anyone wants to know what we were born for, let him look round at life and contemplate the splendour, grandeur, and beauty in which it everywhere abounds. [35.4] It is a natural inclination that leads us to admire not the little streams, however pellucid and however useful, but the Nile, the Danube, the Rhine, and above all the Ocean. Nor do we feel so much awe before the little flame we kindle, because it keeps its light clear and pure, as before the fires of heaven, though they are often obscured. We do not think our flame more worthy of admiration than the craters of Etna,⁸ whose eruptions bring up rocks and whole hills out of the depths, and sometimes pour forth rivers of the earth-born, spontaneous fire. [35.5] A single comment fits all these examples: the useful and necessary are readily available to man, it is the unusual that always excites our wonder.

[36.1] So when we come to great geniuses in literature—where, by contrast, grandeur is not divorced from service and utility—we have to conclude that such men, for all their faults, tower far above mortal stature. Other literary qualities prove their users to be human; sublimity raises us towards the spiritual greatness of god. Freedom from error does indeed save us from blame, but it is only greatness that wins admiration. [36.2] Need I add that every one of those great men redeems all his mistakes many times over by a single sublime stroke? Finally, if you picked out and put together all the mistakes in Homer, Demosthenes, Plato, and all the other really great men, the total would be found to be a minute fraction of the successes which those heroic figures have to their credit. Posterity and human experience—judges whose sanity envy cannot question—place the

8. An active volcano in Sicily.

crown of victory on their heads. They keep their prize irrevocably, and will do so

so long as waters flow and tall trees flourish.⁹

[36.3] It has been remarked that ‘the failed Colossus is no better than the Doryphorus of Polyclitus’.¹ There are many ways of answering this. We may say that accuracy is admired in art and grandeur in nature, and it is *by nature* that man is endowed with the power of speech; or again that statues are expected to represent the human form, whereas, as I said, something higher than human is sought in literature.

[36.4] At this point I have a suggestion to make which takes us back to the beginning of the book. Impeccability is generally a product of art; erratic excellence comes from natural greatness; therefore, art must always come to the aid of nature, and the combination of the two may well be perfection.

It seemed necessary to settle this point for the sake of our inquiry; but everyone is at liberty to enjoy what he takes pleasure in.

* * *

(v) *Word-Arrangement or Composition*

[39.1] There remains the fifth of the factors contributing to sublimity which we originally enumerated. This was a certain kind of composition or word-arrangement. Having set out my conclusions on this subject fully in two books, I shall here add only so much as is essential for our present subject.

Effect of Rhythm

Harmony is a natural instrument not only of conviction and pleasure but also to a remarkable degree of grandeur and emotion. [39.2] The *aulos*² fills the audience with certain emotions and makes them somehow beside themselves and possessed. It sets a rhythm, it makes the hearer move to the rhythm and assimilate himself to the tune, ‘untouched by the Muses though he be’.³ The notes of the lyre, though they have no meaning, also, as you know, often cast a wonderful spell of harmony with their varied sounds and blended and mingled notes. [39.3] Yet all these are but spurious images and imitations of persuasion, not the genuine activities proper to human nature of which I spoke.⁴ Composition, on the other hand, is a harmony of words, man’s natural instrument, penetrating not only the ears but the very soul. It arouses all kinds of conceptions of words and thoughts and objects, beauty and melody—all things native and natural to mankind. The combination and variety of its sounds convey the speaker’s emotions to the minds of those around him and make the hearers share them.

9. “Epigram on the tomb of Midas,” ascribed to Homer: see Plato, *Phaedrus* 264d [translator’s note].

1. It is not certain whether “Longinus” means the Colossus of Rhodes or some other large statue. For the Doryphorus, famous for its proportions, see, e.g., G. M. A. Richter, *Handbook of Greek Art* (Phaidon, 1959), 110 [translator’s note]. Polycli-

tus: a leading Greek sculptor of the second half of the 5th c. B.C.E. (a number of copies of his Doryphoros exist).

2. A reed instrument (often translated “pipe” or “flute”).

3. Euripides, frag. 663 Nauck [translator’s note].

4. Presumably in the work referred to in 39.1 [translator’s note].

It fits his great thoughts into a coherent structure by the way in which it builds up patterns of words. Shall we not then believe that by all these methods it bewitches us and elevates to grandeur, dignity, and sublimity both every thought which comes within its compass and ourselves as well, holding as it does complete domination over our minds? It is absurd to question facts so generally agreed. Experience is proof enough.

* * *

Effect of Period Structure

[40.1] I come now to a principle of particular importance for lending grandeur to our words. The beauty of the body depends on the way in which the limbs are joined together, each one when severed from the others having nothing remarkable about it, but the whole together forming a perfect unity. Similarly great thoughts which lack connection are themselves wasted and waste the total sublime effect, whereas if they co-operate to form a unity and are linked by the bonds of harmony, they come to life and speak just by virtue of the periodic structure.⁵ It is indeed generally true that, in periods, grandeur results from the total contribution of many elements.

[40.2] I have shown elsewhere that many poets and other writers who are not naturally sublime, and may indeed be quite unqualified for grandeur, and who use in general common and everyday words which carry with them no special effect, nevertheless acquire magnificence and splendour, and avoid being thought low or mean, solely by the way in which they arrange and fit together their words. Philistus, Aristophanes⁶ sometimes, Euripides generally, are among the many examples. [40.3] Thus Heracles says after the killing of the children:

I'm full of troubles, there's no room for more.⁷

This is a very ordinary remark, but it has become sublime, as the situation demands. If you re-arrange it, it will become apparent that it is in the composition, not in the sense, that Euripides' greatness appears.

[40.4] Dirce is being pulled about by the bull:

And where it could, it writhed and twisted round,
dragging at everything, rock, woman, oak,
juggling with them all.⁸

The conception is fine in itself, but it has been improved by the fact that the word-harmony is not hurried and does not run smoothly; the words are propped up by one another and rest on the intervals between them; set wide apart like that, they give the impression of solid strength.

* * *

5. A sentence (i.e., a "period") composed of intricately balanced main and dependent clauses, often artfully arranged to create a sense of anticipation.

6. Major Greek comic dramatist (ca. 450–ca. 385 B.C.E.). Philistus (ca. 430–356 B.C.E.), Greek historian of Sicily.

7. Euripides, *Hercules Furens* 1245 [translator's

note].

8. From Euripides' lost *Antiope* (frag. 221 Nauck) [translator's note]. The quote describes how the mythical Dirce died. She was tied to the tail of a bull by Antiope's sons, who were attempting to avenge the mistreatment Dirce had inflicted on their mother.

Conclusion

[43.6] There is no urgent need to enumerate in detail features which produce a low effect. We have explained what makes style noble and sublime; the opposite qualities will obviously make it low and undignified.

* * *

1st century C.E.

AUGUSTINE OF HIPPO

354–430

“Scripture enjoins nothing but love, and censures nothing but lust.” Although this critical touchstone, articulated by St. Augustine in *On Christian Teaching*, may strike modern readers as more theological than literary, it involved Augustine in some remarkably modern literary issues: for example, how signs function, how readers make meaning of texts, and how interpretations are validated. He offers a generally Christian response to the problem of intentionality when he says of love in the Scriptures, “Anyone who derives from them an idea which is useful for supporting this love but fails to say what the writer demonstrably meant in the passage has not made a fatal error, and is certainly not a liar.”

Augustine was born in a North African Roman province in present-day Algeria—a backwater of the Roman Empire. Although his mother, Monica, was a devout Christian, his father was a pagan and thus their son was not baptized. He studied in the rhetoric schools of Carthage, where he was attracted to Manichaeism, an early Christian philosophy noted for its extreme metaphysical and moral dualism and its belief that evil is as powerful as good. The other great influence on his intellectual development was Greek philosophy, most notably the works of such Neoplatonists as Plotinus. Augustine taught in Carthage for seven years, from 376 to 383. He then went to Rome, where he set up as a teacher of rhetoric. By 384, at the age of thirty, he was a prominent enough scholar to be appointed municipal professor of rhetoric by the city of Milan. There, profoundly moved by the preaching of Ambrose, the bishop of Milan, he was baptized in 387. He resigned his position and returned to North Africa, where, in 391, he became a priest. In 395 he was appointed bishop of Hippo, a position he held until his death.

Augustine was an extremely prolific writer (his bibliography numbers over one thousand works). Besides his celebrated *Confessions*, written around 400, and his magisterial philosophy of history, *City of God* (413–26), undertaken in the wake of the sack of Rome, he wrote many commentaries on the Bible and polemics against prominent heresies of the time, including Manichaeism. One treatise that deals with the theory of criticism and biblical interpretation—*On Christian Teaching* (*De doctrina christiana* in Latin)—was written after his appointment as bishop of Hippo. *On Christian Teaching*, whose first three books were written around 395 (book 4 was added in 427), is a central text of medieval philosophy and aesthetics.

Augustine wrote at a time when Christianity was just beginning to establish itself, a time when there was no agreement on a fixed text for its Scriptures. The

Bible consisted of scattered manuscript fragments (complete Bibles were rare), written variously in Hebrew, Greek, and Latin. Because of his early experiences with Manichaeism, Augustine recognized the need for some way to authorize the interpretation of Scriptures to prevent Christianity from fragmenting into sects. The existing hodgepodge of unconnected and sometimes contradictory narratives (and translations) could not simply be taken as a group of literal documents. Only a method of interpreting figurative language could unravel the many difficult and obscure passages contained in various Scriptures, but to argue for a figurative reading of the sacred texts of Christianity required mechanisms to limit meaning to authorized interpretations. Drawing from many sources, including classical Platonic thinking about language (see PLATO), the rhetorical tradition in which he was trained, the epistles of St. Paul, and the early traditions of biblical criticism pioneered by Origen (180–254) in Greek and Sts. Jerome (ca. 347–420) and Ambrose (ca. 340–397) in Latin, Augustine fashioned a theory of signification that would dominate Western hermeneutics for ten centuries after his death. In the later Middle Ages, Augustinian sign theory would be further developed into a system of exegesis (a method for interpreting texts allegorically) by writers such as Hugh of St. Victor (1097–1141) and THOMAS AQUINAS, as well as by vernacular poets such as DANTE.

Augustine's originality lay in linking the theory of signs to a theory of language, which to this point had been considered separately, and in bringing both theories to bear on the practice of interpreting Scriptures. His first principles, the basic elements of signification, were transmitted almost unchanged to the modern linguist FERDINAND DE SAUSSURE. In books 1 and 2 of *On Christian Teaching*, Augustine distinguishes between signs and things: "For a sign is a thing which of itself makes some other thing come to mind, besides the impression that it presents to the senses." He further differentiates between natural and conventional (or "given") signs: natural signs, such as smoke or the tracks of an animal, signify without intending to; conventional signs, such as words, are used by living beings to convey things they have sensed or understood. Conventional signs may be further distinguished as literal and figurative; for instance, "ox" may conventionally refer to a four-legged draft animal, but in the New Testament it also figuratively symbolizes one of the four evangelists. This careful survey of assumptions might seem, at first glance, somewhat obvious and simple, but it is necessary so that Augustine can posit a stable one-to-one correspondence between signs and the things they signify. Augustine's concern is to create a method and rules by which readers can correctly interpret difficult passages of Scriptures whose meaning might be obscure. Difficulties are created because signs (primarily words) are either unknown or ambiguous. Book 2 details the learning necessary to understand unknown or unfamiliar signs encountered in reading Scriptures. This learning includes a knowledge not only of languages and translation but more generally of history, philosophy, logic, mathematics, music, the sciences, and rhetoric (which he takes up in more detail in book 4). In book 3 he turns to ambiguous signs, which present a different set of interpretive challenges. Here Augustine develops a method for close reading that stresses the importance of attending to punctuation, to grammar and syntax, and to metaphor for correct interpretations of biblical texts.

The development of an adequate theory of conventional signs, especially of tropes, is one of the goals of Augustinian hermeneutics—as it is for much subsequent theory of interpretation, including modern semiotics. It is, however, a project undermined by signs' ability to carry multiple meanings (to function in richly figurative ways), a problem Augustine addressed but never adequately resolved.

***On Christian Teaching* Keywords:** The Canon/Tradition, Hermeneutics, Interpretation Theory, Language, Medieval Theory, Religion, Rhetoric, Semiotics

*From On Christian Teaching*¹

From Book Two

When I was writing about things I began with the warning that attention should be paid solely to the fact that they existed, and not to anything besides themselves that they might signify. Now that I am discussing signs, I must say, conversely, that attention should not be paid to the fact that they exist, but rather to the fact that they are signs, or, in other words, that they signify.² For a sign is a thing which of itself makes some other thing come to mind, besides the impression that it presents to the senses. So when we see a footprint we think that the animal whose footprint it is has passed by; when we see smoke we realize that there is fire beneath it; when we hear the voice of an animate being we observe its feeling; and when the trumpet sounds soldiers know they must advance or retreat or do whatever else the state of the battle demands.

Some signs are natural, others given.³ Natural signs are those which without a wish or any urge to signify cause something else besides themselves to be known from them, like smoke, which signifies fire. It does not signify fire because it wishes to do so; but because of our observation and consideration of things previously experienced it is realized that there is fire beneath it, even if nothing but smoke appears. The footprint of a passing animal also belongs to this category. The expression of an angry or depressed person signifies an emotional state even if there is no such wish on the part of the person who is angry or depressed, and likewise any other emotion is revealed by the evidence of the face even if we are not seeking to reveal it. It is not my intention to discuss this whole category now, but since it comes into my classification it could not be omitted altogether. So let the above remarks suffice.

Given signs are those which living things give to each other, in order to show, to the best of their ability, the emotions of their minds, or anything that they have felt or learnt. There is no reason for us to signify something (that is, to give a sign) except to express and transmit to another's mind what is in the mind of the person who gives the sign. It is this category of signs—to the extent that it applies to humans—that I have decided to examine and discuss, because even the divinely given signs contained in the holy scriptures have been communicated to us by the human beings who wrote them. Some animals, too, have signs among themselves by which they show the desires of their minds: a cockerel⁴ on finding food gives a vocal sign to its hen to come quickly, and a dove calls to, or is called by, its mate by cooing. Many other such signs are observed regularly. Whether (as with a facial expression or a shout of pain) they accompany emotion without any desire to signify, or whether they are really given in order to signify something, is another question, and irrelevant to the matter in hand. I am excluding it from this work as not essential.

1. Translated by R. P. H. Green. Some of the translator's notes have been edited and some omitted.

2. In book 1, Augustine discusses "things," which, in and of themselves, do not signify anything.

Here he turns his attention to the ways in which things can and do signify.

3. The Latin phrase Augustine uses here, *signa data*, is sometimes translated "conventional signs."

4. Rooster.

Some of the signs by which people communicate their feelings to one another concern the eyes; most of them concern the ears, and a very small number concern the other senses. When we nod, we give a sign just to the eyes of the person whom we want, by means of that sign, to make aware of our wishes. Particular movements of the hands signify a great deal. By the movement of all their limbs, actors give certain signs to the cognoscenti and converse with the spectators' eyes, as it were; and it is through the eyes that flags and standards convey the wishes of military commanders. All these things are, to coin a phrase, visible words. But most signs, as I said, and especially verbal ones, concern the ears. A trumpet, a flute, and a lyre generally produce not just a pleasant sound but one that is also significant. But these signs are very few compared with words. Words have gained an altogether dominant role among humans in signifying the ideas conceived by the mind that a person wants to reveal. It is true that our Lord gave a sign through the smell of the ointment by which his feet were anointed,⁵ and that in the sacrament of his body and blood he signified his wishes through the sense of taste,⁶ and that the healing of the woman who touched the border of his garment has its significance.⁷ But an incalculable number of the signs by which people disclose their thoughts consist in words. I have been able to express in words all the various kinds of sign that I have briefly mentioned, but in no way could I have expressed all my words in terms of signs.

But spoken words cease to exist as soon as they come into contact with the air, and their existence is no more lasting than that of their sound; hence the invention, in the form of letters, of signs of words. In this way words are presented to the eyes, not in themselves, but by certain signs peculiar to them. These signs could not be shared by all nations, because of the sin of human disunity by which each one sought hegemony for itself. This pride is signified by the famous tower⁸ raised towards heaven at the time when wicked men justly received incompatible languages to match their incompatible minds. Consequently even divine scripture, by which assistance is provided for the many serious disorders of the human will, after starting off in a single language,⁹ in which it could have been conveniently spread throughout the world, was circulated far and wide in the various languages of translators and became known in this way to the Gentiles for their salvation. The aim of its readers is simply to find out the thoughts and wishes of those by whom it was written down and, through them, the will of God, which we believe these men followed as they spoke.

But casual readers are misled by problems and ambiguities of many kinds, mistaking one thing for another. In some passages they find no meaning at all that they can grasp at, even falsely, so thick is the fog created by some obscure phrases. I have no doubt that this is all divinely predetermined, so that pride may be subdued by hard work and intellects which tend to despise things that are easily discovered may be rescued from boredom and reinvigorated. Suppose someone were to make the following statements: that there exist holy and perfect men by whose lives and conduct the church of Christ tears away

5. In John 12.3–7, Mary Magdalene anoints Christ's feet with precious ointment. In book 3 of *On Christian Teaching*, Augustine interprets the "good odor" of the ointment as a sign of "good fame."

6. Matthew 26.26–28; Mark 14.22–24; Luke

22.15–20.

7. Matthew 9.20–22; Mark 5.25–29; Luke 8.43–44.

8. The Tower of Babel; see Genesis 11.1–9.

9. Hebrew for the Old Testament, Greek for the New [translator's note].

those who come to it from their various superstitions, and somehow, by inspiring them to imitate their goodness, incorporates them into itself; and that there exist servants of the true God, good and faithful men who, putting aside the burdens of this life, have come to the holy font of baptism, arise from it born again with the Holy Spirit, and then produce the fruit of a double love, that is love of God and love of their neighbour. Why is it, I wonder, that putting it like this gives less pleasure to an audience than by expounding in the same terms this passage from the Song of Songs, where the church is addressed and praised like a beautiful woman: 'Your teeth are like a flock of shorn ewes ascending from the pool, all of which give birth to twins, and there is not a sterile animal among them'?¹ Surely one learns the same lesson as when one hears it in plain words without the support of the imagery? And yet somehow it gives me more pleasure to contemplate holy men when I see them as the teeth of the church tearing men away from their errors and transferring them into its body, breaking down their rawness by biting and chewing. And it is with the greatest of pleasure that I visualize the shorn ewes, their worldly burdens set aside like fleeces, ascending from the pool (baptism) and all giving birth to twins (the two commandments of love), with none of them failing to produce this holy fruit. Exactly why this picture gives me greater pleasure than if no such imagery were presented by the divine books, since the topic is the same, and the lesson the same, it is difficult to say; this, however, is another question entirely. But no one disputes that it is much more pleasant to learn lessons presented through imagery, and much more rewarding to discover meanings that are won only with difficulty. Those who fail to discover what they are looking for suffer from hunger, whereas those who do not look, because they have it in front of them, often die of boredom. In both situations the danger is lethargy. It is a wonderful and beneficial thing that the Holy Spirit organized the holy scripture so as to satisfy hunger by means of its plainer passages and remove boredom by means of its obscurer ones. Virtually nothing is unearthed from these obscurities which cannot be found quite plainly expressed somewhere else.

* * *

There are two reasons why written texts fail to be understood: their meaning may be veiled either by unknown signs or by ambiguous signs. Signs are either literal or metaphorical. They are called literal when used to signify the things for which they were invented: as, for example, when we say *bovem* [ox], meaning the animal which we and all speakers of Latin call by that name. They are metaphorical when the actual things which we signify by the particular words are used to signify something else: when, for example, we say *bovem* and not only interpret these two syllables to mean the animal normally referred to by that name but also understand, by that animal, 'worker in the gospel', which is what scripture, as interpreted by the apostle Paul, means when it says, 'You shall not muzzle the ox that treads out the grain'.²

An important antidote to the ignorance of literal signs is the knowledge of languages. Users of the Latin language—and it is these that I have now undertaken to instruct—need two others, Hebrew and

1. Song of Solomon 4.2.

2. Deuteronomy 25.4. St. Paul interprets oxen as

apostles, those "who labor in the word and doctrine," in 1 Corinthians 9.9 and 1 Timothy 5.18.

Greek,³ for an understanding of the divine scriptures, so that recourse may be had to the original versions if any uncertainty arises from the infinite variety of Latin translators. Though we often find Hebrew words untranslated in the texts, like *amen*, *alleluia*, *raca*, *hosanna*.⁴ In some cases, although they could be translated, the original form is preserved for the sake of its solemn authority (so *amen*, *alleluia*); in others, like the other two that I mentioned, they are said to be incapable of being translated into another language. There are certain words in particular languages which just cannot be translated into the idioms of another language. This is especially true of interjections, which signify emotion rather than an element of clearly conceived meaning: two such words, it is said, are *raca*, a word expressing anger, and *hosanna*, a word expressing joy. But it is not because of these few words, which it is easy enough to note down and ask other people about, but because of the aforementioned diversity of translators that a knowledge of languages is necessary. Translators of scripture from Hebrew into Greek can be easily counted, but not so translators into Latin, for in the early days of the faith any person who got hold of a Greek manuscript and fancied that he had some ability in the two languages went ahead and translated it.

This fact actually proves more of a help to interpretation than a hindrance, provided that readers are not too casual. Obscure passages are often clarified by the inspection of several manuscripts, like the passage in Isaiah⁵ rendered by one translator as 'and do not despise the household of your own seed', but by another as 'and do not despise your own flesh'. Each one confirms the other. One is explained by the other, because 'flesh' can be taken literally—so that one may consider this a warning not to despise one's own body—and 'household of your seed' can be metaphorically understood as 'Christians', those spiritually born with us from the same seed of the word. But when the ideas of the translators are compared a more plausible idea suggests itself: that the command is literally about not despising your kinsfolk, since when you relate 'the household of your own seed' to the flesh your kinsfolk are what particularly comes to mind. This, I think, is the explanation of Paul's statement, 'If in any way I can arouse my flesh to jealousy, so that I may save some of them'⁶ (in other words, so that they too may believe by jealously emulating those who believed earlier). By his flesh he meant the Jews, by virtue of his kinship with them. Another example, again from Isaiah:⁷ one version has 'if you do not believe, you will not understand', another has 'if you do not believe, you will not stand fast'. It is not clear which of these represents the truth unless the versions in the original language are consulted. Yet both convey something important to those who read intelligently. It is difficult to find translators who diverge so much that they do not touch at some point. So because understanding concerns the vision of eternal things, whereas faith nourishes us with milk, so to speak, while we are babies in the cradle of this temporal life, and

3. Augustine himself admits to having little Greek and no Hebrew.

4. See, for example, Deuteronomy 27.15; Revelation 19.1; Matthew 5.22; John 12.13.

5. Isaiah 58.7. The first reading given is that of the Septuagint; the second a more literal translation used in the Vulgate [translator's note]. Septuagint: a translation of the Hebrew Bible into Greek, so called from the legend that it was done by 70 (*septuaginta*, Latin) superb Jewish scholars; references

to it are abbreviated LXX. Vulgate: 4th-century Latin translation of the Bible that eventually became the official Latin version.

6. Romans 11.14.

7. Isaiah 7.9. The readings quoted are those of the Septuagint and of Symmachus respectively [translator's note]. Symmachus (ca. late 2d c.e.), an otherwise unknown scholar who translated the Old Testament into Greek.

because here and now 'we walk by faith, not sight',⁸ and because if we do not walk by faith we cannot reach that vision which is not transient but eternal, and because we hold fast to the truth through a purified understanding—that is why one version says 'if you do not believe you will not stand fast' and the other 'if you do not believe you will not understand'.

Ambiguity in the original language often misleads a translator unfamiliar with the general sense of a passage, who may import a meaning which is quite unrelated to the writer's meaning. For example, some manuscripts have: 'their feet are sharp to shed blood' (the Greek adjective means both 'sharp' and 'quick').⁹ The translator who wrote 'their feet are quick to shed blood' saw the meaning; but another was misled by the ambiguous sign and went astray. Any other translations of this are not obscure, but plain wrong. They differ from the above-mentioned examples, and our advice must be not to seek an interpretation of such texts, but an emendation. Another example: because *moschus* is 'calf' in Greek some translators did not interpret the word *moscheumata* as 'plants' but translated it as 'calves'.¹ This mistake has taken over so many manuscripts that an alternative reading is hard to find; and yet the meaning is quite obvious, because all is revealed in the words that follow. 'False plants do not put out deep roots' gives a better meaning here than 'calves', which are not rooted to the earth, but walk over it with their feet! This particular translation is guaranteed by the surrounding context.

Because the exact meaning which the various translators are trying to express, each according to his own ability and judgement, is not clear without an examination of the language being translated, and because a translator, unless very expert, often strays away from the author's meaning, we should aim either to acquire a knowledge of the languages from which the Latin scripture derives or to use the versions of those who keep excessively close to the literal meaning. Not that such translations are adequate, but they may be used to control the freedom or error of others who in their translations have chosen to follow the ideas rather than the words. Translators often meet not only individual words, but also whole phrases, which simply cannot be expressed in the idioms of the Latin language, at least not if one wants to maintain the usage of ancient speakers of Latin. Sometimes these translations lose nothing in intelligibility but trouble those people who take more delight in things when correct usage is observed in expressing the corresponding signs. What is called a solecism² is simply what results when words are not combined according to the rules by which our predecessors, who spoke with some authority, combined them. Whether you say *inter homines* or *inter hominibus*³ does not matter to a student intent upon things. And again, what is a barbarism but a word articulated with letters or sounds that are not the same as those with which it was normally articulated by those who spoke Latin before us? Whether one says *ignoscere*⁴ with a long or short third syllable is of little concern to someone who beseeches God to forgive his sins no matter how he may have managed to articulate the word.

* * *

8. 2 Corinthians 5.7.

9. Psalm 13.3 (LXX); cf. Romans 3.15 and Isaiah 59.7 (the latter does not use the ambiguous Greek adjective, *oxus*).

1. Wisdom 4.3.

2. An ungrammatical phrase.

3. The meaning is the same ("among men"), but only the first is good Latin [translator's note].

4. "To forgive." In what follows Augustine means "vowel," not "syllable" [translator's note].

As for metaphorical signs, any unfamiliar ones which puzzle the reader must be investigated partly through a knowledge of languages, and partly through a knowledge of things. There is a figurative significance and certainly some hidden meaning conveyed by the episode of the pool of Siloam,⁵ where the man who had his eyes anointed by the Lord with mud made from spittle was ordered to wash his face. If the evangelist had not explained this name from an unfamiliar language, this important meaning would have remained hidden. So too, many of the Hebrew names not explained by the authors of these books undoubtedly have considerable significance and much help to give in solving the mysteries of the scriptures, if they can be explained at all. Various experts in the language have rendered no small service to posterity by explaining all these individual words from the scriptures and giving the meaning of the names Adam, Eve, Abraham, and Moses, and of place names such as Jerusalem, Zion, Jericho, Sinai, Lebanon, Jordan, and any other names in that language that are unfamiliar to us. Once these are clarified and explained many figurative expressions in scripture become quite clear.

Ignorance of things makes figurative expressions unclear when we are ignorant of the qualities of animals or stones or plants or other things mentioned in scripture for the sake of some analogy. The well-known fact about the snake, that it offers its whole body to assailants in place of its head, marvellously illustrates the meaning of the Lord's injunction to be as wise as serpents,⁶ which means that in place of our head, which is Christ,⁷ we should offer our body to persecutors, so that the Christian faith is not as it were killed within us when we spare our body and deny God. And the fact that a snake confined in its narrow lair puts off its old garment and is said to take on new strength chimes in excellently with the idea of imitating the serpent's astuteness and putting off the old man (to use the words of the apostle)⁸ in order to put on the new, and also with that of doing so in a confined place, for the Lord said 'enter by the narrow gate'.⁹ Just as a knowledge of the habits of the snake clarifies the many analogies involving this animal regularly given in scripture, so too an ignorance of the numerous animals mentioned no less frequently in analogies is a great hindrance to understanding. The same is true of stones, herbs, and anything that has roots. Even a knowledge of the carbuncle, a stone which shines in the dark, explains many obscure passages in scripture where it is used in an analogy; and ignorance of the beryl and adamant¹ often closes the door to understanding. It is easy to understand that unbroken peace is signified by the olive branch brought by the dove when it returned to the ark,² simply because we know that the smooth surface of oil is not easily broken by another liquid

5. John 9.7. The pool of Siloam is a rock-cut pool located just outside the walls of the Old City of Jerusalem; its name, according to John, means "sent." In "Lectures or Tractates on the Gospel According to St. John," Augustine explains: "Had He [Christ] not been sent, none of us would have been set free from iniquity. Accordingly he [the blind man] washed his eyes in that pool which is interpreted, Sent—he was baptized in Christ."

6. Matthew 10.16.

7. Ephesians 4.15.

8. Ephesians 4.22–24. The apostle is Paul.

9. Matthew 7.13.

1. A fabulous stone with the properties of diamonds and magnets; like the precious stones carbuncle and beryl, it was thought in the Middle Ages to have hidden, magical, or healing properties to which Christian writers added allegorical meanings. Beginning in the classical period, knowledge about rocks and stones and their meanings was systematically collected in books called *lapidaries*.

2. Genesis 8.11.

and also that the tree itself is in leaf all year round. And because of their ignorance about hyssop³ many people, unaware of its power to cleanse the lungs or even (so it is said) to split rocks with its roots, in spite of its low and humble habit, are quite unable to discover why it is said, 'You will purge me with hyssop, and I shall be clean'.⁴

An unfamiliarity with numbers makes unintelligible many things that are said figuratively and mystically in scripture. An intelligent intellect (if I may put it thus) cannot fail to be intrigued by the meaning of the fact that Moses and Elijah and the Lord himself fasted for forty days.⁵ The knotty problem of the figurative significance of this event cannot be solved except by understanding and considering the number, which is four times ten, and signifies the knowledge of all things woven into the temporal order. The courses of the day and the year are based on the number four: the day is divided into the hours of morning, afternoon, evening, and night, the year into the months of the spring, summer, autumn, and winter. While we live in the temporal order, we must fast and abstain from the enjoyment of what is temporal, for the sake of the eternity in which we desire to live, but it is actually the passage of time by which the lesson of despising the temporal and seeking the eternal is brought home to us. Then the number ten signifies the knowledge of the creator and creation: the Trinity⁶ is the number of the creator, while the number seven symbolizes the creation because it represents life and the body. The former has three elements (hence the precept that God must be loved with the whole heart, the whole soul, and the whole mind),⁷ and as for the body, the four elements of which it consists are perfectly obvious.⁸ To live soberly according to this significance of the number ten—conveyed to us temporally (hence the multiplication by four)—and abstain from the pleasures of this world: this is the significance of the forty-day fast. This is enjoined by the law, as represented by Moses; by prophecy, as represented by Elijah; and by the Lord himself, who, to symbolize that he enjoyed the testimony of the law and the prophets, shone out in the midst of them on the mountain as the three amazed disciples looked on.⁹ In the same way a solution may be found to explain how the number fifty, which enjoys particular authority in our religion because of Pentecost,¹ comes from the number forty; and how, when it is multiplied by three—either because of the three eras (before the law, under the law, under grace) or because of the name of the Father, the Son, and the Holy Spirit—and with the conspicuous addition of the Trinity, refers to the mystery of the fully purified church, matching the 153 fishes that were caught in the nets cast on the right-hand side of the boat after the Lord's resurrection.² In this way, expressed in a variety of numbers,

3. A medicinal plant native to southern Europe and the Middle East, commonly used as an anti-septic, cough reliever, and expectorant.

4. Psalm 50.7 LXX (51.7).

5. Exodus 24.18; 3 Kings LXX (1 Kings) 19.8; Matthew 4.2. Elijah: prophet of the Old Testament during the reign of Ahab, according to 1 and 2 Kings. In 1 Kings 19, Elijah travels 40 days and 40 nights to Mount Horeb, where Moses had received the Ten Commandments.

6. In Christian doctrine, the unity of the Father, the Son, and the Holy Spirit as three persons in one Godhead.

7. Matthew 22.37.

8. According to Greek philosophers from Empedocles (ca. 493–ca. 433 B.C.E.) on, all matter is composed of only four elements: earth, air, fire, and water.

9. Matthew 17.1–8; Mark 9.2–6.

1. The Christian holiday celebrating the descent of the Holy Spirit upon the apostles and followers of Christ. It occurs 50 days (in Greek, *pentēcostē* means "fiftieth") after Easter, falling on the 10th day after Ascension Thursday, which is itself 40 days after Easter.

2. John 21.6–11.

there are in the sacred books certain abstruse analogies which are inaccessible to readers without a knowledge of number.

Many passages are also made inaccessible and opaque by an ignorance of music. It has been elegantly demonstrated that there are some figurative meanings of things based on the difference between the psaltery and the lyre.³ It is a matter of dispute among experts, not unreasonably, whether the psaltery of ten strings embodies some musical principle which obliges it to have this number of strings, or whether, if this is not so, the number should for that reason be understood rather in a special religious sense, either in terms of the Decalogue⁴ (and if that number is investigated, it can only be related to the creator and the creation), or in terms of the number ten itself as expounded above. The number of years given in the gospel for the building of the Temple, forty-six,⁵ has some musical overtones, and when related to the constitution of the Lord's body—which is why the Temple was mentioned—compels numerous heretics to admit that the Son of God took on a real human body, not an insubstantial one. Indeed we find both number and music mentioned with respect in several places in the holy scriptures.

* * *

From Book Three

The student who fears God earnestly seeks his will in the holy scriptures. Holiness makes him gentle, so that he does not revel in controversy; a knowledge of languages protects him from uncertainty over unfamiliar words or phrases, and a knowledge of certain essential things protects him from ignorance of the significance and detail of what is used by way of imagery. Thus equipped, and with the assistance of reliable texts derived from the manuscripts with careful attention to the need for emendation, he should now approach the task of analysing and resolving the ambiguities of the scriptures. To prevent himself from being misled by ambiguous signs, in so far as I can instruct him (it may indeed be the case that either because of great intellectual gifts or a clarity of mind that is the result of greater illumination than I have he scorns as elementary the methods which I wish to demonstrate)—but, as I began to say, in so far as I can instruct him, the student who is in the proper state of mind to accept my instruction should know that ambiguity in scripture resides either in literal or in metaphorical usages (as the terms were described in Book 2).

When it is literal usages that make scripture ambiguous, we must first of all make sure that we have not punctuated or articulated the passage incorrectly.⁶ Once close consideration has revealed that it is uncertain how a passage should be punctuated and articulated, we must consult the rule of faith,⁷ as it is perceived through the plainer passages of the scriptures and the authority of the church. (I dealt adequately with this matter when speaking of things in Book 1.) But if both interpretations, or indeed all of

3. Both are stringed instruments, similar to small harps, but with slightly different shapes and so different sounds.

4. The Ten Commandments (Exodus 20.2–17; Deuteronomy 5.6–21).

5. John 2.20. There John refers to the Second Temple, built ca. 350 B.C.E., after the Jews returned

from Babylon. The Temple symbolically figures Christ's human body.

6. Ancient texts often lacked punctuation, accent marks, and sometimes even spaces.

7. By this Augustine (and AQUINAS after him) means the fundamentals of Christian doctrine [translator's note].

them, if there are several sides to the ambiguity, sound compatible with the faith, then it remains to consult the context—the preceding and following passages, which surround the ambiguity—in order to determine which of the several meanings that suggest themselves is supported by it, and which one lends itself to acceptable combinations with it.

Consider now the following examples. The well-known heretical punctuation⁸ ‘In the beginning was the Word, and the Word was with God, and there was God’, giving a different sense in what follows (‘This Word was in the beginning with God’) refuses to acknowledge that the Word was God. This is to be refuted by the rule of faith, which lays down for us the equality of the members of the Trinity, and so we should say ‘and the Word was God’, and then go on, ‘This was in the beginning with God.’ The following ambiguous passage is not, on either interpretation, at odds with the faith, and therefore has to be resolved by its actual context. The apostle says, ‘And I know not which to choose; I am torn in two directions having a desire to be dissolved and be with Christ, for that is much the best; to remain in the flesh is necessary on your account’.⁹ It is not in fact clear whether we should read ‘having a desire in two directions’ or ‘I am torn in two directions’, followed by ‘having a desire to be dissolved and be with Christ’. But since the phrase ‘for that is much the best’ follows, it is clear that he says he has a desire for that which is best, so that although torn in two directions he feels a desire to do the one but an obligation to do the other (that is, a desire to be with Christ, but an obligation to remain in the flesh). The ambiguity is resolved by the presence of the single word ‘for’. Critics who remove this word have been led to the conclusion that he was apparently not only torn in two directions but also had a desire for two things.¹ So the punctuation must be: ‘and I know not which to choose; I am torn in two directions’ (pause) ‘having a desire to be dissolved and be with Christ’. And then, as if he were being asked why he has a desire for this, he says, ‘for it is much the best’. Why, then, is he torn in two directions? Because there is an obligation to remain, which he expresses thus: ‘to remain in the flesh is necessary on your account’. Where an ambiguity can be resolved neither by an article of faith nor by the actual context there is no objection to any punctuation which follows one of the meanings that suggest themselves. Such is the passage in Corinthians: ‘so having these promises, my dearest brethren, let us purify ourselves from all pollution of the flesh and the spirit, perfecting holiness in the fear of God. Welcome me; I have wronged no one’.² It is uncertain whether we should read ‘let us purify ourselves from all pollution of the flesh and the spirit’, on the analogy of the phrase ‘so that she may be holy in body and spirit’,³ or ‘let

8. The Arians are meant. As Augustine explains, their revised punctuation radically changed the theological significance of the passage [John 1.1–2; translator’s note]. Arians: followers of a 3d-century heresy that rejected the doctrine of the Trinity, holding that Christ (the Son) is not equal to the Father.

9. Philippians 1.22–24; an English translation of these words cannot illustrate the ambiguity, because its word-order, unlike the Latin word-order, determines the meaning. The point here was important in debates with the Manichees, who saw in it evidence for the existence of two conflicting

natures in the human soul [translator’s note]. Manichaeism was a 3d-century heresy, to which Augustine subscribed early in his career: it espouses a dualism that divides the world between two equally powerful forces of good and evil.

1. The conclusion is not inescapable; the omission of *enim* [“for”; Latin] in the Vulgate did not close the question. In fact Augustine’s first argument is the stronger one [translator’s note].

2. 2 Corinthians 7.1–2; again an English translation inevitably removes the ambiguity under discussion [translator’s note].

3. 1 Corinthians 7.34.

us purify ourselves from all pollution of the flesh', with a different sense emerging in what follows: 'and perfecting holiness of the spirit in the fear of God. Welcome me . . .' Such problems of punctuation are for the reader to resolve.

* * *

As well as these ambiguities we must consider in a similar way those which do not concern punctuation or reading aloud, like the one in Thessalonians' *Propterea consolati sumus fratres in vobis*.⁴ It is not clear whether *fratres* is in the vocative case or the accusative;⁵ neither reading would be contrary to the faith. But in Greek the corresponding case-forms are not identical, and so after inspecting the Greek we declare in favour of the vocative (equivalent to *o fratres*). If a translator had chosen to say *Propterea consolationem habuimus, fratres, in vobis*, he would have been less faithful to the wording, but there would be no doubt of his meaning. Or indeed *nostri*⁶ might be added, for hardly anyone would doubt that the vocative was being used in the phrase *Propterea consolati sumus fratres nostri in vobis*. But it is rather dangerous to allow such changes. This has been done in Corinthians, where the apostle says *cotidie morior, per vestram gloriam, fratres, quam habeo in Christo Iesu*.⁷ one translator actually wrote *cotidie morior, per vestram iuro gloriam*, because in Greek there is a clear and unambiguous word signifying an oath. In the field of literal expressions, then, as far as the books of holy scripture are concerned, it is very unusual, and very difficult, to find cases of ambiguity which cannot be resolved either by the particular details of the context—which are a pointer to the writer's intention—or by a comparison of Latin translations or an inspection of the original language.

But the ambiguities of metaphorical words, about which I must now speak, require no ordinary care and attention. To begin with, one must take care not to interpret a figurative expression literally. What the apostle says is relevant here: 'the letter kills but the spirit gives life'.⁸ For when something meant figuratively is interpreted as if it were meant literally, it is understood in a carnal way. No 'death of the soul' is more aptly given that name than the situation in which the intelligence, which is what raises the soul above the level of animals, is subjected to the flesh by following the letter. A person who follows the letter understands metaphorical words as literal, and does not relate what the literal word signifies to any other meaning. On hearing the word 'sabbath', for example, he interprets it simply as one of the seven days which repeat themselves in a continuous cycle; and on hearing the word 'sacrifice' his thoughts do not pass beyond the rituals performed with sacrificial beasts or fruits of the earth. It is, then, a miserable kind of spiritual slavery to interpret signs as things, and to be incapable of raising the mind's eye above the physical creation so as to absorb the eternal light.

* * *

4. Therefore, brethren, we were comforted over you in all our affliction and distress by your faith (1 Thessalonians 3.7, King James Version [KJV]).

5. The case ending of a noun indicating its use in direct address ("Oh brethren") or as a direct object (the accusative). For *fratres*, they are identical.

6. Our (with *fratres*, this form could be vocative

but not accusative).

7. I protest by your rejoicing which I have in Christ Jesus our Lord, I die daily (1 Corinthians 15.31, KJV). The second version might be translated "I swear by your rejoicing, I die daily." The apostle is Paul.

8. 2 Corinthians 3.6.

As well as this rule, which warns us not to pursue a figurative (that is, metaphorical) expression as if it were literal, we must add a further one: not to accept a literal one as if it were figurative. We must first explain the way to discover whether an expression is literal or figurative. Generally speaking, it is this: anything in the divine discourse that cannot be related either to good morals or to the true faith should be taken as figurative. Good morals have to do with our love of God and our neighbour, the true faith with our understanding of God and our neighbour. The hope that each person has within his own conscience is directly related to the progress that he feels himself to be making towards the love and understanding of God and his neighbour.

* * *

The literary-minded should be aware that our Christian authors used all the figures of speech which teachers of grammar call by their Greek name of tropes,⁹ and that they did so more diversely and profusely than can be judged or imagined by those who are unfamiliar with scripture or who gained their knowledge of figures from other literature. Those who know about these tropes recognize them in sacred literature, and this knowledge to some extent helps them in understanding it. This would not be the proper place to present them to people not familiar with them; I do not wish to look as if I am giving a course on grammar. I recommend that they be learnt independently; as indeed I have recommended already, in Book 2, when discussing the importance of learning languages. (Letters, from which grammar actually takes its name—the Greek word for them is *grammata*—are of course the signs of the sounds involved in the articulation of the words which we use when speaking.) In the divine books we find not only examples of these tropes, as of everything else, but also the names of some of them, like ‘allegory’, ‘enigma’, and ‘parable’.¹ Almost all these tropes, which are said to be acquired through one of the ‘liberal’ arts,² are also found in the utterances of those who have had no formal teaching in grammar and are content with the style of ordinary people. Don’t we all say ‘so may you flourish’? This is a metaphor. Don’t we all refer to a swimming pool by the word *piscina*,³ which takes its name from fish even though it does not contain fish and was not made for fish? This trope is called catachresis.⁴

It would take a long time to work through the others in the same way. Popular speech has even come to use some which are remarkable because what they mean is the opposite of what is said, like the figures of irony and antiphrasis.⁵ In irony we indicate what is meant by means of our intonation, as when we say to a man who is doing something badly, ‘you’re doing a good job there’. In antiphrasis, on the other hand, we signify the opposite meaning, not by our intonation, but either by the use of particular words whose origin

9. Figures of speech (literally, “turns”).

1. Teaching moral lessons by means of extended metaphors. “Allegory”: a narrative relating one thing to mean another. “Enigma”: allusive or obscure speech.

2. The arts or disciplines which it was considered worthwhile for a free man—or rather a man (sometimes woman) of some wealth and status—to learn [translator’s note]. *Liber* means “free” in Latin.

3. Basin, pool, pond, tank, or other large container for water. A stock example among ancient grammarians [translator’s note]. *Piscis* means “fish” in Latin.

4. This term denotes the use of a word in a context where strictly speaking it does not apply (e.g., “substantial” for “big,” or “menu” and “mouse” in computer language) [translator’s note].

5. From *anti* (reverse) and *phrasis* (diction): saying one thing and meaning the contrary.

derives from a contrary—for example, *lucus* [grove], which is so called because it has little light,⁶ or by using certain customary expressions (though these can also be used without a contrary meaning). For example, when looking for something that is not available in a particular place, we may be told ‘there’s plenty’;⁷ or we may by adding words give what we say a contrary interpretation, as in ‘beware of him, he’s a good man’.⁸ Are things of this kind not said by all the uneducated⁹ and by people who are totally ignorant of the tropes and all their names? A knowledge of them is necessary for the resolution of ambiguities in scripture because when a meaning based on the literal interpretation of the words is absurd we must investigate whether the passage that we cannot understand is perhaps being expressed by means of one or other of the tropes. This is how most hidden meanings have been discovered.

ca. 395

6. Another old chestnut [translator’s note].

7. Compare perhaps the modern “no problem” or (in some contexts) “I’m delighted” [translator’s note].

8. It is not clear whether Augustine means that the meaning of “beware” is coloured by “good,” and so means “look out for,” or the reverse (so that

“good” means “bad”), which would be more truly a contrary interpretation [translator’s note].

9. The Roman rhetorician Quintilian (ca. 30/35–ca. 100 C.E.) points out (*Institutio Oratoria* 8.6.4) that metaphor was so natural a turn of speech that it was often employed by uneducated persons [translator’s note]

MOSES MAIMONIDES (RABBI MOSES BEN MAIMON) 1135–1204

Moses Maimonides’ *Guide of the Perplexed* brings into view what MATTHEW ARNOLD might call Hebraic ways of thinking about textual interpretation that continue to be relevant to literary theory today. As JACQUES DERRIDA declares in *Writing and Difference* (1967): “We live in the difference between the Jew and the Greek, which is perhaps the unity of what is called history.” While Greek philosophy values the universal, the general, and the univocal, Jewish thought is more open to ambiguity, contradiction, and plurality of meaning. Where Greek thought separates interpretation from text, Jewish hermeneutics tends to see text and its interpretation as part of one process. Conflicts over these values have been central to contemporary debates, especially those on poststructuralism, even as the original theological issues that created them have become increasingly unfamiliar. Maimonides’ importance for the Latin Middle Ages is twofold: he is among the handful of Jewish and Islamic scholars who reintroduced the works of ARISTOTLE, including Aristotelian literary criticism, to Europe; and he influenced Scholastic philosophers like THOMAS AQUINAS. But the significance of Jewish hermeneutics (the theory and practice of interpretation) for contemporary literary theory has not been as well understood as that of Christian hermeneutics, even though it is clear that Maimonides’ methods of exegesis have strongly affected Jewish theorists who have shaped recent theoretical debates, such as SIGMUND FREUD, ERICH AUERBACH, LEO STRAUSS, HAROLD BLOOM, and Derrida.

Maimonides resembles AUGUSTINE when he insists on the need for an allegorical interpretation of the Torah (the Jewish Scriptures). Like other Western theorists of interpretation, Maimonides worries about three principal problems: discovering the

author's original intention, warding off ingenious overinterpretation, and finding deep as opposed to superficial meaning. And he too argues that esoteric meanings exist, though they can often only be glimpsed before fading back into obscurity—which, he believes, is as it should be. The meaning of sacred texts is not always accessible to the vulgar but can be understood only by the perfect (virtuous) person, one who is prone to being perplexed. This is the reader that Maimonides addresses.

Maimonides' approach will seem somewhat alien to students of a Western literary criticism based on Greek methods of interpretation—and their Christian derivatives—which separate the literary text from its commentary and which strive for a univocal, single, "correct" interpretation. Jewish hermeneutics, as exemplified by Maimonides' *Guide of the Perplexed*, treats text and interpretation as dual aspects of the same revelation that remains open to multiple textual meanings.

Maimonides (also known by the acronym for his name, Rambam) was born into an influential Jewish family in Cordova, in Muslim Spain, near the end of the *convivencia*, the period from the eighth to the twelfth centuries when the three great religious cultures of the Middle Ages—Christian, Jewish, and Islamic—coexisted on the Iberian Peninsula. His father, from whom he received his rabbinic instruction, was a noted Talmudist (a scholar of the collection of ancient Jewish law) as well as a mathematician and astronomer. In addition, Maimonides received a secular education from the most distinguished Arabic scholars of his day. He was thirteen years old when Cordova was captured by the Almohads, members of a fundamentalist Islamic sect, and his family was compelled to choose between Islam and exile. They chose the latter; after wandering around Spain for ten years, they took up residence in Fez in Morocco, where Maimonides devoted himself to studies in theology and medicine. Fez was also under the rule of the Almohads, and for a while the family tried to pass as Muslims. But Maimonides' growing reputation as a scholar (by sixteen he had already published a treatise on logical terminology) brought him under the scrutiny of the authorities. He was even tried for having lapsed from Islam, a capital crime; he escaped death only because an Arab friend interceded. In 1165 the family set sail for the Holy Land, then held by Christians. They finally settled in Egypt, where Maimonides lived for the rest of his life. In Cairo he went into business in precious stones; but when his brother, his business partner, was lost at sea with the family fortune, Maimonides turned to medicine to support himself, becoming physician to the court of the grand vizier. He describes his work there as grueling, yet in his spare time he became the unofficial leader of the Jewish community of Cairo, studied the Torah, and worked on his comprehensive code of Jewish law. His widespread reputation for learning made him one of the most celebrated Jews of the Middle Ages; England's King Richard invited Maimonides to become his royal physician. Maimonides' death was publicly mourned throughout the Jewish world, and his body was moved to the Holy Land, where his grave has been a pilgrimage site ever since.

Maimonides' writings are extensive and eclectic; they include lengthy and ambitious works in medicine, theology, and philosophy. He wrote several commentaries on traditional Jewish law. He began his *Commentary on the Mishnah* (1168)—the great legal code composed during the period between 10 and 220 c.e. that was designed to organize and regulate Jewish oral law—when he was just twenty-three, completing it ten years later. A second collection, the massive *Mishneh Torah* (1178), was meant to provide a complete classification of rabbinic law. This alone would have been an unprecedented undertaking; but the *Mishneh Torah* is more than simply a law code. In it Maimonides also included many interpretations, passages of exegesis, historical surveys, and explanations of difficult phrases and concepts. *The Guide of the Perplexed* (1190) turns from the codification of religious law to "the science of the law in its true sense." In this wide-ranging and occasionally baffling treatise, Maimonides attempts to reconcile faith with philosophical reason, Judaism

with a newly recovered Aristotelianism. More specifically, he wants to demonstrate that Judaism is not irreconcilable with the understanding of physics and metaphysics articulated by the twelfth-century Aristotelians. In the course of his introduction, he argues that when their "internal" sense is properly understood, the *Account of the Beginning* (the Genesis story) refers to "natural science" (physics) and *The Account of the Chariot* (Ezekiel 1 and 10) to "divine science" (metaphysics).

Ostensibly written for his disciple Joseph ben Judah, *The Guide* elucidates obscure parables and terms found in "the books of the prophets." Maimonides, whose interpretive skills were honed by his extensive investigations of the Mishnah, argues that to penetrate the meaning of Scriptures and the Talmud (the great collections of oral law compiled between the second and fifth centuries C.E.) requires a fully elaborated method of interpretation (a hermeneutic). In his introduction, he explains that the failures to understand (1) the polysemy (many meanings) of biblical language and (2) the biblical use of obscure parables (which maintain the secrets of divine knowledge) give rise to "perplexity" even in the learned. Significantly, biblical texts are full of terms that are difficult to understand because they are "equivocal"—they have more than one meaning; or "derivative"—they contain supplemental meanings derived from other terms; or "amphibolous"—they are understood as having sometimes one and sometimes many meanings. Maimonides illustrates his discussions with frequent quotations from the Bible.

A purely linguistic comprehension of the richness of biblical language, according to Maimonides, is insufficient for understanding the Torah and Talmud, for these texts are also full of parables designed to obscure the "secrets of the prophetic books." Such an understanding requires a more fully elaborated theory of narrative, which Maimonides sketches in his introduction, including a key distinction between those parables that must be interpreted word by word and those that must be interpreted holistically.

For Maimonides, contradictions, far from being philosophical flaws, are to be embraced and studied according to principles he sets forth at the end of the introduction, where he identifies seven types. Perhaps the most interesting of the contradictions in Maimonides' own hermeneutic is the essential tension in his introduction between the injunction to secrecy—his understanding that the secrets of that divine science "ought not to be taught even to one man, except if he be wise and able to understand by himself, in which case only the chapter headings may be transmitted to him"—and the need to pass those secrets from generation to generation by teaching them to others. In the context of a close-knit and homogeneous community, it might be possible to preserve secret knowledge by passing it on orally from teacher to student, master to disciple. But in the context of the Jewish Diaspora, which could separate teacher from pupil—as happened to Maimonides and his disciple Joseph—written texts become necessary for organizing and preserving such knowledge, even while running the risk that the teacher "in effect would be teaching them to thousands of men." To preserve from the ignorant and the vulgar "those truths especially requisite for [the pupil's] apprehension," Maimonides must adopt the very techniques of the texts he seeks to explain: he must conceal them by scattering them throughout the treatise and entangling them with contradictions so that the truths are "glimpsed and then again . . . concealed."

Insofar as Maimonides' interpretive method strikes the modern student of literary criticism as perhaps too esoteric to illuminate literary issues, that response may suggest the extent to which Greek modes of thinking have determined Western literary criticism. Yet Jewish hermeneutics has continued to exert at least a covert influence on the development of the dominant tradition. Although it was translated from its original Arabic into Hebrew and Latin during the Middle Ages, *The Guide of the Perplexed* was, ironically, not eagerly accepted within the Jewish community, because it advocated the study of philosophy alongside the more important study of the Torah.

But in the century following his death, Maimonides' influence spread widely among Jews and Christians alike. Maimonides and his famous predecessor Rashi (Rabbi Solomon ben Isaac, 1040–1105, a talmudic scholar from Troyes) were both important precursors of the Scholasticism of the High Middle Ages, affecting Christian exegetes such as Hugh of St. Victor and Thomas Aquinas. There are also elements in later Freudian analysis that elaborate and extend the rabbinic hermeneutics articulated by Maimonides. Finally, many of the issues that interest contemporary literary theorists such as Derrida and his Yale School disciples, most notably Harold Bloom—for example, the indeterminacy of interpretation or the continuity between literary text and interpretation—show the influence of Jewish approaches to interpretation.

The Guide of the Perplexed Keywords: Hermeneutics, Interpretation Theory, Language, Medieval Theory, Philology, Religion

*From The Guide of the Perplexed*¹

From [Introduction to the First Part]

Cause me to know the way wherein I should walk,
For unto Thee have I lifted my soul.²

Unto you, O men, I call,
And my voice is to the sons of men.³

Incline thine ear, and hear the words of the wise,
And apply thy heart unto my knowledge.⁴

The first purpose of this Treatise is to explain the meanings of certain terms occurring in books of prophecy. Some of these terms are equivocal; hence the ignorant attribute to them only one or some of the meanings in which the term in question is used. Others are derivative terms; hence they attribute to them only the original meaning from which the other meaning is derived. Others are amphibolous terms,⁵ so that at times they are believed to be univocal and at other times equivocal. It is not the purpose of this Treatise to make its totality understandable to the vulgar or to beginners in speculation, nor to teach those who have not engaged in any study other than the science of the Law—I mean the legalistic study of the Law. For the purpose of this Treatise and of all those like it is the science of Law in its true sense.⁶ Or rather its purpose is to give indications to a religious man for whom the validity of our Law has become established in his soul and has become actual in his belief—such a man being perfect in his religion and character, and having studied the sciences of the philosophers and come to know what they signify. The human intellect having drawn him on

1. Translated by Shlomo Pines, who occasionally supplies explanatory text in brackets.

2. Psalms 143.8.

3. Proverbs 8.4.

4. Proverbs 22.17.

5. Words understood as having sometimes one meaning and sometimes many meanings. "Equivocal": words with more than one meaning. "Derivative": words containing supplemental meanings

derived from other words; words used figuratively.

6. In an earlier work, the *Mishneh Torah* (literally, "repetition of the Torah"), Maimonides collected, organized, and commented on the oral rabbinic law—called the *Mishnah*—that had evolved in the first centuries of the common era. In *The Guide of the Perplexed*, he turns his attention to the relationship between Jewish law and philosophy as well as to interpretive theory.

and led him to dwell within its province, he must have felt distressed by the externals of the Law and by the meanings of the above-mentioned equivocal, derivative, or amphibolous terms, as he continued to understand them by himself or was made to understand them by others. Hence he would remain in a state of perplexity and confusion as to whether he should follow his intellect, renounce what he knew concerning the terms in question, and consequently consider that he has renounced the foundations of the Law. Or he should hold fast to his understanding of these terms and not let himself be drawn on together with his intellect, rather turning his back on it and moving away from it, while at the same time perceiving that he had brought loss to himself and harm to his religion. He would be left with those imaginary beliefs to which he owes his fear and difficulty and would not cease to suffer from heartache and great perplexity.

This Treatise also has a second purpose: namely, the explanation of very obscure parables occurring in the books of the prophets, but not explicitly identified there as such. Hence an ignorant or heedless individual might think that they possess only an external sense, but no internal one. However, even when one who truly possesses knowledge considers these parables and interprets them according to their external meaning, he too is overtaken by great perplexity. But if we explain these parables to him or if we draw his attention to their being parables, he will take the right road and be delivered from this perplexity. That is why I have called this Treatise “The Guide of the Perplexed.”

I do not say that this Treatise will remove all difficulties for those who understand it. I do, however, say that it will remove most of the difficulties, and those of the greatest moment. A sensible man thus should not demand of me or hope that when we mention a subject, we shall make a complete exposition of it, or that when we engage in the explanation of the meaning of one of the parables, we shall set forth exhaustively all that is expressed in that parable. An intelligent man would be unable to do so even by speaking directly to an interlocutor. How then could he put it down in writing without becoming a butt for every ignoramus who, thinking that he has the necessary knowledge, would let fly at him the shafts of his ignorance? We have already explained in our legal compilations some general propositions concerning this subject and have drawn attention to many themes. Thus we have mentioned there that the *Account of the Beginning*⁷ is identical with natural science, and the *Account of the Chariot*⁸ with divine science; and have explained the rabbinic saying: *The Account of the Chariot ought not to be taught even to one man, except if he be wise and able to understand by himself, in which case only the chapter headings may be transmitted to him.*⁹ Hence you should not ask of me here anything beyond the chapter headings. And even those are not set down in order or arranged in coherent fashion in this Treatise, but rather are scattered and entangled with other subjects that are to be clarified. For my purpose is that the truths be glimpsed and then again be concealed, so as not to oppose that

7. Literally, the *Work of the Beginning* [translator's note]. That is, the Genesis story.

8. Literally, the *Work of the Chariot* [translator's note]. That is, Ezekiel 1 and 10.

9. From the Babylonian Talmud, Hagigah, 11b, 13a [translator's note]. The Babylonian Talmud is one of the two great Talmuds, or collections of

oral law; it was compiled between the 2d and 5th centuries C.E. (the Jerusalem Talmud was compiled between 220 C.E. and the end of the 4th c.). It is divided into six Orders; each Order has a number of tractates. Hagigah is one of the tractates, which are further divided into chapters and then paragraphs.

divine purpose which one cannot possibly oppose and which has concealed from the vulgar among the people those truths especially requisite for His apprehension. As He has said: *The secret of the Lord is with them that fear Him*.¹ Know that with regard to natural matters as well, it is impossible to give a clear exposition when teaching some of their principles as they are. For you know the saying of [the Sages], *may their memory be blessed: The Account of the Beginning ought not to be taught in the presence of two men*.² Now if someone explained all those matters in a book, he in effect would be *teaching* them to thousands of men. Hence these matters too occur in parables in the books of prophecy. The *Sages, may their memory be blessed*, following the trail of these books, likewise have spoken of them in riddles and parables, for there is a close connection between these matters and the divine science, and they too are secrets of that divine science.

You should not think that these great *secrets* are fully and completely known to anyone among us. They are not. But sometimes truth flashes out to us so that we think that it is day, and then matter and habit in their various forms conceal it so that we find ourselves again in an obscure night, almost as we were at first. We are like someone in a very dark night over whom lightning flashes time and time again. Among us there is one³ for whom the lightning flashes time and time again, so that he is always, as it were, in unceasing light. Thus night appears to him as day. That is the degree of the great one among the prophets, to whom it was said: *But as for thee, stand thou here by Me*,⁴ and of whom it was said: *that the skin of his face sent forth beams, and so on*.⁵ Among them there is one to whom the lightning flashes only once in the whole of his night; that is the rank of those of whom it is said: *they prophesied, but they did so no more*.⁶ There are others between whose lightning flashes there are greater or shorter intervals. Thereafter comes he who does not attain a degree in which his darkness is illumined by any lightning flash. It is illumined, however, by a polished body or something of that kind, stones or something else that give light in the darkness of the night. And even this small light that shines over us is not always there, but flashes and is hidden again, as if it were the *flaming sword which turned every way*.⁷ It is in accord with these states that the degrees of the perfect vary. As for those who never even once see a light, but grope about in their night, of them it is said: *They know not, neither do they understand; They go about in darkness*.⁸ The truth, in spite of the strength of its manifestation, is entirely hidden from them, as is said of them: *And now men see not the light which is bright in the skies*.⁹ They are the vulgar among the people. There is then no occasion to mention them here in this Treatise.

Know that whenever one of the perfect wishes to mention, either orally or in writing, something that he understands of these *secrets*, according to the degree of his perfection, he is unable to explain with complete clarity and coherence even the portion that he has apprehended, as he could do with the other sciences whose teaching is generally recognized. Rather there will befall him when teaching another that which he had undergone when learning

6. Numbers 11.25.

7. Genesis 3.24.

8. Psalm 82.5.

9. Job 37.21.

himself. I mean to say that the subject matter will appear, flash, and then be hidden again, as though this were the nature of this subject matter, be there much or little of it. For this reason, all the Sages possessing knowledge of God the Lord, knowers of the truth, when they aimed at teaching something of this subject matter, spoke of it only in parables and riddles. They even multiplied the parables and made them different in species and even in genus. In most cases the subject to be explained was placed in the beginning or in the middle or at the end of the parable; this happened where a parable appropriate for the intended subject from start to finish could not be found. Sometimes the subject intended to be taught to him who was to be instructed was divided—although it was one and the same subject—among many parables remote from one another. Even more obscure is the case of one and the same parable corresponding to several subjects, its beginning fitting one subject and its ending another. Sometimes the whole is a parable referring to two cognate subjects within the particular species of science in question. The situation is such that the exposition of one who wishes to teach without recourse to parables and riddles is so obscure and brief as to make obscurity and brevity serve in place of parables and riddles. The men of knowledge and the sages¹ are drawn, as it were, toward this purpose by the divine will just as they are drawn by their natural circumstances. Do you not see the following fact? God, may His mention be exalted, wished us to be perfected and the state of our societies to be improved by His laws regarding actions. Now this can come about only after the adoption of intellectual beliefs, the first of which being His apprehension, may He be exalted, according to our capacity. This, in its turn, cannot come about except through divine science, and this divine science cannot become actual except after a study of natural science. This is so since natural science borders on divine science, and its study precedes that of divine science in time as has been made clear to whoever has engaged in speculation on these matters. Hence God, may He be exalted, caused His book to open with the *Account of the Beginning*, which, as we have made clear, is natural science. And because of the greatness and importance of the subject and because our capacity falls short of apprehending the greatest of subjects as it really is, we are told about those profound matters—which divine wisdom has deemed necessary to convey to us—in parables and riddles and in very obscure words. As [the Sages], *may their memory be blessed*, have said: *It is impossible to tell mortals² of the power of the Account of the Beginning. For this reason Scripture tells you obscurely: In the beginning God created, and so on.*³ They thus have drawn your attention to the fact that the above-mentioned subjects are *obscure*. You likewise know Solomon's saying: *That which was is far off, and exceeding deep; who can find it out?*⁴ That which is said about all this is in equivocal terms so that the multitude might comprehend them in accord with the capacity of their understanding and the weakness of their representation,

1. The Arabic term *al-hukamā'* often designates the philosophers [translator's note].

2. Literally, flesh and blood [translator's note].

3. Cf. Midrash Shnei Ketubim, Batei Midrashoth, IV [translator's note]. Midrash: literally, "to seek out the meaning" (Hebrew); an explanation of a text from the Torah (the 5 books of Moses; known to Christians as the first 5 books of the Old Testa-

ment). The term may refer to a collection of such explanations or to a hermeneutic technique by which such explanations are produced. A midrash might explain a single word or a gap in the text. There are midrashim for every book of the Torah, and Maimonides here refers to a midrash on Genesis.

4. Ecclesiastes 7.24.

whereas the perfect man, who is already informed, will comprehend them otherwise.

We had promised in the Commentary on the *Mishnah* that we would explain strange subjects in the “Book of Prophecy” and in the “Book of Correspondence”—the latter being a book in which we promised to explain all the difficult passages in the *Midrashim*⁵ where the external sense manifestly contradicts the truth and departs from the intelligible. They are all parables. However, when, many years ago, we began these books and composed a part of them, our beginning to explain matters in this way did not commend itself to us. For we saw that if we should adhere to parables and to concealment of what ought to be concealed, we would not be deviating from the primary purpose. We would, as it were, have replaced one individual by another of the same species. If, on the other hand, we explained what ought to be explained, it would be unsuitable for the vulgar among the people. Now it was to the vulgar that we wanted to explain the import of the *Midrashim* and the external meanings of prophecy. We also saw that if an ignoramus among the multitude of Rabbanites⁶ should engage in speculation on these *Midrashim*, he would find nothing difficult in them, inasmuch as a rash fool, devoid of any knowledge of the nature of being, does not find impossibilities hard to accept. If, however, a perfect man of virtue should engage in speculation on them, he cannot escape one of two courses: either he can take the speeches in question in their external sense and, in so doing, think ill of their author and regard him as an ignoramus—in this there is nothing that would upset the foundations of belief; or he can attribute to them an inner meaning, thereby extricating himself from his predicament and being able to think well of the author whether or not the inner meaning of the saying is clear to him. With regard to the meaning of prophecy, the exposition of its various degrees, and the elucidation of the parables occurring in the prophetic books, another manner of explanation is used in this Treatise. In view of these considerations, we have given up composing these two books in the way in which they were begun. We have confined ourselves to mentioning briefly the foundations of belief and general truths, while dropping hints that approach a clear exposition, just as we have set them forth in the great legal compilation, *Mishneh Torah*.⁷

My speech in the present Treatise is directed, as I have mentioned, to one who has philosophized and has knowledge of the true sciences, but believes at the same time in the matters pertaining to the Law and is perplexed as to their meaning because of the uncertain terms and the parables. We shall include in this Treatise some chapters in which there will be no mention of an equivocal term. Such a chapter will be preparatory for another, or it will hint at one of the meanings of an equivocal term that I might not wish to mention explicitly in that place, or it will explain one of the parables or hint at the fact that a certain story is a parable. Such a chapter may contain

5. Maimonides uses here and subsequently the term *drashoth* [translator's note]. The Hebrew term (singular *derash* or *derasha*) refers to the meanings derived from the original text by means of a variety of rabbinic techniques.

6. Tenth-century teachers who began to use philosophy to supplement the written Torah and the oral Torah (Talmud) as a defense against ratio-

nalism. Though their philosophical thinking was not as sophisticated as Maimonides' use of Aristotle, they paved the way for him and other Jewish philosophers.

7. Maimonides' massive compilation of Jewish rabbinic law, written a decade before *The Guide of the Perplexed*.

strange matters regarding which the contrary of the truth sometimes is believed, either because of the equivocality of the terms or because a parable is taken for the thing being represented or vice versa.

As I have mentioned parables, we shall make the following introductory remarks: Know that the key to the understanding of all that the prophets, peace be on them, have said, and to the knowledge of its truth, is an understanding of the parables, of their import, and of the meaning of the words occurring in them. You know what God, may He be exalted, has said: *And by the ministry of the prophets have I used similitudes.*⁸ And you know that He has said: *Put forth a riddle and speak a parable.*⁹ You know too that because of the frequent use prophets make of parables, the prophet has said: *They say of me: Is he not a maker of parables?*¹ You know how Solomon began his book: *To understand a proverb, and a figure; The words of the wise, and their dark sayings.*² And it said in the Midrash: *To what were the words of the Torah to be compared before the advent of Solomon? To a well the waters of which are at a great depth and cool, yet no man could drink of them. Now what did one clever man do? He joined cord with cord and rope with rope and drew them up and drank. Thus did Solomon say one parable after another and speak one word after another until he understood the meaning of the words of the Torah.*³ That is literally what they say. I do not think that anyone possessing an unimpaired capacity imagines that the words of the Torah referred to here that one contrives to understand through understanding the meaning of parables are ordinances concerning the building of *tabernacles*, the *lulab*, and the *law of four trustees*.⁴ Rather what this text has in view here is, without any doubt, the understanding of obscure matters. About this it has been said: *Our Rabbis say: a man who loses a sela or a pearl in his house can find the pearl by lighting a taper worth an issar.*⁵ *In the same way this parable in itself is worth nothing, but by means of it you can understand the words of the Torah.*⁶ This too is literally what they say. Now consider the explicit affirmation of [the Sages], *may their memory be blessed*, that the internal meaning of the words of the Torah is a pearl whereas the external meaning of all parables is worth nothing, and their comparison of the concealment of a subject by its parable's external meaning to a man who let drop a pearl in his house, which was dark and full of furniture. Now this pearl is there, but he does not see it and does not know where it is. It is as though it were no longer in his possession, as it is impossible for him to derive any benefit from it until, as has been mentioned, he lights a lamp—an act to which an understanding of the meaning of the parable corresponds. The Sage has said: *A word fitly spoken is like apples of gold in settings [maskiyyoth] of silver.*⁷ Hear now an elucidation

8. Hosea 12.10.

9. Ezekiel 17.2.

1. Ezekiel 20.49.

2. Proverbs 1.6. Proverbs is one of the books of the Bible traditionally ascribed to Solomon.

3. Cf. Midrash on the Song of Songs, 1.1 [translator's note].

4. Maimonides, contrasting those parts of the Torah that can be taken as parables with those that are completely straightforward (not in need of special interpretation), gives three examples of straightforward ordinances. "Tabernacle": a sukkah or building constructed during the holiday of Sukkoth, which occurs after the High Holy Days

and commemorates the Jews' wandering in the desert. "Lulab": a wand of sorts, fashioned of palm leaves, willow, and myrtle and waved in four directions during the holiday of Sukkoth. "The law of the four trustees": the four categories of legal guardian over someone else's property, which are the unpaid guardian, the borrower, the paid guardian, and the hirer.

5. A coin; ninety-six issar were worth a sela [translator's note]. "A sela": a silver coin.

6. Cf. Midrash on the Song of Songs, 1.1 [translator's note].

7. Proverbs 25.11.

of the thought that he has set forth. The term *maskiyyoth* denotes filigree traceries; I mean to say traceries in which there are apertures with very small eyelets, like the handiwork of silversmiths. They are so called because a glance penetrates through them; for in the [Aramaic] *translation* of the Bible the Hebrew term *va-yashqeph*—meaning, he glanced—is translated *va-istekhe*.⁸ The Sage accordingly said that a saying uttered with a view to two meanings is like an apple of gold overlaid with silver filigree-work having very small holes. Now see how marvellously this dictum describes a well-constructed parable. For he says that in a saying that has two meanings—he means an external and an internal one—the external meaning ought to be as beautiful as silver, while its internal meaning ought to be more beautiful than the external one, the former being in comparison to the latter as gold is to silver. Its external meaning also ought to contain in it something that indicates to someone considering it what is to be found in its internal meaning, as happens in the case of an apple of gold overlaid with silver filigree-work having very small holes. When looked at from a distance or with imperfect attention, it is deemed to be an apple of silver; but when a keen-sighted observer looks at it with full attention, its interior becomes clear to him and he knows that it is of gold. The parables of the prophets, peace be on them, are similar. Their external meaning contains wisdom that is useful in many respects, among which is the welfare of human societies, as is shown by the external meaning of *Proverbs* and of similar sayings. Their internal meaning, on the other hand, contains wisdom that is useful for beliefs concerned with the truth as it is.

Know that the prophetic parables are of two kinds. In some of these parables each word has a meaning, while in others the parable as a whole indicates the whole of the intended meaning. In such a parable very many words are to be found, not every one of which adds something to the intended meaning. They serve rather to embellish the parable and to render it more coherent or to conceal further the intended meaning; hence the speech proceeds in such a way as to accord with everything required by the parable's external meaning. Understand this well.

An example of the first kind of prophetic parable is the following text: *And behold a ladder set up on the earth, and so on*.⁹ In this text, the word *ladder* indicates one subject; the words *set up on the earth* indicate a second subject; the words *and the top of it reached to heaven* indicate a third subject; the words *and behold the angels of God* indicate a fourth subject; the word *ascending* indicates a fifth subject; the words *and descending* indicate a sixth subject; and the words *And behold the Lord stood above it* indicate a seventh subject. Thus every word occurring in this parable refers to an additional subject in the complex of subjects represented by the parable as a whole.

An example of the second kind of prophetic parable is the following text: *For at the window of my house I looked forth through my lattice; And I beheld among the thoughtless ones, I discerned among the youths, A young man void of understanding, Passing through the street near her corner, And he went the way to her house; In the twilight, in the evening of the day, In the blackness of night and the darkness. And, behold, there met him a woman With the attire*

8. A verbal form deriving from the same root as the word *maskiyyoth*. Genesis 26.8 [translator's note].

9. Genesis 28.12–13. After the word *earth*, the

verses read: *and the top of it reached to heaven; and behold the angels of God ascending and descending on it. And behold the Lord stood above it* [translator's note].

of a harlot, and wily of heart. She is riotous and rebellious, and so on.¹ Now she is in the streets, now in the broad places, and so on.² So she caught him, and so on.³ Sacrifices of peace-offerings were due from me, and so on.⁴ Therefore came I forth to meet thee, and so on.⁵ I have decked with the coverlets, and so on.⁶ I have perfumed my bed, and so on.⁷ Come, let us take our fill of love, and so on.⁸ For my husband is not at home, and so on.⁹ The bag of money, and so on.¹ With her much fair speech she causeth him to yield. With the blandishment of her lips she enticeth him away.² The outcome of all this is a warning against the pursuit of bodily pleasures and desires. Accordingly he [Solomon] likens matter, which is the cause of all these bodily pleasures, to a harlot who is also a married woman. In fact his entire book is based on this allegory. And we shall explain in various chapters of this Treatise his wisdom in likening matter to a married harlot, and we shall explain how he concluded this book of his with a eulogy of the woman who is not a harlot but confines herself to attending to the welfare of her household and husband. For all the hindrances keeping man from his ultimate perfection, every deficiency affecting him and every disobedience, come to him from his matter alone, as we shall explain in this Treatise. This is the proposition that can be understood from this parable as a whole. I mean that man should not follow his bestial nature; I mean his matter, for the proximate matter of man is identical with the proximate matter of the other living beings. And as I have explained this to you and disclosed the secret of this parable, you should not hope [to find some signification corresponding to every subject occurring in the parable]³ so that you could say: what can be submitted for the words, *Sacrifices of peace-offerings were due from me; this day have I paid my vows*? What subject is indicated by the words, *I have decked my couch with coverlets*? And what subject is added to this general proposition by the words, *For my husband is not at home*? The same holds good for the other details in this chapter. For all of them only figure in the consistent development of the parable's external meaning, the circumstances described in it being of a kind typical for adulterers. Also the spoken words and other such details are of a kind typical of words spoken among adulterers. Understand this well from what I have said for it is a great and important principle with regard to matters that I wish to explain.

When, therefore, you find that in some chapter of this Treatise I have explained the meaning of a parable and have drawn your attention to the general proposition signified by it, you should not inquire into all the details occurring in the parable, nor should you wish to find significations corresponding to them. For doing so would lead you into one of two ways: either into turning aside from the parable's intended subject, or into assuming an

1. The omitted words are: *her feet abide not in her house* [translator's note].

2. The omitted words are: *and lieth in wait at every corner* [translator's note].

3. The omitted words are: *and kissed him, and with impudent face she said unto him* [translator's note].

4. The omitted words are: *this day have I paid my vows* [translator's note].

5. The omitted words are: *diligently to seek thy face, and I have found thee* [translator's note].

6. The omitted words are: *my bed, with striped cloths of the yarn of Egypt* [translator's note].

7. The omitted words are: *with myrrh, aloes and*

cinnamon [translator's note].

8. The omitted words are: *until the morning; let us solace ourselves with loves* [translator's note].

9. The omitted words are: *he is gone a long journey* [translator's note].

1. The omitted words are: *he has taken with him, and will come home at the full moon* [translator's note].

2. Proverbs 7.6–21.

3. The words enclosed in brackets appear in Ibn Tibbon's Hebrew translation, but not in the printed Arabic text. There is little doubt that in this case Ibn Tibbon's text is more correct [translator's note].

obligation to interpret things not susceptible of interpretation and that have not been inserted with a view to interpretation. The assumption of such an obligation would result in extravagant fantasies such as are entertained and written about in our time by most of the sects of the world, since each of these sects desires to find certain significations for words whose author in no wise had in mind the significations wished by them. Your purpose, rather, should always be to know, regarding most parables, the whole that was intended to be known. In some matters it will suffice you to gather from my remarks that a given story is a parable, even if we explain nothing more; for once you know it is a parable, it will immediately become clear to you what it is a parable of. My remarking that it is a parable will be like someone's removing a screen from between the eye and a visible thing.

* * *

1190

THOMAS AQUINAS

1225–1274

Thomas Aquinas's *Summa Theologica*, also known as *Summa Theologiae*, with its compelling synthesis of faith and reason, of Platonism and Aristotelianism, of Hellenistic and Christian thought, marks the high point of the Scholastic philosophy and theology of the European Middle Ages. But it may be difficult to imagine that Aquinas, the medieval philosopher most widely read today, could have much to say about poetics, which he relegates in the *Summa* to "the least of all the sciences." Yet when read against the backdrop of the so-called commentary tradition, the tradition of allegorical interpretation of biblical and secular texts, Aquinas's writings on biblical exegesis force a reevaluation of our portrait of the saint as a prosaic logician. Early in the *Summa*, Aquinas wrestles with a problem that has continued to perplex both literary critics and philosophers of language: how to reconcile the indeterminacy of figurative language (such as poetic metaphor) with a belief in the ability of language to guarantee stable reference and access to truth and reality. If language cannot guarantee that the intentions of its author—whether divine or human—can be known, then how can it function as a vehicle of knowledge? The centrality of this question to contemporary debates over the nature of language and signification makes Aquinas's uneasy resolution of it—his insistence on both the multiplicity of meaning and the stability of reference in the biblical text—all the more interesting.

Thomas Aquinas (Tommaso d'Aquino) was born in his father's castle in Roccasecca in central Italy, the youngest son of a noble family. At the age of five he was sent to the Benedictine monastery of Monte Cassino to begin his education, and in 1236 he entered the University of Naples. Some time between 1240 and 1243, against his parents' wishes, he decided to join the Dominican friars, an order founded in 1205 and dedicated to learning and preaching. On the way to Rome he was abducted by his brothers and imprisoned for two years at the castle of San Giovanni, where his family tried everything—including hiring a prostitute to seduce him—to break his will. When his family finally relented, Thomas took his vows; he was sent to Cologne, Germany, in 1244 where he continued his education under the direction of Albertus Magnus, the most famous scholar of the order. Thomas's taciturnity as a student

earned him a reputation for dullness, though Albertus, on hearing him defend a difficult thesis, is reported to have said, "We call this young man a dumb ox, but his bellowing in doctrine will one day resound throughout the world."

In 1245 Thomas accompanied Albertus to Paris as a student. In 1248, when a new *studium generale* (a school founded by the Dominicans for the teaching of theology) was opened in Cologne, Albertus returned as its master. Thomas went with him to serve as a bachelor, or subregent, under him. While in Cologne, in 1250, he was ordained a priest by the city's archbishop. In 1252 Thomas was sent to Paris to fill the position of bachelor at the *studium generale* in that city. His primary duty was teaching the *Sentences* of Peter Lombard (ca. 1100–1160), the basic textbook for all theology courses in the Middle Ages, and his commentaries on that book would later furnish the materials and plan for his chief work, the *Summa Theologica*. In 1257 Thomas took the degree of doctor in theology from the University of Paris and was subsequently appointed regent (or master) in theology, a position he held until 1259. The years between 1259 and 1265 are not well documented; most likely he spent them teaching, preaching, writing, and traveling throughout Europe. In 1265 he went to Rome to serve as regent of the *studium generale* founded there, and in 1268 the order sent him back to the University of Paris. In 1274, while traveling to the Council of Lyons, he fell ill. He was taken to the monastery of Fossanova, where he died on March 7. He was canonized a saint on July 18, 1323.

Aquinas composed more than sixty books on philosophy, theology, ethics, and exegesis. His exegetical works include commentaries on various books of the Bible, including Job, the Psalms, Isaiah, Jeremiah, the Epistles of St. Paul, and his *Catena Aurea* (a commentary on all four Gospels). His philosophical works include thirteen commentaries on ARISTOTLE, which were instrumental in the efforts of Christian scholarship to assimilate the Greek philosopher's newly discovered works. His *Summa contra Gentiles* (1261–64) was a defense of the Christian faith against the Jews and Muslims of Spain, whose scholarship was central to the recovery of Aristotle's writing in thirteenth-century Europe. This work reveals the breadth and depth of his understanding of the Jewish and Islamic philosophy of the period, especially that of MAIMONIDES (1135–1204) and the great Islamic philosopher Avicenna (980–1037). Far and away his greatest work, however, is the twenty-two-volume *Summa Theologica* (1265–73), an encyclopedic compendium, left unfinished at his death, designed to organize systematically and to explicate all of Christian theology and philosophy.

In his prologue to the *Summa*, Aquinas explains, "we shall endeavor, confiding in the Divine assistance, to treat of these things that pertain to sacred doctrine with brevity and clearness, in so far as the subject to be treated will permit." The fourfold method Aquinas follows, a method identified with Scholasticism, is first to pose a yes-or-no question, next to offer all of the arguments for the no position, then to present the contrary argument, and finally to supply a complete defense of his own position by replying to the objections outlined at the beginning. This form is illustrated in the selection below.

Very early in the *Summa*, in articles 9 and 10 of question 1, "On Sacred Doctrine: What Kind It Is and What It Covers," Aquinas deals with problems of interpretation that have occupied literary critics from ancient and medieval Christian and Jewish exegetes down to poststructuralist theorists like JACQUES DERRIDA. He wishes not only to explain the obscurities and ambiguities of biblical texts but also to understand the theoretical consequences of figurative language in a text that claims privileged authorship. Aquinas, like other medieval religious writers, has inherited the Platonic distrust of poetry—which is, in part, a distrust of the multiplicity of meaning and the instability of linguistic reference. The divine text, he argues, must "make truth clear," while figurative language obscures truth. Yet Scriptures use figurative language frequently; thus Aquinas must struggle to reconcile this kind of unstable language with the authority and infallibility of the sacred biblical word.

While poetry uses metaphors “for the sake of lively description,” Aquinas argues, Scriptures use them of necessity. While poetry promotes deception, Scriptures reveal spiritual truths through corporeal metaphors. He offers three defenses of Scriptures’ use of figurative language, which will find their way into the Italian poet-critic BOCACCIO’s defense of poetry in the fourteenth century. For Aquinas, the figurative language of Scriptures exercises the thoughtful mind, serves as a defense against the “ridicule of the impious,” and preserves readers from error because it appeals to the senses to guide them to the intelligible. Like AUGUSTINE, Aquinas endorses the possibility that the Bible contains multiple meanings, while maintaining that such multiplicity does not lead to indeterminacy.

For Aquinas, as for such twelfth-century predecessors as Hugh of St. Victor (1097–1141) and Bernardus Silvestris (d. ca. 1160), biblical meanings are organized systematically and hierarchically on four levels that Aquinas enumerates in article 10: (1) the historical or literal; (2) the allegorical, which refers to the spiritual meaning in which the Old Law (Old Testament) prefigures the New (New Testament); (3) the tropological, which provides an edifying moral message; and (4) the anagogical, which refers to eschatology, or the end of time. While this system of biblical interpretation was first articulated by John Cassian in the fourth century and was introduced in the Latin West by Augustine in *On the Usefulness of Belief*, it reached the height of its popularity in the twelfth century in treatises like Hugh’s *Didascalicon*. What sets Aquinas apart from his predecessors is his decidedly non-Platonic insistence that all interpretation of biblical texts must proceed from the literal sense alone. In fact, drawing on Augustine’s *Usefulness of Belief*, Aquinas goes on to distinguish four different types of the literal sense of the Bible—history, etiology (the origin or cause of a statement), analogy (showing the agreement of the Old and New Testament), and parable. Aquinas’s claim that nothing necessary to faith is conveyed through the allegorical senses of the Bible that is not conveyed clearly and openly through the literal sense would seem at odds with his endorsement of multiple meanings, since the obvious consequence of literal reading would be to render the techniques of *allēgorēsīs* redundant. Indeed, there are some scholars who have argued that Aquinas’s literal reading of Scriptures led to the rejection of allegorical readings of the Bible during the Reformation. Yet in their effort to come to terms with the difficulties of biblical language, Aquinas and other medieval exegetes developed conventions of interpretation that would influence all subsequent literary criticism long after the fourfold scheme of allegory was forgotten. Among these conventions is the practice of searching for “hidden” meanings in the text and the tendency to value literary texts for their multiplicity and complexity of meaning.

Aquinas occupies a pivotal position between the Neoplatonic exegetes of the twelfth century, philosopher-theologians such as Hugh of St. Victor and Bernardus Silvestris who wrote in Latin for a primarily clerical audience, and Italian poet-critics such as DANTE and Boccaccio, who, writing in Italian, would literally invent vernacular literary criticism in the fourteenth. Twelfth-century exegetes (Hugh may be the exception here) believed, with Augustine, that meaning had been hidden in the biblical text by God, so they subordinated the literal sense of the text to its allegorical senses in much the same way that Neoplatonists subordinated the material world to the transcendental world of forms (see PLATO). The revival of interest in Aristotle in the thirteenth century had profound consequences for the study of signification in both biblical and secular texts. Aquinas’s more Aristotelian analyses of Scriptures privilege the literal over allegorical sense; and because the literal sense was identified with the expression of the author’s intention, his remarks on biblical commentary set the stage for the appreciation of the individual poet’s style apparent in the landmark fourteenth-century Italian criticism of Dante and Boccaccio.

From *Question I*

NINTH ARTICLE

WHETHER HOLY SCRIPTURE SHOULD USE METAPHORS?

We proceed thus to the Ninth Article:—

Objection 1. It seems that the Holy Scripture should not use metaphors. For that which is proper to the lowest science seems not to befit this science, which holds the highest place of all. But to proceed by the aid of various similitudes and figures is proper to poetry, the least of all the sciences. Therefore it is not fitting that this science should make use of such similitudes.

Obj. 2. Further, this doctrine seems to be intended to make truth clear. Hence a reward is held out to those who manifest it: *They that explain me shall have life everlasting.*² But by such similitudes truth is obscured. Therefore to put forward divine truths by likening them to corporeal things does not befit this science.

Obj. 3. Further, the higher creatures are, the nearer they approach to the divine likeness. If therefore any creature be taken to represent God, this representation ought chiefly to be taken from the higher creatures, and not from the lower; yet this is often found in the Scriptures.

On the contrary, It is written: *I have multiplied visions, and I have used similitudes by the ministry of the prophets.*³ But to put forward anything by means of similitudes is to use metaphors. Therefore this sacred science may use metaphors.

I answer that, It is befitting Holy Writ to put forward divine and spiritual truths by means of comparisons with material things. For God provides for everything according to the capacity of its nature. Now it is natural to man to attain to intellectual truths through sensible objects, because all our knowledge originates from sense. Hence in Holy Writ spiritual truths are fittingly taught under the likeness of material things. This is what Dionysius says: *We cannot be enlightened by the divine rays except they be hidden within the covering of many sacred veils.*⁴ It is also befitting Holy Writ, which is proposed to all without distinction of persons—*To the wise and to the unwise I am a debtor*⁵—that spiritual truths be expounded by means of figures taken from corporeal things, in order that thereby even the simple who are unable by themselves to grasp intellectual things may be able to understand it.

Reply Obj. 1. Poetry makes use of metaphors to produce a representation, for it is natural to man to be pleased with representations. But sacred doctrine makes use of metaphors as both necessary and useful.

Reply Obj. 2. The ray of divine revelation is not extinguished by the sensible imagery wherewith it is veiled, as Dionysius says;⁶ and its truth so far

1. Translated by Fathers of the English Dominican Province.

2. Ecclesiasticus 24.31.

3. Hosea 12.10.

4. From *The Celestial Hierarchy* 1 [translator's note]. Its author, Pseudo-Dionysius, was a Neoplatonic writer of late 5th-century Syria who suc-

cessfully passed himself off as Dionysius the Areopagite, whose conversion by St. Paul is recorded in Acts 17.34. His writing was influenced by Plotinus (ca. 204/5–270 c.e.), who is regarded as the founder of Neoplatonism.

5. Romans 1.14.

6. *Celestial Hierarchy* 1 [translator's note].

remains that it does not allow the minds of those to whom the revelation has been made, to rest in the metaphors, but raises them to the knowledge of truths; and through those to whom the revelation has been made others also may receive instruction in these matters. Hence those things that are taught metaphorically in one part of Scripture, in other parts are taught more openly. The very hiding of truth in figures is useful for the exercise of thoughtful minds, and as a defence against the ridicule of the impious, according to the words *Give not that which is holy to dogs*.⁷

Reply Obj. 3. As Dionysius says,⁸ it is more fitting that divine truths should be expounded under the figure of less noble than of nobler bodies, and this for three reasons. Firstly, because thereby men's minds are the better preserved from error. For then it is clear that these things are not literal descriptions of divine truths, which might have been open to doubt had they been expressed under the figure of nobler bodies, especially for those who could think of nothing nobler than bodies. Secondly, because this is more befitting the knowledge of God that we have in this life. For what He is not is clearer to us than what He is. Therefore similitudes drawn from things farthest away from God form within us a truer estimate that God is above whatsoever we may say or think of Him. Thirdly, because thereby divine truths are the better hidden from the unworthy.⁹

TENTH ARTICLE

WHETHER IN HOLY SCRIPTURE A WORD MAY HAVE SEVERAL SENSES?

We proceed thus to the Tenth Article:—

Objection 1. It seems that in Holy Writ a word cannot have several senses, historical or literal, allegorical, tropological or moral, and anagogical. For many different senses in one text produce confusion and deception and destroy all force of argument. Hence no argument, but only fallacies, can be deduced from a multiplicity of propositions. But Holy Writ ought to be able to state the truth without any fallacy. Therefore in it there cannot be several senses to a word.

Obj. 2. Further, Augustine says that *the Old Testament has a fourfold division as to history, etiology, analogy, and allegory*.¹ Now these four seem altogether different from the four divisions mentioned in the first objection. Therefore it does not seem fitting to explain the same word of Holy Writ according to the four different senses mentioned above.

Obj. 3. Further, besides these senses, there is the parabolical,² which is not one of these four.

On the contrary, Gregory says: *Holy Writ by the manner of its speech transcends every science, because in one and the same sentence, while it describes a fact, it reveals a mystery*.³

7. Matthew 7.6.

8. *Celestial Hierarchy* 1 [translator's note].

9. In his reply to objection 3, Aquinas expresses some traditional justifications for using figurative language when speaking of God. Some, including the argument that such language obscures divine truths from the unworthy, are repeated in BOCCACCIO's defense of poetry in *Genealogy of the Gentile Gods* (1350–62; see below). There is a paradox involved in Aquinas's explanation that we

know God better negatively through what he is *not* than through what he *is*, which we can never comprehend.

1. *On the Usefulness of Belief* 3 [translator's note]. AUGUSTINE (354–430), early Christian philosopher and theologian.

2. Expressed in a parable.

3. From *Moralia in Job* 20.1 [translator's note], by Pope Gregory I (540–604).

I answer that, The author of Holy Writ is God, in whose power it is to signify His meaning, not by words only (as man also can do), but also by things themselves. So, whereas in every other science things are signified by words, this science has the property that the things signified by the words have themselves also a signification. Therefore that first signification whereby words signify things belongs to the first sense, the historical or literal. That signification whereby things signified by words have themselves also a signification is called the spiritual sense, which is based on the literal, and presupposes it. Now this spiritual sense has a threefold division. For as the Apostle says the Old Law is a figure of the New Law,⁴ and Dionysius says *the New Law itself is a figure of future glory*.⁵ Again, in the New Law, whatever our Head has done is a type of what we ought to do. Therefore, so far as the things of the Old Law signify the things of the New Law, there is the allegorical sense; so far as the things done in Christ, or so far as the things which signify Christ, are types of what we ought to do, there is the moral sense. But so far as they signify what relates to eternal glory, there is the anagogical sense. Since the literal sense is that which the author intends, and since the author of Holy Writ is God, Who by one act comprehends all things by His intellect, it is not unfitting, as Augustine says, if, even according to the literal sense, one word in Holy Writ should have several senses.⁶

Reply Obj. 1. The multiplicity of these senses does not produce equivocation or any other kind of multiplicity, seeing that these senses are not multiplied because one word signifies several things; but because the things signified by the words can be themselves types of other things. Thus in Holy Writ no confusion results, for all the senses are founded on one—the literal—from which alone can any argument be drawn, and not from those intended in allegory, as Augustine says.⁷ Nevertheless, nothing of Holy Scripture perishes on account of this, since nothing necessary to faith is contained under the spiritual sense which is not elsewhere put forward by the Scripture in its literal sense.

Reply Obj. 2. These three—history, etiology, analogy—are grouped under the literal sense. For it is called history, as Augustine expounds,⁸ whenever anything is simply related; it is called etiology when its cause is assigned, as when Our Lord gave the reason why Moses allowed the putting away of wives—namely, on account of the hardness of men's hearts; it is called analogy whenever the truth of one text of Scripture is shown not to contradict the truth of another. Of these four, allegory alone stands for the three spiritual senses. Thus Hugh of St. Victor⁹ includes the anagogical under the allegorical sense, laying down three senses only—the historical, the allegorical, and the topological.

Reply Obj. 3. The parabolical sense is contained in the literal, for by words things are signified properly and figuratively. Nor is the figure itself, but that which is figured, the literal sense. When Scripture speaks of God's arm, the literal sense is not that God has such a member, but only what is signified by

4. A rough paraphrase of Hebrews 10.1.

5. *Celestial Hierarchy* 1 [translator's note].

6. *Confessions* 12.31.42 [translator's note].

7. *Epistles* 93.8.42 (Augustine's letter against the Donatists, a heretical Christian sect of the 4th and 5th centuries).

9. *De Sacramentis*, 4.4, prologue [translator's note]. Hugh of St. Victor (ca. 1097–1141), educator and biblical commentator.

this member, namely, operative power. Hence it is plain that nothing false can ever underlie the literal sense of Holy Writ.

1265–73

DANTE ALIGHIERI

1265–1321

The Divine Comedy (1307–21) secured Dante's reputation as the greatest poet of the Middle Ages; his literary criticism marks him as the first major theorist of European vernacular literature. Yet the relationship between Dante's masterpiece and his comments on poetics has vexed scholars throughout the modern period. How could a work as monumental and groundbreaking as *The Divine Comedy* be the product of as derivative and seemingly reductive a poetics as that described in his famous letter to Can Grande della Scala (1319)? Many have denied the authenticity of this letter, believing that the theologically driven allegory depicted there could not have been the basis for so great a poem. Such a position, however, neglects the subtleties of Dante's adaptation of the techniques of biblical exegesis to poetry. At the heart of these debates are questions about the nature and status of allegorical representation that have perennially engaged critics, including contemporary figures such as ERICH AUERBACH and PAUL DE MAN.

Much of Dante's literary criticism is derivative of the great twelfth- and thirteenth-century biblical scholars who preceded him—especially THOMAS AQUINAS, to whom he is most immediately indebted. But he is the first to make the intellectual achievements of medieval Latin culture accessible to those who did not know Latin and, just as significantly, to apply them to secular texts that could circulate among a growing audience of vernacular readers. In his *Eloquence in the Vernacular Tongue* (ca. 1304–08), Dante writes, “I see that such eloquence is unquestionably needed by almost everyone, for not only men, but even women and children (to the extent their nature allows) strive for it.” His goal as a critic was to “enlighten the discernment of those who, like the blind, roam the streets thinking for the most part that what is really behind is in front.” In fourteenth-century Europe, Dante's defense of Italian, his own vernacular, as an appropriate vehicle for poetry was innovative; indeed, the debate continued to rage long after—taken up, for example, by JOACHIM DU BELLAY in sixteenth-century France, JOHN DRYDEN in seventeenth-century England, and NGUGI WÄ THIONG’O in twentieth-century Kenya. In addition, Dante's remarks on the polysemous nature of poetic language continue to resound within present-day debates about allegory.

Dante Alighieri was born in Florence to a family that was neither wealthy nor especially prominent. His father, Alighiero di Bellincione d'Alighiero, was a member of the lesser nobility. Little is known about Dante's early education, though he probably received elementary instruction in grammar, language, and philosophy. Later he was a pupil of the Florentine encyclopedist, statesman, and poet Brunetto Latini, who, in the *The Divine Comedy*, is confined to the seventh circle of Hell for his sins against nature (sodomy). Under Latini's direction, Dante studied literature and rhetoric and associated himself with several respected Florentine poets, including Guido Cavalcanti. In 1283 he inherited a modest amount of money from his parents, and two years later he married Gemma Donati, who bore him four children. The death in 1290 of his childhood friend Beatrice Portinari proved to be a turning point in Dante's life, propelling him to begin an intense study of the philosophical works of Boethius (480–524

C.E.), Cicero (106–43 B.C.E.), and ARISTOTLE (384–322 B.C.E.). It also resulted in the appearance of his only work to be written in Florence. Dante's commemoration of Beatrice's death, *La Vita Nuova* (ca. 1295, *The New Life*), was a new, innovative approach to love poetry that equated love with mystical and spiritual revelation. His memorialization of Beatrice would continue in *The Divine Comedy*, where she serves as his guide to redemption in the concluding third volume, *Paradiso*.

In the last decade of the thirteenth century, Dante became involved in Florence's increasingly violent politics. For much of the late thirteenth century Italy was engulfed in a civil war between the Ghibellines (a party favoring imperial rule for Italy) and the Guelphs (a party advocating control by the papacy). By the time of Dante's birth, Florence had become a Guelph stronghold; but the Guelph party itself had split into two factions, the White and the Black, divided more by competing family loyalties than by opposing political philosophies. In 1295 Dante, a supporter of the White Guelphs, got entangled in the city's politics by enrolling in the Guild of Doctors and Pharmacists. A year later he participated in a citizen's government known as the Council of the Hundred. He was elected for a term as one of the six priors, or magistrates, of Florence in 1300. By 1302, however, the Black Guelphs had begun to displace the Whites in Florentine politics, and Dante was exiled on pain of death if he returned to Florence. He spent the next few years wandering around Italy, during which time he produced both *De Vulgari Eloquentia* (*Eloquence in the Vernacular Tongue*), a theoretical and practical defense of the literary uses of the vernacular (written, ironically, in Latin), and *Il Convivio* (1306–09, *The Banquet*), an encyclopedic collection of *canzoni* (or short poems) followed by related prose commentaries on philosophy. Both projects were abandoned before they were completed, probably because as early as 1306 Dante became caught up in the plan of *The Divine Comedy*.

By 1312 Dante took up residence in Verona, where he sought the patronage of that city's imperial vicar, Can Grande della Scala, a member of the powerful Scaliger family. There he wrote most of his greatest work, *The Divine Comedy*, dedicating its final volume, the *Paradiso*, to his patron. *De Monarchia*, a political treatise, was most likely written around 1317. Dante spent the last three years of his life in Ravenna; he died without having ever returned to his native Florence.

In our selections, Dante confronts the problem of how to understand and construe textual meaning. Both his encyclopedic treatise *Il Convivio* and his famous letter dedicating the *Paradiso* to his patron, Can Grande della Scala, examine the relationship between general critical principles and the detailed interpretation of specific parts of a text. Dante is remarkably consistent in his descriptions of how poetry is to be read and interpreted. He extends to vernacular poetry the four senses of allegorical interpretation—the literal, the allegorical, the moral, and the anagogical—articulated in earlier medieval commentaries on biblical texts. In doing so, he effects a synthesis between the “allegory of the poets,” or the allegories that Christian writers such as Bernardus Silvestris (d. ca. 1160) attributed to pagan poets such as Virgil, and the “allegory of the theologians,” or the interpretations of Scriptures developed by exegetes such as Hugh of St. Victor (ca. 1097–1141) and Aquinas. Although in classical rhetoric *allegory* involves saying one thing while meaning another, Dante insists that his allegories are not simple substitution codes (this is how Bernardus earlier understands Virgil's *Aeneid*). Instead, each of the four “senses” of the text inheres in and evokes the other three simultaneously. The text is polysemous: that is, it has many meanings—including the literal—that occur in a single imaginative act. Dante's commentaries demonstrate that textual exegesis (explication) was not expected to follow the theory of allegorical “senses” in any dogmatic or wooden way. That a poem could be interpreted literally and in three figurative senses (allegorical, moral, and anagogical) does not imply that every episode or every symbol must contain all four meanings. Dante offers a more subtle approach. Much of the richness of *The Divine Comedy*, for example, derives from the gap allegory opens up between the sign and what it might signify. The promise of stable signification seemingly held

out by the allegorical method is offset by his claim that the text is polysemous, open to many meanings. This recurring paradox has also fascinated present-day critics of allegory, who are generally more interested than was Dante in the destabilization of meaning that accompanies the possibility of multiple meanings.

***Il Convivio* Keywords:** Hermeneutics, Interpretation Theory, Medieval Theory, Poetry, Religion

"The Letter to Can Grande" Keywords: Hermeneutics, Interpretation Theory, Medieval Theory, Poetry, Vernacular Language

*From Il Convivio*¹

From Book Two

CHAPTER 1

Now that by way of a preface my bread has been sufficiently prepared in the preceding book through my own assistance, time calls and requires my ship to leave port; thus, having set the sail of my reason to the breeze of my desire, I enter upon the open sea with the hope of a smooth voyage and a safe and praiseworthy port at the end of my feast. But so that this food of mine may be more profitable, I wish to show, before it appears, how the first course must be eaten.²

As I stated in the first chapter, this exposition must be both literal and allegorical. To convey what this means, it is necessary to know that writings can be understood and ought to be expounded principally in four senses. The first is called the literal, and this is the sense that does not go beyond the surface of the letter, as in the fables of the poets. The next is called the allegorical, and this is the one that is hidden beneath the cloak of these fables, and is a truth hidden beneath a beautiful fiction. Thus Ovid says that with his lyre Orpheus tamed wild beasts and made trees and rocks move toward him,³ which is to say that the wise man with the instrument of his voice makes cruel hearts grow tender and humble and moves to his will those who do not devote their lives to knowledge and art; and those who have no rational life whatsoever are almost like stones. Why this kind of concealment was devised by the wise will be shown in the penultimate book. Indeed the theologians take this sense otherwise than do the poets; but since it is my intention here to follow the method of the poets, I shall take the allegorical sense according to the usage of the poets.⁴

1. Translated by Richard H. Lansing.

2. In the allegorical framework of *Il Convivio*, Dante uses the conceit of a banquet to represent human knowledge. Like Boethius's *Consolation of Philosophy* (ca. 524 C.E.), *Il Convivio* employs a combination of verse and prose commentary called *prosimetrum*. In Dante's allegorical banquet, the "meat" is the *canzoni*, or verses, and the "bread" the commentaries on those verses.

3. Ovid (43 B.C.E.–17 C.E.), *Metamorphoses* 11.1–2. In Greek mythology, Orpheus was the greatest of all mortal musicians.

4. What Dante means by distinguishing between the allegory of the poets and the allegory of the theologians is not entirely clear and has given

rise to endless speculation. The theologians insist on the veracity of all four levels of meaning, and conceived of the allegorical levels (the typological, tropological, and anagogical) to depend on a literal level which was historically true. In the allegory of the poets, as exemplified by the allusion to the myth of Orpheus, the literal level is a "bella menzogna," a beautiful fiction having no basis in historical reality. In the allegory of the theologians, moreover, the second level always refers to some aspect of Christ's historical being, of which he is the ideal type, which is not the case with the poets. The third and fourth levels are shared in common by both modes of allegory [translator's note].

The third sense is called moral, and this is the sense that teachers should intently seek to discover throughout the scriptures, for their own profit and that of their pupils; as, for example, in the Gospel we may discover that when Christ ascended the mountain to be transfigured, of the twelve Apostles he took with him but three, the moral meaning of which is that in matters of great secrecy we should have few companions.⁵

The fourth sense is called anagogical, that is to say, beyond the senses; and this occurs when a scripture is expounded in a spiritual sense which, although it is true also in the literal sense, signifies by means of the things signified a part of the supernal things of eternal glory, as may be seen in the song of the Prophet which says that when the people of Israel went out of Egypt, Judea was made whole and free.⁶ For although it is manifestly true according to the letter, that which is spiritually intended is no less true, namely, that when the soul departs from sin it is made whole and free in its power. In this kind of explication, the literal should always come first, as being the sense in whose meaning the others are enclosed, and without which it would be impossible and illogical to attend to the other senses, and especially the allegorical. It would be impossible because in everything that has an inside and an outside it is impossible to arrive at the inside without first arriving at the outside; consequently, since in what is written down the literal meaning is always the outside, it is impossible to arrive at the other senses, especially the allegorical, without first arriving at the literal.

Moreover, it would be impossible because in every natural or artificial thing it is impossible to proceed to the form unless the subject on which the form must be imposed is prepared first—just as it is impossible for a piece of jewelry to acquire its form if the material (that is, its subject) is not first arranged and prepared, or a chest to acquire its form if the material (that is, the wood) is not first arranged and prepared. Consequently, since the literal meaning is always the subject and material of the other senses, especially of the allegorical, it is impossible to come to an understanding of them before coming to an understanding of it. Moreover, it would be impossible because in every natural or artificial thing it is impossible to proceed unless the foundation is laid first, as in a house or in studying; consequently, since explication is the building up of knowledge, and the explication of the literal sense is the foundation of the others, especially of the allegorical, it is impossible to arrive at the other senses without first arriving at it.

Moreover, even supposing it were possible, it would be illogical, that is to say out of order, and would therefore be carried out with great labor and much confusion. Consequently as the Philosopher says in the first book of the *Physics*,⁷ nature wills that we proceed in due order in our learning, that is, by proceeding from that which we know better to that which we know not so well; I say that nature wills it since this way of learning is by nature innate in us. Therefore if the senses other than the literal are less understood (which they are, as is quite apparent), it would be illogical to proceed to explain them if the literal had not been explicated first. For these reasons, therefore, I shall on each occasion discuss first the literal meaning

5. The apostles Peter, James, and John; see Matthew 17.1–8, Mark 9.1–7, Luke 9.28–36 [translator's note].

6. Psalm 114; Dante refers to this same psalm in his "Letter to Can Grande" (below).

7. ARISTOTLE, *Physics* 1.1, 184a17–21.

concerning each canzone, and afterwards I shall discuss its allegory (that is, the hidden truth), at times touching on the other senses, when opportunity, as time and place deem proper.

1306–09

*From The Letter to Can Grande*¹

* * *

[6] Therefore, if one should wish to present an introduction to a part of a work, it is necessary to present some conception of the whole work of which it is a part. For this reason I, who wish to present something in the form of an introduction to the above-mentioned part of the whole *Comedy*, have decided to preface it with some discussion of the whole work, in order to make the approach to the part easier and more complete.² There are six questions, then, which should be asked at the beginning about any doctrinal work: what is its subject, its form, its agent, its end, the title of the book, and its branch of philosophy. In three cases the answers to these questions will be different for the part of the work I propose to give you than for the whole, that is, in the cases of its subject, form, and title, while in the other three, as will be clear upon inspection, they will be the same. Thus these first three should be specifically asked in a discussion of the whole work, after which the way will be clear for an introduction to the part. Let us, then, ask the last three questions not only about the whole but also about the offered part itself.

[7] For the clarification of what I am going to say, then, it should be understood that there is not just a single sense in this work:³ it might rather be called *polysemous*, that is, having several senses. For the first sense is that which is contained in the letter, while there is another which is contained in what is signified by the letter. The first is called literal, while the second is called allegorical, or moral or anagogical. And in order to make this manner of treatment clear, it can be applied to the following verses: "When Israel went out of Egypt, the house of Jacob from a barbarous people, Judea was made his sanctuary, Israel his dominion."⁴ Now if we look at the letter alone, what is signified to us is the departure of the sons of Israel from Egypt during the time of Moses; if at the allegory, what is signified to us is our redemption through Christ; if at the moral sense, what is signified to us is the conversion of the soul from the sorrow and misery of sin to the state of grace; if at the anagogical, what is signified to us is the departure of the sanctified soul from bondage to the corruption of this world into the freedom of eternal glory. And although these mystical senses are called by various names, they may all be called allegorical, since they are all different from the literal or historical. For allegory is derived from the Greek *alleon*, which means in Latin *alienus* ("belonging to another") or *diversus* ("different").

1. Translated by Robert Haller. Can Grande della Scala (1287–1329), the imperial vicar of Verona, was Dante's patron; his name means "Big Dog."

2. Dante dedicated the third volume of *The Divine Comedy*, the *Paradiso*, to Can Grande; the

letter serves as an introduction to that part of the poem.

3. *The Divine Comedy*.

4. Psalm 114.1–2; Dante uses the same psalm to illustrate the anagogical level of meaning in *Il Convivio* (see above).

[8] This being established, it is clear that the subject about which these two senses play must also be twofold. And thus it should first be noted what the subject of the work is when taken according to the letter, and then what its subject is when understood allegorically. The subject of the whole work, then, taken literally, is the state of souls after death, understood in a simple sense; for the movement of the whole work turns upon this and about this. If on the other hand the work is taken allegorically, the subject is man, in the exercise of his free will, earning or becoming liable to the rewards or punishments of justice.

* * *

[10] The title of the work is, "Here begins the Comedy of Dante Alighieri, a Florentine by birth but not in character." To understand the title, it must be known that comedy is derived from *comos*, "a village," and from *oda*, "a song," so that a comedy is, so to speak, "a rustic song."⁵ Comedy, then, is a certain genre of poetic narrative differing from all others. For it differs from tragedy in its matter, in that tragedy is tranquil and conducive to wonder at the beginning, but foul and conducive to horror at the end, or catastrophe, for which reason it is derived from *tragos*, meaning "goat," and *oda*, making it, as it were, a "goat song," that is, foul as a goat is foul. This is evident in Seneca's⁶ tragedies. Comedy, on the other hand, introduces a situation of adversity, but ends its matter in prosperity, as is evident in Terence's⁷ comedies. And for this reason some writers have the custom of saying in their salutations, by way of greeting, "a tragic beginning and a comic ending to you." And, as well, they differ in their manner of speaking. Tragedy uses an elevated and sublime style, while comedy uses an unstudied and low style, which is what Horace implies in the *Art of Poetry* where he allows comic writers occasionally to speak like the tragic, and also the reverse of this:

Yet sometimes even comedy elevates its voice,
and angry Chremes rages in swelling tones;
and in tragedy Telephus and Peleus often lament
in prosaic speeches. . . .⁸

So from this it should be clear why the present work is called the *Comedy*. For, if we consider the matter, it is, at the beginning, that is, in Hell, foul and conducive to horror, but at the end, in Paradise, prosperous, conducive to pleasure, and welcome. And if we consider the manner of speaking, it is unstudied and low, since its speech is the vernacular, in which even women communicate. There are, besides these, other genres of poetic narrative, such as pastoral verse, elegy, satire, and the hymn of thanksgiving, as could also be gathered from Horace in his *Art of Poetry*. But there is no purpose to discussing these at this time.

1321

5. For a similar derivation of "comedy" (usually linked to the Greek *kōmos*, "revel," not *kōmē*, "village"), see ARISTOTLE, *Poetics* 3, 1448a (above).

6. Roman philosopher and author of several tragedies (ca. 4 B.C.E.–65 C.E.).

7. Roman comic dramatist (ca. 190–159 B.C.E.).

8. HORACE [65–8 B.C.E.], *Art of Poetry* 93–96 [translator's note]; reprinted above. Chremes: a character in Aristophanes' comedy *Ecclesiazusae* (ca. 392 B.C.E.). Telephus: in Greek mythology, a son of Heracles. Peleus: the father of the Greek hero Achilles.

GIOVANNI BOCCACCIO

1313–1375

Giovanni Boccaccio, author of the famous *Decameron* (1348–53), was, with DANTE and Petrarch, a pioneer of Italian vernacular literature and of the humanism that would become the philosophical basis of the Renaissance. Although Boccaccio's present-day reputation is based primarily on the bawdy tales of the *Decameron*, his romances and scholarly works were indispensable sources for poets throughout the Renaissance. His *Genealogia Deorum Gentilium* (1350–62, *Genealogy of the Gentile Gods*), an encyclopedic compendium in Latin of pagan mythology designed as a guide to the ancient poets, culminates in books 14 and 15 with a defense of poetry against the criticisms of it that reach back to PLATO's *Republic*. Like John of Salisbury in the twelfth century, Boccaccio defends poetry in terms that are unmistakably medieval. But he also stands in a long line of practicing poets who have written in defense of their art, ranging from HORACE (65–8 B.C.E.), JOACHIM DU BELLAY (ca. 1522–1560), and SIR PHILIP SIDNEY (1554–1586) to JOHN DRYDEN (1631–1700), ALEXANDER POPE (1688–1744), WILLIAM WORDSWORTH (1770–1850), and PERCY BYSSHE SHELLEY (1792–1822).

Boccaccio was born in Tuscany, the illegitimate son of a merchant, Boccaccino di Chelino, and raised in Florence. Having provided him with a grammatical and literary education, as well as practical business training, his father sent him in 1327 to serve an apprenticeship in Naples. Boccaccio, however, preferred the aristocratic intellectual circles of the court of Robert of Anjou to a life in commerce. He began to mingle in courtly society and to write stories in verse and prose. He fell in love with—and wrote about—an unattainable aristocratic woman he called Fiammetta, who has been identified as Maria d'Aquino, an illegitimate daughter of King Robert. His first literary works appeared during this period, including the allegorical poem *La caccia di Diana* (ca. 1334, *Diana's Hunt*) and two romances: *Filostrato* (ca. 1335)—a version of the story of Troilus and Criseida, later adapted by both Chaucer and Shakespeare—and *Teseida* (ca. 1339), a source of Chaucer's *Knight's Tale*. In 1341 Boccaccio returned to Florence, where he discovered a different kind of intellectual and artistic community, one that followed in the style of the recently deceased Dante. Under the influence of this literary tradition of allegorical didacticism that stressed the moral and symbolic dimensions of literature, he wrote the allegorical works *Comedy of the Florentine Nymphs* (1341–42) and *Fiammetta* (1343). By 1348, when the bubonic plague had reached Italy, Boccaccio began his greatest work, the hundred prose tales of the *Decameron*. The plague provides their framework—ten young people retreat to the country to escape the disease and tell ten stories each as a means of entertaining themselves during their confinement.

About 1350, around the same time that he began the *Genealogy of the Gentile Gods*, Boccaccio became involved in Florentine politics, serving on various ambassadorial missions. He also met Petrarch, beginning a friendship that would last until Petrarch's death in 1374. He turned from literature to scholarship, especially to the study of classical history, literature, and mythology, translating the Roman historian Livy, searching for ancient manuscripts, learning Greek, and attempting to establish an academic chair in Greek in Florence. Between 1350 and 1362 he wrote in Latin most of the *Genealogy*, as well as such scholarly collections as his *Fates of Illustrious Men* (1356, *De Casibus Virorum Illustrium*) and *Concerning Famous Women* (1361, *De Mulieribus Claris*), which was an important source for CHRISTINE DE PIZAN's famous *City of Ladies* (1405). In 1362 Boccaccio underwent a spiritual crisis during which he considered burning his secular writing and taking holy orders; he was dissuaded from both by Petrarch. A year later he retired to his native

town, Certaldo, where he remained active in Florentine politics. By 1373 he had completed a biography, *Life of Dante*. In the same year, he is said to have met the English poet Chaucer in Florence. He died at Certaldo two years later.

Boccaccio intended *Genealogy of the Gentile Gods* as a monumental work of scholarship, a mythological sourcebook that would introduce readers to the study of the ancient poets. His decision to write in Latin rather than Italian is a measure of its seriousness as a scholarly project. Books 1–13, mostly completed by 1360, contain Boccaccio's allegorical interpretations of Greek mythology. By the 1360s, however, he seemed to feel that some kind of defense of the ancient poets was necessary as well, to show that they were, as he writes in the first chapter of book 15, "really men of wisdom, . . . their compositions full of profit and pleasure to the reader." Boccaccio's defense of poetry in books 14 and 15 compiles and arranges in a single document a series of arguments both for and against poetry that had been in circulation for more than a thousand years. Together with Plato's writing on poetry and ARISTOTLE'S *Poetics* (which was not recovered in Europe until the fifteenth century), it provides the substance of Renaissance literary theory. The influence of the *Genealogy's* defense of poetry during the Renaissance is easily discernible, for instance, in Sir Philip Sidney's *Defence of Poesy* (see below), published in England over two centuries later.

In chapter 5 of book 14 Boccaccio neutralizes the arguments of poetry's detractors, especially the philosophers who, since Plato, had been chief among those denouncing poetry as a distraction from the pursuit of truth. In the Middle Ages, the theologians had inherited the philosopher's mantle. Both philosophy and theology enjoyed enormous prestige in this period, beside which all other forms of knowledge, including poetry, were dismissed as trivial—especially in Italy, where the study of theology was more isolated from the other liberal arts than in the rest of Europe. Boccaccio borrows a scene from Dante's *Il Convivio* (see above), ultimately derived from Boethius's *Consolation of Philosophy* (ca. 524), opening chapter 5 with a vision of Lady Philosophy. Unlike either Dante or Boethius, however, Boccaccio puts poets in "high places," as Lady Philosophy's counselors, and relegates philosophers and other critics of poetry to the "noisy crowd" surrounding her. In a neat reversal, the text's allegory makes the poets the true followers of philosophy, while poetry's detractors are exposed as impostors. Placing the criticisms of poetry into the mouths of this crowd of pretenders robs them of their force; at the same time, poetry is redefined as proceeding, like philosophy, from "the bosom of God." Later in the text, Boccaccio concedes that philosophy does arrive at truth, but only by slow reason; poets do so by leaps of imagination.

Chapter 7 contains Boccaccio's most important ideas about poetry, ideas that draw both on his own experience as a poet and on critics who preceded him, including Horace, AUGUSTINE (354–430 C.E.), Macrobius (b. ca. 360 C.E.), Dante, and his friend Petrarch. He defines poetry as "fervid and exquisite invention" combined with "fervid expression, in speech or writing," insisting that inspiration, education in the liberal arts, and craft are equally important in its creation. Following Aristotle and the Roman orator Cicero (106–43 B.C.E.), Boccaccio carefully distinguishes poetry from rhetoric, countering a medieval tendency to subordinate poetry to both rhetoric and grammar. While the poet needs to master the rules and methods of rhetoric, poetry transcends it both in its "invention" and its "expression." Whereas rhetoricians are required to be "simple and clear," poets have license to invent wonders and to make language seem strange.

In chapter 12, Boccaccio takes on the charge that poets are often obscure, engaging in an argument that sounds remarkably similar to contemporary debates about theoretical jargon. If poets are obscure, so too, he argues, are philosophers such as Plato and Aristotle, who "abound in difficulties so tangled and involved that . . . they have yielded no clear nor consistent meaning." Holy Scriptures, he points out, are full of ambiguous and difficult passages, yet no critic would dare, for fear of blasphemy,

accuse their author of deliberate obscurity for the sake of appearing clever. Obscurity, for Boccaccio, is both engaging and fruitful, as it is for MAIMONIDES (1135–1204). It protects poetry from vulgar people, while usefully prompting multiple interpretations from the learned.

True to his roots in medieval linguistics, which insists on a fundamental distinction between words used “properly” and those used “figuratively,” Boccaccio never allows himself to question openly the notion of language as a transparent medium referring to an independent reality. For him, poetry is always subordinate to some higher reality—philosophy, theology, the divine. However, by insisting that poetry’s “veil of fiction” “clothes” the naked truth, Boccaccio unwittingly challenges traditional assumptions about the referential nature of language and poetry, pointing toward the fundamentally figurative basis of all language.

V. OTHER CAVILLERS AT THE POETS AND THEIR IMPUTATIONS

There is also, O most serene of rulers,² as you know far better than I, a kind of house established in this world by God’s gift, in the image of a celestial council, and devoted only to sacred studies. Within, on a lofty throne, sits Philosophy,³ messenger from the very bosom of God, mistress of all knowledge. Noble is her mien and radiant with godlike splendor. There she sits arrayed in royal robes and adorned with a golden crown, like the Empress of all the World. In her left hand she holds several books, with her right hand she wields a royal sceptre, and in clear and fluent discourse she shows forth to such as will listen the truly praiseworthy ideals of human character, the forces of our Mother Nature, the true good, and the secrets of heaven. If you enter you do not doubt that it is a sanctuary full worthy of all reverence; and if you look about, you will clearly see there every opportunity for the higher pursuits of the human mind, both speculation and knowledge, and will gaze with wonder till you regard it not merely as one all-inclusive household, but almost the very image of the divine mind. Among other objects of great veneration there, behind the mistress of the household, are certain men seated in high places, few in number, of gentle aspect and utterance, who are so distinguished by their seriousness, honesty, and true humility, that you take them for gods not mortals. These men abound in the faith and doctrine of their mistress, and give freely to others of the fullness of their knowledge.

But there is also another group—a noisy crowd—of all sorts and conditions. Some of these have resigned all pride, and live in watchful obedience

1. Translated by Charles G. Osgood.

2. Boccaccio claims that his treatise was commissioned by Hugh IV of Cyprus, king of Cyprus and Jerusalem from 1324 to 1358. Hugh was dead by 1359; it is not clear why Boccaccio

continues to address him.

3. The ultimate source for this image of Lady Philosophy is Boethius’s *Consolation of Philosophy* (ca. 524 C.E.), Prose 1.3.

to the injunctions of their superiors, in hopes that their obsequious zeal may gain them promotion. But others there are who grow so elated with what is virtually elementary knowledge, that they fall upon their great mistress' robes as it were with their talons, and in violent haste tear away a few shreds as samples; then don various titles which they often pick up for a price; and, as puffed up as if they knew the whole subject of divinity, they rush forth from the sacred house, setting such mischief afoot among ignorant people as only the wise can calculate. Yet these rascals are sworn conspirators against all high arts. First they try to counterfeit a good man; they exchange their natural expression for an anxious, careful one. They go about with downcast eye to appear inseparable from their thoughts. Their pace is slow to make the uneducated think that they stagger under an excessive weight of high speculation. They dress unpretentiously, not because they are really modest, but only to mask themselves with sanctity. Their talk is little and serious. If you ask them a question they heave a sigh, pause a moment, raise their eyes to heaven, and at length deign to answer. They hope the bystanders will infer from this that their words rise slowly to their lips, not from any lack of eloquence, but because they are fetched from the remote sanctuary of heavenly secrets. They profess piety, sanctity, and justice, and often, forsooth, utter the words of the prophet,⁴ "The zeal of God's house hath eaten me up."

Then they proceed to display their wonderful knowledge, and whatever they don't know they damn—to good effect too. This they do to avoid inquiry about subjects of which they are ignorant, or else to affect scorn and indifference in such matters as cheap, trivial, and obvious, while they have devoted themselves to things of greater importance. When they have caught inexperienced minds in traps of this sort, they proceed boldly to range about town, dabble in business, give advice, arrange marriages, appear at big dinners, dictate wills, act as executors of estates, and otherwise display arrogance unbecoming to a philosopher. Thus they blow up a huge cloud of popular reputation, and thereby so strut with vanity that, when they walk abroad, they want to have everybody's finger pointing them out, to overhear people saying that they are great masters of their subjects, and see how the grand folk rise to meet them in the squares of the city and call them "Rabbi,"⁵ speak to them, invite them, give place and defer to them. Straightway they throw off all restraint and become bold enough for anything; they are not afraid to lay their own sickles to the harvest of another; and haply, while they are basely defiling other people's business, the talk may fall upon poetry and poets. At the sound of the word they blaze up in such a sudden fury that you would say their eyes were afire. They cannot stop; they go raging on by the very momentum of their wrath. Finally, like conspirators against a deadly enemy, in the schools, in public squares, in pulpits, with a lazy crowd, as a rule, for an audience, they break out into such mad denunciation of poets that the bystanders are afraid of the speakers themselves, let alone the harmless objects of attack.

They say poetry is absolutely of no account, and the making of poetry a useless and absurd craft; that poets are tale-mongers, or, in lower terms,

4. David, Psalms 69.9; John 2.17 [translator's note].

5. Literally, "my master," "my teacher" (Hebrew).

liars; that they live in the country among the woods and mountains because they lack manners and polish. They say, besides, that their poems are false, obscure, lewd, and replete with absurd and silly tales of pagan gods, and that they make Jove,⁶ who was, in point of fact, an obscene and adulterous man, now the father of gods, now king of heaven, now fire, or air, or man, or bull, or eagle, or similar irrelevant things; in like manner poets exalt to fame Juno⁷ and infinite others under various names. Again and again they cry out that poets are seducers of the mind, prompters of crime, and, to make their foul charge, fouler, if possible, they say they are philosophers' apes, that it is a heinous crime to read or possess the books of poets; and then, without making any distinction, they prop themselves up, as they say, with Plato's authority⁸ to the effect that poets ought to be turned out-of-doors—nay, out of town, and that the Muses,⁹ their mumming mistresses, as Boethius¹ says, being sweet with deadly sweetness, are detestable, and should be driven out with them and utterly rejected. But it would take too long to cite everything that their irritable spite and deadly hatred prompt these madmen to say. It is also before judges like these—so eminent, forsooth, so fair, so merciful, so well-inclined—that my work will appear, O glorious Prince; and I know full well they will gather about it like famished lions,² to seek what they may devour. Since my book has entirely to do with poetic material, I cannot look for a milder sentence from them than in their rage they thunder down upon poets. I am well aware that I offer my breast to the same missiles that their hatred has already employed; but I shall endeavor to ward them off.

O merciful God, meet now this foolish and ill-considered clamor of mad men, and oppose their rage. And thou, O best of kings, as I advance upon their line, support me with the strength of thy noble soul, and help me in my fight for thee; for courage and a stout heart must now be mine. Sharp and poisonous are their weapons, but weak withal. Foolish judges though they be, they are strong in other ways, and I tremble with fear before them, unless God, who deserteth not them that trust in Him, and thou, also, favor me. Slender is my strength and my mind weak, but great is my expectation of help; borne up by such hope, I shall rush upon them with justice at my right hand.

VII. THE DEFINITION OF POETRY, ITS ORIGIN, AND FUNCTION

This poetry, which ignorant triflers cast aside, is a sort of fervid and exquisite invention, with fervid expression, in speech or writing, of that which the mind has invented. It proceeds from the bosom of God, and few, I find, are the souls in whom this gift is born; indeed so wonderful a gift it is that true poets have always been the rarest of men. This fervor of poesy is sublime in its effects: it impels the soul to a longing for utterance; it brings forth strange and unheard-of creations of the mind; it arranges these meditations in a fixed order, adorns the whole composition with unusual interweaving of

6. Jupiter, the chief Roman god (identified with the Greek god Zeus).

7. Jupiter's wife and sister, the chief Roman goddess (identified with the Greek goddess Hera).

8. See PLATO, *Republic* 3.398a–b.

9. In Greek mythology, 9 daughters of Memory

who preside over the arts and all intellectual pursuits.

1. Roman Christian philosopher (470–524). In *The Consolation of Philosophy*, Prose 1.1, Philosophy calls the Muses “play-acting prostitutes.”

2. Like the Devil: 1 Peter 5.8 [translator's note].

words and thoughts; and thus it veils truth in a fair and fitting garment of fiction. Further, if in any case the invention so requires, it can arm kings, marshal them for war, launch whole fleets from their docks, nay, counterfeit sky, land, sea, adorn young maidens with flowery garlands, portray human character in its various phases, awake the idle, stimulate the dull, restrain the rash, subdue the criminal, and distinguish excellent men with their proper meed of praise: these, and many other such, are the effects of poetry. Yet if any man who has received the gift of poetic fervor shall imperfectly fulfil its function here described, he is not, in my opinion, a laudable poet. For, however deeply the poetic impulse stirs the mind to which it is granted, it very rarely accomplishes anything commendable if the instruments by which its concepts are to be wrought out are wanting—I mean, for example, the precepts of grammar and rhetoric, an abundant knowledge of which is opportune. I grant that many a man already writes his mother tongue admirably, and indeed has performed each of the various duties of poetry as such; yet over and above this, it is necessary to know at least the principles of the other Liberal Arts,³ both moral and natural, to possess a strong and abundant vocabulary, to behold the monuments and relics of the Ancients, to have in one's memory the histories of the nations, and to be familiar with the geography of various lands, of seas, rivers and mountains.

Furthermore, places of retirement, the lovely handiwork of Nature herself, are favorable to poetry, as well as peace of mind and desire for worldly glory; the ardent period of life also has very often been of great advantage. If these conditions fail, the power of creative genius frequently grows dull and sluggish.

Now since nothing proceeds from this poetic fervor, which sharpens and illumines the powers of the mind, except what is wrought out by art,⁴ poetry is generally called an art. Indeed the word poetry has not the origin that many carelessly suppose, namely *poio*, *pois*, which is but Latin *finco*, *finco*; rather it is derived from a very ancient Greek word *poetes*,⁵ which means in Latin exquisite discourse (*exquisita locutio*). For the first men who, thus inspired, began to employ an exquisite style of speech, such, for example, as song in an age hitherto unpolished, to render this unheard-of discourse sonorous to their hearers, let it fall in measured periods; and lest by its brevity it fail to please, or, on the other hand, become prolix and tedious, they applied to it the standard of fixed rules, and restrained it within a definite number of feet and syllables. Now the product of this studied method of speech they no longer called by the more general term poesy, but poem. Thus as I said above, the name of the art, as well as its artificial product, is derived from its effect.

Now though I allege that this science of poetry has ever streamed forth from the bosom of God upon souls while even yet in their tenderest years,

3. The liberal arts in the Middle Ages included the trivium (grammar, rhetoric, and logic) and the quadrivium (arithmetic, geometry, music, and astronomy).

4. Conscious skill, technique, indispensable to poetic creation [translator's note].

5. Boccaccio's limitations in Greek have allowed him to follow Isidore of Seville—bad etymology

and all—in this whole passage, as did writers before him who knew no Greek [translator's note]. Isidore of Seville (ca. 560–636), Spanish bishop and encyclopedist; see his *Etymologiarum* 8.7.2, "De poeta." The Greek *poieō* (which is, in fact, related to "poet") means "make, create"; the Latin *finco* means "form, invent."

these enlightened cavillers will perhaps say that they cannot trust my words. To any fair-minded man the fact is valid enough from its constant recurrence. But for these dullards I must cite witnesses to it. If, then, they will read what Cicero,⁶ a philosopher rather than a poet, says in his oration delivered before the senate in behalf of Aulus Licinius Archias,⁷ perhaps they will come more easily to believe me. He says: "And yet we have it on the highest and most learned authority, that while other arts are matters of science and formula and technique, poetry depends solely upon an inborn faculty, is evoked by a purely mental activity, and is infused with a strange supernal inspiration."

But not to protract this argument, it is now sufficiently clear to reverent men, that poetry is a practical art,⁸ springing from God's bosom and deriving its name from its effect, and that it has to do with many high and noble matters that constantly occupy even those who deny its existence. If my opponents ask when and in what circumstances, the answer is plain: the poets would declare with their own lips under whose help and guidance they compose their inventions when, for example, they raise flights⁹ of symbolic steps to heaven, or make thick-branching trees¹ spring aloft to the very stars, or go winding about mountains to their summits. Haply, to disparage this art of poetry now unrecognized by them, these men will say that it is rhetoric which the poets employ. Indeed, I will not deny it in part, for rhetoric has also its own inventions. Yet, in truth, among the disguises of fiction rhetoric has no part, for whatever is composed as under a veil, and thus exquisitely wrought, is poetry and poetry alone.²

XII. THE OBSCURITY OF POETRY IS NOT JUST CAUSE FOR CONDEMNING IT

These cavillers further object that poetry is often obscure, and that poets are to blame for it, since their end is to make an incomprehensible statement appear to be wrought with exquisite artistry; regardless of the old rule of the orators, that a speech must be simple and clear. Perverse notion! Who but a deceiver himself would have sunk low enough not merely to hate what he could not understand, but incriminate it, if he could? I admit that poets are at times obscure. At the same time will these accusers please answer me? Take those philosophers among whom they shamelessly intrude; do they

6. Roman statesman, orator, and author (106–43 B.C.E.).

7. A Greek poet of Antioch, whose claim of Roman citizenship was successfully defended by Cicero; the greater part of his oration is devoted to glorifying literature (the quotation is from *Pro Archia* 8.18).

8. *Facultas* (ability, power, capacity, skill [Latin]) [translator's note].

9. Dante's mountain of Purgatory, and perhaps the steps from circle to circle (*Purgatorio* 11.40; 13.1; 17.65, 77; 25.8; etc.); or the three steps in *Purgatorio* 9.76ff.; or the mystic stairway of the Seventh Heaven (*Paradiso* 21.8; 22.68) [translator's note]. For DANTE ALIGHIERI (1265–1321), see above.

1. Like Pandarus and Bitias in Virgil's *Aeneid* [19 B.C.E.], 9.677–82: "While they within stand at the right and left / Before the turrets, armed, their lofty heads / Flashing with plumes. So by some

river's bank, / Whether the Po or pleasant Athetis, / Two breezy oaks lift up their unshorn heads, / And nod their lofty tops" [translator's note].

2. According to Aristotle (*Rhetoric* 3.2) poetry can create wonder by strange matter and expression, as rhetoric should not. Cicero (*De Oratore* 1.16) says that the poet is more restricted than the orator by "numbers" but less in choice of words. Augustine (*De Ordine* 2.14.40) finds the grammarians rather than the rhetoricians are poetry's proper judges. In the Middle Ages the academic conception of poetry became debased and subordinated to rhetoric and grammar. Boccaccio obviously is protesting against the medieval opinion partly by appealing to the Ancients, but chiefly by consulting the fact of a poet's experience [translator's note]. For ARISTOTLE (384–322 B.C.E.) and the theologian AUGUSTINE (354–430 C.E.), see above.

always find their close reasoning as simple and clear as they say an oration should be? If they say yes, they lie; for the works of Plato and Aristotle, to go no further, abound in difficulties so tangled and involved that from their day to the present, though searched and pondered by many a man of keen insight, they have yielded no clear nor consistent meaning. But why do I talk of philosophers? There is the utterance of Holy Writ, of which they especially like to be thought expounders; though proceeding from the Holy Ghost, is it not full to overflowing with obscurities and ambiguities? It is indeed, and for all their denial, the truth will openly assert itself. Many are the witnesses, of whom let them be pleased to consult Augustine,³ a man of great sanctity and learning, and of such intellectual power that, without a teacher, as he says himself, he learned many arts, besides all that the philosophers teach of the ten categories. Yet he did not blush to admit that he could not understand the beginning of Isaiah. It seems that obscurities are not confined to poetry. Why then do they not criticise philosophers as well as poets? Why do they not say that the Holy Spirit wove obscure sayings into his works, just to give them an appearance of clever artistry? As if He were not the sublime Artificer of the Universe!⁴ I have no doubt they are bold enough to say such things, if they were not aware that philosophers already had their defenders, and did not remember the punishment⁵ prepared for them that blaspheme against the Holy Ghost. So they pounce upon the poets because they seem defenseless, with the added reason that, where no punishment is imminent, no guilt is involved. They should have realized that when things perfectly clear seem obscure, it is the beholder's fault. To a half-blind man, even when the sun is shining its brightest, the sky looks cloudy. Some things are naturally so profound that not without difficulty can the most exceptional keenness in intellect sound their depths; like the sun's globe, by which, before they can clearly discern it, strong eyes are sometimes repelled.⁶ On the other hand, some things, though naturally clear perhaps, are so veiled by the artist's skill that scarcely anyone could by mental effort derive sense from them; as the immense body of the sun when hidden in clouds cannot be exactly located by the eye of the most learned astronomer. That some of the prophetic poems are in this class, I do not deny.

Yet not by this token is it fair to condemn them; for surely it is not one of the poet's various functions to rip up and lay bare the meaning which lies hidden in his inventions. Rather where matters truly solemn and memorable are too much exposed, it is his office by every effort to protect as well as he can and remove them from the gaze of the irreverent, that they cheapen not by too common familiarity. So when he discharges this duty and does it ingeniously, the poet earns commendation, not anathema.

Wherefore I again grant that poets are at times obscure, but invariably explicable if approached by a sane mind; for these cavillers view them with

3. Augustine, *Confessions* 4.16: "And what did it profit me that, when scarcely twenty years old, a book of Aristotle's entitled *The Ten Predicaments* [*Categories*] fell into my hands? . . . I read it alone and understood it . . . And what did it profit me that I . . . read unaided, and understood, all the books that I could get of the so-called liberal arts? . . . Whatever was written either on rhetoric or logic, geometry, music, or

arithmetic, did I, without any great difficulty, and without the teaching of any man, understand." Cited by Petrarch, *Invectivae contra Medicum* [1355], 3, p. 1105 [translator's note].

4. Wisdom 7.21, 22 [translator's note].

5. Mark 3.29 [translator's note].

6. Perhaps a reminiscence of Dante, *Paradiso* 1.54ff. A favorite figure with Dante: cf. *Purgatorio* 32.11; *Paradiso* 25.118; etc. [translator's note].

owl eyes, not human. Surely no one can believe that poets invidiously veil the truth with fiction, either to deprive the reader of the hidden sense, or to appear the more clever; but rather to make truths which would otherwise cheapen by exposure the object of strong intellectual effort and various interpretation, that in ultimate discovery they shall be more precious. In a far higher degree is this the method of the Holy Spirit; nay, every right-minded man should be assured of it beyond any doubt. Besides it is established by Augustine in the *City of God*, Book Eleven, when he says:

"The obscurity of the divine word has certainly this advantage, that it causes many opinions about the truth to be started and discussed, each reader seeing some fresh meaning in it."

Elsewhere he says of Psalm 126:⁷

"For perhaps the words are rather obscurely expressed for this reason, that they may call forth many understandings, and that men may go away the richer, because they have found that closed which might be opened in many ways, than if they could open and discover it by one interpretation."

To make further use of Augustine's testimony (which so far is adverse to these recalcitrants), to show them how I apply to the obscurities of poetry his advice on the right attitude toward the obscurities of Holy Writ, I will quote his comment on Psalm 146:⁸

"There is nothing in it contradictory: somewhat there is which is obscure, not in order that it may be denied thee, but that it may exercise him that shall afterward receive it," etc.

But enough of the testimony of holy men on this point, I will not bore my opponents by again urging them to regard the obscurities of poetry as Augustine regards the obscurities of Holy Writ. Rather I wish that they would wrinkle their brows a bit, and consider fairly and squarely, how, if this is true of sacred literature addressed to all nations, in far greater measure is it true of poetry, which is addressed to the few.

If by chance in condemning the difficulty of the text, they really mean its figures of diction and oratorical colors and the beauty which they fail to recognize in alien words, if on this account they pronounce poetry obscure—my only advice is for them to go back to the grammar schools,⁹ bow to the ferule, study, and learn what license ancient authority granted the poets in such matters, and give particular attention to such alien terms as are permissible beyond common and homely use. But why dwell so long upon the subject? I could have urged them in a sentence to put off the old mind,¹ and put on the new and noble; then will that which now seems to them obscure look familiar and open. Let them not trust to concealing their gross confusion of mind in the precepts of the old orators; for I am sure the poets were ever mindful of such. But let them observe that oratory is quite different, in

7. Augustine, *Enarratio: Patrologia. Latina* 37.1675. Boccaccio's quotation immediately precedes the passage on the obscurity of Isaiah cited above [translator's note].

8. *Enarratio: Patrologia. Latina* 37.1907. The preceding words are "Honor God's Scripture, honor God's Word, though it be not plain; in reverence wait for understanding. Be not wanton to accuse either the obscurity or seeming contradiction of

Scripture" (trans. Coke) [translator's note].

9. The study of poetry was subject either to grammar or to rhetoric in the medieval scheme. See book 14, chapter 7. Though Boccaccio does not mention rhetoric in this passage, it is, like 14.7, a stroke on behalf of the liberation of poetry from technical bondage [translator's note].

1. Ephesians 4.22; Colossians 3.9 [translator's note].

arrangement of words, from fiction, and that fiction has been consigned to the discretion of the inventor as being the legitimate work of another art than oratory. "In poetic narrative above all, the poets maintain majesty of style and corresponding dignity." As saith Francis Petrarch² in the Third Book of his *Invectives*, contrary to my opponents' supposition, "Such majesty and dignity are not intended to hinder those who wish to understand, but rather propose a delightful task, and are designed to enhance the reader's pleasure and support his memory. What we acquire with difficulty and keep with care is always the dearer to us;" so continues Petrarch.³ In fine, if their minds are dull, let them not blame the poets but their own sloth. Let them not keep up a silly howl against those whose lives and actions contrast most favorably with their own. Nay, at the very outset they have taken fright at mere appearances, and bid fair to spend themselves for nothing. Then let them retire in good time, sooner than exhaust their torpid minds with the onset and suffer a violent repulse.

But I repeat my advice to those who would appreciate poetry, and unwind its difficult involutions. You must read, you must persevere, you must sit up nights, you must inquire, and exert the utmost power of your mind. If one way does not lead to the desired meaning, take another; if obstacles arise, then still another; until, if your strength holds out, you will find that clear which at first looked dark. For we are forbidden by divine command⁴ to give that which is holy to dogs, or to cast pearls before swine.

1350–62

2. Italian poet and humanist (1304–1374).

3. *Invectivae contra Medicum*, p. 1105. Petrarch has just been comparing the obscurity of poets with that of Holy Writ, not citing the difference between oratory and poetry. Boccaccio's quota-

tion, either through his carelessness or corruption of his text, differs slightly from Petrarch [translator's note].

4. Matthew 7.6 [translator's note].

CHRISTINE DE PIZAN

ca. 1365–ca. 1429

The most prolific woman writer of the Middle Ages, Christine de Pizan was the first European woman to earn a living as a writer and, as such, she was acutely aware of the difficulty of reconciling the demands of writing with the occupations of women. In *Christine's Vision* (1405), a lengthy complaint against Fortune in the tradition of Boethius's *Consolation of Philosophy* (ca. 524), she laments that "although I was naturally inclined to scholarship from my birth, my occupation with the tasks common to married women and the burden of frequent childbearing had deprived me of it." The sheer volume of her literary output is all the more remarkable for a woman who was married and bearing children at the age of fifteen.

Christine was born in Venice around 1365. Shortly after, her father, Tommaso di Benvenuto da Pizzano, an astrologer-physician, received an offer of employment from Charles V of France—the age's greatest patron—and in 1368 he brought his family to Paris. Around 1380, at "the age when young girls are customarily assigned

husbands" (according to *Christine's Vision*), Christine was married to Etienne de Castel. In the same year, the death of Charles V meant the loss of the royal patronage Tommaso had enjoyed; the family fortunes soon began to wane. In 1389 both Tommaso and Castel died, leaving Christine a twenty-five-year-old widow with three small children and a large household. Though her father and husband left her a small inheritance, they also left her with debts, which required many years of expensive litigation to settle. Fortunately, Christine's father had given her some education, so Christine turned to writing to support her family.

From 1399 until her death in 1429, Christine wrote more than twenty volumes in prose and verse, culminating in 1405 with *The Book of the City of Ladies*, the work for which she is best known. But Christine did not limit herself only to the defense of women, to the so-called *querelle des femmes* for which we remember her today. In 1404 she received her first large commission from Philip the Bold of Burgundy to write a biography of his father, Charles V. During her career, she wrote on subjects as diverse as good government (something sorely lacking in early fifteenth-century France), military strategy, religion, morality, and ethics. She died shortly after completing the *Ditié de Jehanne d'Arc* (1429, *Poem of Joan of Arc*).

In her earliest composition, *Epistle of the God of Love* (1399), Christine deplored the popularity of the *Roman de la Rose* (*Romance of the Rose*), one of the central works of medieval French literature, for its misogynistic representations of women. In 1402 she collected and published a series of letters by various hands that make up France's first literary debate—the so-called Quarrel of the *Rose*—over the merits of Jean de Meun's continuation of the poem begun by Guillaume de Lorris. In the course of this debate, Christine engaged with some of the most prominent fifteenth-century French intellectuals, including Jean Gerson, the chancellor of the University of Paris, who sided with Christine in condemning the poem, and Jean de Montreuil, the provost of Lille and a royal secretary, whose treatise in praise of the *Roman de la Rose* sparked the uproar. Our first selection, Christine's response to Montreuil's treatise, encapsulates the central issues of the debate. Christine objected to the obscene language used by some of the allegorical figures, most notably Reason's naming of the "secret parts" of the body and Genius's exhortation to procreate, and to the defamation of women in the speeches of the Duenna, the Jealous Husband, and Genius. One of the royal secretaries participating in the debate, Gontier Col, was so incensed by the criticism that he sharply attacked Christine for her presumption in contradicting Montreuil and called on her to retract her statements, a request she steadfastly refused. In Christine's mind, the two offenses—obscenity and misogyny—are linked. Some readers might see Christine's denunciation of the poem's obscenity as simply priggish; others might read it as a precursor to contemporary feminist arguments about pornography. However, she was engaging with members of the royal court in serious, age-old debates over the morality of literature and the duplicity of language.

In our second excerpt, from *The Book of the City of Ladies*, Christine continues the critique of misogyny begun in the Quarrel of the *Rose*. Her criticisms in both texts reveal a typically medieval distrust of the excesses of poetic language cut loose from proper signification. Misogynist writing is untrue because its authors have not understood the proper use of language. Christine's distrust of false representation reveals her indebtedness to theories of language pioneered by ST. AUGUSTINE, while her interest in allegory links her with writers such as Quintilian, Hugh of St. Victor, and DANTE, all of whom developed medieval notions of exegesis. Her attempt to counter the misogynist representations of the "philosophers and poets" with true representations of "good women" owes its largest debt to BOCCACCIO's *Concerning Famous Women* (1361), though she is far from being an uncritical reader of that text. While nearly three-quarters of the tales in the *City of Ladies* are found in Boccaccio's work, Christine's adaptations show her to be a resisting reader, her text a refutation of Boccaccio's often backhanded praise of women.

The opening of the *City of Ladies* illustrates some ways in which women read and write under the conditions of patriarchy. The predominance of “wicked insults” about women and their behavior in the books she reads prompts Christine to disregard everything she knows about women and to ask God why, if women were so evil, she could not have been born as a man. The process of building a “city of ladies” entails reeducating herself to read as a woman and to discern true from false representations of women. Christine’s collection of stories about illustrious women might be read as an early attempt to counter what SANDRA M. GILBERT and SUSAN GUBAR in the twentieth century call the “anxiety of authorship” suffered by the woman writer, the fear that “because she can never become a precursor, the act of creation will isolate and destroy her.” To clear the ground for a “city of ladies,” Reason, her guide, must unpack the logical errors in misogynist discourse, articulating the reasons that so many learned men would slander women. But that is only a first step. The woman writer overcomes her anxiety of authorship only by actively seeking female precursors, the task that Christine sets herself in the *City of Ladies*. Like so many female critics who would follow her—for example, MARY WOLLSTONECRAFT and VIRGINIA WOOLF—Christine recognizes that because women have been denied education and thus kept ignorant, they have been unable to counter male images of female wickedness. Despite this spirited defense of women and her importance as a feminist precursor, we would be premature to call her a feminist writer. Her social vision of women’s proper sphere is ultimately quite conservative, even for its time. Nevertheless, the *City of Ladies* remains an important document, an early voice of female resistance to the tradition of male misogyny.

Christine’s Reaction to Jean de Montreuil’s Treatise on the *Roman de la Rose*¹

Christine

To a most skillful and learned person, Master Jean Johannes, Secretary to Our Lord the King and provost of Lille.²

To my lord the provost of Lille, with reverence, honor, and esteem. Dear lord and master who is wise in morals, steeped in learning, a trained clergyman, and an expert in rhetoric: I, Christine de Pizan, an ignorant woman of inadequate opinion—for this your wisdom may well hold the insignificance of my arguments in disdain—beg you to take into consideration my female weakness. Since you had the kindness, for which I thank you, to send me a small treatise³ adorned with beautiful rhetoric and convincing arguments (where you say, it seems to me, that you can find no fault with any aspect of

1. Translated by Christine McWebb, whose notes have sometimes been abridged.

2. Christine’s letter, written in June/July 1401, is a response to a treatise sent to her by Jean de Montreuil, whom she addresses as “secretary to our lord the king.” Montreuil was a scholar of the late 14th to early 15th century and provost of Lille.

3. The small treatise refers to the *opusculum gallicum*, the treatise written by Jean de Montreuil about the *Roman* in May or June 1401, which is unfortunately lost to us today. Thanks to Christine’s meticulous reply to this treatise, we have been provided, albeit implicitly, with a summary of its content [translator’s note].

the compilation of the *Roman de la rose*,⁴ which you support and approve as you do its authors, in particular de Meun), I, having read and reflected upon it and having understood it within the limits of my small intelligence, will reply because of my disagreement with you, although this treatise was not addressed to me, nor do you require my response. Rather, I agree with the skilled cleric to whom your text is addressed,⁵ and wish to divulge and maintain openly that, with all due respect, you are mistaken in according unlimited praise to this work, which, I think, instead of being labeled useful should be called a work of idleness. As much as you reprimand your opponents and say that “it is important to understand that which is shown by another text if it is better written, longer, and well founded,” etc., I shall not be accused of presumption for daring to repudiate and criticize this famous and very skilled author. However, take heed of my firm disagreement with certain elements which you express in your treatise. In truth, a mere assertion not rightfully justified can be contradicted without bias. Although I am neither learned nor eloquent in style (beautiful phrases and polite, elegant words would certainly make my arguments shine), I will nevertheless express my opinion plainly and in simple French, even if I cannot express it properly in adorned speech.⁶

Yet why did I say earlier that this book “ought rather be called a work of idleness . . .”? Without a doubt, it seems to me that a thing without use for anyone, regardless of how painstakingly it was done, may be called idle or worse than idle, even more so if it turns out to be harmful. When, some time ago and after I had acquired sufficient knowledge to understand such things, I wished to read this romance because of its great reputation, I read and thought about it at great length and tried to the best of my ability to understand it. It is true that I skipped the passages which were not to my liking, just as a rooster skips over hot embers: therefore, I did not read it in its entirety.⁷ Nevertheless, I remember some things in it which I condemn very much. Moreover, I cannot approve of the praise coming from others for this work. It is also true that my limited understanding finds great beauty in many parts of the work, where he solemnly expresses what he wishes to say in very beautiful phrases and graceful leonine rhymes.⁸ What he wished to say, he could not have said more skillfully, nor in a better rhyme. But in agreeing with the opinion which you contradict, there is no doubt in my mind that he sometimes speaks dishonorably, as when he speaks about the character whom he calls Reason, who calls the secret parts plainly by their

4. An allegorical poem in the form of a dream vision. The first 4,058 lines were written around 1230 by Guillaume de Lorris, a poet about whom little else is known. Around 1275, the poet and philosopher Jean de Meun (ca. 1250–ca. 1305) composed an additional 17,724 lines, his only extant work. The debate revolves primarily around certain notorious passages in de Meun's continuation.

5. This “especial clerc soubtil” has been identified as Nicolas de Clamanges [translator's note] (1360–1437), a member of the circle of Parisian theologians who participated in the debate over the *Roman de la Rose*.

6. Letter writers in the Middle Ages often included a formulaic expression of humility; while it is not to be taken too seriously, Christine frequently deploys it ironically against her interlocutors.

7. The fact that Christine admits she did not read

the *Roman* in its entirety will later on become a significant point of contention in Pierre Col's reply to both Christine and Jean de Gerson [translator's note]. Gerson (1363–1429), a prominent theologian and chancellor of the University of Paris, was a participant in the debate over the *Roman de la Rose* who also condemned the poem. Col (ca. 1352–1416), another of Christine's opponents, was a royal secretary and canon of Paris and Tournai.

8. Traditionally defined as internal rhymes: that is, words that rhyme in the middle and end of a line. In *L'Art de dictier* (1392, *The Art of Writing Poetry*)—the first French treatise on versification—the poet Eustache Deschamps applied the term to a rhyme scheme that involves all a word's syllables (thus *timing/rhyming* is a leonine rhyme by his definition, while *singing/running* is not).

names.⁹ You openly proclaim his view as logical and invoke—rightfully, I admit—that there is no ugliness in all things which God created, and consequently their names need not be hidden, because all things coming from Him are pure and clean, since in the state of innocence there was no ugliness in naming them. Yet through the corruption of sin mankind was ruined, and original sin has remained (as is shown in Holy Scripture). If I may argue by analogy: God made Lucifer the most beautiful among the angels and gave him a solemn and beautiful name,¹ which was later reduced to terrible ugliness through his sin. As a result, the name, beautiful as it may be in itself, terrifies those who hear it because of its association with the person.

You also quote Jesus Christ who, “when He spoke of the female sinners, called them *meretrix*,” etc.² That He called them thus can be explained: It is not shameful to say the word *meretrix*, because it refers to an abject thing; words more abject than this could be used, even in Latin. What is shameful, however, is to speak in public of things of which Nature herself would be ashamed. With all due respect for the author and for you, I must say that you sin greatly against the noble virtue of shame, which by definition restrains obscenities and disgrace in word and deed. That this is a great vice and against honorable government and good custom is written in many places in Holy Scripture. And the word “which was merely called relics”³ must be repudiated. I grant you, it is not the word which causes the disgrace of the thing, but the thing which renders the word disgraceful. It is for this reason, in my feeble opinion, that one must speak of these things only when absolutely necessary, such as in the case of an illness or for some other legitimate reason. Just as our first parents hid these parts naturally, so must we, in deed and in speech.

I cannot yet be silent about that which dissatisfies me immensely: He makes it Reason’s task, whom he himself calls daughter of God, to propound such speech, and in the form of a dictum, as I note in the passage where she says to the Lover that “in the war of love . . . it is better to deceive than to be deceived.”⁴ In fact, I dare say that with this statement Master Jean de Meun’s Reason has denounced her Father because He Himself taught her a very different lesson. And it cannot be that both statements are valid; this would mean that both are good. I think the opposite is true: Clearly, to be deceived is not as bad as to deceive, for the vice of pure perfidy is much worse than that of simple ignorance.

Now let us consider further the subject matter or manner of speech to which many would reasonably object. Good God! What disgust! What disgrace! And the exhortations which he teaches in the passage of the Duenna!⁵ By God! Who could possibly find anything but specious advice in them, full of insults and baseness? Hey, those of you who have beautiful daughters and

9. A central issue in the debate over the *Roman* is Lady Reason’s defense of her practice of naming the testicles (7078–86), which Christine and Gerson both found “shameful.”

1. Literally, “bringer of light”; in Christian theology, the name given to Satan before his fall from heaven.

2. That is, prostitute; see Matthew 21.31 and Luke 15.30 [translator’s note].

3. In her discussion on words and their meaning, Lady Reason stresses the arbitrariness of the sign

and the absence of relation between word and thing as she admits that “coilles” [testicles] could be called “reliques” [relics] or vice versa. Let us not forget that *reliques* is the term used later on in the narrative to describe the sacred, untouched vagina of the young virgin [translator’s note].

4. *Roman de la Rose* 4261–62.

5. A chaperone or nurse. In the *Roman*, the Duenna acts as a go-between for the Lover; her account of her life (12710–4516) is filled with conventional misogynist themes.

wish to introduce them to an honorable life, give them—yes, ask for and give them—the *Roman de la rose* in order that they may learn how to distinguish good from bad. What am I saying? I mean bad from good! And to what end should anyone listen to such insults? Then, in the passage of the Jealous Husband,⁶ my God, what could possibly be the benefit of such shameful and insulting speech, frequently uttered by those poor souls afflicted by this illness? What good example can this possibly set? And the insults of women—which can be found in that passage and which many dismiss by pointing out that it is the Jealous Husband speaking and that, indeed, this can be compared to God speaking through the mouth of Jeremiah!⁷ Yet surely, then, the other lies he added can in no way, God be thanked, lessen or worsen the situation for women. For when I remember the deceits, hypocrisies, and lies that occur in marriage or any other state which can be learned from this treatise, I certainly think that by comparison these are beautiful and good to hear!

And the character whom he calls the priest Genius⁸ truly speaks wondrously: no doubt, Nature's works would have vanished entirely long ago, had he not so highly recommended them! By God, I would like to find someone who can explain to me the advantage of the long speech full of venom that he calls a "sermon," as if to deride holy preaching—delivered, he says, by this so-called Genius. In it such disgrace and specious words are used, fanning the flames of Nature's secrets, which ought to remain tacit and not be named, because it is impossible to see a work come to an end which logically cannot end: if the opposite were true, it would be advantageous for the continuation of humankind to find and utter fiery words and terms to encourage mankind to continue this work.

The author goes even further, if I remember correctly, though I cannot for the life of me understand to what purpose. In this sermon he uses metaphor to associate paradise and the joys that can be found there. He rightfully says that the virtuous will go there, and then announces that all men and women, without exception, should perform and carry out Nature's works⁹—no exception made, as if he wished to say (and, in fact, does say plainly)—that it is precisely these people who will be saved. It seems that he wishes to maintain that lechery is not a sin but, on the contrary, a virtue, which is wrong and against the law of God. Ha! What a notion, and what a doctrine! No good can possibly come of it! I think that many left the worldly life and have chosen to enter the monastic one, becoming hermits for the Holy Scripture, or have chosen to turn their backs on a sinful life, saving themselves from this kind of exhortation which, I dare tell those who will not like to hear it, will lead inevitably to immorality, decay, and vice, possibly causing great misfortune and sin.

And there is more, my God! Let us look a little further! How can his excessive, impetuous, and false accusations, insults, and defamation of women—whom he accuses of several great vices and perverse habits—possibly be valid

6. *Roman* 8437–9330.

7. According to the book of Jeremiah of the Old Testament, the prophet began his career in 627/26 [B.C.E.], the thirteenth year of King Josiah's reign. It is told there that he responded to Yahweh's call to prophesy by protesting, "I do not know how to speak, for I am only a youth" [translator's note].

8. An allegorical figure whose argument for the

fecundity of nature (19475–20637) seems to Christine to advocate sexual license.

9. That is, engage in sexual intercourse. Genius wants to excommunicate and condemn "all those disloyal apostates, of high rank or low, who hold in despite the acts by which Nature is supported" (*Roman* 19500–502).

and purposeful? His appetite for such statements and examples seems insatiable. And if you wish to tell me that the Jealous Husband says these things out of anger, I do not understand why it is Genius's task to vehemently recommend and exhort that one share a bed with them [women] without refraining from the work he so praises. At the same time, however, he rants and raves about them, saying in fact, "Flee! Flee! Flee from the venomous serpent!"¹ Yet he goes on to say that one should not cease to follow them. This is a flagrant contradiction, to command one to flee from that which one is supposed to follow and follow that from which he wishes one to flee. Since women are so perverse, he should command men not to approach them at all, because one should always avoid the risk of encountering misfortune.

And since he so strongly forbids men to confide in women, who, he claims, are so eager to know their secrets²—though I do not know where the devil he found such rubbish and tainted speech, which he arranges in a long passage—I ask all those who believe that this is true to tell me when they have seen a man accused or killed, hanged, or reprimanded in the streets due to the indiscretion of his wife. I think they will be hard to find. That being said, it is always wise and noble to keep one's secrets hidden, because there is perfidy everywhere. As I heard tell not long ago, for example, there was someone who was accused and then hanged after being denounced by a friend in whom he had confided. Yet I think that neither the complaints nor the rumors of such terrible sins, disloyalties, and evil acts, which women purportedly commit in a mean spirit of complicity, will go very far in the court of law. In the end, a true secret is that which belongs to no one! I have already spoken about this in one of my poems, *L'Epistre au Dieu d'Amour*.³ Where are the countries and kingdoms which have been exiled due to the great injustices caused by women? Let us not speak arbitrarily: Of which terrible crimes can even the worst and the most deceptive be accused? Truly, what can they do to betray you? If they ask for money from your purse, they will not simply steal it from you. So do not give it to them if you do not wish to! And if you say that they have made a fool of you, do not let them! Will they seek you out in your place of lodging, pleading with you or taking you by force? It would be nice to know how it is that they deceive you.

Moreover, he speaks unnecessarily and defamingly of married women who terribly betray their husbands, though he cannot know about the married state from experience,⁴ and thus can only speak about it in general terms. What good does this do, and what can come of this? It can serve only to impede happiness and peace in marriage and to render husbands suspicious, who hear so much babbling and exaggeration and believe it, and it causes them to have little love for their wives. My God, what a biased exhortation! And, indeed, since he insults all women, I am forced to believe that he did not know nor was he acquainted with any honorable and virtuous woman, but, having known only fallen ones who led sinful lives, as the lecherous tend to do, he thought he knew—or claimed to know—that they must all be like this. And if he had only insulted the dishonorable ones and counseled men to flee them, he would have given a good lesson. But no, he accuses them all, without exception. Since he thinks they are deprived of reason and accuses them

1. A paraphrase of *Roman* 16548–86.

2. See *Roman* 16347–706.

3. *Epistle of the God of Love* (1399).

4. As a priest, he is celibate.

wrongfully, he himself should be blamed instead because he is so far from the truth; and his lie is not credible, since the contrary is so obviously true. For if he and all his partisans in this case had sworn that there were, are, and will be many worthy, honorable, educated, and even knowledgeable women who bring more good to the world than he ever did, even in worldly politics and in wise virtue, no harm will be done to anyone. Similarly, there were many who brought about reconciliation with their husbands and quietly kept the secret of their dealings and confidences and suffering even if their husbands were violent and bad lovers. Enough proof can be found of this in the Bible and in other ancient stories, such as in the lives of Sarah, Rebecca, Esther, Judith,⁵ and many others. And even nowadays, there are many courageous and noble ladies of France, such as the holy and pious Queen Jeanne, Queen Blanche, the Duchess of Orléans (daughter of the King of France), and the Duchess of Anjou, now Queen of Sicily.⁶ They are beautiful, chaste, honorable, and knowledgeable, as are many others. Further, there are many courageous bourgeois ladies such as my Lady of Ferté,⁷ wife of Seigneur Pierre de Craon—she is to be praised—and others too numerous to mention here.

And you must believe me, dear sir, that I do not sustain these opinions in favor of women simply because I am myself a woman. For, to be sure, my purpose is simply to uphold the absolute truth because I know from experience that the truth is contrary to those things which I am denying. And as much as I am a woman, I am much better able to speak of these things than one who has no experience in this matter, and who thus can go only by mere assumption and guessing.

And then after all this, by God, let us consider the end of this treatise!⁸ As a certain proverb says, "Things finish in the end." Pay heed to the purpose of this very awful and shameful conclusion; what am I saying? Shameful? It is so shameful that I dare say that no one who loves virtue and honor will hear this shameful ruse without being ashamed and outraged, when Shame and Reason would not even allow decent people to think these disgraces, let alone listen to them. What is worse, I dare say that no one who loves virtue and honor will hear this shameful ruse without feeling ashamed and outraged, when Shame and Reason. . . . So why praise a text which no one will dare read nor tell in a proper setting—at the table of queens, princesses, or bourgeois ladies, for whom it would be appropriate to cover their faces, to blush with shame? And if you wish to excuse him claiming that it pleased him to use such images for the end of his love tale for the sake of embellishing it, I respond that he does not tell or teach us anything extraordinary whatsoever! Is it not known how men and women customarily copulate? If

5. This list of female biblical exempla will appear again in some of Christine's subsequent works, most notably in the *Livre de la cité des dames* [*Book of the City of Ladies*] (book 2, chapters 31, 32, 38, 39) [translator's note]. Judith: a Jewish widow who delivered the Jews from the Assyrians by beheading their commander, Holofernes (see Judith, an early book not included in the canonical Hebrew Bible). Sarah: wife of Abraham and mother of Isaac (Genesis 12–23). Rebecca: wife of Isaac and mother of Jacob and Esau (Genesis 24–27). Esther: queen of the Persian king Ahasuerus (Xerxes), who saved her fellow Jews from massacre (see Esther).

6. Marie de Châtillon (ca. 1343–1404), daughter

of Charles de Blois, duke of Brittany, who married Louis I of Anjou, younger brother of Charles V. Queen Jeanne (1310–1371), Jeanne d'Evreux, third wife of the French king Charles IV. Queen Blanche (1331–1398), Blanche of Navarre, the second wife of the French king Philip VI. Duchess of Orléans (1328–1392), Blanche of France, daughter of Charles IV and Jeanne d'Evreux, wife of Philip of Orleans (son of Philip VI).

7. Jeanne de Châtillon (ca. 1390–1426/27); her husband was lord of Sablé and La Ferté-Bernard in Brittany.

8. The poem ends with the male Lover's successful attack on the tower and his deflowering of the rose.

he had told us how bears, lions, or birds or other things behaved, and how they were created, it would have been funny because of the mockery, but he tells us nothing new. Surely, he could have used more pleasant and more courtly expressions, which would have pleased beautiful and honorable lovers better, as it would any other virtuous person.

Therefore, according to my limited intelligence and weak judgment and my lack of prolix language, though much more could be said and could be better expressed, I do not find this treatise useful in any way. Instead, it seems to me that great effort was undertaken for little gain. Despite my judgment, I admit that Master Jean de Meun was a very skilled and eloquent cleric who could have created a much more useful doctrine had he applied himself to it—which is a shame, but I suppose that instead of by usefulness, he was guided by his great love for carnality, which consumed him. After all, it is known that our actions reveal our inclinations. This said, I do not rebuke the *Roman de la rose* in its entirety, since without a doubt, it contains good and well-said things. In fact, the danger is all the greater because more credibility is given to the bad even if the good holds more authority and truth. Through this many errors have been planted, cleverly mixed in with truth and virtue. As his priest Genius says, “Flee, flee from women, the evil serpents hidden under the grass!” And he goes on: “Flee, flee the evil hidden beneath the shadow of good and virtue!”

So in conclusion, I say to you, dear sir, and to all your allies and partisans, who praise his work so highly that you are prepared to dare elevate it above all others, with all due respect, it is not worthy of such praise. You do not do other more worthy works justice, because a work without usefulness, which is harmful for the common good even if it is delightful and was painstakingly written, cannot be praised. Let us consider the example of the victorious Romans who, in former times, attributed no praise or honor to something which did not serve a public purpose. Then let us decide whether we are able to crown this romance with laurels.⁹ After having considered these things and numerous others, I think it deserves to be buried in flames rather than crowned with laurels, although you claim it to be a “mirror for good living, a model for all estates to lead a life of wise social and moral conduct.”¹ With all due respect: On the contrary, I call it an exhortation to vice, encouraging immoral life, a doctrine full of deceit; the path to damnation; a public defamer. It gives rise to suspicion and idolatry, to shame for many people, and possibly to heresy.²

I am convinced, however, since you protect him, that you will reply that the good is there to exhort others to practice it, and the bad is there to be avoided. If only I could persuade you that human nature, which is in itself inclined to sinfulness, does not need to be reminded of its limp in order to walk straight. And speaking of all the good which can be noted in this work, certainly more virtuous things, even things relating to social and moral conduct,

9. In the ancient world, laurel wreaths were given to the victors in Greek athletic games and in Roman battles; they were also associated with the triumphs of poets.

1. Jean de Meun proposes the term *Mirror for Lovers* as an alternative title for his continuation of the *Roman*. The term *mirror* inserts the *Roman* in the framework of this didactic genre alongside the numerous contemporary mirrors for princes

and princesses. The reference here is to Jean de Montreuil's lost treatise; however, it does come up again in one of his Latin epistles [translator's note].

2. This is the first mention of a possible accusation of heresy by Christine, which will become a recurrent threat uttered by her and Jean Gerson [translator's note].

can be found in many other works by renowned philosophers such as Aristotle, Seneca, Saint Paul, Saint Augustine,³ and so forth, who as you know attest to and teach the virtues and to flee vices much more effectively, eloquently, and profitably than ever was Jean de Meun able to do. But what will be remembered above all are the carnal pleasures, in the same way the invalid abuses his doctor's permission to drink, and out of gluttony believes that drinking will do him no harm. I am certain that you—to whom God allows it—and all the others onto whom God has bestowed clarity and a good conscience, untarnished by sin or its intention, will do penitence (the purpose of which is to bare the secrets of our conscience and to condemn our own will as judge of truth) and will judge the *Roman de la rose* properly and wish perhaps that you had never seen it. This will suffice.

I should not be accused of madness, arrogance, or pretentiousness in that I, a woman, dared to criticize such a skilled author and to diminish the praise of his work, when he alone dared to defame and to insult, without exception,⁴ an entire sex.

1402

*From The Book of the City of Ladies*¹

From Part One

I. HERE BEGINS THE BOOK OF THE CITY OF LADIES, WHOSE FIRST CHAPTER TELLS WHY AND FOR WHAT PURPOSE THIS BOOK WAS WRITTEN.

Following the practice that has become the habit of my life, namely the devoted study of literature, one day as I was sitting in my study, surrounded by books on many different subjects, my mind grew weary from dwelling at length on the weighty opinions of authors whom I had studied for so long. I looked up from my book, deciding then to leave subtle questions in peace and to read some lyric poetry for pleasure. With this intention, I searched for some small book, and by chance a strange volume came into my hands, not one of my own but one which had been given to me for safekeeping along with some others. When I held it open and saw from its title page that it was by Mathéolus,² I smiled, for though I had never seen it before, I had often heard that like other books it discussed respect for women. I thought I would browse through it to amuse myself. I had not been reading for very long when my good mother called me to refresh myself with some supper, for it was evening. Intending to look at it the next day, I put it down. The next morning, again seated in my study as was my habit, I remembered wanting to

3. For ARISTOTLE (384–322 B.C.E.) and AUGUSTINE (354–430 C.E.), see above. Seneca (ca. 4 B.C.E.–65 C.E.), Roman Stoic philosopher, statesman, and dramatist. Saint Paul (d. ca. 67 C.E.), Roman Jew whose conversion to Christianity is recorded in Acts of the New Testament, to whom all New Testament Epistles were attributed.

4. In this debate, Gontier Col, brother of Pierre, did in fact reprimand Christine for her “error

and manifest foolishness which was caused by your pretentiousness, as a woman passionate about this matter.”

1. Translated by Earl Jeffrey Richards.

2. The *Liber Lamentationum Matheoluli* (*The Book of the Lamentations of Mathéolus*), composed around 1300, translated from Latin into French in the last decades of the 14th century.

examine this book by Mathéolus. I started to read it and went on for a little while. Because the subject seemed to me not very pleasant for people who do not enjoy lies, and of no use in developing virtue or manners, given its lack of integrity in diction and theme, and after browsing here and there and reading the end, I put it down in order to turn my attention to more elevated and useful study. But just the sight of this book, even though it was of no authority, made me wonder how it happened that so many different men—and learned men among them—have been and are so inclined to express both in speaking and in their treatises and writings so many devilish and wicked thoughts about women and their behavior. Not only one or two and not even just this Mathéolus (for this book had a bad name anyway and was intended as a satire) but, more generally, judging from the treatises of all philosophers and poets and from all the orators—it would take too long to mention their names—it seems that they all speak from one and the same mouth. They all concur in one conclusion: that the behavior of women is inclined to and full of every vice. Thinking deeply about these matters, I began to examine my character and my conduct as a natural woman, and, similarly, I discussed this with other women whose company I frequently kept, princesses, great ladies, women of the middle and lower classes in great numbers, who graciously told me of their private experiences and intimate thoughts, in order to know in fact—judging in good conscience and without favor—whether the testimony of so many famous men could be true. To the best of my knowledge, no matter how long I confronted or dissected the problem, I could not see or realize how their claims could be true when compared to the natural behavior and character of women. Yet I still argued vehemently against women, saying that it would be impossible that so many famous men—such solemn scholars, possessed of such deep and great understanding, so clear-sighted in all things, as it seemed—could have spoken falsely on so many occasions that I could hardly find a book on morals where, even before I had read it in its entirety, I did not find several chapters or certain sections attacking women, no matter who the author was. This reason alone, in short, made me conclude that, although my intellect did not perceive my own great faults and, likewise, those of other women because of its simpleness and ignorance, it was however truly fitting that such was the case. And so I relied more on the judgment of others than on what I myself felt and knew. I was so transfixed in this line of thinking for such a long time that it seemed as if I were in a stupor. Like a gushing fountain, a series of authorities, whom I recalled one after another, came to mind, along with their opinions on this topic. And I finally decided that God formed a vile creature when He made woman, and I wondered how such a worthy artisan could have deigned to make such an abominable work which, from what they say, is the vessel as well as the refuge and abode of every evil and vice. As I was thinking this, a great unhappiness and sadness welled up in my heart, for I detested myself and the entire feminine sex, as though we were monstrosities in nature. And in my lament I spoke these words:

“Oh, God, how can this be? For unless I stray from my faith, I must never doubt that Your infinite wisdom and most perfect goodness ever created anything which was not good. Did You yourself not create woman in a very special way and since that time did You not give her all those inclinations which it pleased You for her to have? And how could it be that You could go wrong in anything? Yet look at all these accusations which have been

judged, decided, and concluded against women. I do not know how to understand this repugnance. If it is so, fair Lord God, that in fact so many abominations abound in the female sex, for You Yourself say that the testimony of two or three witnesses lends credence,³ why shall I not doubt that this is true? Alas, God, why did You not let me be born in the world as a male, so that all my inclinations would be to serve You better, and so that I would not stray in anything and would be as perfect as a male is said to be? But since Your kindness has not been extended to me, then forgive my negligence in Your service, most fair Lord God, and may it not displease You, for the servant who receives fewer gifts from his lord is less obliged in his service." I spoke these words to God in my lament and a great deal more for a very long time in sad reflection, and in my folly I considered myself most unfortunate because God had made me inhabit a female body in this world.⁴

* * *

4. HERE THE LADY EXPLAINS TO CHRISTINE THE CITY WHICH SHE
HAS BEEN COMMISSIONED TO BUILD AND HOW SHE WAS CHARGED
TO HELP CHRISTINE BUILD THE WALL AND ENCLOSURE, AND
THEN GIVES HER NAME.

"Thus, fair daughter, the prerogative among women has been bestowed on you to establish and build the City of Ladies. For the foundation and completion of this City you will draw fresh waters from us as from clear fountains, and we will bring you sufficient building stone, stronger and more durable than any marble with cement could be. Thus your City will be extremely beautiful, without equal, and of perpetual duration in the world.

"Have you not read that King Tros founded the great city of Troy with the aid of Apollo, Minerva, and Neptune,⁵ whom the people of that time considered gods, and also how Cadmus founded the city of Thebes with the admonition of the gods? And yet over time these cities fell and have fallen into ruin. But I prophesy to you, as a true sybil,⁶ that this City, which you will found with our help, will never be destroyed, nor will it ever fall, but will remain prosperous forever, regardless of all its jealous enemies. Although it will be stormed by numerous assaults, it will never be taken or conquered.

"Long ago the Amazon kingdom⁷ was begun through the arrangement and enterprise of several ladies of great courage who despised servitude, just as history books have testified. For a long time afterward they maintained it under the rule of several queens, very noble ladies whom they elected themselves, who governed them well and maintained their dominion with great strength. Yet, although they were strong and powerful and had conquered a large part of the entire Orient in the course of their rule and terrified all the neighboring lands (even the Greeks, who were then the flower of all countries in the world, feared them), nevertheless, after a time,

3. See Deuteronomy 17.6.

4. While she is engaged in this lamentation, three ladies appear to Christine, comforting her. The first speaks to her, telling her that with their help she will build a city of ladies, which would house "ladies who are of good reputation and worthy of praise."

5. Christine uses the Roman names of the Greek gods: Apollo, god of music and philosophy; Minerva (Athena), goddess of war and wisdom; and Neptune (Poseidon), god of the sea.

6. In ancient Greece, a female oracle.

7. In Greek mythology, a kingdom of female warriors.

the power of this kingdom declined, so that as with all earthly kingdoms, nothing but its name has survived to the present. But the edifice erected by you in this City which you must construct will be far stronger, and for its founding I was commissioned, in the course of our common deliberation, to supply you with durable and pure mortar to lay the sturdy foundations and to raise the large walls, all around, high, wide, and with mighty, entrenched towers, blockhouses, moats, and palisades,⁸ just as is fitting for a city with a strong and lasting defense. Following our plan, you will set the foundations deep to last all the longer, and then you will raise the walls so high that they will not fear anyone. Daughter, now that I have told you the reason for our coming and so that you will more certainly believe my words, I want you to learn my name, by whose sound alone you will be able to learn and know that, if you wish to follow my commands, you have in me an administrator so that you may do your work flawlessly. I am called Lady Reason; you see that you are in good hands. For the time being then, I will say no more.”⁹

* * *

8. HERE CHRISTINE TELLS HOW, UNDER REASON’S COMMAND
AND ASSISTANCE, SHE BEGAN TO EXCAVATE THE EARTH
AND LAY THE FOUNDATION.

Then Lady Reason responded and said, “Get up, daughter! Without waiting any longer, let us go to the Field of Letters. There the City of Ladies will be founded on a flat and fertile plain, where all fruits and freshwater rivers are found and where the earth abounds in all good things. Take the pick of your understanding and dig and clear out a great ditch wherever you see the marks of my ruler, and I will help you carry away the earth on my own shoulders.”

I immediately stood up to obey her commands and, thanks to these three ladies, I felt stronger and lighter than before. She went ahead, and I followed behind, and after we had arrived at this field I began to excavate and dig, following her marks with the pick of cross-examination. And this was my first work:

“Lady, I remember well what you told me before, dealing with the subject of how so many men have attacked and continue to attack the behavior of women, that gold becomes more refined the longer it stays in the furnace, which means the more women have been wrongfully attacked, the greater waxes the merit of their glory. But please tell me why and for what reason different authors have spoken against women in their books, since I already know from you that this is wrong; tell me if Nature makes man so inclined or whether they do it out of hatred and where does this behavior come from?”

Then she replied, “Daughter, to give you a way of entering into the question more deeply, I will carry away this first basketful of dirt. This behavior most certainly does not come from Nature, but rather is contrary to Nature, for no connection in the world is as great or as strong as the great love

8. Defensive features of a medieval town. “Palisades”: defensive walls enclosing a structure. “Blockhouses”: small defensive forts, usually single buildings covering access to some strategic point.

9. The second and third ladies introduce themselves as Rectitude and Justice. Christine thanks the ladies for their comfort and promises to obey them in all things.

which, through the will of God, Nature places between a man and a woman. The causes which have moved and which still move men to attack women, even those authors in those books, are diverse and varied, just as you have discovered. For some have attacked women with good intentions, that is, in order to draw men who have gone astray away from the company of vicious and dissolute women, with whom they might be infatuated, or in order to keep these men from going mad on account of such women, and also so that every man might avoid an obscene and lustful life. They have attacked all women in general because they believe that women are made up of every abomination."

"My lady," I said then, "excuse me for interrupting you here, but have such authors acted well, since they were prompted by a laudable intention? For intention, the saying goes, judges the man."

"That is a misleading position, my good daughter," she said, "for such sweeping ignorance never provides an excuse. If someone killed you with good intention but out of foolishness, would this then be justified? Rather, those who did this, whoever they might be, would have invoked the wrong law; causing any damage or harm to one party in order to help another party is not justice, and likewise attacking all feminine conduct is contrary to the truth, just as I will show you with a hypothetical case. Let us suppose they did this intending to draw fools away from foolishness. It would be as if I attacked fire—a very good and necessary element nevertheless—because some people burnt themselves, or water because someone drowned. The same can be said of all good things which can be used well or used badly. But one must not attack them if fools abuse them, and you have yourself touched on this point quite well elsewhere in your writings.¹ But those who have spoken like this so abundantly—whatever their intentions might be—have formulated their arguments rather loosely only to make their point. Just like someone who has a long and wide robe cut from a very large piece of cloth when the material costs him nothing and when no one opposes him, they exploit the rights of others. But just as you have said elsewhere, if these writers had only looked for the ways in which men can be led away from foolishness and could have been kept from tiring themselves in attacking the life and behavior of immoral and dissolute women—for to tell the straight truth, there is nothing which should be avoided more than an evil, dissolute, and perverted woman, who is like a monster in nature, a counterfeit estranged from her natural condition, which must be simple, tranquil, and upright—then I would grant you that they would have built a supremely excellent work. But I can assure you that these attacks on all women—when in fact there are so many excellent women—have never originated with me, Reason, and that all who subscribe to them have failed totally and will continue to fail. So now throw aside these black, dirty, and uneven stones from your work, for they will never be fitted into the fair edifice of your City.

"Other men have attacked women for other reasons: such reproach has occurred to some men because of their own vices and others have been moved by the defects of their own bodies, others through pure jealousy, still others by the pleasure they derive in their own personalities from slander.

1. Reason may be referring to Christine's letters in the debate over *The Romance of the Rose* (see above).

Others, in order to show they have read many authors, base their own writings on what they have found in books and repeat what other writers have said and cite different authors.

* * *

From *Part Two*

36. AGAINST THOSE MEN WHO CLAIM IT IS NOT GOOD
FOR WOMEN TO BE EDUCATED.

Following these remarks,² I, Christine, spoke, “My lady, I realize that women have accomplished many good things and that even if evil women have done evil, it seems to me, nevertheless, that the benefits accrued and still accruing because of good women—particularly the wise and literary ones and those educated in the natural sciences whom I mentioned above—outweigh the evil. Therefore, I am amazed by the opinion of some men who claim that they do not want their daughters, wives, or kinswomen to be educated because their mores³ would be ruined as a result.”

She responded, “Here you can clearly see that not all opinions of men are based on reason and that these men are wrong. For it must not be presumed that mores necessarily grow worse from knowing the moral sciences, which teach the virtues, indeed, there is not the slightest doubt that moral education amends and ennobles them. How could anyone think or believe that whoever follows good teaching or doctrine is the worse for it? Such an opinion cannot be expressed or maintained. I do not mean that it would be good for a man or a woman to study the art of divination⁴ or those fields of learning which are forbidden—for the holy Church did not remove them from common use without good reason—but it should not be believed that women are the worse for knowing what is good.

“Quintus Hortensius, a great rhetorician and consumately skilled orator in Rome, did not share this opinion. He had a daughter, named Hortensia,⁵ whom he greatly loved for the subtlety of her wit. He had her learn letters and study the science of rhetoric, which she mastered so thoroughly that she resembled her father Hortensius not only in wit and lively memory but also in her excellent delivery and order of speech—in fact, he surpassed her in nothing. As for the subject discussed above, concerning the good which comes about through women, the benefits realized by this woman and her learning were, among others, exceptionally remarkable. That is, during the time when Rome was governed by three men,⁶ this Hortensia began to support the cause of women and to undertake what no man dared to undertake. There was a question whether certain taxes should be levied on women and on their jewelry during a needy period in Rome. This woman’s eloquence was so compelling that she was listened to, no less readily than her father would have been, and she won her case.

2. Spoken by Christine’s second guide, Rectitude.

3. Moral attitudes.

4. Occult practices.

5. Hortensia appears in BOCCACCIO’s *Concerning Famous Women* (1361), chap. 82. Quintus Hor-

tensius: dictator (in the Roman Republic, a temporary position of great power) appointed in 287 B.C.E.

6. Rome was usually governed by two men (consuls elected for 1-year terms); the third here is the dictator.

“Similarly, to speak of more recent times, without searching for examples in ancient history, Giovanni Andrea,⁷ a solemn law professor in Bologna not quite sixty years ago, was not of the opinion that it was bad for women to be educated. He had a fair and good daughter, named Novella, who was educated in the law to such an advanced degree that when he was occupied by some task and not at leisure to present his lectures to his students, he would send Novella, his daughter, in his place to lecture to the students from his chair. And to prevent her beauty from distracting the concentration of her audience, she had a little curtain drawn in front of her. In this manner she could on occasion supplement and lighten her father’s occupation. He loved her so much that, to commemorate her name, he wrote a book of remarkable lectures on the law which he entitled *Novella super Decretalium*,⁸ after his daughter’s name.

“Thus, not all men (and especially the wisest) share the opinion that it is bad for women to be educated. But it is very true that many foolish men have claimed this because it displeased them that women knew more than they did. Your father, who was a great scientist and philosopher, did not believe that women were worth less by knowing science; rather, as you know, he took great pleasure from seeing your inclination to learning. The feminine opinion of your mother, however, who wished to keep you busy with spinning and silly girlishness, following the common custom of women, was the major obstacle to your being more involved in the sciences. But just as the proverb already mentioned above says, ‘No one can take away what Nature has given,’ your mother could not hinder in you the feeling for the sciences which you, through natural inclination, had nevertheless gathered together in little droplets. I am sure that, on account of these things, you do not think you are worth less but rather that you consider it a great treasure for yourself; and you doubtless have reason to.”

And I, Christine, replied to all of this, “Indeed, my lady, what you say is as true as the Lord’s Prayer.”

* * *

1405

7. Andrea (1275–1347) must have been known to Christine’s father.

8. Literally, “new things about the decrees” (Latin).

JOACHIM DU BELLAY

ca. 1522–1560

Joachim du Bellay is known for having written one of the first theoretical defenses of a vernacular language against an imperial language. Contemporary postcolonial writers often attack the prestige of European languages, but those same European languages were once considered by Renaissance authors to be inferior to Latin and Greek. In *The Defense and Enrichment of the French Language* (1549), Joachim du Bellay argued that with careful cultivation, French was capable of equaling Greek

and Latin as a literary language. But du Bellay's defense of the vernacular was paradoxically also an attack on the vernacular: French poetry, in his view, had to abandon its own popular forms in order to acquire the dignity of the classics.

Born in Anjou (France), a younger son in a minor branch of an ancient and noble French family, Joachim du Bellay possessed, from the beginning, both nobility and resentment. Impoverished, in poor health, and abandoned, du Bellay was to dream of a future as noble as the past—a nobility obtained through the pen rather than the sword. He was a frail child, and one of his long illnesses later left him nearly deaf. Both his parents had died by the time he was ten, leaving him in the care of an older brother. In one of the few references to his early years, Joachim berates his brother for indifference and for neglecting his education. Still, he did learn Latin and ultimately left home to study law at Poitiers, where he appears to have concentrated more on studying rhetoric and entering poetry competitions. His time at Poitiers is described by scholars as setting the scene for his entrance into the world of scholarship, poetry, and the life of the mind, the world that would become his legacy.

By all accounts, the turning point of du Bellay's life was the day he met Pierre de Ronsard, a distant cousin encountered by chance, apparently at a country inn. They were about the same age, with a common passion for learning and a shared love of poetry. Ronsard was a student in Paris at the Collège de Coqueret, a small, run-down boardinghouse that was one of many colleges that then formed the University of Paris. Du Bellay moved to Paris and enrolled at Coqueret in 1547.

Jean Dorat, the master at Coqueret, was a young, enthusiastic scholar of Greek philology, the historical and comparative study of the language, literature, and culture of ancient Greece. As master, he transformed the college into a center of humanism and rigorous scholarship. The handful of young noblemen who lived there studied literally around the clock, sometimes working in shifts to make the most efficient use of candles. They learned Greek, Latin, and Italian poetry and argued about translations, rhetoric, and the use of language. They soon began to see themselves as a unified group destined to bring about revolutionary changes in poetry. The group first called itself the Brigade but later chose a more peaceful, and more grandiose, name: the *Pléiade*, or constellation of seven poets (Pierre de Ronsard, Joachim du Bellay, Jean-Antoine de Baïf, Etienne Jodelle, Pontus de Tyard, Rémy Belleau, and Jean Dorat himself). Believing in the divine inspiration of poetry, they looked to the future, intent on creating a rich language that would benefit French poets to come.

Two years after his arrival in Paris, du Bellay wrote and published *The Defense and Enrichment of the French Language*. That same year he published a collection of love sonnets in French, *L'Olive* (the sonnet was one of the few vernacular forms approved by the *Pléiade*). In 1553 he accompanied Cardinal Jean du Bellay, his cousin, to Rome, where he served, grumblingly, as the cardinal's secretary. Two of his major works came out of his four-year stay in Italy: the sonnets in *Les Antiquitez de Rome* (1558) praise the glories of ancient Rome, while the poems in *Les Regrets* (1558) tell of the disillusionment he felt in the Rome of the present day. His failed love affair with a married Italian woman seems to have hastened his return to his newly appreciated homeland. Two years later, miserable, he died at the age of thirty-seven.

To understand du Bellay's argument in the *Defense*, we must recall the status of the French language during the sixteenth century. While Latin was the language of scholarship, legal documents, and poetry, the French vernacular suffered from an intellectual inferiority complex as the language of the masses, more frequently spoken than written. This two-language social order led to continual discord over the comparative value of languages, particularly French and Latin. During the 1530s and 1540s, scholars enthusiastically translated the texts of ancient Greece and Rome into the vernacular. However, because Latin was considered a richer, more poetic language, these same men composed their own poetry in Latin. The weighty presence of Latin in the church, in the academy, and in the poetry of French authors

signified to some a linguistic enslavement. The question naturally arose as to what equips a language for eloquence. Was it the very nature of Greek and Latin that allowed a flourishing of scholarship? Or, rather, were all languages potentially equal?

The Defense and Enrichment of the French Language was written with a specific goal: to justify the French vernacular by establishing a new poetics to elevate the status of French and, in turn, France itself. A 1548 pamphlet had set the popular forms of French poetry on a par with Greek and Latin works, but the students at the Collège de Coqueret saw this declaration of victory in the battle for French as premature. French poetry required the enrichment provided by a study of classical authors. The Pléiade needed to respond with a manifesto, and du Bellay was the man for the job. As the pamphlet that provoked his treatise indicates, vernacular forms were already enjoying a lively reception through the efforts of poets of lowly birth such as Clément Marot, a rival of du Bellay's. Du Bellay was thus engaging in a class struggle with other French poets while defending French against Latin.

The *Defense* begins with a distinction between the natural and the cultural. Claiming that all languages are potentially equal in value, du Bellay points out the fundamental difference between plants and languages. While languages may appear to be of the same order as plants, they are, in fact, cultural constructs and thus not subject to the same *natural* variations of strength and weakness. The relative weakness of the French language is only temporary. Du Bellay supports this claim by discussing the rise of Latin: the Romans borrowed extensively from Greek authors but wrote in Latin; through imitation, they transformed Latin from a rather rough and brutish tongue to a language of literature and philosophy. Even the Greeks, he will later claim, drew from the wisdom of Egypt and India.

Although du Bellay begins his treatise by distinguishing between languages and plants, he goes on to employ a wide array of agricultural metaphors to describe the kinds of cultivation needed to transform a feeble language into a fruitful one. The metaphor of grafting seems ideal, conveying a process neither natural nor artificial: the grafting of one language onto another makes possible the development of robust new forms.

To enrich the vernacular, du Bellay recommends translation as a way of incorporating the knowledge of the ancients; but for highly rhetorical writings, especially poetry, translation cannot capture stylistic invention, which is specific to each language. Therefore, for poetry, imitation rather than translation is needed. The word du Bellay uses for a properly cultivated language is *copious*, which can be read as both "abundant" and "copied." But imitation should not be slavish: imitation can improve a natural genius but not create one. Without imitation, genius remains "wild"; without genius, imitation remains "apelike." What is to be imitated is the *spirit* of the original, not its external form.

Nevertheless, classical forms are inherently richer than popular forms, and French poets should adopt them, swallowing their classical predecessors whole and cannibalistically incorporating their genius. French poetry should abandon the ballades, rondelets, and virelays of the medieval popular tradition in favor of more learned forms: the ode (soon to be cultivated by Ronsard), the elegy, the eclogue, the sonnet. Du Bellay thus exhorts French poets to imitate and incarnate the poets of Greece and Rome in order to demonstrate that French poetry can be as noble as the classics.

By trying to become something it was not, French poetry began to become what it is. The struggle between classical and popular forms gave rise to a kind of poetry that could not have been derived from either alone. Du Bellay's defense of French, ambivalent though it was about the popular roots of the vernacular, launched a poetic movement destined to stand as one of the golden moments of French poetry.

The Defense and Enrichment of the French Language Keywords: Language, Literary History, Philology, Poetry, Rhetoric, Tradition, Vernacular Language

CHAPTER 1

THE ORIGIN OF LANGUAGES

If Nature (of whom a person of great renown has, not without reason, wondered whether we should call her mother or stepmother²) had given all men the same desire and inclination, besides the innumerable benefits that would have resulted, human inconstancy would not have had to forge for itself so many ways of speaking. This diversity and confusion can rightly be called the Tower of Babel.³ For languages are not born of themselves like herbs, roots, and trees, some of them sickly and weak in their kind, others healthy and robust and more capable of bearing the weight of human conceptions, but all their strength is born of the desire and will of mortals. That, it seems to me, is a great reason why we should not praise one language and blame another, since they all come from a single source and origin—that is, from the imagination of men—and have been shaped by the same judgment and for a single end—that is, to express among us the conceptions and apprehensions of the mind. It is true that with the passage of time some, from having been more carefully ordered, have become richer than others. But that should not be attributed to the natural superiority of those languages, but only to the artifice and industry of men. And therefore all things Nature has created, all the arts and learned disciplines in the four quarters of the world, are in themselves the same, but since men differ in their desires, they speak and write differently. Accordingly, I can not sufficiently blame the foolish arrogance and temerity of some of our fellow countrymen who, taking themselves for nothing less than Greeks or Romans, despise and reject with a more than Stoic haughtiness everything written in French. And I cannot sufficiently wonder at the strange opinion of some learned men, who think that our vulgar tongue is incapable of all good letters and erudition, as if an idea should be judged good or bad for its language alone. I do not aim to satisfy the first sort. I do wish (if I can do it) to change the opinion of the second with some arguments I hope briefly to develop, not that I feel myself more clear-sighted in this or in other things than they are, but because the affection they bear toward foreign languages does not allow them to reach a sound and impartial judgment concerning their vulgar tongue.

CHAPTER 2

THAT THE FRENCH LANGUAGE SHOULD NOT BE CALLED BARBAROUS

To begin, then, to broach the subject, as to the meaning of this word *barbarous*: in antiquity they were called barbarous who spoke Greek badly. For as

1. Translated by Richard Helgerson, whose notes have sometimes been slightly edited.

2. That is, kind or merciless; see *Natural History* 7.1, by the Roman writer Pliny the Elder (23–79 C.E.).

3. See Genesis 11, which describes how God responded to men's attempt to build this tower to heaven by confusing their language, thereby creating many different languages where there had been one for all people.

foreigners coming to Athens attempted to speak Greek, they often fell into this absurd sound *Barbaras*. Afterwards the Greeks transferred this term to brutal and cruel customs, calling all nations but Greece barbarous. This should in no way lessen the excellence of our language, seeing that this Greek arrogance, admiring only its own inventions, had neither the right nor the privilege thus to legitimate its nation and bastardize others. As Anacharsis said, the Scythians⁴ were barbarians among the Athenians, but so were the Athenians among the Scythians. And even if the barbarity of the manners of our ancestors did rightly move them to call us barbarians, I do not see why we should be thought so now, since in civility of manners, equity of laws, greatness of courage, in short, in all forms and ways of living that are no less praiseworthy than beneficial, we are in nothing inferior to them, but rather superior, seeing that they are now such that we can justly call them by the name they gave others. That the Romans called us barbarians is of still less concern, given their ambition and insatiable hunger for glory, which strove not only to subjugate but to render all other nations vile and abject in comparison with them, especially the Gauls⁵ from whom they suffered more shame and injury than from the others.

On this subject, often wondering how it happens that the deeds of the Roman people are so celebrated by everyone, indeed for so long preferred over those of all other nations together, I find no greater reason than this: it is because the Romans had such a great multitude of writers that most of their deeds (to say no worse) through the space of so many years—their eagerness in battle, their devastation of Italy, their foreign invasions—have been conserved intact to our times. The deeds of other nations, particularly of the Gauls before they fell to the power of the French,⁶ and the deeds of the French themselves from the time they gave their name to the Gauls, have, on the contrary, been so poorly preserved, that we have nearly lost not only the glory of them but their very memory. This loss has been aggravated by the envy of the Romans, who, as if joined together to conspire against us, have diminished in every way they could our warlike praises, whose brilliance they could not endure. And not only have they wronged us in that, but to render us still more odious and contemptible, they have called us brutal, cruel, and barbarous. Someone will say, “Why did they spare the Greeks this name?” Because they would have done themselves still greater injury than to the Greeks, from whom they had borrowed everything good they had, at least with regard to the learned disciplines and the enrichment of their language. These reasons seem to me sufficient to make any equitable judge of things understand that our language (though we have been called barbarous either by our enemies or by those who had no right to give us this name) should not be scorned, especially by those to whom it belongs and is natural and who are in nothing inferior to the Greeks and Romans.

4. The Greek name for the nomadic peoples north of the Black Sea, in what is today Moldova, Ukraine, and western Russia. Anacharsis (6th c. B.C.E.), Scythian prince who traveled widely in Greece and was later credited with many pithy sayings.

5. Ancient Celtic peoples occupying the area that became modern France.

6. That is, the Franks, German tribes that entered the Roman provinces in the 3d century C.E. and overthrew the last Roman governor in Gaul in 486.

CHAPTER 3

WHY THE FRENCH LANGUAGE IS NOT AS RICH AS GREEK AND LATIN

And if our language is not as copious and rich as Greek or Latin, that should not be imputed to any defect in it, as though of itself it could never be other than poor and sterile, but should rather be attributed to the ignorance of our ancestors, who, holding (as someone⁷ said, speaking of the ancient Romans) well-doing in higher esteem than fair speaking and preferring to leave to their posterity examples of virtue rather than precepts, denied themselves the glory of their high deeds and us the benefit of imitating them, and by the same means left us our language so poor and naked that it needs the ornaments and (so to speak) the feathers of others. But who would dare say that Greek and Latin were always at the level of excellence they attained at the time of Homer and of Demosthenes, of Virgil and of Cicero?⁸ And had those authors judged that, whatever diligence and cultivation were applied to those languages, they would never be able to produce greater fruit, would they have made such great efforts to bring them to the height at which we now see them?

I can say as much of our language, which is just beginning to flower without bearing fruit, or rather, like a seedling and fresh shoot, has not yet flowered, much less yielded all the fruit it is capable of producing. That comes certainly not from any defect in its nature, as apt to engender as others, but through the fault of those who have had it in their care and have not sufficiently tended it; but like a wild plant in that same uncultivated place where it was born, they have let it grow old and nearly die, without ever watering it, pruning it, or protecting it from the bramble and thorns that shaded it. Had the ancient Romans been as negligent in the cultivation of their language when it first began to sprout, it would certainly not have become so great in such a brief time. But they, like good farmers, first transplanted it from a wild to a cultivated site. Then, so that it might yield fruit better and more quickly, pruning away the useless branches, they replaced them with fine and cultivated branches, taken in masterly fashion from the Greek language, which were rapidly so well grafted to their trunk and made to resemble it that from that time on they have no longer appeared adopted but natural. From this were born in the Latin language those flowers and those fruits colored with great eloquence, along with meter and the skillful blending of sound with sense, all of which every language produces not by its own nature but by art. Thus if the Greeks and Romans, more diligent in the cultivation of their languages than we are in that of ours, could not find in theirs, save as the result of great labor and industry, either grace or meter or indeed any eloquence, should we be surprised if our vulgar tongue is not as rich as it might be and take that as a reason to despise it as vile and worthless?

The time will perhaps come—and with the help of the good fortune of France, I have high hopes for it—when this noble and powerful kingdom will

7. The Roman historian Sallust (86–34 B.C.E.) in *Bellum Catalinae* 8.

8. Du Bellay chooses conventional representatives of excellence in Greek and Latin: in epic

poetry, Homer (ca. 8th c. B.C.E.) and Virgil (70–19 B.C.E.); and in oratory, the Athenian Demosthenes (384–322 B.C.E.) and Cicero (106–43 B.C.E.).

in its turn seize the reins of universal dominion and when our language (if with Francis⁹ the French language has not been wholly buried), which is just beginning to put down roots, will spring from the ground and grow to such height and girth that it will equal the Greeks and Romans themselves, producing, like them, Homers, Demosthenes, Virgils, and Ciceros, just as France has sometimes produced Pericles, Nicias, Alcibiades, Themistocles, Caesars, and Scipios.¹

CHAPTER 4

THAT THE FRENCH LANGUAGE IS NOT AS POOR AS MANY JUDGE IT

I do not, however, consider our vulgar tongue, as it is now, to be as vile and abject as do those ambitious admirers of the Greek and Latin languages, who would not think, were they Pitho² herself, goddess of persuasion, that they could say anything of worth except in a foreign language not understood by the common people. And whoever wishes to look closely into the matter will find that our French language is not so poor that it cannot render faithfully what it borrows from others or so barren that it cannot produce on its own some fruit of good invention by means of the industry and diligence of its cultivators, if any are found who are such friends to their country and to themselves that they would apply themselves to it. But to whom, after God, shall we give thanks for such a benefit if not to our late good king and father Francis, the first of that name and first in all virtues? I say "first" inasmuch as he first in his noble kingdom restored all the good arts and learned disciplines to their former dignity and thus made our language, which was previously rude and unpolished, elegant and, if not as copious as it might be, at least a faithful interpreter of all others. And because of this, philosophers, historians, physicians, poets, Greek and Latin orators have learned to speak French. As, I might add, have the Hebrews: the Holy Scriptures³ bear ample witness to what I say.

I will here leave aside the superstitious arguments of those who maintain that the mysteries of theology must not be laid bare and, as it were, profaned in a vulgar tongue,⁴ as well as what they allege who hold the contrary opinion. For that controversy does not belong to what I have undertaken, which is only to show that our language did not at its birth have the gods and the stars so set against it that it could not one day achieve a level of excellence and perfection as well as any other, since all branches of learning can be faithfully and copiously treated in it, as may be seen from such a great number of Greek and Latin books, as well as Italian, Spanish, and others, translated into French by many excellent pens of our times.

9. Francis I (1494–1547), king of France (1515–47) and patron of the arts.

1. Du Bellay names famous statesmen and generals. The Greeks, all Athenians, were active during the 5th century B.C.E.—Pericles (ca. 495–429), Nicias (ca. 470–413), Alcibiades (ca. 450–404), and Themistocles (ca. 528–462). Julius Caesar (100–44 B.C.E.) and Scipio Africanus (ca. 236–184/3 B.C.E.) were statesmen as well as the most brilliant generals of Roman antiquity.

2. That is, Peitho (literally, "persuasion": Greek),

in Greek mythology the personification of persuasion and seduction.

3. As allusion to biblical translations by, among others, Jacques Lefèvre d'Étaples in 1530 and Pierre-Robert Olivetan in 1535, to which objections of the sort du Bellay mentions in the following sentence were raised, especially by the theology faculty of the Sorbonne [translator's note].

4. Many within the Catholic Church resisted the publication of the Bible in French.

CHAPTER 5
THAT TRANSLATIONS ARE NOT SUFFICIENT TO GIVE PERFECTION
TO THE FRENCH LANGUAGE

Nevertheless this very praiseworthy labor of translation does not seem to me the only or sufficient means to raise our vulgar tongue to be the equal—and the rival—of other more famous languages. I intend to prove this so clearly that no one (I believe) will wish to say the opposite, unless he is a manifest slanderer of truth. And first it is an accepted fact among all the best authors on rhetoric that there are five parts of speaking well: invention, elocution, disposition, memory, and pronunciation.⁵ Now inasmuch as these last two are not so much learned by the benefit of languages as they are given to each person according to his innate talent, augmented and maintained by studious exercise and continual diligence, and inasmuch as disposition resides more in the discrimination and good judgment of the orator than in particular rules and precepts—since events of time, circumstances of place, conditions of persons, and diversity of occasions are innumerable—I will content myself with speaking of the first two: namely, invention and elocution.

The duty of the orator is then to speak elegantly and copiously on whatever topic is proposed.⁶ Now, the ability to speak in this way of all things can only be acquired by a perfect knowledge of all branches of learning, which were first treated by the Greeks and then by their imitators, the Romans. It is thus necessary that those two languages be understood by anyone who wishes to attain that copiousness and richness of invention, which is the first and principal piece in the orator's armor. And with regard to this point, faithful translators can greatly aid and support those who have not the unique opportunity to devote themselves to foreign languages. But as for elocution, certainly the most difficult part of rhetoric and that without which all others remain useless, like a sword still enclosed in its sheath: elocution (I say), by which an orator is principally judged more excellent and one way of speaking thought better than another, being that from which eloquence is itself named, and whose virtue resides in appropriate words, familiar and not estranged from their common use, in metaphors, allegories, comparisons, similes, vivid descriptions,⁷ and so many other figures and ornaments without which any writing in prose or verse is bare, maimed, and weak; I will never believe that one can learn all that from translators, for it is impossible to render a work with the same grace the author put into it, inasmuch as each language has an indescribable something that belongs to it alone, so that if you strive to express its inborn quality in another language, abiding by the law of translation, which is never to stray beyond the bounds of the author, your diction will be constrained, cold, and graceless. And as proof, just read a Latin Demosthenes and Homer, a French Cicero and Virgil, to see if they will beget such emotions in you—will, indeed, transform you like a Proteus⁸ into differing kinds—as you feel reading those authors in their own languages. Going from the original to the translation, you will seem to pass from the burning

5. These divisions are standard in Greek and Latin handbooks of rhetoric.

6. See Cicero, *De Oratore* 1.6.20 [translator's note].

7. In French, *energies*, from the Greek *energeia* or

energeia, rhetorical terms for vivid description or description of things in motion [translator's note].

8. In Greek mythology a seer, son of Poseidon (god of the sea), who is able to assume different shapes at will.

mountain of Etna to the cold summit of the Caucasus.⁹ And what I say of the Latin and Greek languages can be equally said of all the vulgar tongues, of which I will cite only Petrarch,¹ of whom I dare say that if a reborn Homer and Virgil undertook to translate him, they could not render him with the same grace and freshness that he has in his native Tuscan. Yet some in our time have tried to make him speak French.²

These, in brief, are the reasons that have made me think that the diligent service of translators, otherwise very useful in instructing those ignorant of foreign languages in the knowledge of things, is not sufficient to give our language that perfection and, as painters do with their paintings, that final touch we desire. And if the reasons I have provided do not appear strong enough, I will produce as my guarantors and defenders the ancient Roman authors, principally poets and orators, who (although Cicero translated several books of Xenophon and Aratus³ and Horace offers precepts on good translating⁴) devoted themselves to this activity more for their study and individual benefit than to publish it for the amplification of their language, for their own glory, and for the use of others. If any have seen works of that time under the title of translations—I mean works of Cicero, of Virgil, and of the happy age of Augustus⁵—they can contradict what I say.

CHAPTER 6

OF BAD TRANSLATORS AND OF NOT TRANSLATING POETS

But what shall I say of some who truly deserve rather to be called traitors than translators?⁶ For they betray those they undertake to reveal, denying them their glory and by the same means seduce ignorant readers, showing them white for black. To gain the name of learned men, they translate on credit languages, like Hebrew and Greek, of which they have never understood the first elements and to raise their standing still further, take on poets, a race of authors that, if I could or would translate, I would address as little as possible because of that divinity of invention they have more than others, that greatness of style, magnificence of words, gravity of thoughts, boldness and variety of figures, and a thousand other adornments of poetry; in short, that energy and indefinable spirit in their writings which the Latins would call *genius*.⁷ All these things can be no more rendered in translation than a painter can represent the soul along with the body of the person he undertakes to portray from life.

What I say is not directed at those who by the order of princes and great lords translate the most famous Greek and Latin poets, for the obedience one

9. Mountain range between the Black and Caspian Seas. Etna: a volcano on the eastern coast of Sicily.

1. Italian poet and scholar (1304–1374).

2. Beginning early in the 16th century, several French translations of Petrarch appeared, most notably by the French poet Clément Marot (ca. 1496–1544), du Bellay's rival.

3. Greek poet (ca. 315–ca. 240 B.C.E.); his best-known work, a poem on astronomy titled *Phaenomena*, was translated by Cicero. Xenophon (ca. 428/27–ca. 354 B.C.E.), Athenian historian and general, author of the *Anabasis*, which sig-

nificantly influenced Latin literature.

4. Du Bellay may have in mind the advice of the Roman poet HORACE (65–8 B.C.E.) in *Ars Poetica*, line 268, to “unroll Greek originals in your hand night and day.”

5. The first emperor of Rome (63 B.C.E.–14 C.E.; proclaimed emperor, 27). He was a great patron of letters, and, after decades of civil war, his rule was a time of peace and prosperity.

6. The Italian proverb *traduttori, traditori*, (translators, traitors) is echoed in du Bellay's *traditeurs . . . traducteurs*.

7. The guardian spirit of a person or place.

owes such figures admits no excuse in this regard, but I mean rather to speak to those who from gaiety of heart (as they say) lightly undertake such things and accomplish them in the same way. O Apollo! O Muses!⁸ Thus to profane the sacred remains of antiquity! But I will say no more. Let him then who wishes to produce a work worthy to be valued in his own vulgar tongue leave the work of translating, especially of poets, to those who from a laborious task of little profit—one, I dare say again, useless and even harmful to the growth of their language—rightly earn more vexation than glory.

CHAPTER 7

HOW THE ROMANS ENRICHED THEIR LANGUAGE

If the Romans (someone will say) did not devote themselves to this labor of translation, then by what means were they able so to enrich their language, indeed to make it almost the equal of Greek? By imitating the best Greek authors, transforming themselves into them, devouring them, and, after having thoroughly digested them, converting them into blood and nourishment, selecting, each according to his own nature and the topic he wished to choose, the best author, all of whose rarest and most exquisite strengths they diligently observed and, like shoots, grafted them, as I said earlier, and adapted them to their own language. In doing this (I say) the Romans constructed all those fine writings we so ardently praise and admire, judging some to be the equal of the Greeks, preferring some as superior to them.

And of what I say Cicero and Virgil, whom willingly and with honor I always cite from the Latin language, provide good proof. The one gave himself entirely to the imitation of the Greeks, counterfeited and so vividly expressed the copiousness of Plato, the vehemence of Demosthenes, and the joyful sweetness of Isocrates that Molo of Rhodes,⁹ once hearing him declaim, cried that he was bringing Greek eloquence to Rome. The other so well imitated Homer, Hesiod, and Theocritus¹ that since then it has been said of him that of those three he surpassed one, equaled one, and came so close to the other that, if the felicity of the subjects they treated had been the same, the prize would have been in doubt. Thus I ask you, you who undertake only translations, if these famous authors had diverted themselves in translating, would they have raised their language to the excellence and height where we now see it? Then do not think, whatever diligence and industry you may expend in that pursuit, that you can do enough for our language, which still crawls on all fours, for it to lift its head and get on its feet.

8. In Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits. Apollo: the Greek and Roman god of music and prophecy.

9. Apollonius Molon (1st c. B.C.E.), rhetorician who lectured at Rhodes and visited Rome; he taught Cicero and other Romans. PLATO (ca. 427–ca. 347 B.C.E.), Greek philosopher; like him,

Cicero wrote philosophical dialogues, including *De Republica*. Isocrates (436–338 B.C.E.), Athenian orator, rhetorician, and teacher.

1. Greek poet (ca. 300–260 B.C.E.), whose pastoral poetry Virgil imitated in his *Eclogues*. Hesiod (active ca. 700 B.C.E.), Greek didactic poet whom Virgil imitated in his *Georgics*.

From *Second Book*

CHAPTER 3

THAT NATURAL TALENT IS NOT ENOUGH FOR HIM WHO IN
POETRY WOULD PRODUCE A WORK WORTHY OF IMMORTALITY

But since there are good and bad models in all languages, I do not, Reader, want you to attach yourself without choice and judgment to the first comer. It would be far better to write without imitation than to resemble a bad author, seeing that even the most learned² agree that natural talent without the rules of art does more than rules without talent. Nevertheless, inasmuch as the amplification of our language (which is the subject I am addressing) cannot be accomplished without rules and erudition, I do want to warn those who aspire to that glory to imitate good Greek and Roman authors—indeed, even Italians, Spaniards, and others—or not to write at all, unless for yourself (as we say) and your Muses. Let no one answer me here by citing some of our writers who without any rules of art, or at most with no more than mediocre ones, have acquired great renown in our vulgar tongue.³ Those who willingly admire petty things and disdain whatever exceeds their capacity will make as much of them as they want. But I know that the learned will put them in no other rank than that of those who speak French well and who have (as Cicero said of the earliest Roman authors) good wits but very little art. Nor let anyone claim that poets are born, for that can be assumed from the ardor and alacrity of mind which naturally motivates poets and without which all the rules of art would be lost on them and useless. Certainly it would be all too easy, and for that very reason contemptible, to win everlasting fame, if the felicity of nature that is granted even to the most ignorant were enough to do something worthy of immortality. He who wishes to fly through the hands and lips of men⁴ must long dwell in his study. And he who desires to live in the memory of posterity must, as though dead unto himself, often sweat and tremble and, just as our courtier poets drink, eat, and sleep at their ease, endure hunger, thirst, and long vigils. These are the wings by which the writings of men soar to heaven.

But to return to the beginning of this topic, let our imitator first consider those he would imitate and what in them can and should be imitated, so as not to do as those who, wanting to resemble some great lord, will imitate rather a petty gesture of his or a vicious mode of behavior than his virtues and good graces. Above all, our imitator must have the judgment to know his own strength and to weigh how much his shoulders can bear. Let him diligently sound his own nature and adapt himself to the imitation of him to whom he feels closest. Otherwise his imitation will resemble that of an ape.

2. See Cicero, *Pro Archia* 7.15 and *De Oratore* 1.25.113; Quintilian, *Institutio Oratoria* (ca. 96 C.E.) 2.19.2 [translator's note].

3. The allusion is again to Clément Marot, who

was a popular poet at the court of Francis I.

4. Here begins a passage lifted verbatim from one of du Bellay's Italian predecessors, Sperone Speroni (*Dialogo delle lingue*, 1542).

CHAPTER 4

WHAT KINDS OF POEMS THE FRENCH POET SHOULD CHOOSE

First then, O future Poet, read and reread. With nightly and daily hand, turn over the pages of Greek and Roman models. Then do me the favor of leaving to the Floral Games of Toulouse and the Confraternity of Rouen⁵ all those old French poetic forms, such as rondels, ballads, virelays, royal airs, songs, and other such spices,⁶ which corrupt the taste of our language and serve only as evidence of our ignorance. Give yourself over to those amusing epigrams, not as a host of new tale-tellers do today, who in a poem of ten lines are happy to have said nothing of worth in the first nine lines so long as there is a little joke in the tenth. But if lasciviousness does not please you, in imitation of a Martial⁷ or some other of good reputation mix profit with pleasure.⁸ Distill in a flowing and not harsh style those touching elegies, modeled after an Ovid, a Tibullus, and a Propertius,⁹ weaving in from time to time some of those ancient myths, no small adornment of poetry. Sing me those odes,¹ still unknown to the French Muse, on a lute well tuned to the sound of the Greek and Roman lyre, and let there be no line in which some vestige of rare and ancient learning fails to appear. And for this, the praises of the gods and of virtuous men, the destined course of worldly things, the preoccupations of young men, such as love, free-flowing wine, and all good living, will supply you with matter. Above all, take care that this kind of poem be removed from the commonplace, enriched and illuminated with fit words and lively epithets, adorned with grave reflections, and varied with all sorts of poetic colors and ornaments, not like a "Laissez la verte couleur," "Amour avec Psyches," "O combien est heureuse,"² and other such works, worthier to be called vulgar songs than odes or lyric poems. As for epistles, this is not a kind of poem that can greatly enrich our vulgar tongue, since they are normally about familiar and domestic matters, unless you wanted to write them in imitation of elegies, like Ovid, or make them sententious and grave, like Horace.³ I say much the same of satires, which the French, for I know not what reason, have called *coqs-à-l'âne*,⁴ and which I advise you to practice just as infrequently, since I want you to avoid slander, unless, after the example of the ancients,

5. The oldest of several bourgeois fraternal societies established beginning in the 12th century to cultivate music and poetry. The Floral Games of Toulouse: an institution founded in 1323 by seven minstrel poets; during the 16th century, at the height of its glory, it was renamed the College of the Art and Science of Rhetoric.

6. Vernacular French medieval poetic genres.

7. Roman poet (ca. 40–ca. 104 C.E.), best known for his witty epigrams that depicted Roman society, high and low (sometimes in very coarse language).

8. Compare Horace, *Ars Poetica*, lines 342–43: "Mingling the 'useful' with the 'sweet' wins every point."

9. Roman poet (ca. 50–ca. 15 B.C.E.), one of the great masters of Latin love elegy (that is, a poem in elegiac couplets, a specific metrical form). Ovid (43 B.C.E.–17 C.E.) and Tibullus (ca. 50–19

B.C.E.) also wrote highly polished elegies.

1. The ode was the form in which du Bellay's friend Pierre Ronsard first distinguished himself with the publication in 1550, a little less than a year after the *Defense*, of his *First Four Books of Odes* [translator's note].

2. Three 16th-century French *chansons* (songs): "Leave the Green Color," "Love [or Cupid] with Psyche," and "Oh How Happy."

3. Horace's epistles are conversational, not grave; but the long poems of *Epistles* 2 concern literature. Ovid's elegiac epistles are his *Heroides* (letters from legendary women to their absent lovers or husbands) and his *Tristia* and *Letters from Pontus* (describing the hardships of the poet's exile and pleading for leniency).

4. From the expression *sauter du coq à l'âne* (to jump from the cock to the donkey); stories characterized by absurd associations.

you would spare the names of vicious persons and reprehend with moderation the vices of your time in heroic lines (that is, lines of ten or eleven syllables and not of eight or nine) under the name of *satire* and not that inept title of *coq-à-l'âne*. For this, you have the example of Horace, who, according to Quintilian,⁵ holds first place among the satirists. Ring out for me those beautiful sonnets, a no less learned than pleasant Italian invention which agrees in name with the ode and differs from it only in that the sonnet has a certain number of lines of a fixed length, while the ode can run through all sorts of lines freely—can, indeed, invent them at will, after the example of Horace, who sang odes in nineteen kinds of lines, as the grammarians say. For the sonnet then, you have Petrarch and several modern Italians. With a resounding pipe and a well-joined flute, sing me those pleasant rustic eclogues⁶ after the example of Theocritus and Virgil or seafaring ones after the example of Sannazaro,⁷ a Neapolitan gentleman.

May it please the Muses that in all the kinds of poetry I have named we have many imitations like that eclogue on the birth of the son of Monseigneur the Dauphin, in my opinion one of the best little works that Marot⁸ ever wrote. Adopt, too, into the French family those flowing and dainty hendecasyllabics, after the example of a Catullus, a Pontanus, and a Secundus,⁹ which you could do, though not in quantitative meter, at least with regard to the number of syllables. As for comedies and tragedies, if kings and commonwealths would restore them to their ancient dignity, which farces and morality plays have usurped, I would surely think you should set yourself to them, and if you wished to do so for the adornment of your language, you know where you must find the models for them.

1549

5. Roman rhetorician and teacher of oratory (ca. 30/35–ca. 100 c.e.); he calls Horace the best satirist in *Institutio Oratoria* 10.1.94.

6. Short poems—often pastoral—in the form of a dialogue or soliloquy, particularly popular during the 15th and 16th centuries.

7. Jacopo Sannazaro (1458–1530), a poet born in Naples who was greatly admired by the poets of the Pléiade.

8. Clément Marot, official court poet. The Dauphin: Francis of Valois, the future King Francis

II, born January 19, 1544.

9. Joannes Secundus (1511–1536), Latin name of the neo-Latin poet Jean Everaerts. Catullus (ca. 84–ca. 54 B.C.E.), Roman lyric poet who was the first to adopt Greek hendecasyllabics—11-syllable lines in a set pattern of “quantity” (i.e., syllable length)—to represent everyday Latin speech. Giovanni Pontano (1426–1503), neo-Latin prose writer and poet of the Italian Renaissance.

GIACOPO MAZZONI

1548–1598

In his *On the Defense of the “Comedy” of Dante* (1587, *Della difesa della “Comedia” di Dante*), the Italian Renaissance philosopher and scholar Giacopo Mazzoni set out to defend DANTE ALIGHIERI’s great medieval poem from a growing number of detractors. As was also the case with the new Renaissance romantic epic, a genre defended by Mazzoni’s elder contemporary Giambattista Giralaldi, Dante’s extended dream allegory was widely criticized as unrealistic. Instead of subscribing to the general

preference for what PLATO had called realistic ("icastic") imitation, Mazzoni chose to defend "phantastic" or purely imaginary imitation, claiming it to be the basis of Dante's *Divine Comedy*. In the process, Mazzoni developed an elaborate theory of the poetic "idol" (image or simulacrum), going well beyond the defense of a particular poem to formulate what many scholars believe to be the most fully developed system of literary aesthetics of the Renaissance.

Born in Cesena, Italy, Mazzoni as a young man was educated in Bologna, where he learned Hebrew, Greek, Latin, rhetoric, and poetics. In 1563 he entered the University of Padua to study philosophy and jurisprudence. Thereafter, he taught for brief periods at the universities in Rome, Pisa, and his native Cesena. He spent much of his time managing his family estates, but he often entered into public debates with many prominent public figures and made the acquaintance of such famous Italian writers as Sperone Speroni, Ludovico Castelvetro, and Torquato Tasso, among others. He was reputed to have an astoundingly good memory, able to recall at will any part of the works of Lucretius (ca. 94–55 B.C.E.), Virgil (70–19 B.C.E.), Dante, and Ludovico Ariosto (1474–1533), and he routinely defeated all opponents at public memory contests. He considered himself primarily a philosopher, an identification clearly reflected not only in the sophisticated argumentative structure of the *Defense* but also in his major work, *De Triplici Hominum Vita, Activa Nempe, Contemplativa, et Religiosa Methodi Tres* (1576, *On the Three Ways of Man's Life: The Active, the Contemplative, and the Religious*), a philosophical attempt in Latin to reconcile the views of Plato and ARISTOTLE. In this work, as in the *Defense*, Mazzoni demonstrates a remarkable command of the history of philosophy, citing an impressive number of authorities and sources. His abiding concern with Dante scholarship is demonstrated by his having published before his *Defense* the polemical *Discorso in difesa della Commedia della divino poeta Dante* (1572, *The Discourse in Defense of the "Comedy" of the Divine Poet Dante*). Critics generally agree, however, that the earlier work is much less successful.

Taken from Mazzoni's book-length "Introduction and Summary" to his *Defense*, our selection has very few references to Dante, offering instead a straightforward presentation of Mazzoni's theory of poetry. Reflecting his celebrated memory, this text shows extensive reliance on a wide range of classical philosophers and rhetoricians, including Plato and Aristotle, as well as various Greek sophists and Neoplatonists, particularly Philostratus (active 3d c. C.E.) and Proclus (412–485 C.E.). Considered structurally, the "Introduction and Summary" presents three definitions of poetry one right after the other. Each definition views poetry from a different perspective, considering the poem as an artistic imitation, a game, and a game shaped by moral philosophy in order to promote social order.

Mazzoni indicates, to begin with, that poetry is an imitative art that has as its object the idol (simulacrum or image), not classical literary models, as other Renaissance theorists, such as Pierre de Ronsard, argued. The proper subject matter for poetic imitation, however, is *marvelous* scenes and events, whether these are strict imitations of reality or purely imaginative. As a result, poetry is a species of sophistic rhetoric in that it deals with what is credible and persuasive, not with what is necessarily true. Seen from the perspective of the audience, the goal of poetry is to move the reader to pleasure and delight in the perception of believable images (idols). Mazzoni argues, in addition, that the distinct pleasure of poetry should ultimately lead to its social utility or moral purpose. As an entertaining recreational game, poetry is a means of pleasantly interrupting the serious business of the world so that business may be later resumed with freshness and vigor. It does instruct, but in a concealed way; consequently it may be regarded at its best as regulated by the civil faculty (moral philosophy). Mazzoni's view here is summed up cryptically in his belief that Aristotle's *Poetics* is the ninth book of [his] *Politics*."

A distinctive feature of Mazzoni's work is that it proceeds by continuous logical differentiation. Defining poetry for him requires making precise distinctions between similar but different phenomena. Perhaps the key distinction is the earliest, involving

three types of objects: the idea, the work, and the idol, which conform to the observable, the fabricable, and the imitable. Here Mazzoni isolates the distinct traits of poetry by differentiating it from epistemology (the observable) and the practical arts (the fabricable). After subdividing the imitable into the phantastic and icastic, he goes on to assess these two forms of imitation in relation to ancient and “second” sophistic rhetoric. Since ancient sophistic used made-up names and second sophistic named real individuals, Mazzoni classifies the phantastic under the former and the icastic under the latter. In this differentiation he further emphasizes the autonomy and the imaginative or phantastic force of the image. Such complex sets of distinctions form the basis of Mazzoni’s “Introduction and Summary,” which tries to develop a complete and perfect definition of poetry.

Along the way Mazzoni distinguishes “poetics” from poetry, and he also develops a sociological theory of genre. Poetics examines a poem in relationship to the civil faculty, noting prescribed standards, rules, and laws, while poetry looks at a poem from the perspective of its making, attending to its form. As for genre, Mazzoni notes that there are three kinds of poetry: the comic, the heroic, and the tragic. Each of these is addressed to one of the three sorts of people whom Plato thought necessary for civil society: artisans, soldiers, and magistrates, respectively. (Artisans include lower- and middle-class citizens.) Mazzoni’s point is that each genre regulates a particular social class, instilling civil obedience. The humor of comic poetry consoles artisans, resigning them to their low or modest estate, while the glorious battles of heroic poetry inspire soldiers to freely defend their country. Tragic poetry depicts the downfall of noble persons and, in so doing, encourages magistrates to take their duties seriously.

Some critics of Mazzoni have perceived contradictions in his definitions of poetry, particularly in his attempt to reconcile the pleasures of imitation with the lessons of the civil faculty. Moreover, some twentieth-century theory implicitly questioned his distinction between icastic and phantastic imitation, pointing out the artifice involved in even “realistic” modes of imitation. In spite of these criticisms, Mazzoni raises to a rigorous level of analysis the discussion of literary mimesis (imitation and representation) initiated by Plato and Aristotle. In emphasizing poetry’s relationship to images and games, he also foreshadows later Romantic interest in theories of imagination and aesthetic play, as exemplified most influentially in the works, respectively, of SAMUEL TAYLOR COLERIDGE and FRIEDRICH VON SCHILLER.

On the Defense of the “Comedy” of Dante Keywords: Ethics, Poetry, Religion, Renaissance Theory, Representation, Rhetoric

From On the Defense of the “Comedy” of Dante

*From Introduction and Summary*¹

It seems to me that before we proceed to discuss matters belonging to this defense, it would be well to offer first in briefer form what may be termed a summary notion of the art of poetry and of the defense of Dante,² bringing together some considerations scattered through the present volume and adding some others, the whole of which will serve not only as an opportune introduction to what I am going to say, but also as a brief compendium of what has been said.

1. Translated by Robert L. Montgomery, who occasionally adds clarifying words in brackets. The bracketed section numbers correspond to

those of the 1587 first edition, which is not paginated.

2. The Italian poet DANTE ALIGHIERI (1265–1321).

It is the common opinion of all schools of philosophy that the arts and sciences are distinguished and separated from one another by means of a proper and particular object or subject. (I do not at this point differentiate between these two names around which each school constructs its discourse.) But no matter how this subject is handled, there is no agreement at all in opinion within the same school. For some (and the Bishop of Caserta³ in his *Monomachia* followed this opinion) prefer to think that the objects of the arts and sciences are distinct according to a distinction between things insofar as they are things. And on the basis of this condition they are forced to admit two quite extraordinary conclusions. The first is that metaphysics is a comprehensive science, that which concerns itself (so to speak) with universal being, and that the other arts and sciences are a part of it, considering each of these some part of universal being. The second conclusion (if the first is correct) is that each particular art and science has for its subject some thing that could not then be the subject of any other art or science. And since both of these conclusions are quite false, as is shown elsewhere (we will discuss it briefly later), it must therefore be judged that the above opinion is not in any way conformable to the truth. [7] Passing on then to a better and truer opinion and following the Peripatetics,⁴ I say, as they believe, that the arts and sciences derive their true and real distinctions from objects, not insofar as they are things, but insofar as they are (forgive me, all you strictly Tuscan writers, the necessity of this word) knowable⁵ and, if one can speak so, artificiable.

* * *

[8] Since on this topic I find no doctrine more copious or sound than that of Plato⁶ in the tenth book of the *Republic*, so, following in his footsteps, I say that there are three types of objects and that they have three ways in which they can be devised; as a consequence these constitute three species of arts in the first category. The objects are idea, work, and idol. The idea is the object of the ruling, or we might say, the governing arts. The work is the object of the fabricating arts, and the idol is the object of the imitating arts. Therefore the modes of the objects of the arts, insofar as they are capable of being differently treated by artifice will be three; that is, the observable, the fabricable, the imitable. The arts that only contemplate a thing pertinent to some object are the ruling arts, and they are founded in the idea. Such is the art of horsemanship when it deals with the bridle. For the art of horsemanship does not consist in making the bridle but is concerned only with the idea of how it has to work and prescribes to the bridle maker what he must hold to, to make it work. [9] The arts that make the bridle (which was first conceived by the ruling art) are those that have as object what is called the work. The arts that make what was first conceived by the ruling arts are the fabricating arts and have as object what is called the work, and such is bridlemaking, which makes the work of the bridle and nothing else. The imitating arts have been so named because they deal with the object only insofar as it is imitable; hence Plato said that it has an idol as object, which means the simulacrum or image of some other things.

3. Antonio Bernardi (1503–1565), bishop of Caserta from 1552 to 1554.

4. Followers of the Greek philosopher ARISTOTLE (384–322 B.C.E.).

5. Mazzoni uses the word *scibili*, a borrowing from Latin.

6. Greek philosopher (ca. 427–ca. 347 B.C.E.). For book 10 of *Republic*, see above.

Since, therefore, the same thing may be treated in different sciences under different modes of the knowable, so also the same thing can be submitted to different arts by different modes of artifice. And we have a clear example in the bridle: it belongs to the art of horsemanship when considered in its idea, to the art of bridlemaking when made as a work, and to painting when imitated as an idol.

But there may arise a doubt of some importance in thus distinguishing the imitative arts from other arts, for it would seem that the fabricating arts also deserve the name of imitation, since each one of these imitates in its work the model of the idea conceived by the ruling art. Thus, for example, the art of bridlemaking forms a bridle exactly in conformity to the idea conceived by horsemanship. Therefore it would seem that the fabricating arts are not very well distinguished from the imitating arts. I respond that (as has already been said) the distinction between arts derives from their objects insofar as they are capable of being devised variously and distinctly. [10] Now the artifice of the work is not only to represent the idea of the ruling art; it also has to serve other ends. And in this way we can say that bridlemaking forms the bridle in accordance with the idea conceived by horsemanship; still, this bridle is not made in order to represent the similitude of the idea, but rather so that it can be used in various ways in managing horses. Hence we see that the artifice of the fabricating arts aims at something other than just representing or resembling; therefore I say that the fabricating arts cannot be called imitative. But those arts that have the idol as object have an object that has no other end in its artifice but to represent and resemble; hence they are called imitative. And just as philosophers have come to call the logical faculty rational, not because it uses reason—for in this sense all the arts and all the faculties are rational—but because it has an object that takes all its being from reason and in reason; so we say that the imitative arts are so named, not because they use imitation—for in this sense all the arts involve more or less some kind of imitation—but because they have objects that have no other being or use except by reason of imitation or in imitation.

* * *

It can therefore be concluded that the imitative arts have been so named because they have as objects those things which are good for no other end or no other use than to represent or to resemble; and they are distinguished from the other arts that are not called imitative because their objects are good for other uses or other ends than representation or resemblance alone. In this way, then, the idol is the object of the imitative arts. [11] But in order to understand clearly what this idol, which is the true and sufficient object of the imitative arts, is, and in order to unravel all the complications that are wont to become involved in this subject, so that we may anticipate a perfect and settled account of it, it is necessary to begin at some distance.

* * *

[15] Coming now to our topic, I say that when we previously concluded that the idol is the object of the imitative arts, we did not mean that sort of idol that originates without human artifice, * * * but instead that which does have its origins in our artifice, arising only from our phantasy or our intellect by means of our choice and will, like the idols in painting, sculpture, and so

on. I conclude therefore that this species of idol is that which is a suitable object of human imitation and that when Aristotle said at the beginning of the *Poetics* that all the kinds of poetry are imitation,⁷ he meant that sort of imitation which has as its object the idol that arises from human artifice in the way we have stated. Rather I will say further that all imitations that arise from human artifice insofar as they are imitations have the idol as object in this manner.

But it would seem that the words of Suidas⁸ are contrary to this determination, for he shows himself believing that the idol that derives from human artifice is not an adequate object of the imitative arts, unless the idol is joined to some other different thing that he calls a similitude. Here are his words: "Idols are effigies of things that do not subsist, like tritons, sphinxes, or centaurs. But similitudes are the images of subsistent things, like beasts or men." [16] According to this statement of Suidas we see that there are two imitations. One of them represents the true, as a painter does when he represents with colors the effigy of a known man; and the other represents the caprice of the person who is doing the imitating, just as the painter does when he depicts according to the caprice of his phantasy. We see at the same time that the idol is the object of this second sort of imitation and at the same time that the similitude is the object of the first. Therefore, it is not true that the idol that is born of human artifice is an adequate object of every imitation.

We may respond that this statement of Suidas concerning the idol is too narrow and also in opposition to what other writers have said. Hesychius,⁹ uttering other sentiments about the term "idol," speaks as follows: "The idol is similitude, image, and sign." He shows clearly then with these words that the idol is also taken as a similitude and as an image of something discovered. Ammonius in the *Etymology* and Favorinus¹ in the *Vocabulary* explaining the etymology of the idol have said that it derives "from the verb εἶδω, which means match or resemble," almost as if it meant that the idol is of things that are apparent but not found and of things that are found, of which it represents the likeness. Let us add to it what Plato left us in writing in the *Sophist* that imitation is of two species, one of which he names the icastic, and it is that which represents things that are really found or at least have been, and the other he called phantastic, of which we have examples in paintings made according to the caprice of the artist. And even he himself says the same thing in the tenth book of the *Republic*, namely that the idol is the object of every imitation. Therefore the idol must also be common to phantastic imitation.

* * *

I believe, then, that everyone is able to understand up to this point what imitative art is and how it is distinguished from other arts that are not imitative, and what the idol is, which is the object of imitation. Now I add that poetry ought to be placed under this imitative art or imitation, as a species

7. "Epic poetry and tragedy, comedy also and dithyrambic poetry, and the music of the flute and the lyre in most of their forms, are all in their general conception modes of imitation," *Poetics* 1 (trans. S. H. Butcher). In emphasizing imitation as the production of man-made images, Mazzoni seems to make a silent comment on Plato's theory of dae-

monic inspiration in *Ion* [translator's note]. For *Ion*, see above.

8. Greek lexicographer (late 10th c. C.E.).

9. Alexandrian grammarian (active 4th c. C.E.).

1. Rhetorician of Rome (ca. 80–ca. 150 C.E.). Ammonius (active 5th c. C.E.), Alexandrian philosopher, disciple of Proclus.

under its genus. Therefore, in beginning to define poetry one can say that it is imitation.

* * *

[29] Now let us sum up the discussion to this point concerning the nature of the imitative arts, their distinctiveness from the nonimitative arts, and the fact that poetry which is icastic or phantastic, dramatic or narrative, always has imitation for its genus, since it always forms idols and images in the ways mentioned.

The genus of poetry having been established, it remains for us to investigate the differences according to which it has come to be distinguished and separated from all the other imitative arts. And first of all it would seem that reason requires that we find the instrument proper to poetic imitation, and then its subject matter, and next its efficient cause, and then its final cause. In this fashion we will have established its definition completely and perfectly.

Now if we can find a genus that includes only three species, that is, harmony, number, and meter, we will by combining them with imitation have arrived at a proper instrument. But since such a genus is not to be found, we will compensate with rules taught by Aristotle at the beginning of the *Posterior Analytics*,² and instead of the general term we will take the names of all three species and say that poetry is an imitation made with harmony, with number, and with meter, singly or together.

* * *

[44] Now that we have found the genus, and the individuality of poetry—that is, its instrument³—we can be said to have discovered its entire form. Next it would appear that orderliness requires that we turn to inquire into its proper subject and material. In the opinion of many these are falsehood and lying, even though the verisimilar is a fitting subject of poetry. And they have let themselves be induced to believe this because they think that the true poet is one who by himself fabricates the invention of his poem, adding that he who takes it from a place other than his own invention does not deserve the name of a true poet. They suppose also that this is the opinion of Aristotle, who called Empedocles⁴ more often a natural philosopher than a poet, because not his own invention but the truth of natural things was thought to exhibit itself in his verses.⁵ And in another place he says that Herodotus's⁶ history reduced to verse would still be history. And in this context I wish to mention that Euphronius in one of his comedies compared the poet to a cook in the following two lines cited by Athenaeus⁷ in his *Banquet of the Wise Men*:

2. *Posterior Analytics* 1.2, 71b–72b. Aristotle here argues the case for syllogistically arriving at a general conclusion on the basis of premises that are certain and require no prior demonstration to establish their certainty. Moreover, the premises must be better known than the conclusion. Mazzoni will try to arrive at the distinctive generic description of poetry by using those attributes necessary to it, namely harmony, number, and meter. In other words, he will argue that poetry is a name given to a kind of imitation using these instruments, but as a genus its character is assumed rather than a previously given certainty [translator's note].

3. Mazzoni has just argued that the instruments of poetry are taken from music because they produce delight and because they reduce to order the immoderate pleasures that poetic imitation can instill.

4. Greek philosopher, poet, orator, physician, scientist, and statesman (ca. 493–ca. 433 B.C.E.).

5. *Poetics* 1, 1447b.

6. Greek historian (ca. 484–ca. 425 B.C.E.). See Aristotle, *Poetics* 9, 1451b.

7. Greek scholar (active ca. 200 C.E.). Euphronius (active mid–3d c. B.C.E.), an obscure Greek comic poet.

"The cook is no different from the poet, since both use wit to make art." * * * On account of all these authorities and others besides, it would be very easy to fall into the view of those who maintain that poetry has no subject other than the fabulous and false, but is yet linked to the verisimilar, since verisimilitude, according to the rule of Aristotle, is to be sought in the poets' fables.

[45] On the contrary, I maintain that this opinion does not conform to the truth for many reasons. Among these I am going to choose those which I think are most to the point. Therefore I will note first that the verisimilar false comes into some other arts that are different from that of the poets, such as rhetoric, which Aristides in the oration against the *Gorgias* of Plato and Philostratus⁸ in the Proem to the *Lives of the Sophists* calls "praise" [*adulante*], that which always and everywhere impresses the verisimilar false on the minds of judges to turn them from the straight way of justice. And on this topic I recall having read a most splendid dialogue by Signor Camillo Paleotti, a most erudite gentleman and also the most illustrious Maecenas⁹ of letters in this century, in which with very effective arguments and lively reasons he shows that the verisimilar false is, though greatly abused by the corrupt world, virtually the universal subject of the arts, the sciences, and education. Therefore it cannot be concluded that it is the proper and sufficient subject of the poets' art. Moreover, if it were to be the true subject of poetry, then poetry could not in any way be capable of truth; yet Plato wrote, Aristotle agreed, and reason persuades us that just the contrary is the case. Therefore Plato in the *Republic* and in the *Laws* having approved that kind of poetry which treats the Gods in conformity to the truth, has demonstrated that he believes that truth is not repugnant to poetry.¹ [46] Likewise Aristotle has confirmed this judgment in three places in the *Poetics*. The first is in these words: "And if it happens that anyone treats poetically of things that have actually happened, he would nevertheless be a poet. For nothing prevents anything that has actually happened from being such that it might happen and could happen in a verisimilar way, so that he who treats them is a poet." The second place is at the beginning of the defense of poets: "For either he represents things that have happened or are said to have happened or appear to have happened or ought to have happened." The third is a little after this where he writes: "And beyond this it will be objected that the things he has said are not true. But they are what ought to be true."² In all three places, and especially in the last two, we see manifestly that Aristotle has sometimes conceded that the poet may use the true as a subject and that from everything said before, the idol in icastic imitation is, in Aristotle's opinion, a poetic idol.

But in addition to the authority of Plato and Aristotle, there is also reason to prove that the poet sometimes utters what is true. For when he is recounting the wanderings of some hero, he can do no less many times than describe places in the countryside. In these he follows the facts of geography, so either it must be said that he occasionally loses his title of poet, which would be quite ridiculous, or we must confess that the true may sometimes be a

8. Greek sophist (b. ca. 170 C.E.). Aristides (2d c. C.E.), celebrated Greek sophist.

poetic subject. And we have already shown that idols and images can also be made from the true, both in narrative and in representation [i.e., drama].

From all these considerations it seems to me that we ought to affirm two conclusions as correct. The first of them is that the false is not always necessarily the subject of poetry. The second is that since the subject of poetry is sometimes true and sometimes false, there is consequently a need to constitute a poetic subject that by itself can be sometimes true and sometimes false. * * *

[47] Now if we remove the false and in its place put the true, we do not therefore destroy poetry, since we have already said that it can stand together with the true. The same can be said of the possible, for if the impossible is substituted in poetry, it will not therefore come to be corrupted or spoiled, if the impossible is credible. But if we take away the credible and in its place put the incredible, the nature of poetry is totally destroyed. And on the other hand taking the credible and at the same time removing the possible, we still have the poetic subject, as Aristotle has clearly testified in the following words: "As to what belongs to poetry, the credible impossible is more often to be preferred to the incredible and possible."³ Therefore it ought to be said that among all these there is no more appropriate subject of poetry than the credible. And even more to the point, how much the credible by its very nature includes both the true and the false, for often not only the true but also the false is credible.

* * *

[51] Therefore, the credible is the object of that persuasion whose end is that which has now been demonstrated. And because it has already been decided on the authority of Aristotle that the credible is the subject of the art of the poets, it seems to me that we can draw three conclusions from what has been said. The first of them is that the poet being always concerned with the credible, he must as a necessary consequence treat everything in a fashion suitable to the credible, that is, always making use of singular and sensible means to represent the things he writes about whatever they may be. [52] And even if he treats things pertinent to contemplative doctrine, he must make every effort to represent them by idols and sensible simulacra, which Empedocles did not do. Hence, he was more often termed a physicist than a poet. In this matter Dante is really marvelous, as we will demonstrate more fully in the fifth book. For the present we must be content with this single example in which he speaks of the most holy and ineffable Trinity, writing:

Within the profound and clear substance
Of the exalted light three circles appeared to me,
Of three colors and one magnitude.
And one in the other, like a rainbow in a rainbow
Seemed reflected, and the third seemed like
Fire breathed forth equally from the one and the other.⁴

And for this reason it also happens that the poet uses such frequent comparisons and lengthy and specific parables. And whoever looks for the rea-

3. *Poetics* 24, 1460a.

4. *Paradiso* 33.115–20 [translator's note]. Dante's image uses "sensible means" to present the

"contemplative doctrine" of the Son's eternal generation from the Father and the Spirit's eternal procession from the Father and the Son.

sons why the poet is obligated at the very least in his storytelling to use this mode of the credible may rest content with the following reason: because the poet must speak to the people, among whom are many rude and uneducated men, and if he were to discuss knowable things in a mode appropriate to the sciences, they would not understand. And so he treats his subject in a credible mode, that is, instructing by means of comparisons and similitudes taken from sensible things, and the people, who understand that in sensible things truth resides in a way that is revealed by the poet, easily believe for this reason that the same is true of intelligible things.

From this we are able to conclude that it is not denied to the poet to treat things pertinent to the sciences and the speculative intellect, but he treats them in a credible manner, making idols and poetic images, as Dante, with most marvelous and noble artifice, has certainly done in representing all intellectual nature and the intelligible world itself with idols and images most beautifully to all eyes.

I recall that Plato in the *Phaedrus*, exalting his own invention, wrote just to this point: "But of that place that is beyond the heavens, I do not know that any of the poets has ever treated or is likely to treat it in a manner worthy of the way it is."⁵ And so on. But if he had seen Dante's third canticle, he would without any doubt have recognized his own invention as inferior and given the palm to Dante, and consequently to poets for knowing how to make idols and images appropriate to giving to the popular understanding the quality of the supercelestial world. Concerning this I have written at length in the fifth book where I also show with what tact Dante has at times introduced either a philosopher or a theologian to discuss matters pertinent to the contemplative sciences in an understandable fashion, never deviating from the credible. [53] The second conclusion is that, since the poet has the credible as his subject, he ought therefore to oppose credible things to the true and the false, the possible and the impossible, by which I mean that he ought to give more importance to the credible than to any of the others I have enumerated.

Therefore, if it should happen that two things should appear before the poet, one of them false but credible and the other true but incredible or at least not very credible, then the poet must leave the true and follow the credible. And if anyone wants an example, let him read what I have written in the seventy-third chapter of the third book, where it is shown that Ariosto⁶ has described the mouths of the Ganges River according to credibility, departing totally from the truth. And if the Ganges were such that its mouths faced the south, as Ariosto has said, then it would also be necessary to say that Taprobana is New Zealand and not Sumatra.⁷ And yet Ariosto, following the credible and leaving the true, has said that Sumatra is Taprobana. This is discussed in the thirtieth chapter of the third book.

The third and last conclusion, which is almost a corollary of the previous two, is that poetry, in order to give more importance to the credible than to the true, must be strictly categorized under the rational faculty named by the ancients "sophistic." [54] And for a complete understanding of this truth, which (unless I am mistaken) has until now remained mysterious, it must be understood that the poetic art may be taken in two modes, that is,

5. *Phaedrus* 247c.

6. Ludovico Ariosto (1474–1533), Italian poet.

7. A glance at the atlas will confirm Ariosto's

superior knowledge of geography and the points of the compass [translator's note].

either according as it is concerned with the laws of the poetic idol, or according as it is concerned with fashioning or forming the poetic idol.

The first mode ought to be called “poetics” and the second “poetry.” In the first mode is the ruling art, which uses the idol and is part of the civil faculty, as we will show a little further on. In the second mode is the art that forms and fabricates the idol and is a species of the rational faculty. As I have said, it ought to be included under sophistic, since it does not care about the true. I am aware that I may have offended the sensibilities of poets by fastening upon an art considered until now virtually divine and the title of sophistic, which has come to be thought repellent and scandalous. Yet to console them a bit I wish to dwell a bit upon the art of the sophists to show where it has or does not have positive or negative meanings. And for an easier understanding of what we have to say, I will set down here the words of Philostratus at the beginning of his *Lives of the Sophists*, which will be seen to contain a summary knowledge of the sophistic art very different from that commonly understood. Here then are the words of Philostratus:

Ancient sophistic must be called philosophical rhetoric, since it argues the same things treated by philosophers. Those who bring forward questions and doubts about each little item, have neglected to understand the ancient sophists about whom they speak with such assurance. Even so, their introductions say, “I understand this,” “I know this,” “It is just a portion that I have considered.” Or, “Nothing is permanent for men.” Either this mode of beginning adds luster to an oration or it makes plainer what is going to be treated. It was part of human prophecy, which the Egyptians and the Chaldeans studied, and before them the Indians prophesied by means of the stars. It belonged to the oracles, as the Pythian oracle⁸ said,

“I know the number of grains of sand and how great the seas are.”

And this:

“Of wood were the walls which Jove gave to Tritonia [Athena].” Also, both Orestes and Alcmeon⁹ killing their mothers and many other things similarly fashioned were the subjects that the ancient sophists practised, and, drawing them out at length, they ornamented them everywhere with conceits, referring to the gods, heroes, justice, strength, and sometimes going even higher, they treated the creation of the world itself.

[55] In these words of Philostratus we have the proposition that sophistic is what treats everything rhetorically—that is, credibly—and reasons confidently with a certain vaunting of its propositions and takes feigned subjects like Orestes and Alcmeon, imitating the one or the other and representing them by idols. Now, that such representation by idols and images is proper to the sophistic art Plato has clearly shown in the *Sophist* where he names it εἰδωλοποιητικὴν, that is, “The making of idols,”¹ that which represents apparent reality. This was also confirmed by Alexander Aphrodisias² in his *Commentary on the Elenches of Aristotle*. Philostratus in the place cited above, seeking to prove that Prodicus Chios³ was also a sophist, shows that

8. The most famous of Apollo’s oracles, at Delphi; its priestess was the Pythia.

9. In Greek mythology, each avenged his father’s death by killing his mother.

1. Plato’s word is *eidōlopoiikē*; see especially *Sophist* 235b–236c, 268d.

2. Aristotelian commentator known as Exegetes (active 200 C.E.).

3. Prodicus of Chios (active 5th c. B.C.E.), a sophist concerned with precise diction and a friend of Socrates.

he wrote a book in which he dealt with a matter pertinent to moral philosophy, namely, the appetites for virtue and vice which are at war within young men, and made idols and images for them. [56] He then says, "And for this purpose Prodicus Chio wrote a pleasant speech in which virtue and vice in feminine guise stood around Hercules.⁴ But he adorned and altered both of them as he saw fit and presented them to the young Hercules, here ease and softness and there discomfort and toil."

It seems to me therefore that one can reasonably say that poetry deserves to be placed under this ancient sophistic, since it also treats things credibly and speaks with such boldness as to profess to know all things by means of the Muses and Apollo.⁵ Certainly Hesiod,⁶ as a poet, became arrogant enough to pretend to know all things past, present, and future at once, and on this point I was pleased to see the opinion of a well-read commentator⁷ on the *Poetics* who feels that it is not suitable to the poet in any way to use words or modes of speech which place in doubt the things he discusses, for, professing the credible more than others, he ought to utter things with great assurance and boldness. Thus on this condition also the poet deserves the name of sophist, and even more he deserves it as the maker of idols and as representing everything with images, as has been shown at sufficient length in the preceding discourse.

Philostratus also says that the ancient sophists willingly talked of gods and heroes, which material is held to be appropriate to poets. And therefore in this respect also it can be concluded that poetry is a species of ancient sophistic. But in order to understand perfectly everything pertinent to this discourse, it will be well to disclose all the other species of sophistic and then to see which are convenient to poetry, and which are not. Therefore, having discussed ancient sophistic in the words quoted above, Philostratus then shows that there is another species that he calls second sophistic, about which he writes in the following way: "Following this was one which does not suit the term new, for it also was ancient. But more often than not it favors and takes as its subjects the poor, the rich, gentlemen, or tyrants, giving them names, as in history. The old sophistic of Gorgias Leontinus originated in Thessaly, and the second sophistic of Aeschines,⁸ son of Astrometus, was already in decline in the Athenian republic."

[57] We know by these words of Philostratus that the old sophistic was not different from the second in any other way, except that the old used made-up names and the second used real names. Whence it can be said that iastic poetry is a species of the second sophistic and phantastic poetry is a species of the ancient sophistic. Now I think that everyone should know that Philostratus believed the sophistic art to be that which set the true aside to behold the credible, and that he considered it worthy and noble, not low and scandalous, as Boethius⁹ preferred to depict it, and perhaps also Aristotle and Plato. But to reconcile those authors who have condemned sophistic with those who have praised it, we have to understand that sophistic was considered in some way to partake of the rectitude of true philosophy.

4. The Roman name for Heracles, the greatest hero of classical mythology.

5. The ancient Greeks considered the Muses and Apollo to be the sources of inspiration for the arts and sciences.

6. Greek didactic poet (active ca. 700 B.C.E.).

7. Ludovico Castelvetro (ca. 1505–1571), Italian critic and philologist.

8. Famous Athenian orator (ca. 397–ca. 322 B.C.E.). GORGIAS (ca. 483–376 B.C.E), famous rhetor and sophist known for eloquence and skepticism.

9. Roman philosopher (ca. 480–524 C.E.).

Now only true philosophy directs the intellect by means of the true and the will by means of the good. Therefore only the sophistic totally contrary to true philosophy misdirects the intellect by means of the false and the will by means of evil. It was this sort of sophistic which was condemned by Plato and Aristotle and all their followers, and apparently Plato wanted to gather under this species of sophistic the poetry of Homer¹ as that which misdirected the intellect by representing false things about the gods and heroes and that which misdirected the will with that variety of imitation and immoderate augmenting of our feelings which were discussed just previously.² [58] And therefore one could say that any other poetry like that of Homer would have to be placed under the sophistic condemned by that philosopher, and not only was it banished from Plato's *Republic* but also from that of the Athenians, as Philostratus has written in the following words: "The Athenians, perceiving the eloquence of the sophists, chased them from the courts, on the grounds that they dominated the courts with unjust utterance and had too great a power over the law." Therefore the species of sophistic condemned by the philosopher is that which misdirects the intellect with falsehood and the will with injustice. Under which he also places that sort of poetry which produces the same disorders and which does not really deserve the name of poetry, since it does not form its idols according to the laws of poetic practice or theory, as was plainly discussed a little before.

The second species of sophistic is that which Philostratus called the old sophistic, which indeed sets feigned things before the intellect, yet does not mislead the will, so that it claims in every way to make it conformable to what is just. And that kind of sophistic was never condemned by the ancients. And if, even so, it should appear to someone that it deserves condemnation for misleading the intellect by some falsehood, I say that he should know that the ancient pagan philosophers (being at variance in this matter with the truth of sacred theology) have praised this misleading of the intellect in certain things, when it is directed to a legitimate end. And in this respect Plato preferred that the magistrate should be able to tell lies to his citizens for the sake of some public good.³ I pass over the fact that this species of sophistic almost always contains some truth under the skin of a first appearance.

Now I maintain that phantastic poetry regulated by the proper laws belongs to that ancient sophistic, since it also offers feigned things to our intellects in order to regulate the appetite. And often it contains under the outer covering of fiction the truth of many noble concepts.

The third species of sophistic is that which Philostratus called the second sophistic, which does not employ feigned names and events, but rather true names and real actions on which are based discussions appropriate to the rules of justice. [59] And this was also much praised by the ancients: thus Demosthenes⁴ and Aeschines professed to be most worthy and excellent in this kind, as Philostratus makes evident in the following words: "In this way Aeschines and Demosthenes publicly traded insults, when they were trying a case before the courts." And this was also called a species of sophistic, because even though it made use of true things in the cause of justice, yet

1. Greek epic poet (ca. 8th c. B.C.E.) to whom were attributed the *Iliad* and *Odyssey*, which were in effect the national poems of ancient Greece.

2. *Republic* 2.377–78 and *Protagoras* 316 [trans-

lator's note].

3. *Republic* 3.389b (see above).

4. Athenian orator and statesman (384–322 B.C.E.); his great rival was Aeschines.

it did so in a credible manner. For which reason the sophists sometimes departed from the truth if the false were a more credible or effective instrument in persuading those of what they wished. There is no better example than the following warning by Valerius Harpocration⁵ about an oration of Demosthenes: "Demosthenes affirmed in his oration on the fleet that the revenue of the Athenian republic was six thousand talents⁶ (a sum of three million six hundred thousand escudos), writing thus: 'He will hear that our fields yield us a revenue of six million talents.' This was either an error on the part of the scribe, or the orator spoke cleverly to make it appear that the republic had a greater ability to make war than the king of Persia."

Under the third species of sophistic we ought in my judgment to place ionic poetry, which represents true actions and persons but always in a credible way. [60] Therefore, on the basis of this entire discussion of sophistic with the fundamentals we have provided, everyone can understand that poetry is a rational faculty and that, among other rational faculties, it ought not to be placed with those that teach the truth, avoiding all other matters, but with those that employ all their power to examine the apparent credible, avoiding the true, and that this was the reason the ancients called it sophistic. To all these reasons may be added the authority of two most excellent writers. The first is Plato, who, as we have said, called the sophist a maker of idols, that is, a sophistic imitator. In the tenth book of the *Republic* where he discusses the imitator he calls him the "marvelous sophist," adding that he never represents the true, but always the apparent. "The painter," he says, "does not paint the real bed, only its appearance." And just after this he says clearly that an imitation is three stages removed from the truth, the first stage being the art of using, the second the art of making, and the third that of imitating. And then he concludes: "Therefore the imitator imitates at a distance from the truth, and, as we have seen, he is able to do all things because he touches only a small part of them, and that part is an image."⁷ The second authority is Plutarch, who in the essay where he deals with how a young man ought to listen to poems, writes as follows: "But he who does not forget, but always keeps in mind the tricks of poetry in telling lies, will say to it at every turn, 'O clever device, whose hide is more varied than the lynx's, why when joking do you deceive with a serious brow, pretending to tell the truth?'"⁸ And he has previously shown that poetry willingly accepts the lie in order better to please.

Therefore, I firmly conclude that poetry is a sophistic art and that through imitation, which is its proper genus, and the credible, which is its subject, and through delight, which is its end, when it is under that genus, and has that subject, and gains that end, it is many times forced to find room for the false. And although I have only cited Philostratus, Plato, and Plutarch on this point, a thousand others could be found whom I have left in the wings so as not to be too long.

And so the credible is the subject of poetry. But because it is also the subject of rhetoric we must necessarily see in what way it can be made to

5. Alexandrian lexicographer and scholar of oratory (active 2d c. C.E.).

6. About 340,000 lbs. (an Athenian talent was ca. 57 lbs.) of silver.

7. *Republic* 10.596d, 597e; 601d, 602c; 603a.

8. Plutarch, "How a Young Man Should Study Poetry," *Moralia*, Loeb ed., vol. 1, pp. 83–84 [translator's note]. Plutarch (ca. 50–ca. 120 C.E.), Greek biographer and moralist.

become proper to both poetry and rhetoric, since we will not fall into the error of those who accept the verisimilar false.

[61] I say therefore that the credible insofar as it is credible is the subject of rhetoric and the credible insofar as it is marvelous is the subject of poetry, for poetry must not only utter credible things but also marvelous things. And for this reason when it can do so credibly, it falsifies human and natural history and passes beyond them to impossible things, as I prove in the sixth chapter of the third book and in the others following, in which a full digression treats this material. So that, if two things equally credible were offered to the poet, one of them more marvelous than the other, though false, not just impossible, the poet ought to take it and refuse the other. And if anyone wants examples, let him read the abovementioned digression, in which, I am convinced, he will find many to the point in each of Aristotle's ten predicaments.⁹

But perhaps there is someone who might wonder why the credible marvelous is not found in company with the true. And he might also suppose that what was said before—that poetry sometimes admits the true—is wrong. I respond that sometimes true things are found in poetry which are often more marvelous than the false, not only in natural things, as Pliny the Younger¹ has shown in the eighth book of his *Letters* when he writes to Caninius Rufus, but also in human history, as that same Pliny has shown in the ninth book, writing to the same Caninius. [62] In the latter he explains that the war made on Dacia by the Emperor Trajan,² although true, was nevertheless a worthy subject for a poem because it was marvelous. Here are his words: "I greatly approve your plan of writing a poem on the Dacian war, for where could you have found a subject so fresh, so eventful, so broad, and, in short, so poetical; a subject which, although most true, is also marvelous. You will write of rivers turned into new channels, of bridges thrust across rivers for the first time, of camps pitched on precipitous mountains."³ See how well Pliny demonstrates that the true can sometimes reach the marvelous. Concerning this topic there only remains to discuss that authority by which it seems to be proven that the false, insofar as it is verisimilar, is a poetic subject. I mention first of all that it is the case that Aristotle calls Empedocles more a physicist than a poet, and this is confirmed by Plutarch in the essay on understanding poems cited above: "I do not know of poetry without fable or fiction. For the verses of Empedocles and of Parmenides, the *Theriaca* of Nicander, and the sayings of Theognis⁴ are more often than not sermons, so that as a vehicle to cast off the baseness of prose, I prefer the grandeur and measure of poetry."⁵ Now as for the authority of Aristotle, we can respond to it in two ways, the first of which is that he has said that Empedocles is more often a physicist than a poet, but he has not by that statement said absolutely

9. The "predicaments" or predicables make up Aristotle's *Categories*. They are substance, quantity, quality, relation, place, time, position, state, action, and affection [translator's note].

1. Roman rhetorician (ca. 61–ca. 112 C.E.), nephew of the natural historian Pliny the Elder. Among his correspondents on literary subjects was Caninius Rufus, of whom little else is known.

2. Roman emperor, 98–117 C.E. (b. 53); he successfully conquered Dacia (roughly equivalent to modern Romania) in 105.

3. Pliny the Younger, *Letters*, book 8, letter 4. The

reference to a natural marvel is in book 9, letter 33 [translator's note].

4. A Greek elegiac poet of Megara (active ca. 540 B.C.E.), known for his large fragmentary collection of gnomic verses. Parmenides (b. ca. 515 B.C.E.), Greek didactic poet and philosopher known for his *On Nature*, which contains the earliest Greek discussion of philosophical method. Nicander (2d c. B.C.E.), Greek poet and grammarian.

5. Plutarch, "How a Young Man Should Study Poetry," *Moralia*, Loeb ed., vol. 1, pp. 83–85 [translator's note].

that he is not a poet, so that affirming that he is more of a physicist than a poet, he has in some way said that he is a poet, since the grammarians tell us that the comparative assumes the positive.

The second way of answering Aristotle is that it could be said (as it was said above) that Empedocles did not merit the name of poet, not because he dealt with true things, for it has already been shown that poetry is able sometimes to treat the true; but because he dealt with things belonging to the sciences scientifically, when he was obligated as a poet to treat them credibly, that is, forming idols and images, matching his mode of instruction more often to the sensitive than to the intellectual powers. As for Plutarch, I say that either he is really speaking of the true and perfect poet, who (as it is said) ought more often to be placed under phantastic imitation, rather than icastic imitation, or his opinion is in opposition to that of Aristotle and Plato, that is, that poetry cannot in any fashion be made from the true. And this answer ought to suffice for the authority of Plutarch, which has been cited to the contrary. [63] To Aristotle's text where he writes that the history of Herodotus laid out in verse would still be history, and so not worthy of the name of poetry, I respond that it is true, but that it does not follow from this that one cannot in some way make a poem out of history, when it is represented as the credible marvelous in idols and particularized images. But if it were narrated in the mode appropriate to history, without making idols and images, even if it were laid out in verse, it would always remain history. And this was what Aristotle meant at that place [in the *Poetics*]. To the authority of Euphron,⁶ I respond that the true can also be sweetened by narrating it in conformity with the credible, using idols and images.

For this reason I believe that icastic poetry, which takes a true subject from history, may nevertheless combine some things of its own in order to render that history more particularized. This is no doubt even more clearly evident in the dramatic-icastic than in the narrative-icastic.

As for the authority of Plato in the *Phaedo*, I say that he discussed phantastic poetry which always takes a fabulous subject, either forming one totally feigned or falsifying a true story. And for this reason he says in that place [the *Phaedo*] that the poet deserves his name more often for his inventing of fables than for his inventing of verses.⁷ Or one might say that he takes the fable in the sense of every invention that can be suitable to the poem and names it fable, because for him such subjects are false and fabulous. [64] But it should not for this reason be said that he did not believe that the true could be a poetic subject, since in an infinite number of other places he says just the contrary, as has already been shown.

Therefore let us summarize what has been said on the poetic subject, that it ought to be credible and at the same time marvelous, and then joining this subject to the form already disclosed above, we can now say that *poetry is an imitation made with harmony, rhythm, and verses, singly or together, of things credible and marvelous*.

There remains for the completion of this definition that we find the efficient and final causes of poetry. Now as for the efficient cause, we might

6. Poet of Greek New Comedy (active 270 B.C.E.).

7. Apparently a somewhat inaccurate reference to *Phaedo* 61b.

dispatch it by saying that it is the human intellect. But this is a cause common to all the other arts, and we only wish to find one that is more appropriate to poetry and that, joined to its end, will reveal the proper origin and legitimate use of poetry.

Therefore in order to lay the foundation for this, I believe there is no surer way than to consider what that art is that discovers the use of poetry, because that, unless I deceive myself, will reveal the origin and the end of poetry. I think, then, that the civil faculty⁸ is that which discovers not only the use of poetry but also explains the norm and the rules for the poetic idol. The following consideration presses me toward this belief, namely, that all the natural powers and the arts that are born of human reason are usually directed to contrary objects, as for example medicine, which not only deals with health and healthful potions but also with sickness and poisons. We can say also that the legal profession likewise not only professes to deal with justice but with injustice as well.

Now keeping this in mind, I say that the civil faculty not only professes to understand the justness of human actions but also the justness of the cessation of human actions, a justness that is opposed to the first justness as deprivation is opposed to habit. * * * [65] But the cessation of a process, as will be explained a little further on, must dispose and prepare men so that they are more apt and eager for the process. Therefore the same faculty will provide the rule for the activity and its cessation. [66] And note that I do not take cessation to be total privation or extinction or activity, but only cessation of serious and difficult activities, and so in the word *cessation* we include the activities of play and amusement which we do for recreation and entertainment. So it can be said that the contrariety of function and cessation is not only privation but (as was said above) also positive. It is privation insofar as the cessation indicates the absence of serious work. It is positive insofar as the cessation of serious work might contain some pleasant activity apt to restore the spirits fatigued by the more important function. This is clearly enough indicated by Aristotle in the tenth book of the *Ethics* and the eighth of the *Politics*, where discussing cessation (which he treats at length in the fifth chapter of the second book), the name is always ἀνάπαυσις and not σχολή⁹ to make it clear that he does not take the otium that is the father of all vices as entertainment or the cessation of serious things, but rather some peaceful and gentle activity.¹

So it appears to me that one can firmly say that in order for cessation to be the opposite of the privative and positive activity, it must necessarily be the concern of one art and a single faculty. But the civil faculty is that which considers the rightness of an activity, so it should also consider the rightness of its cessation. Within it, as I have said, are contained all the activities of amusement, that is, those performed in games. Therefore the consideration of the rightness of pleasure will without any doubt be pertinent in some way to the civil faculty and to moral philosophy. But among all games none is

8. By the civil faculty Mazzoni means, roughly speaking, ethics, or the mode of discourse that decides the social relevance of something [translator's note].

9. Both Greek terms can denote rest and repose, but the first (*anapausis*) suggests leisure and relaxation while the second (*scholē*) implies idleness.

1. *Nicomachean Ethics* 10.3; *Politics* 8 generally concerns education and leisure. The sixth chapter of the second book would seem more to Mazzoni's point than the fifth, which deals with a number of topics ranging from the justice system to political innovation [translator's note].

found more worthy, more noble, and more central than what the poets' work has made. Therefore the civil faculty takes care to consider principally among the other pleasures the standard and rightness of poetry.

Now, that the ancients believed that poetry was a game is shown in the abovementioned chapter of the second book on the authority of Virgil, Horace, Timocles² the comic poet, Plato in the tenth book of the *Republic*, and in the fifth of the *Laws*, and Eusebius of Caesarea³ in the twelfth book of the *Evangelical Preparations*. To these can be added the authority of Aristotle, who in the seventh book of the *Politics* calls games "the imitations of those things you do seriously." And there is the authority of Plato who in the second book of the *Laws* says of poetic imitation: "Again I call it amusement and play."⁴ From all these considerations it seems to me that it can be reasonably said that the civil faculty ought to be divided into two principal parts, one of which is concerned with the laws of activities and is given the general name of politics, that is the civil law. [67] The other is concerned with the laws of cessation or the laws of recreational activities, and is called poetics. And on this basis I believe that the *Poetics* is the ninth book of the *Politics*, and my view seems to me all the more correct in that I find in the eighth book of the *Politics* and at the beginning of the first chapter of the *Poetics* he commences to deal with music, in order to proceed step by step to discuss the recreation of the civil faculty. And so I say that the first seven books of the *Politics* speak of the civil faculty at work and the last two speak of the civil faculty (so to speak) at rest, a state we have just previously called poetics.⁵

Therefore poetics is part of the civil faculty and is what prescribes the standards, the rules, and the laws of the idol in poetry. So in a way it can be said that poetics deals with the idea of the idol and poetry with the making of it. Thus poetics will be in its genus the ruling art, using the idol made by poets to that end we have just previously mentioned. And in its genus poetry will be the fabricating art, the maker of the idol, which is then to be used by poetics and by the civil faculty.

[68] We can therefore add to the previous words concerning the definition of poetry its efficient cause and say: *Poetry is an imitation made with harmony, number, and verses, singly or together, of credible and marvelous things discovered by the civil faculty.*

Up to this point we have disclosed the form, the subject matter, and the making of poetry, so that it remains only to turn our hand to the discussion of its final cause. Ancient and modern writers have raised a great fuss about this, not knowing very well whether they should take usefulness or delight or both, or neither the one nor the other, as the end of poetry.

* * *

2. Greek poet of Middle Comedy (active ca. 330 B.C.E.). Virgil (70–19 B.C.E.), Roman poet. HORACE (65–8 B.C.E.), Roman lyric poet and satirist.

3. Bishop of Caesarea and historian of the early Christian church (ca. 260–340 C.E.).

4. Aristotle, *Politics* 7.1334a; Plato, *Laws* 2.667e [translator's note].

5. The latter part of book 7 and all of book 8 discuss liberal education, that is, the education

appropriate to a free man. For Aristotle this means not just someone not a slave, but a citizen relieved from the compulsion to labor or earn a living by commerce. The civil faculty at rest or leisure thus concerns itself with contemplation and with the study and appreciation of certain kinds of elevated enjoyment such as music and poetry [translator's note].

[70] Now for a complete solution to the present questions, it is necessary to understand that it is not inappropriate for the same thing when considered in diverse ways to have diverse and different ends. And because in this matter I desire to be understood by everyone, it will not perhaps weigh against me to discuss the abovementioned proposition by means of some examples taken from natural things. Therefore I maintain that nature (as is demonstrated at length in the fifty-fifth chapter of the third book) forms the tongues of animals for one principal end, that is for taste, in order that by means of the delight taken in the tasting of food animals will be almost violently impelled to keep themselves alive. And therefore it can be said definitely that nature has formed the tongue in order to serve as an instrument of the vital powers and the concupiscible appetite. However (as Aristotle has declared in many places cited in the abovementioned chapter), nature has sometimes directed that same tongue to an end other than taste, since in men it has made it also an instrument of speech, and consequently as such it is not just an instrument of the vital power or the concupiscible appetite, but, rather, of the rational power and appetite. And at other times it has also been formed as an instrument of the irascible power, having been placed among their weapons of defense, as is seen in bees and in certain other insects.

Thus it can be said that the adequate and principal end that nature proposes in the fashioning of the tongue is taste, since the tongue is not found fashioned by nature unless it is directed to this end. [71] But for all this it can also be added that sometimes nature forms that same tongue to serve another end and consequently it is an instrument of other powers than the concupiscible or vital, and this is clearly seen in the tongues of bees and men. The first of these is an instrument not only of the concupiscible appetite but also of the irascible, and in this second mode it is not made for taste but for defense. The second is an instrument of the vital power and of the rational, and in the latter mode its end is human speech. Therefore, the tongue can be considered in three different manners, that is, as an instrument of the concupiscible, of the irascible, or of the rational appetites, and in each one of these modes it always has a different end—when used by the concupiscible power, it has taste as its end; when used by the irascible, offense; when used by the rational, speech—yet in such a way that taste seems always to be the more suitable and essential end among all the others.

In like fashion I say that poetry can be considered in three different modes, that is, as an imitative art, either as enjoyment or amusement simply, or as enjoyment or amusement directed, ruled, and defined by the civil faculty. If it is considered as an imitative art, I say that it has no other end than to represent or resemble correctly. And this is what Plato, Proclus, and Maximus of Tyre⁶ meant in the passages cited above. [72] Now it should be understood that (as Aristotle has written in the tenth book of the *Ethics*) delight is an accident proper to some functions, and among them is without doubt most proper to imitation, since it seems in a way joined to it so that

6. Sophist (ca. 125–185 C.E.). Proclus (412–485 C.E.), Neoplatonic philosopher and systematizer known for his commentaries on Plato's works.

no mode of imitation can be found that does not at the same time bring both delight and pleasure. * * *

Since, therefore, imitation is always linked to delight, so it happens that all those who have attempted to produce games and enjoyment have produced them with some kind of imitation, as I have shown in discussing the ancient game of chess in the sixth chapter of the second book, and I may add here (to provide an example different from those two) the game of *primero*,⁷ in which is represented the image of ochlocracy, that is, that republic in which the common people have the most power. For since in this kind of republic the aristocrats are weak and the common people strong, so in the game the cards commonly given the noblest names are of lesser value than the other cards that have the vulgar name of waste paper because of their baseness. Now since imitation itself can be considered as part of the above-mentioned game, in this mode it has no other end than to represent the image of ochlocracy and can be deemed a game and amusement, and in such a mode we recognize no other end than delight and pleasure. So I say that poetry can in the same way be thought of as an imitative art and as a game and amusement.

In the first mode it has as its end the correctness of the idol, that is, whether the thing has been imitated in an appropriate way. But in the second mode it contemplates delight and pleasure as its end, and these are joined to a good and perfect imitation. [73] Therefore, I conclude that poetry as an imitative art has the correctness of the idol as its end, but as a thing that should be used for play and amusement and to interrupt some more serious and rigorous business, it here proposes as its end delight born of appropriate imitation. Now this delight that poetry brings us can be looked at in two ways: that is, either as free and independent of any law, or as subject to and regulated by the civil faculty. In the first mode it is the end of that poetry which was classified under the kind of sophistic worthy of blame, because it disordered the appetite with immoderate delight, producing complete rebellion against reason and bringing on damage and loss to a virtuous life.

That was the sort of poetry banished from his republic by Plato, concerning the reason for which Maximus of Tyre has written in his eighth sermon that just as Mithecus, the most excellent cook, was banished by the Spartans, despite the fact that he was greatly esteemed among the other peoples of Greece, only because his art had no other end than to please the taste, which was totally repugnant to the sobriety of the Lacedaemonians;⁸ so also did Plato banish poets from his republic as having regard for nothing other than delighting too freely. [74] And Proclus in the *Poetic Questions*, having admitted that this sort of poetry is truly enjoyable, supplies the reasons why it is damaging and harmful to civil life: "I will therefore suggest two reasons why Plato did not accept tragedy and comedy in a proper republic as worthy of the education of the young. One was the variety (as it is called) of the imitations; the other was the unlimited moving of the passions, which he wished to moderate however he could. To this can be added as a third the case of saying any sort of wickedness in those same genres about gods and heroes." And so on.

7. A card game, often called "prime" in Renaissance England [translator's note].

8. Citizens of Sparta (also called "Lacedaemon").

If, therefore, one has to reason about the end of this poetry, it can be definitely said that as an imitative art its end is the correctness of the idol, but that as recreation its only end is pleasure.

But if delight is considered insofar as it is regulated and defined by the civil faculty, we will necessarily have to say that it is directed toward the useful and consequently is that species of poetry which was placed under praiseworthy sophistic, that is, under that which orders the appetite and submits it to the reason, and, considered as game, defined by the civil faculty to have usefulness as its end. It is nevertheless true that I do not ascertain that this species of poetry is as rough and austere as Proclus claims in the first poetic questions, where he distinguishes two species of poetry, the good and the evil, in the following words: "But it is especially the job of the laws concerning the instruction of youth to keep an eye on such poetry as that which is genuinely enjoyable, pleasing, but not useful for teaching virtue, and which the more it is enjoyable, so the more it is harmful. And to the same laws belongs the choice of an austere muse that guides us to virtue by the right way. For we do not find the wonder of medicine in what is pleasant but in that which heals." In these words of Proclus we see that he believes poetry has to be more a medicine than an enjoyment and that consequently by giving it the useful as its end he does not mind if he separates it from any sort of delight. [75] But it is beyond doubt that in this he disagrees with Plato, who has clearly admitted in many places that poetry is the bringer of the useful to our minds by means of the delight it offers us under the species of enjoyment and recreation.

And to understand fully this favorable opinion of Plato's one has to know that there are three sorts of men to whom he apparently believed the civil faculty—by which we mean moral philosophy—could bring some betterment. These three sorts are: those disposed and habituated to the good, those who are wicked and habituated to evil, and those who are not disposed or in any way habituated either to good or evil. Among the first sort are the men who have learned to curb the disorderly movements of the appetites, and I think that these are the ones who practise moral philosophy well (as Plato himself writes in the *Protagoras* and the *Gorgias*) insofar as it is lawful, that is, insofar as it gives laws and precepts for living well and happily and free of passion. Of the second sort are impious men used to despising the decrees of the law, and for these he shows at length in the *Gorgias* that moral philosophy is useful, insofar as it is judicial, that is, insofar as evildoers are punished by penalties established in trials.⁹ [76] Of the third sort are young girls and boys and all those who feel the tumult of passions, who, in addition, are not used to either good or evil, but who still can be taught the way of virtue and as well be instructed in the way of vice. And because these—as Aristotle has written at the beginning of the *Ethics*—are greatly agitated by their turbulent passions and violent affections, therefore, he believes, they are not apt listeners to the teaching of moral philosophy.¹ But Plato thinks that even these may be offered moral teachings seasoned with poetic sweetness. So it appears that Plato believes (according to what he writes in the second, third, and tenth

9. Cf. *Protagoras* 342–43 and *Gorgias* 476–77 [translator's note].

1. Aristotle, *Nicomachean Ethics* 1.4, 1095a [translator's note].

books of the *Republic*, but even more plainly in the second book of the *Laws*) that the poetic faculty is the civil faculty, or moral philosophy, and it gives instruction to those who are unfit for naked instruction, either because of their age or the strength of their passions. And so I conclude with Proclus that Plato sometimes calls poetry a medicine, like that which aims to make souls healthy, and thus has usefulness as its end.

But I disagree with Proclus because he does not recognize any sort of delight in poetry. Even Plato allows that it introduces the useful by means of delight, for thus he praises it and calls it play and wants to be so understood: "Because the more tender minds do not accept serious studies, their studies are called games and songs and are performed as play; so when men are physically ill, those who care for them spread their nourishment with sweet condiments, but they make unhealthful food unpleasant, so that they learn to accept the one and reject the other."²

* * *

[78] Now without any doubt I think that as regards the end of poetry this is a correct opinion, that is, that perfect poetry regards delight as the cause of the useful. And as proof of my opinion, I am going to make the following discussion a little different from that of Plato.

Therefore I say that perfect poetry is game and is modified by the civil faculty; insofar as it is recreation it has delight as its end, but insofar as it is modified or, so to speak, characterized by moral philosophy, it puts delight first in order to provide a later benefit. And from this it seems to me that the civil faculty has decided that everyone may enjoy the delight that comes from poetry. And it has been so established by Plato in his *Laws* and by other legislators. I say further that the Athenian Republic so valued the delight brought to the people by poets that they were not ashamed to give each year many hundreds of coins to its citizens to buy themselves seats in the theatre where they could more easily hear the comedies and tragedies acted. * * *

[79] And if it should seem to anyone that it is necessary to set forth more in detail the mode and type of this benefit, I am pressed, in order to satisfy this desire, to say something briefly.

[80] Plato wanted his republic to be composed of three sorts of persons: artisans, soldiers, and magistrates. Proclus added that under the category of artisans Plato included all the lower- and middle-class citizens, and that under the category of magistrates he included all those more powerful people who had the government of the republic in their hands. Now based upon this supposition I say that there are, deriving from the providence of the civil faculty in the city, three principal kinds of poetry—the heroic, the tragic, and the comic, each one of which makes use of delight to benefit all the people; each principally aimed at the benefit of one of those three parts that are, according to Plato, necessary to civil community. And so we say that the heroic poem was principally directed at soldiers, since by means of the virtuous actions of the heroes represented in such poems, they would be as if spurred on by glory driven to imitate it. Tragedy principally looks to the utility and benefit of princes, magistrates, and the powerful and, so as to keep

them always under the justice of the laws, represents freely the dreadful and terrible downfall of great persons, which comes almost to be a bridle to restrain and moderate the size of their fortune. Comedy has as its principal intention the benefit of persons of low or moderate estate, and to console them for their modest fortune it usually presents actions that always end happily. And in this way, I think, the civil faculty inclines to the understanding that the humble and popular life is so much more enjoyable and filled with greater contentment than the grand or regal life. * * *

[82] Since the civil faculty seeks to implant in the minds of humble citizens obedience to their superiors, so that out of desire for novelties they should not be moved to disobedience or rebellion, and so that they should always remain content with their condition, it gave birth to comedy, in which the humble life is shown to be happy, fortunate, and capable of infinite solace. On the other hand, since the more powerful and all those raised to the mastery of others have not had to pay too much attention to their fortune, and consequently have become insupportable and insolent in their rule, the civil faculty wished to create tragedy, which would function as an adequate counterweight to the insolence of prosperous fortune. Hence all those who find themselves in such a condition will be able to extract useful instruction in moderating the pride characteristic of their state. [83] This usefulness of tragedy, I believe, is clearly enough indicated by Dio Chrysostum³ in these words: "Nor is it anyone poor that the tragic situation deals with. On the contrary, all tragedies concern the Atreides, the Agamemnons, and the Oedipuses,⁴ who possess a great abundance of gold, silver, fields, and cattle. So they say that the golden fleece was the greatest of all misfortunes." And so on.

Now it seems to me that from what has been said before concerning the utility to be derived from comedy and tragedy, we can conclude that those two kinds of poems are directed by the civil faculty to the extinguishing of sedition and the preservation of peace. And because the civil faculty also has to keep military education in mind, in order that in times of war the republic may be capable of defending itself, it seems to me that it can probably be supposed that for this end the civil faculty created the heroic poem, in which is celebrated the highest strength of the heroes, and especially of those who generously disdain death for the sake of the country, to the end of reminding our soldiers of like examples so that they will consequently be more prone to despise the perils of death for the safety and increase of the public good. And in this way we see that these three species of poetry ruled by the civil faculty, in addition to delight, bring utility and benefit to the republic, instructing in an almost concealed way the three kinds of men, from which (according to Plato) the ideal order of citizens is made up. * * *

[84] Now to come to the end of this definition, I think it would be well to recapitulate in a brief epilogue what has been said before about the final cause of poetry. I say therefore that since language is always the instrument of the concupiscible power and has enjoyment as its end, but that, nevertheless considered as an instrument of the irascible power, it has as its end the defense of the sensitive soul; and if considered as an instrument of the

3. Rhetorician (ca. 40–ca. 120 C.E.), an adherent of Cynic-Stoic philosophy.

4. The sons of Atreus (i.e., the Atreides), Menelaus

and Agamemnon, like Oedipus, were kings of Greek city-states.

rational power, its end is language. In the same way poetry is always an imitative art, and insofar as it is such, its end is always to represent the images of things correctly. Nevertheless, considered as a game, its end is delight; and considered as a game modified by the civil faculty, its immediate end is delight, but directed to profit.

On this premise, it seems to me that it can be concluded that poetry is capable of three definitions according as it is looked at in three different ways, that is, either as imitation, or purely as a game, or as a game modified by the civil faculty. In the first mode it can, perhaps, be defined this way: *Poetry is an art made with verse, number, and harmony, singly or together, imitative of the credible marvelous, and invented by the human intellect to represent the images of things suitably.* In the second mode this other definition would perhaps be appropriate: *Poetry is a game made with verse, number, and harmony, singly or together, imitating the credible marvelous, and invented by the human intellect in order to delight.* Now, since of poetry considered in the first mode we have come to understand all the authority that acknowledges correct imitation as the poetic end, so of poetry considered in the second mode we have expounded all the other authority that accepts only delight as poetic end[.] * * *

[85] In the third mode perhaps there is room for this last definition: *Poetry is a game made with verses, number, and harmony, singly or together, imitating the credible marvelous and invented by the civil faculty to delight the people in a useful way.* Of poetry considered in this mode, we have to understand fully all the authorities that attribute to it the end of usefulness by means of delight. [86] In this regard we should attend to the following words of Proclus, in which he talks of poetry more as a kind of learning than as imitation: "Now if it must be an imitation, as we have said, it also has to concern itself with worthy goodness. For I say that all its virtuous deeds, whether or not they are fashioned by imitation, have no more important end than the good."

From these three definitions there necessarily follow four corollaries. The first of these is that poetry taken in the first two modes is neither ruled nor governed by the civil faculty. The second is that only poetry in the third mode is that which is ruled and governed by moral philosophy or the civil faculty. The third is that the poetic that considers the idol in the first mode and that which likewise considers the idol in the second mode of poetry should not in any way be called a part of moral philosophy. The fourth and last corollary is that only the poetic that considers the idol in the third mode of poetry is that which really deserves to be called part of the civil faculty. And each good poet should put together his poems according to the rules of this mode of poetry, as Dante has done better than all the others.

* * *

SIR PHILIP SIDNEY

1554–1586

Sir Philip Sidney embodied the aristocratic ideals of the Renaissance man: he was a courtier, soldier, statesman, amateur scholar, and poet—a legendary figure in his own lifetime. Author of the first English sonnet sequence, Sidney also wrote the first landmark of literary criticism in English. In 1579, a Puritan minister named Stephen Gosson published an attack on the theaters titled *The School of Abuse*, dedicating it, without permission, “to the right noble Gentleman, Master Philip Sidney, Esquire”; Sidney countered the following year with his work *The Defence of Poesy*, sometimes called *An Apology for Poetry* (1580–81). Though it responds to specific attacks, the *Defence* enjoys significance far beyond its occasion for its synthesis of the Renaissance understanding of classical literary theory, which set the terms of literary debate in England for the next two centuries, and for its formidable handling of its genre—the defense of poetry—which Sidney adapted from classical and medieval models.

Because Gosson's attack draws so heavily on PLATO's objections to poetry, Sidney's *Defence* reads like a reply to the *Republic*. Though his classicism is filtered through the Italian humanists of the fourteenth and fifteenth century (it echoes BOCCACCIO's defense of poetry in *Genealogy of the Gentile Gods*), Sidney relies particularly on ARISTOTLE's *Poetics* and HORACE's *Ars Poetica*. His remarks on the state of the English language and its poetry would define the significant literary issues for later English critics—including JOHN DRYDEN and APHRA BEHN in the seventeenth century and SAMUEL JOHNSON in the eighteenth—shaping the direction taken by post-Renaissance neoclassicism.

Sidney was born at Penshurst, the eldest son of Sir Henry Sidney and Mary Dudley, daughter of the duke of Northampton. His godfather, after whom he was named, was Philip II of Spain, husband of Queen Mary I. In 1564 he entered Shrewsbury school in Shropshire. By 1568 he was a student in Christ Church at Oxford University, though he left in 1571 without taking a degree, perhaps because of an outbreak of the plague. He departed England for the traditional “Grand Tour” of the Continent, arriving in Paris in 1572, in time to witness the infamous St. Bartholomew's Day Massacre of the Protestants.

In March 1575 Sidney returned to London, succeeding his father as Queen Elizabeth's cupbearer (a purely ceremonial position). The next year he traveled to Ireland with his father, the lord deputy, and the earl of Essex (Walter Devereux). Negotiations began for a marriage between Sidney, then twenty-three, and Essex's fourteen-year-old daughter Penelope. Sidney began writing sonnets addressed to her, calling her Stella and himself Astrophil, a literary exercise inspired by the sonnets of the Italian poet Petrarch (1304–1374) to Laura. Though in 1581 Penelope married another, the sonnets continued for many years, even after Sidney's own marriage.

Sidney, who was greatly admired both in England and on the Continent for his sophistication and learning, was for several years unable to find employment at court; he belonged to the faction led by his uncle Robert Dudley, the earl of Leicester, one of Queen Elizabeth's favorites. He divided his time between visits with his illustrious friends, among them the poet Edmund Spenser, and his own writing. When he fell out of favor with the queen, he retreated to his sister's estate and began work on the *Old Arcadia*, also known as *The Countess of Pembroke's Arcadia* (after his sister), a pastoral romance alternating prose and poetry that was completed about 1581. Two sonnet sequences followed, *Certain Sonnets* (1581) and *Astrophil and Stella* (1581–82). He also began, but did not complete, a revision of the *Arcadia*. In keeping with his sense of the decorum required of a courtier, none

of Sidney's works, including the *Defence*, was published during his lifetime; instead, they circulated privately among his friends in manuscript.

By 1583 Sidney's fortunes seemed to be changing. He was knighted and finally given a government appointment. In the fall he married Frances Walsingham, daughter of Queen Elizabeth's secretary of state, and his father-in-law paid off his considerable debts. In 1585 the queen appointed him governor of Flushing in the Netherlands, where she had sent troops to fight against Spain in support of the Protestant cause. There, in September 1586, in a raid on a Spanish convoy at Zutphen, Sidney was wounded by a bullet in the left thigh. The wound became infected, and he died at Arnhem on October 17 at the age of thirty-two. All Europe mourned his loss, and after a lavish state funeral he was buried in St. Paul's Cathedral in London.

The Defence of Poesy is a classic statement of Renaissance literary theory primarily because of its scope, its typicality, and its wit. Unlike his English contemporary George Puttenham, Sidney displays little interest in formulating the technical rules of poetry or rhetoric; he treats the subject of poetry much more broadly. At the same time, Sidney's debts are clear; he is a synthesizer, not a trailblazer. *The Defence* is a veritable encyclopedia of Renaissance humanism. Though structured as a classical oration with the standard seven parts (exordium, proposition, division, examination, refutation, digression, peroration), Sidney's text is more usefully understood as treating three major topics. The first part defends the dignity of poetry, demonstrating its superiority to philosophy and history because it combines the moral precepts of the one with the entertaining examples of the other, all the while cloaking its lessons with the pleasurable devices of art. Along the way, Sidney discusses the ethics of genres, ranging from pastoral, elegy, and satire to comedy, tragedy, and epic. The second part deals with the specific objections raised against poetry, in particular the charge that the poet is a liar. Sidney follows Boccaccio on this point, famously declaring: "Now, for the poet, he nothing affirms, and therefore never lieth." Poets' imitations are not lies, as Plato charged, because poets make no truth claims. The third part of the essay examines the current state of English literature. Here Sidney, the practicing poet, offers some critical comments on genre, diction, poetic figures, meter, rhyme, rhythm, and the English vernacular compared to other languages. Of particular interest is Sidney's pointed criticism of the English drama for failing to adhere to the unities of time and place sketched in Aristotle's *Poetics*. This issue would occupy neoclassical critics of the drama from PIERRE CORNEILLE through Samuel Johnson.

A fundamental aesthetic problem of the late sixteenth century concerns the object and purpose of poetry's representation. Sidney's definition of poetry sets an agenda for the discussion of poetry that brings together many of the learned commonplaces of Renaissance criticism: "an art of imitation, . . . that is to say, a representing, counterfeiting or figuring forth—to speak metaphorically, a speaking picture—with this end: to teach and delight." This definition is less notable for its originality (it is drawn almost word for word from the Italian-born humanist Julius Caesar Scaliger's *Poetics* of 1561, which, in turn, was indebted to Aristotle's *Poetics* and Horace's *Ars Poetica*) than for the insights it gives into the critical controversies of the period. The definition, and Sidney's subsequent discussion of it, raises three issues—all derived from Plato's discussion of poetry in the *Republic*—that dominate literary criticism until the end of the eighteenth century: the nature of imitation, the problem of defining nature, and the injunction that poetry serve moral ends.

Although the principle of imitation reigned unchallenged in literary theory from the Renaissance to the end of the eighteenth century, not all critics meant the same thing by *imitation*, nor did they necessarily agree on what is imitated (compare GIACOMO MAZZONI's extremely elaborate contemporaneous views on the subject with Sidney's). At the center of the controversy over imitation was a debate about nature itself: what constituted nature and what was the status of representations of "reality"? Like the third-century C.E. philosopher Plotinus, Sidney uses the Platonic theory of

Forms to refute Plato's criticism of poetry. The Neoplatonic mimesis espoused by Sidney held that the nature the poet imitated was the ideal, not the material, world. In the Renaissance, the ideal of nature was God's cosmological plan. Sidney perhaps best represents this Christian viewpoint when he argues that "right poets" "imitate to teach and delight, and to imitate borrow nothing of what is, hath been or shall be, but range, only reined with learned discretion, into the divine consideration of what may be and should be." This view of mimesis is based on a religious belief in providential design; because the universe is the product of divine wisdom, the purpose of the poet is ultimately to affirm the rule of justice and order. The ideal that Sidney invokes—what may be or should be—is more "real" than what is. In the next century this view of nature runs head on into the scientific revolution, and the debate is recast in Dryden's *Essay of Dramatic Poesy* (see below) and elsewhere.

Critics of the *Defence*, especially modern ones, have argued that it is derivative, that Sidney is simply not an original theorist, and that the rhetorical play and intertextual abundance of his Renaissance prose is tiring. Yet so long as contemporary literary theorists continue to debate the status of nature and the ideological stakes involved in representation, Sidney's essay, with its elegant variation on Platonic mimesis, will repay close scrutiny.

***The Defence of Poesy* Keywords:** Affect, The Canon/Tradition, Drama, Ethics, Literary History, Poetry, Realism, Religion, Representation

From The Defence of Poesy

When the right virtuous Edward Wotton and I were at the Emperor's court together, we gave ourselves to learn horsemanship of John Pietro Pugliano, one that with great commendation had the place of an esquire in his stable.¹ And he, according to the fertility of the Italian wit, did not only afford us the demonstration of his practice, but sought to enrich our minds with the contemplations therein, which he thought most precious. But with none I remember mine ears were at any time more laden, than when (either angered with slow payment or moved with our learner-like admiration) he exercised his speech in the praise of his faculty.² He said soldiers were the noblest estate of mankind, and horsemen the noblest of soldiers. He said they were the masters of war and ornaments of peace, speedy goers and strong abiders,³ triumphers both in camps and courts. Nay, to so unbelievably⁴ a point he proceeded, as that no earthly thing bred such wonder to a prince as to be a good horseman—skill of government was but a *pedanteria*⁵ in comparison. Then would he add certain praises by telling what a peerless beast the horse was, the only serviceable courtier without flattery, the beast

1. Sidney undertook a European tour between 1571 and 1575. Between autumn 1574 and spring 1575, at the court of the Holy Roman Emperor Maximilian II, he befriended Edward Wotton (1548–1626), secretary to the English embassy there. Sidney would already have been an accomplished horseman, but Vienna was a centre of more advanced equestrianism than was yet common in England: the celebrated Riding School, initially an adjunct of the imperial court and the probable scene of Sidney's encounter with Pugliano, was founded in 1572, and Pugliano, as

Sidney indicates, would have been held in high esteem there (his office was one of considerable status) [except as indicated, all notes are Gavin Alexander's, sometimes abridged or otherwise edited]. [Esquire: officer in charge of a noble's horses and stables—editor's note.]

2. Profession, branch of knowledge.

3. Strong in sustaining an attack or standing their ground.

4. Unbelievable [editor's note].

5. Pedantry [Italian].

of most beauty, faithfulness, courage, and such more, that if I had not been a piece of a logician before I came to him, I think he would have persuaded me to have wished myself a horse.⁶ But thus much at least with his no few words he drave into me, that self-love is better than any gilding to make that seem gorgeous wherein ourselves be parties. Wherein, if Pugliano's strong affection⁷ and weak arguments will not satisfy you, I will give you a nearer example of myself, who (I know not by what mischance) in these my not old years and idlest times having slipped into the title of a poet am provoked to say something unto you in the defence of that my unelected vocation, which if I handle with more good will than good reasons, bear with me, since the scholar is to be pardoned that followeth the steps of his master. And yet I must say that, as I have more just cause to make a pitiful defence of poor poetry, which from almost the highest estimation of learning is fallen to be the laughing stock of children, so have I need to bring some more available proofs, since the former is by no man barred of his deserved credit, the silly latter⁸ hath had even the names of philosophers used to the defacing of it, with great danger of civil war among the Muses.

* * *

But since the authors of most of our sciences were the Romans, and before them the Greeks, let us a little stand upon their authorities, but even so far as to see what names they have given unto this now scorned skill.

Among the Romans a poet was called *vates*, which is as much as a diviner, foreseer or prophet, as by his conjoined words *vaticinium* and *vaticinari* is manifest⁹—so heavenly a title did that excellent people bestow upon this heart-ravishing knowledge. And so far were they carried into the admiration thereof, that they thought in the chanceable hitting upon any such verses great foretokens of their following fortunes were placed. Whereupon grew the word of *Sortes Virgilianae*,¹ when by sudden opening Virgil's book they lighted upon any verse of his making, whereof the histories of the emperors' lives are full, as of Albinus the governor of our island, who in his childhood met with this verse, *arma amens capio; nec sat rationis in armis*, and in his age performed it.² Which, although it were a very vain and godless superstition (as also it was to think spirits were commanded by such verses, whereupon this word 'charms', derived of *carmina*,³ cometh), so yet serveth it to show the great reverence those wits were held in, and altogether not without ground, since both the oracles of Delphos and Sibylla's prophecies were wholly delivered in verses;⁴ for

6. Sidney was interested in contemporary developments in the theory of logic and had a reputation as a skilled disputant. The irony of this passage is enhanced by a habitual, though here submerged, play on words: Philip (phil-hippos) means "horse-lover."

7. Prejudice.

8. That is, poetry (characterized as deserving of compassion, "silly"); the "former" is horsemanship. To make sense of the syntax here the reader must imagine "but the latter" [editor's note].

9. *Vates* was the oldest Latin name for a poet but fell into disuse (*poeta*, derived from the Greek: *poiētēs* being preferred) until revived by Virgil (*Eclogues*, 7.27; 9.34) and HORACE (*Odes*, e.g., 1.1.35; 2.20.3). *Vaticinium* means "a prophesy," *vaticinari* "to foretell" or "to sing."

1. Virgilian lots (Latin), the practice of divining one's fortune by randomly selecting a line or passage from the Roman poet Virgil (70–19 B.C.E.) [editor's note].

2. "Frantic I seize arms; yet little purpose is there in arms." As a child Clodius [Albinus] was obsessed with the line from Virgil, *Aeneid* 2.314. Clodius [150–197 C.E.] was made governor of Britain, and was proclaimed emperor by his troops in 193 C.E.; he committed suicide after defeat by his rival Severus in 197.

3. Songs, incantations.

4. The oracles of the Pythian priestesses at Delphos, sacred to Apollo, were set down in hexameters. Oracles of the sibyl (or sibyls) were given in verse form.

that same exquisite observing of number and measure in the words, and that high-flying liberty of conceit⁵ proper to the poet, did seem to have some divine force in it.

And may not I presume a little farther, to show the reasonableness of this word *vates*, and say that the holy David's Psalms are a divine poem?⁶ If I do, I shall not do it without the testimony of great learned men both ancient and modern. But even the name of 'Psalms' will speak for me, which, being interpreted, is nothing but 'songs'; then, that it is fully written in metre, as all learned Hebricians agree, although the rules be not yet fully found;⁷ lastly and principally, his handling his prophecy, which is merely⁸ poetical. For what else is the awaking his musical instruments, the often and free changing of persons, his notable *prosopopoeias*⁹ when he maketh you, as it were, see God coming in His majesty, his telling of the beasts' joyfulness and hills' leaping, but a heavenly poesy, wherein almost he showeth himself a passionate lover of that unspeakable and everlasting beauty, to be seen by the eyes of the mind, only cleared by faith? But, truly, now having named him, I fear me I seem to profane that holy name, applying it to poetry, which is among us thrown down to so ridiculous an estimation. But they that with quiet judgements will look a little deeper into it shall find the end and working of it such as, being rightly applied, deserveth not to be scourged out of the Church of God.

But now let us see how the Greeks named it, and how they deemed of it. The Greeks called him a 'poet', which name hath, as the most excellent, gone through other languages. It cometh of this word, *poiein*, which is 'to make', wherein, I know not whether by luck or wisdom, we Englishmen have met with the Greeks in calling him a 'maker', which name, how high and incomparable a title it is, I had rather were known by marking the scope of other sciences than by any partial allegation.¹

There is no art delivered to mankind that hath not the works of nature for his² principal object, without which they could not consist,³ and on which they so depend as they become actors and players, as it were, of what nature will have set forth. So doth the astronomer look upon the stars, and, by that he seeth, set down what order nature hath taken therein. So doth the geometrician and arithmetician in their divers sorts of quantities. So doth the musician in times⁴ tell you which by nature agree, which not. The natural philosopher thereon hath his name, and the moral philosopher standeth upon the natural virtues, vices or passions of man: 'and follow nature,' saith he, 'therein, and thou shalt not err.' The lawyer saith what men have determined, the historian, what men have done. The grammarian speaketh only of the rules of speech, and the rhetorician and logician, considering what in nature will soonest prove and persuade, thereon give artificial rules,⁵ which

5. Imagination.

6. The biblical King David is traditionally credited with writing the book of Psalms, thought to be divinely inspired [editor's note].

7. "Psalm" comes from the Greek *psalmos*, "song accompanied on the harp." St. Jerome [ca. 347–420 C.E.] and the 1st-century C.E. Jewish historian Josephus both claimed to find classical metrics and verse forms in the Psalms, and similar claims were made until the 20th century. The consensus now is that there is a system of patterning by clause length and word stress, but "the rules be

not yet fully found."

8. Entirely.

9. The rhetorical figure *prosopopoeia* involves the personification of inanimate things and the giving of a voice to the absent or dead.

1. Biased assertion.

2. Its [editor's note].

3. Exist.

4. Units of metrical measurement. Renaissance music still lacked regular bar lines and time signatures.

5. That is, rules fashioned by skill [editor's note].

still are compassed within the circle of a question, according to the proposed matter. The physician weigheth the nature of man's body, and the nature of things helpful or hurtful unto it. And the metaphysic, though it be in the second and abstract notions, and therefore be counted supernatural,⁶ yet doth he indeed build upon the depth of nature. Only the poet, disdainful to be tied to any such subjection, lifted up with the vigour of his own invention, doth grow in effect into another nature, in making things either better than nature bringeth forth or, quite anew, forms such as never were in nature, as the heroes, demigods, cyclopes, chimeras, furies⁷ and such like. So as he goeth hand in hand with nature, not enclosed within the narrow warrant⁸ of her gifts but freely ranging only within the zodiac of his own wit. Nature never set forth the earth in so rich tapestry as divers poets have done, neither with so pleasant rivers, fruitful trees, sweet-smelling flowers, nor whatsoever else may make the too-much-loved earth more lovely: her world is brazen, the poets only deliver a golden.⁹

But let those things alone and go to man, for whom as the other things are, so it seemeth in him her uttermost cunning is employed, and know whether she have brought forth so true a lover as Theagenes, so constant a friend as Pylades, so valiant a man as Orlando, so right a prince as Xenophon's Cyrus, so excellent a man every way as Virgil's Aeneas.¹ Neither let this be jestingly conceived, because the works of the one be essential, the other in imitation or fiction, for any understanding knoweth the skill of each artificer standeth in that *idea* or fore-conceit of the work, and not in the work itself.² And that the poet hath that *idea* is manifest by delivering them forth in such excellency as he had imagined them; which delivering forth also is not wholly imaginative, as we are wont to say by them that build castles in the air, but so far substantially it worketh, not only to make a Cyrus, which had been but a particular excellency as nature might have done, but to bestow a Cyrus upon the world to make many Cyruses, if they will learn aright why and how that maker made him.

Neither let it be deemed too saucy a comparison to balance the highest point of man's wit with the efficacy of nature, but rather give right honour to the heavenly Maker of that maker, who, having made man to His own likeness, set him beyond and over all the works of that second nature;³ which in nothing he showeth so much as in poetry, when, with the force of a divine

6. Outside the physical world.

7. In Greek mythology, avenging deities who punish crimes both in this world and after death. "Heroes": in the Greek sense, individuals who are part human, part divine. "Demigods": offspring of a god and a mortal. "Cyclopes": one-eyed giants. "Chimeras": fire-breathing female monsters with a lion's head, goat's body, and serpent's tail [editor's note].

8. License, permission.

9. The myth of four (or five) ages goes back to the Greek poet Hesiod (active ca. 700 B.C.E.), *Works and Days*, lines 109–201; see also *Metamorphoses* 1.89–150 (ca. 10 C.E.), by the Roman poet Ovid. Traditionally, the first (and best) age is the golden age, followed by silver, brass or brazen (the generation of humans), and iron [editor's note].

1. Theagenes, the lover of Charikleia, is the hero of the 4th-century Greek prose romance, Heliodorus' *Aethiopica*. Pylades was the faithful friend

of Orestes in Greek myth: see, e.g., Aeschylus' *Oresteia*; Orlando was Roland in the medieval chivalric romances and became Orlando in a series of 15th- and 16th-century Italian verse romances, culminating in Ariosto's *Orlando furioso* (1532). Xenophon wrote a fictional account of the education of the 6th-century B.C.E. Persian king Cyrus, admired founder of the Persian Empire, in the *Cyropaedia*. Aeneas is the hero of Virgil's epic the *Aeneid*.

2. Nature ("the one") and the poet ("the other") are aligned, both skilful artificers able to generate *ideas*, even though nature's ideas actually come into existence ("essential") whereas the poet's can only be represented on the page ("in imitation or fiction").

3. Man is made in God's image; as God presides over nature, man presides over an image of nature, the second nature which he has power to shape at will.

breath, he bringeth things forth surpassing her⁴ doings—with no small arguments to the incredulous of that first accursed fall of Adam, since our erected wit maketh us know what perfection is, and yet our infected will keepeth us from reaching unto it. But these arguments will by few be understood, and by fewer granted. Thus much I hope will be given me, that the Greeks with some probability of reason gave him the name above all names of learning.

Now let us go to a more ordinary opening⁵ of him, that the truth may be the more palpable; and so I hope, though we get not so unmatched a praise as the etymology of his names will grant, yet his very description, which no man will deny, shall not justly be barred from a principal commendation. Poesy, therefore, is an art of imitation, for so Aristotle termeth it in the word *mimēsis*, that is to say, a representing, counterfeiting or figuring forth—to speak metaphorically, a speaking picture—with this end: to teach and delight.⁶ Of this have been three general kinds. The chief, both in antiquity and excellency, were they that did imitate the unconceivable excellencies of God. Such were David in his Psalms, Solomon in his Song of Songs, in his Ecclesiastes and Proverbs, Moses and Deborah in their Hymns, and the writer of Job, which, beside other, the learned Emanuel Tremellius and Franciscus Junius do entitle the poetical part of the Scripture.⁷ Against these none will speak that hath the Holy Ghost in due holy reverence. In this kind, though in a full wrong divinity, were Orpheus, Amphion, Homer in his Hymns,⁸ and many other both Greeks and Romans. And this poesie must be used by whosoever will follow St James' counsel⁹ in singing psalms when they are merry, and I know is used with the fruit of comfort by some, when in sorrowful pangs of their death-bringing sins they find the consolation of the never-leaving goodness.

The second kind is of them that deal with matters philosophical, either moral, as Tyrtæus, Phocylides, Cato;¹ or natural, as Lucretius and Virgil's *Georgics*;² or astronomical, as Manilius and Pontanus; or historical, as Lucan;³ which who mislike, the fault is in their judgement quite out of taste, and not in the sweet food of sweetly uttered knowledge.

4. That is, nature. "He": i.e., the poet.

5. Exposition, definition.

6. See Horace, *Ars Poetica*, line 333: "Poets aim either to do good or to give pleasure" (see above). ARISTOTLE (384–322 B.C.E.) begins the *Poetics* by discussing the nature of poetic *mimēsis*, representation and imitation (see above) [editor's note].

7. Tremellius (1510–1580) and Junius (1545–1602) in their new Latin translation of the Bible from the Hebrew and Greek, *Biblia sacra* (1575), 2:4. [Solomon: the biblical king of Israel was traditionally viewed as the author of the books named. Moses: after the Egyptians pursuing the Israelites perished in the Red Sea, Moses sang a triumphal song of praise to God (Exodus 1.1–15). Deborah: a biblical prophet and judge of Israel who sang a famous song of triumph when the king of Canaan was defeated (Judges 5)—editor's note.]

8. The mythic poems known as the Homeric hymns were ascribed to Homer but were actually composed by various poets from the late 8th century B.C.E. onwards. [Homer (ca. 8th c. B.C.E.), Greek epic poet to whom the *Iliad* and the *Odyssey* are attributed. Orpheus: greatest poet and musician of Greek myth, whose songs could move trees and stones and enchant wild beasts. Amphion: son of Zeus and Antiope, who by singing and

playing his lyre moved the stones to build the walls of Thebes—editor's note.]

9. James 5.13. Psalm singing was something of a Protestant craze in the 16th century.

1. Dionysius Cato, the reputed author of the Latin *Disticha de Moribus* (3d c. C.E., *Distichs on Morals*), a popular elementary textbook on morality in medieval and Elizabethan schools. Tyrtæus (7th c. B.C.E.), Spartan general and poet whose writings include war songs and exhortations in elegiac verse. Phocylides (active 540s B.C.E.), an Ionian poet known for his aphoristic verse [editor's note].

2. A didactic poem that describes and celebrates agriculture (ca. 30 B.C.E.). Lucretius (ca. 94–55 B.C.E.), Roman poet who wrote an epic on Epicurean philosophy, *De rerum natura* (*On the Nature of Things*) [editor's note].

3. Roman statesman and poet (39–64 C.E.), author of a historical epic, *The Civil War*. Manilius (active ca. 20–30 C.E.), author of the *Astronomica*, a didactic poem on astronomy. Jovianus Pontanus (1426–1503), Latin name of the Italian poet, historian, and statesman Giovanni Pontano, author of a neo-Latin poem on the stars, *Urania* [editor's note].

But because this second sort is wrapped within the fold of the proposed subject, and takes not the course of his own invention, whether they properly be poets or no let grammarians dispute, and go to the third, indeed right poets, of whom chiefly this question ariseth, betwixt whom and these second is such a kind of difference as betwixt the meaner sort of painters, who counterfeit only such faces as are set before them, and the more excellent, who having no law but wit bestow that in colours upon you which is fittest for the eye to see—as the constant though lamenting look of Lucretia, when she punished in herself another's fault, wherein he painteth not Lucretia, whom he never saw, but painteth the outward beauty of such a virtue.⁴ For these third be they which most properly do imitate to teach and delight, and to imitate borrow nothing of what is, hath been or shall be, but range, only reined with learned discretion, into the divine consideration of what may be and should be. These be they that, as the first and most noble sort may justly be termed *vates*, so these are waited on⁵ in the excellentest languages and best understandings with the fore-described name of poets. For these indeed do merely make to imitate, and imitate both to delight and teach, and delight to move men to take that goodness in hand, which without delight they would fly as from a stranger, and teach to make them know that goodness whereunto they are moved—which being the noblest scope⁶ to which ever any learning was directed, yet want there not idle tongues to bark at them.

These be subdivided into sundry more special denominations. The most notable be the heroic, lyric, tragic, comic, satiric, iambic, elegiac, pastoral and certain others, some of these being termed according to the matter they deal with, some by the sorts of verses they liked best to write in. For indeed the greatest part of poets have apparelled their poetical inventions in that numbrous⁷ kind of writing which is called verse—indeed but apparelled, verse being but an ornament and no cause to poetry, since there have been many most excellent poets that never versified, and now swarm many versifiers that need never answer to the name of poets. For Xenophon, who did imitate so excellently as to give us *effigiem iusti imperii*—the portraiture of a just empire—under the name of Cyrus, as Cicero saith of him, made therein an absolute heroical poem.⁸ So did Heliodorus in his sugared invention of that picture of love in Theagenes and Charikleia. And yet both these wrote in prose, which I speak to show that it is not rhyming and versing that maketh a poet (no more than a long gown maketh an advocate, who though he pleaded in armour should be an advocate and no soldier), but it is that feigning⁹ notable images of virtues, vices or what else, with that delightful teaching, which must be the right describing note¹ to know a poet by; although indeed the senate of poets hath chosen verse as their fittest raiment, meaning, as in matter they passed all in all, so in manner to go beyond them, not speaking, table talk fashion, or like men in a dream, words as they chanceably fall from

4. In Roman legend, Lucretia was raped by Tarquin, the son of the last king of Rome; after telling her husband, she committed suicide (her story was often treated by Renaissance authors and artists) [editor's note].

5. Accompanied.

6. Object, purpose.

7. Metrical.

8. Sidney refers to Cicero's *Epistola ad Quintum* (*Letter to Quintus*), 1.1.8. [Cicero (106–43 B.C.E.), Roman statesman and orator; Quintus was his brother—editor's note.]

9. Sidney uses "feigning" and its cognates in a precise sense related to its etymology, from the Latin *ingere*, "to shape, form, make."

1. Name, distinguishing mark.

the mouth, but peising² each syllable of each word by just proportion, according to the dignity of the subject.

Now, therefore, it shall not be amiss first to weigh this latter sort of poetry by his works, and then by his parts, and if in neither of these anatomies he be condemnable, I hope we shall obtain a more favourable sentence. This purifying of wit, this enriching of memory, enabling of judgement, and enlarging of conceit,³ which commonly we call learning, under what name soever it come forth, or to what immediate end soever it be directed, the final end is to lead and draw us to as high a perfection as our degenerate souls, made worse by their clayey lodgings, can be capable of. This, according to the inclination of the man, bred many-formed impressions. For some, that thought this felicity principally to be gotten by knowledge, and no knowledge to be so high or heavenly as acquaintance with the stars, gave themselves to astronomy; others, persuading themselves to be demigods if they knew the causes of things, became natural and supernatural philosophers. Some an admirable delight drew to music; and some the certainty of demonstration to the mathematics. But all, one and other, having this scope: to know, and by knowledge to lift up the mind from the dungeon of the body to the enjoying his own divine essence. But when by the balance of experience it was found that the astronomer, looking to the stars, might fall in a ditch,⁴ that the inquiring philosopher might be blind in himself, and the mathematician might draw forth a straight line with a crooked heart, then, lo, did proof, the overruler of opinions, make manifest that all these are but serving sciences, which, as they have each a private end in themselves, so yet are they all directed to the highest end of the mistress-knowledge, by the Greeks called *architektonikē*, which stands as I think in the knowledge of a man's self, in the ethic and politic consideration, with the end of well-doing and not of well-knowing only⁵—even as the saddler's next⁶ end is to make a good saddle, but his further end to serve a nobler faculty, which is horsemanship, so the horseman's to soldiery, and the soldier not only to have the skill but to perform the practice of a soldier. So that the ending end of all earthly learning being virtuous action, those skills that most serve to bring forth that have a most just title to be princes over all the rest.

Wherein, if we can, show we the poet's nobleness, by setting him before his other competitors. Among whom as principal challengers step forth the moral philosophers, whom me thinketh I see coming towards me with a sullen gravity, as though they could not abide vice by daylight, rudely clothed, for to witness outwardly their contempt of outward things, with books in their hands against glory, whereto they set their names, sophistically speaking against subtlety,⁷ and angry with any man in whom they see the foul fault of anger. These men, casting largess as they go of definitions, divisions and distinctions,⁸ with a scornful interrogative do soberly ask whether it be possible to find any path so ready to lead a man to virtue as that which

2. Weighing.

3. Understanding, power of thought.

4. A familiar anecdote from antiquity; see PLATO, *Theaetetus* 174a (where the philosopher is identified as Thales); Cicero, *On the Republic* 1.30 [editor's note].

5. Sidney follows Aristotle, *Nicomachean Ethics* 1.1–2, closely here. *Architektonikē* is the master-

art or science, equated by Aristotle with the political science, that is, the art of living in society.

6. Nearest.

7. Sophistry.

8. Terms inherited from medieval scholasticism describing the stages of rhetorical and logical argument.

teacheth what virtue is, and teacheth it not only by delivering forth his very being, his causes and effects, but also by making known his enemy vice, which must be destroyed, and his cumbersome servant passion, which must be mastered, by showing the generalities that containeth it and the specialities that are derived from it;⁹ lastly, by plain setting down how it extendeth itself out of the limits of a man's own little world to the government of families and maintaining of public societies.

The historian scarcely giveth leisure to the moralist to say so much, but that he—loaden with old mouse-eaten records, authorizing himself for the most part upon other histories whose greatest authorities are built upon the notable foundation of hearsay, having much ado to accord differing writers and to pick truth out of partiality, better acquainted with a thousand years ago than with the present age, and yet better knowing how this world goeth than how his own wit runneth, curious for antiquities and inquisitive of novelties, a wonder to young folks and a tyrant in table talk—denieth in a great chafe¹ that any man for teaching of virtue and virtuous actions is comparable to him. 'I am *testis temporum, lux veritatis, vita memoriae, magistra vitae, nuntia vetustatis*.'² The philosopher,' saith he, 'teacheth a disputative³ virtue, but I do an active. His virtue is excellent in the dangerless Academy⁴ of Plato, but mine showeth forth her honourable face in the battles of Marathon, Pharsalia, Poitiers and Agincourt.'⁵ He teacheth virtue by certain abstract considerations, but I only bid you follow the footing of them that have gone before you. Old-aged experience goeth beyond the fine-witted philosopher, but I give the experience of many ages. Lastly, if he make the song-book, I put the learner's hand to the lute, and if he be the guide, I am the light.' Then would he allege⁶ you innumerable examples, confirming story by stories, how much the wisest senators and princes have been directed by the credit of history, as Brutus, Alphonsus of Aragon,⁷ and who not, if need be? At length, the long line of their disputation maketh a point⁸ in this, that the one giveth the precept, and the other the example.

Now whom shall we find, since the question standeth for the highest form in the school of learning, to be moderator?⁹ Truly, as me seemeth, the poet; and if not a moderator, even the man that ought to carry the title from them both, and much more from all other serving sciences. Therefore compare we the poet with the historian and with the moral philosopher, and if he go beyond them both, no other human skill can match him. For as for the divine, with all reverence it is ever to be excepted, not only for having his scope as far beyond any of these as eternity exceedeth a moment, but even

9. That is, an examination of genus and species.
1. Heart, rage.

2. Cicero, *De Oratore* 2.9.36 (Latin): "the witness of passing ages, the light of truth, the life of memory, the mistress of life, she who brings tidings of antiquity."

3. Theoretical.

4. Plato's school on the outskirts of Athens, founded ca. 385 B.C.E. [editor's note].

5. All sites of great victories: at Marathon, the Greeks defeated the Persians (490 B.C.E.); at Pharsalia, Julius Caesar defeated Pompey (48 B.C.E.); at Poitiers, the English led by Edward the Black Prince defeated the French (1356); and at Agincourt, the English led by Henry V again

defeated the French (1415) [editor's note].

6. Cite.

7. Alphonso V of Aragon (1396–1458, also known as Alfonso I of Naples and Sicily) carried the Roman histories written by Livy and Caesar into battle with him. Marcus Brutus (85–42 B.C.E.), one of the conspirators against Caesar, was inspired by the thought of his ancestor Junius Brutus, who expelled the Tarquin kings [editor's note].

8. (Punning on) full stop, period.

9. Judge, chair. In logic and rhetoric the *quaestio* is the subject of debate, the central issue in an academic disputation. ["Form": grade level—editor's note.]

for passing each of these in themselves. And for the lawyer, though *ius*¹ be the daughter of justice, and justice the chief of virtues, yet because he seeketh to make men good rather *formidine poenae* than *virtutis amore*,² or, to say righter, doth not endeavour to make men good, but that their evil hurt not others, having no care, so he be a good citizen, how bad a man he be, therefore as our wickedness maketh him necessary, and necessity maketh him honourable, so is he not, in the deepest truth, to stand in rank with these who all endeavour to take naughtiness away and plant goodness even in the secretest cabinet of our souls. And these four are all that any way deal in the consideration of men's manners,³ which being the supreme knowledge, they that best breed it deserve the best commendation.

The philosopher, therefore, and the historian are they which would win the goal, the one by precept, the other by example; but both, not having both, do both halt.⁴ For the philosopher, setting down with thorny arguments the bare rule, is so hard of utterance, and so misty to be conceived, that one that hath no other guide but him shall wade in him till he be old before he shall find sufficient cause to be honest. For his knowledge standeth so upon the abstract and general, that happy is that man who may understand him, and more happy that can apply what he doth understand. On the other side, the historian, wanting⁵ the precept, is so tied not to what should be but to what is, to the particular truth of things and not to the general reason of things, that his example draweth no necessary consequence, and therefore a less fruitful doctrine.

Now doth the peerless poet perform both, for whatsoever the philosopher saith should be done, he giveth a perfect picture of it in someone by whom he presupposeth it was done, so as he coupleth the general notion with the particular example. A perfect picture I say, for he yieldeth to the powers of the mind an image of that whereof the philosopher bestoweth but a wordish description, which doth neither strike, pierce nor possess the sight of the soul so much as that other doth. For as in outward things, to a man that had never seen an elephant or a rhinoceros, who should tell him most exquisitely all their shapes, colour, bigness and particular marks, or of a gorgeous palace an architector, with declaring the full beauties, might well make the hearer able to repeat, as it were by rote, all he had heard, yet should never satisfy his inward conceit with being witness to itself of a true lively⁶ knowledge; but the same man, as soon as he might see those beasts well painted, or the house well in model, should straightways grow, without need of any description, to a judicial⁷ comprehending of them: so no doubt the philosopher, with his learned definitions, be it of virtues or vices, matters of public policy or private government, replenisheth the memory with many infallible grounds of wisdom, which notwithstanding lie dark before the imaginative and judging power,⁸ if they be not illuminated or figured forth by the speaking picture of poesy.

* * *

1. Right, law (Latin).

2. From fear of punishment . . . by the love of virtue (Latin); Horace, *Epistles* 1.16.52–53 [editor's note].

3. Morals.

4. Walk with a limp.

5. Lacking [editor's note].

6. Living, lifelike.

7. Judicious, just.

8. Here and elsewhere Sidney adopts the standard Renaissance tripartite division of mind (or "wit") into imagination (or "conceit"), judgment, and memory.

For the question is, whether the feigned image of poetry or the regular instruction of philosophy hath the more force in teaching. Wherein if the philosophers have more rightly showed themselves philosophers than the poets have attained to the high top of their profession (as in truth *mediocribus esse poetis / non di, non homines, non concessere columnae*)⁹ it is, I say again, not the fault of the art, but that by few men that art can be accomplished.

* * *

For conclusion, I say the philosopher teacheth, but he teacheth obscurely, so as the learned only can understand him: that is to say, he teacheth them that are already taught. But the poet is the food for the tenderest stomachs; the poet is indeed the right popular philosopher. Whereof Aesop's tales give good proof, whose pretty allegories, stealing under the formal tales¹ of beasts, make many, more beastly than beasts, begin to hear the sound of virtue from these dumb speakers.

But now may it be alleged, that if this imagining of matters be so fit for the imagination, then must the historian needs surpass, who bringeth you images of true matters, such as indeed were done, and not such as fantastically or falsely may be suggested to have been done. Truly, Aristotle himself, in his discourse of poesy, plainly determineth this question, saying that poetry is *philosophōteron* and *spoudaioteron*—that is to say, it is more philosophical and more studiously serious than history.² His reason is, because poesy dealeth with *katholou*, that is to say with the universal consideration, and the history with *kath' hekaston*, the particular. Now, saith he, the universal weighs what is fit to be said or done, either in likelihood or necessity, which the poesy considereth in his imposed names; and the particular only marketh whether Alcibiades³ did or suffered this or that. Thus far Aristotle: which reason of his, as all his, is most full of reason.

* * *

Now, to that which commonly is attributed to the praise of history, in respect of the notable learning is got by marking the success,⁴ as though therein a man should see virtue exalted and vice punished, truly that commendation is peculiar to poetry, and far off from history; for indeed poetry ever sets virtue so out in her best colours, making fortune her well-waiting handmaid, that one must needs be enamoured of her. Well may you see Ulysses in a storm and in other hard plights,⁵ but they are but exercises of patience and magnanimity,⁶ to make them shine the more in the near-following prosperity. And of the contrary part, if evil men come to the stage, they ever go out (as the tragedy writer answered to one that misliked the show of such persons) so manacled as they little animate folks to follow them. But the history, being captived to the truth of a foolish world, is many times a terror from well-doing, and an encouragement to unbridled wickedness. For see we not valiant Miltiades rot in his fetters; the just Phocion and the accomplished

9. That poets should ever be "average" is not a concession allowed by man, gods, or the stalls (Latin); Horace, *Ars Poetica*, lines 372–73 [editor's note].

1. That is, the outward form of tales. The earliest surviving collection of fables ascribed to the 6th-century B.C.E. Aesop is a metrical version by Babrius, ca. 100 C.E.

2. See *Poetics* 9, 1451a36–1451b11 [editor's note].

3. Athenian general and politician (ca. 450–404 B.C.E.) [editor's note].

4. Outcome, upshot.

5. *Odyssey*, book 5. [Ulysses is the Latin name for Homer's Greek hero, Odysseus—editor's note.]

6. Fortitude, greatness of spirit.

Socrates put to death like traitors; the cruel Severus live prosperously; the excellent Severus miserably murdered; Sulla and Marius dying in their beds; Pompey and Cicero⁷ slain then when they would have thought exile a happiness? See we not virtuous Cato driven to kill himself, and rebel Caesar so advanced that his name yet after sixteen hundred years lasteth in the highest honour?⁸ And mark but even Caesar's own words of the forenamed Sulla (who in that only did honestly, to put down his dishonest tyranny), *litteras nescivit*,⁹ as if want of learning caused him to do well. He meant it not by poetry, which, not content with earthly plagues, deviseth new punishments in hell for tyrants, nor yet by philosophy, which teacheth *occidendos esse*,¹ but no doubt by skill in history, for that indeed can afford you Cypselus, Periander, Phalaris, Dionysius,² and I know not how many more of the same kennel, that speed³ well enough in their abominable injustice of usurpation.

I conclude therefore that he excelleth history, not only in furnishing the mind with knowledge, but in setting it forward to that which deserveth to be called and accounted good, which setting forward and moving to well-doing indeed setteth the laurel crown upon the poets as victorious, not only of the historian, but over the philosopher, howsoever in teaching it may be questionable.⁴ For suppose it be granted, that which I suppose with great reason may be denied, that the philosopher, in respect of his methodical proceeding, doth teach more perfectly than the poet; yet do I think that no man is so much *philophilosophos*⁵ as to compare the philosopher in moving with the poet. And, that moving is of a higher degree than teaching, it may by this appear, that it is well nigh both the cause and effect of teaching. For who will be taught, if he be not moved with desire to be taught? And what so much good doth that teaching bring forth (I speak still of moral doctrine) as that it moveth one to do that which it doth teach? For, as Aristotle saith, it is not *gnōsis* but *praxis* must be the fruit;⁶ and how *praxis* can be, without being moved to practise, it is no hard matter to consider.

7. Killed at the command of Antony (whom his orations defending the Republic had attacked) as he was trying to escape from Rome. Miltiades (ca. 550–489 B.C.E.), Athenian general and victor at Marathon later imprisoned by the Athenians. Phocian (4th c. B.C.E.), Athenian general and statesman unjustly executed for treason because he had opposed the will of the people. Socrates (469–399 B.C.E.), Athenian philosopher immortalized in the writings of his pupil Plato and condemned to death on charges of impiety and corrupting youth. "Cruel Severus": Lucius Septimius Severus (145/6–221 C.E.), a strong emperor of Rome (193–211) who was ruthless in pursuit of his goals. "Excellent Severus": Alexander Severus (208/9–235 C.E.), a peaceful and religious emperor of Rome (225–235), slain by his troops. Sulla and Marius: Lucius Cornelius Sulla (ca. 138–78 B.C.E.) and Gaius Marius (157–86 B.C.E.), Roman generals whose struggle for military and political supremacy led to civil war (88–82 B.C.E.). Pompey: Pompey the Great (106–48 B.C.E.), Roman soldier and statesman defeated at Pharsalia by his former ally, Caesar, and murdered in Egypt [editor's note].

8. The rebellion of Julius Caesar (100–44 B.C.E.)

against the Senate in 49 led to civil war and the end of the Roman Republic. Cato: Cato the Younger (95–46 B.C.E.), a defender of the Republic who committed suicide after it was clear that Caesar had won the day [editor's note].

9. He was ignorant of letters (Latin). ["Caesar's words" are recounted in Suetonius (b. ca. 69 C.E.), *Life of Julius Caesar* 77—editor's note.]

1. That they must fall (Latin).

2. All Greek "tyrants" (that is, rulers): Cypselus, in Corinth, ca. 657–625 B.C.E.; Periander, his son, in Corinth, 625–585 B.C.E.; Phalaris, whose rule in Acragas (Sicily), ca. 570–ca. 544 B.C.E., was notoriously cruel; and Dionysius I, in Syracuse, 405–367 B.C.E. [editor's note].

3. Prosper.

4. That is, who gets the crown for teaching alone may be debatable. [The crown is like those awarded to victors in the Greek athletic contests; laurel, because of the tree's association with Apollo, is linked to poetry—editor's note.]

5. A philosopher-lover (Greek).

6. See Aristotle, *Nicomachean Ethics* 1.3, 1095a: "The end is not knowledge (*gnōsis*) but action (*praxis*)" [editor's note].

The philosopher sheweth you the way, he informeth you of the particularities, as well of the tediousness of the way, as of the pleasant lodging you shall have when your journey is ended, as of the many by-turnings that may divert you from your way. But this is to no man but to him that will read him, and read him with attentive, studious painfulness; which constant desire whosoever hath in him hath already passed half the hardness of the way, and therefore is beholding to the philosopher but for the other half. Nay truly, learned men have learnedly thought that where once reason hath so much overmastered passion as that the mind hath a free desire to do well, the inward light each mind hath in itself is as good as a philosopher's book, since in nature we know it is well to do well, and what is well and what is evil, although not in the words of art which philosophers bestow upon us; for out of natural conceit the philosophers drew it.⁷ But to be moved to do that which we know, or to be moved with desire to know—*hoc opus, hic labor est*.⁸

Now therein of all sciences (I speak still of human, and according to the human conceit) is our poet the monarch. For he doth not only show the way, but giveth so sweet a prospect into the way as will entice any man to enter into it; nay, he doth as if your journey should lie through a fair vineyard—at the very first give you a cluster of grapes that, full of that taste, you may long to pass further. He beginneth not with obscure definitions, which must blur the margent⁹ with interpretations and load the memory with doubtfulness,¹ but he cometh to you with words set in delightful proportion, either accompanied with or prepared for the well-enchancing skill of music, and with a tale, forsooth, he cometh unto you, with a tale which holdeth children from play and old men from the chimney corner; and pretending² no more, doth intend the winning of the mind from wickedness to virtue. Even as the child is often brought to take most wholesome things by hiding them in such other as have a pleasant taste, which if one should begin to tell them the nature of the aloes or rhabarbarum³ they should receive, would sooner take their physic at their ears than at their mouth, so is it in men (most of which are childish in the best things till they be cradled in their graves): glad they will be to hear the tales of Hercules,⁴ Achilles, Cyrus, Aeneas, and hearing them must needs hear the right description of wisdom, valour and justice, which if they had been barely (that is to say, philosophically) set out, they would swear they be brought to school again.

* * *

By these, therefore, examples and reasons I think it may be manifest that the poet with that same hand of delight doth draw the mind more effectually than any other art doth, and so a conclusion not unfitly ensue: that as virtue is the most excellent resting place for all worldly learning to make his end of, so poetry, being the most familiar⁵ to teach it, and most princely to

7. The philosophers deduced moral laws, so why can't we?

8. "This is the labour, this is the toil." Virgil, *Aeneid* 6.129, on Aeneas' path back up from the underworld.

9. Margin of a book.

1. Ambiguity.

2. Claiming.

3. Aloes is a bitter purgative made from the leaves of several species of aloes; rhabarbarum is rhubarb or rhubarb-root, also used as a purgative.

4. Roman spelling of Heracles, greatest of the legendary Greek heroes [editor's note].

5. Courteous, friendly.

move towards it, in the most excellent work is the most excellent workman. But I am content not only to decipher him by his works (although works in commendation or dispraise must ever hold a high authority), but more narrowly will examine his parts, so that (as in a man), though all together may carry a presence full of majesty and beauty, perchance in some one defectuous⁶ piece we may find blemish.

Now in his parts, kinds or species,⁷ as you list to term them, it is to be noted that some poesies have coupled together two or three kinds: as the tragical and comical, whereupon is risen the tragi-comical. Some, in the manner, have mingled prose and verse, as Sannazaro and Boethius.⁸ Some have mingled matters heroical and pastoral. But that cometh all to one in this question, for if severed they be good, the conjunction cannot be hurtful. Therefore, perchance forgetting some, and leaving some as needless to be remembered, it shall not be amiss in a word to cite the special kinds, to see what faults may be found in the right use of them.

Is it then the pastoral poem which is disliked?⁹ (For perchance where the hedge is lowest they will soonest leap over.) Is the poor pipe disdained, which sometimes, out of Meliboeus' mouth, can show the misery of people under hard lords or ravening soldiers, and again, by Tityrus, what blessedness is derived to them that lie lowest from the goodness of them that sit highest;¹ sometimes, under the pretty tales of wolves and sheep, can include the whole considerations of wrongdoing and patience; sometimes show that contentions for trifles can get but a trifling victory, where perchance a man may see that even Alexander and Darius,² when they strave who should be cock of this world's dunghill, the benefit they got was that the after-livers may say:

Haec memini, et victum frustra contendere Thyrsim.
ex illo Corydon, Corydon est tempore nobis?³

Or is it the lamenting elegiac, which in a kind heart would move rather pity than blame; who bewails with the great philosopher Heraclitus⁴ the weakness of mankind and the wretchedness of the world; who surely is to be praised, either for compassionate accompanying just causes of lamentations, or for rightly painting out how weak be the passions of woefulness? Is it the bitter but wholesome iambic,⁵ who rubs the galled mind in making shame

6. Defective.

7. What we would now call "genres."

8. Influential examples of the *prosimetrum*, a work alternating verse and prose, include Boethius' [ca. 480–524] *Consolation of Philosophy* and DANTE's *La Vita Nuova* (*The New Life*). The *Arcadia* (1504) of Jacopo Sannazaro (1458–1530) is a rather limited pastoral narrative, its twelve prose sections alternating with twelve verse sections, but the work gave Sidney the title for his *Arcadia*.

9. Pastoral, the lowest ranking of the genres in the traditional lists, had the status of both the first type of poetry for a writer to publish and the first for a schoolboy to read.

1. Virgil, *Eclogues* 1, a dialogue between the dispossessed Meliboeus and the fortunate Tityrus.

2. The invading Alexander the Great (356–323 B.C.E.) twice defeated Darius III (ca. 380–330 B.C.E.), king of Persia, before Darius was deposed

and finally murdered by his own soldiers [editor's note].

3. "This I remember, and how Thyrsis, vanquished, strove in vain. From that day it is Corydon, Corydon with us." The closing lines of Virgil, *Eclogues* 7.69–70, in which Meliboeus has narrated a contest between Corydon and Thyrsis.

4. The Greek philosopher of the 6th century, whose doctrine that everything is in a state of constant flux Sidney glances at here. [Heraclitus was known as "the weeping philosopher" because of his gloomy views—editor's note.]

5. Another genre named for a verse form. Sidney follows the Italian scholar and poet Julius Caesar Scaliger (1484–1558) in calling the direct and excoriating Juvenalian form of satire "iambic" and reserving the term "satiric" for the gentler, comic approach of Horace. ["The Juvenalian form": i.e., characteristic of the Roman satiric poet Juvenal (ca. 55–ca. 130 C.E.)—editor's note.]

the trumpet of villainy, with bold and open crying out against naughtiness? Or the satiric, who *omne vafer vitium ridenti tangit amico*;⁶ who sportingly never leaveth till he make a man laugh at folly, and, at length ashamed, to laugh at himself, which he cannot avoid without avoiding the folly; who, while *circum praeordia ludit*,⁷ giveth us to feel how many headaches a passionate life bringeth us to, how, when all is done, *est Ulubris, animus si nos non deficit aequus*?⁸

No? Perchance it is the comic, whom naughty play-makers and stage-keepers have justly made odious. To the arguments of abuse I will answer after; only thus much now is to be said—that the comedy is an imitation of the common errors of our life, which he representeth in the most ridiculous and scornful sort that may be, so as it is impossible that any beholder can be content to be such a one. Now, as in geometry the oblique must be known as well as the right,⁹ and in arithmetic the odd as well as the even, so in the actions of our life who seeth not the filthiness of evil wanteth a great foil to perceive the beauty of virtue. This doth the comedy handle so in our private and domestical matters as, with hearing it, we get, as it were, an experience what is to be looked for of a niggardly Demea, of a crafty Davus, of a flattering Gnatho, of a vainglorious Thraso;¹ and not only to know what effects are to be expected, but to know who be such, by the signifying badge given them by the comedian.² And little reason hath any man to say that men learn the evil by seeing it so set out, since, as I said before, there is no man living, but, by the force truth hath in nature, no sooner seeth these men play their parts but wisheth them *in pistrinum*, although perchance the sack of his own faults lie so behind his back³ that he seeth not himself dance the same measure;⁴ whereto yet nothing can more open his eyes than to find his own actions contemptibly set forth.

So that the right use of comedy will, I think, by nobody be blamed. And much less of the high and excellent tragedy, that openeth the greatest wounds, and showeth forth the ulcers that are covered with tissue; that maketh kings fear to be tyrants, and tyrants manifest their tyrannical humours; that with stirring the affects of admiration⁵ and commiseration teacheth the uncertainty of this world, and upon how weak foundations gilden roofs are builded; that maketh us know:

qui sceptrā saevus duro imperio regit
timet timentes; metus in auctorem redit.⁶

6. The rascal probes his friend's every fault while making him laugh (Latin); slightly misquoted from Persius (34–62 C.E.), *Satires* 1.116–17 (a description of Horace) [editor's note].

7. He plays with his [friend's] heart (Latin); Persius 1.117 [editor's note].

8. [What we seek (i.e., to live well)] is in Ulubrae, if our equanimity doesn't fail us (Latin); slightly adapted from Horace, *Epistles* 1.1.30. Ulubrae was an uninspiring town surrounded by marshes [editor's note].

9. "Oblique" means "crooked," and "right" can mean "straight"; at the same time they are used in the technical sense of oblique and right angles.

1. Stock characters in the comedies of the Roman playwright Terence (ca. 190–159 B.C.E.).

2. The requirement of *decorum*, that characters be self-consistent and appropriate; cf. [Aristotle,] *Poetics* 1454a and Horace, *Ars Poetica*, lines 119–27.

3. In the Aesopic fable, man has two sacks, one filled with other men's faults, carried in front, one with his own, carried on his back where he cannot see it. *In pistrinum*: "in the mill," i.e., sentenced to hard labor.

4. Type of dance: i.e., "dance to the same tune."

5. Surprise, wonderment. "Affects": emotions.

6. "The tyrant who rules harshly fears those who fear him; terror rebounds on its agent." A popular tag [slightly misquoted] from Seneca, *Oedipus*, 705–6. [Seneca the Younger (ca. 4 B.C.E.–65 C.E.), Roman philosopher and playwright—editor's note.]

But how much it can move, Plutarch yieldeth a notable testimony of the abominable tyrant Alexander Pheraeus,⁷ from whose eyes a tragedy well made and represented drew abundance of tears, who without all pity had murdered infinite numbers, and some of his own blood; so as he that was not ashamed to make matters for tragedies yet could not resist the sweet violence of a tragedy. And if it wrought no further good in him, it was that he, in despite of himself, withdrew himself from hearkening to that which might mollify⁸ his hardened heart. But it is not the tragedy they do mislike, for it were too absurd to cast out so excellent a representation of whatsoever is most worthy to be learned.

Is it the lyric that most displeaseth, who with his tuned lyre and well-accommoded voice giveth praise, the reward of virtue, to virtuous acts; who gives moral precepts and natural problems;⁹ who sometime raiseth up his voice to the height of the heavens in singing the lauds of the immortal God? Certainly I must confess my own barbarousness: I never heard the old song of Percy and Douglas that I found not my heart moved more than with a trumpet, and yet is it sung but by some blind crowder,¹ with no rougher voice than rude style—which being so evil apparelled in the dust and cobwebs of that uncivil age, what would it work trimmed in the gorgeous eloquence of Pindar?² In Hungary I have seen it the manner at all feasts and other such meetings to have songs of their ancestors' valour, which that right soldierlike nation think one of the chiefest kindlers of brave courage.³ The incomparable Lacedemonians⁴ did not only carry that kind of music ever with them to the field, but even at home, as such songs were made, so were they all content to be singers of them, when the lusty men were to tell what they did, the old men what they had done, and the young what they would do. And where a man may say that Pindar many times praiseth highly victories of small moment, matters rather of sport than virtue, as it may be answered, it was the fault of the poet and not of the poetry, so indeed the chief fault was in the time and custom of the Greeks, who set those toys at so high a price that Philip of Macedon reckoned a horserace won at Olympus among his three fearful felicities.⁵ But as the unimitable Pindar often did, so is that kind most capable and most fit to awake the thoughts from the sleep of idleness to embrace honourable enterprises.

There rests the heroical,⁶ whose very name I think should daunt all backbiters. For by what conceit can a tongue be directed to speak evil of that which draweth with him no less champions than Achilles, Cyrus, Aeneas, Turnus,

7. Ruler of Pherae in Thessaly, 369–358 B.C.E.; in his *Life of Pelopidas*, Plutarch (ca. 50–120 C.E.) records that Alexander, whose savagery he details, wept at the sufferings of Hecuba and Andromache in the Greek playwright Euripides' *Troades* (415 B.C.E.) [editor's note].

8. Soften.

9. Questions posed for academic discussion [editor's note].

1. Fiddler, minstrel. Some form of the ballad of Chevy Chase, dating from the 15th century, which tells of the enmity between Percy (of Northumberland) and the Scottish Douglas; both die in battle.

2. Greek lyric poet (ca. 518–438 B.C.E.), known for his elaborate odes honoring victors in athletic contests. "Uncivil age": the Middle Ages [editor's

note].

3. Sidney spent several weeks in Hungary in 1573.

4. Spartans.

5. Mistaking, as was common, Mount Olympus for Olympia, site of the Games. The three "felicities" were reported to Philip on the same day; the other two were a victory against the Illyrians and the birth of his son Alexander, later the Great (Plutarch's *Life of Alexander* 3). "Toys": trifles. "Fearful": inspiring awe, reverence; ominous.

6. The heroical, or epic, was acknowledged to be the foremost literary kind by almost all authorities, only comparable to tragedy for the dignity of its subject matter, and preferable for its greater scope.

Tydeus and Rinaldo;⁷ who doth not only teach and move to a truth, but teacheth and moveth to the most high and excellent truth; who maketh magnanimity and justice shine through all misty fearfulness and foggy desires; who, if the saying of Plato and Tully be true, that who could see virtue would be wonderfully ravished with the love of her beauty⁸—this man sets her out to make her more lovely in her holiday apparel⁹ to the eye of any that will deign not to disdain until they understand? But if anything be already said in the defence of sweet poetry, all concurrerth to the maintaining the heroical, which is not only a kind, but the best and most accomplished kind of poetry. For as the image of each action stirreth and instructeth the mind, so the lofty image of such worthies most inflameth the mind with desire to be worthy, and informs with counsel how to be worthy. Only let Aeneas be worn in the tablet of your memory¹—how he governeth himself in the ruin of his country, in the preserving his old father, and carrying away his religious ceremonies;² in obeying God's commandment to leave Dido,³ though not only all passionate kindness but even the human consideration of virtuous gratefulness would have craved other of him; how in storms, how in sports, how in war, how in peace, how a fugitive, how victorious, how besieged, how besieging, how to strangers, how to allies, how to enemies, how to his own; lastly, how in his inward self, and how in his outward government—and I think in a mind not prejudiced with a prejudicating humour he will be found in excellency fruitful, yea even as Horace saith, *melius Chrysippo et Crantore*.⁴

But truly I imagine it falleth out with these poet-whippers as with some good women, who often are sick but in faith they cannot tell where—so the name of poetry is odious to them, but neither his cause nor effects, neither the sum that contains him nor the particularities descending from him, give any fast handle to their carping dispraise.

Since then poetry is of all human learnings the most ancient, and of most fatherly antiquity, as from whence other learnings have taken their beginnings; since it is so universal that no learned nation doth despise it, nor barbarous nation is without it; since both Roman and Greek gave such divine names unto it, the one of prophesying, the other of making, and that indeed that name of making is fit for him, considering that where all other arts retain themselves within their subject, and receive, as it were, their being from it, the poet, only, only bringeth his own stuff, and doth not learn a conceit out of a

7. Achilles is the hero of Homer's *Iliad* and the *Achilleis* of Statius (ca. 45–96 c.e.); Tydeus is mentioned in Homer and is one of the seven against Thebes in Statius, *Thebais*; Rinaldo figures in Ariosto's *Orlando furioso*, and in Torquato Tasso's *Rinaldo* (1562) and *Gerusalemme liberata* (1580–81, *Jerusalem Delivered*). [Turnus: legendary king of Italy, defeated by Aeneas in single combat in Virgil's *Aeneid*—editor's note.]

8. Plato, *Phaedrus* 250d, followed in Cicero, *De finibus* (*On Ends*) 2.16.52 and *De officiis* (*On Duties*) 1.5.14. [Tully: another name for Cicero, whose full name is Marcus Tullius Cicero—editor's note.]

9. As opposed to the work clothes in which she is dressed by philosophers.

1. The image of the mind as a wax tablet (e.g., *tabula rasa* in Latin, a blank tablet) was common in Sidney's day. "Tables" or "tablets" were also

boards on which portraits were painted; the image is thus closely related to the thread of visual metaphors centred on the "speaking picture." Sidney's list alludes to all the central matter of the *Aeneid*.

2. Virgil, *Aeneid* 2.705–20. "Ceremonies": religious objects (here, the household gods) [editor's note].

3. The queen of Carthage, whom Jupiter orders Aeneas to leave so that he may fulfill his destiny in Italy. As he departs, she commits suicide; see *Aeneid* 4 [editor's note].

4. Better than Chrysippus and Crantor (Latin); Horace, *Epistles* 1.2.4, referring to the poet Homer, who conveys what is beautiful, shameful, useful, and not useful better than do two philosophers, the Stoic Chrysippus (ca. 280–207 b.c.e.) and the commentator on Plato Crantor (ca. 335–ca. 275 b.c.e.) [editor's note].

matter but maketh matter for a conceit;⁵ since, neither his description nor end containing any evil, the thing described cannot be evil; since his effects be so good as to teach goodness and to delight the learners; since therein (namely in moral doctrine, the chief of all knowledges) he doth not only far pass the historian, but for instructing is well nigh comparable to the philosopher, for moving leaves him behind him; since the Holy Scripture (wherein there is no uncleanness) hath whole parts in it poetical, and that even our Saviour Christ vouchsafed to use the flowers of it; since all his kinds are not only in their united forms but in their severed dissections fully commendable—I think (and think I think rightly) the laurel crown appointed for triumphant captains doth worthily of all other learnings honour the poet's triumph.⁶

* * *

Now then go we to the most important imputations laid to the poor poets. For ought I can yet learn, they are these. First, that there being many other more fruitful knowledges, a man might better spend his time in them than in this. Secondly, that it is the mother of lies. Thirdly, that it is the nurse of abuse, infecting us with many pestilent desires, with a siren's sweetness drawing the mind to the serpent's tail of sinful fancies⁷ (and herein especially comedies give the largest field to ear,⁸ as Chaucer saith); how both in other nations and in ours, before poets did soften us, we were full of courage, given to martial exercises, the pillars of manlike liberty, and not lulled asleep in shady idleness with poets' pastimes. And lastly and chiefly, they cry out with open mouth as if they had overshot Robin Hood, that Plato banished them out of his commonwealth.⁹ Truly this is much, if there be much truth in it.

First, to the first. That a man might better spend his time is a reason indeed, but it doth, as they say, but *petere principium*.¹ For if it be, as I affirm, that no learning is so good as that which teacheth and moveth to virtue, and that none can both teach and move thereto so much as poetry, then is the conclusion manifest, that ink and paper cannot be to a more profitable purpose employed. And certainly, though a man should grant their first assumption, it should follow (methinks) very unwillingly that good is not good because better is better. But I still and utterly deny that there is sprung out of earth a more fruitful knowledge.

To the second, therefore, that they should be the principal liars, I answer paradoxically but truly, I think truly, that of all writers under the sun the poet is the least liar—and though² he would, as a poet can scarcely be a liar. The

5. Does not take his fore-conceit [preconception] from events but creates events which will form a satisfying fore-conceit.

6. A triumph was "the entrance of a victorious commander with his army and spoils in solemn procession into Rome, permission for which was granted by the senate in honour of an important achievement in war" (*Oxford English Dictionary*). The victorious commander would then be crowned with laurel. In 1341, the poet Petrarch was given a triumph and crowned with laurel; thereafter dignified poets were crowned literally or figuratively with laurel (hence "poet laureate").

7. Fantasies. The sirens lured passing sailors to their deaths with their music; they were half

woman, half bird, though Sidney has preferred the later tradition of depicting them as mermaids, perhaps because of the lure of the tale/tail pun.

8. To plow; the English poet Chaucer (ca. 1343–1400) uses the phrase "a large feeld to ere" in the *Knight's Tale*, *Canterbury Tales* 1.886 [editor's note].

9. Cf. the proverb: "Many speak of Robin Hood that never shot with his bow," i.e., people repeat Plato's argument who know nothing of his philosophy. [For Plato's expulsion of the poets, see *Republic* 3.398a–b, 10.595a–608b—editor's note.]

1. Beg the question (Latin).

2. Even if.

astronomer with his cousin the geometrician can hardly escape when they take upon them to measure the height of the stars. How often, think you, do the physicians lie, when they aver things good for sicknesses which afterwards send Charon a great number of souls drowned in a potion before they come to his ferry?³ And no less of the rest which take upon them to affirm. Now, for the poet, he nothing affirms, and therefore never lieth, for, as I take it, to lie is to affirm that to be true which is false. So as the other artists, and especially the historian, affirming many things, can in the cloudy knowledge of mankind hardly escape from many lies. But the poet, as I said before, never affirmeth; the poet never maketh any circles about your imagination,⁴ to conjure you to believe for true what he writes; he citeth not authorities of other histories, but even for his entry calleth the sweet Muses to inspire into him a good invention⁵—in troth, not labouring to tell you what is or is not, but what should or should not be. And therefore, though he recount things not true, yet because he telleth them not for true, he lieth not, without we will say that Nathan lied in his speech before-alleged to David,⁶ which as a wicked man durst scarce say, so think I none so simple would say that Aesop lied in the tales of his beasts—for who thinks that Aesop wrote it for actually true were well worthy to have his name chronicled among the beasts he writeth of. What child is there, that coming to a play and seeing ‘Thebes’ written in great letters upon an old door doth believe that it is Thebes? If then a man can arrive to that child’s age to know that the poet’s persons and doings are but pictures what should be and not stories what have been, they will never give the lie⁷ to things not affirmatively but allegorically and figuratively written; and therefore, as in history, looking for truth, they may go away full fraught with falsehood, so in poesy, looking but for fiction, they shall use the narration but as an imaginative ground-plot of a profitable invention.⁸

* * *

Their third is, how much it abuseth men’s wit, training it to wanton sinfulness and lustful love: for indeed that is the principal, if not only, abuse I can hear alleged. They say the comedies rather teach than reprehend amorous conceits.⁹ They say the lyric is larded with passionate sonnets, the elegiac weeps the want of his mistress, and that even to the heroical Cupid¹ hath ambitiously climbed. Alas, Love, I would thou couldst as well defend thyself as thou canst offend others; I would those on whom thou dost attend could either put thee away or yield good reason why they keep thee. But grant love of beauty to be a beastly fault (although it be very hard, since only man and no beast hath that gift to discern beauty); grant that lovely name of love to deserve all hateful reproaches (although even some of my masters the

3. In the Greek underworld, Charon was the ferryman who transported the souls of the dead across the river Styx.

4. The magic circles drawn on the ground by necromancers defined the area within which the magic worked.

5. The traditional epic invocation, as in Homer (“Sing, Muse, of the wrath of Achilles,” *Iliad*, 1.1); “invention” is the matter of the narrative or oration. “Entry”: opening words.

6. King of Israel (d. ca. 970 B.C.E.); according to the Bible, God sent the prophet Nathan to

reprimand him for committing adultery with Bathsheba (2 Samuel 12) [editor’s note].

7. Make an accusation of lying.

8. “Narration” meant “story” and, in rhetoric, “statement of facts of the case”; “ground-plot” meant either “foundation” or “ground-plan”; “invention,” another rhetorical term, is the finding of the matter for the poem or oration.

9. Minds, ideas.

1. Roman god of love (the equivalent of the Greek Eros, whose name means “Love”) [editor’s note].

philosophers spent a good deal of their lamp oil in setting forth the excellency of it);² grant, I say, whatsoever they will have granted, that not only love but lust, but vanity, but—if they list—scurrility possesseth many leaves of the poets' books: yet think I, when this is granted, they will find their sentence may with good manners put the last words foremost, and not say that poetry abuseth man's wit, but that man's wit abuseth poetry.

For I will not deny but that man's wit may make poesy, which should be *eikastikē*, which some learned have defined figuring forth good things, to be *phantastikē*, which doth contrariwise infect the fancy with unworthy objects,³ as the painter that should give to the eye either some excellent perspective, or some fine picture, fit for building or fortification,⁴ or containing in it some notable example, as Abraham sacrificing his son Isaac, Judith killing Holofernes, David fighting with Goliath,⁵ may leave those and please an ill-pleased⁶ eye with wanton shows of better-hidden matters. But what, shall the abuse of a thing make the right use odious? Nay, truly, though I yield that poesy may not only be abused, but that being abused, by the reason of his sweet charming force, it can do more hurt than any other army of words, yet shall it be so far from concluding that the abuse should give reproach to the abused, that contrariwise it is a good reason, that whatsoever, being abused, doth most harm, being rightly used (and upon the right use each thing conceiveth his title⁷) doth most good. Do we not see skill of physic, the best rampire⁸ to our often assaulted bodies, being abused, teach poison, the most violent destroyer? Doth not knowledge of law, whose end is to even and right all things, being abused, grow the crooked fosterer of horrible injuries? Doth not (to go to the highest) God's word abused breed heresy, and His name abused become blasphemy? Truly, a needle cannot do much hurt, and as truly (with leave of ladies be it spoken) it cannot do much good. With a sword thou mayst kill thy father, and with a sword thou mayst defend thy prince and country. So that, as in their calling poets fathers of lies they said nothing, so in this their argument of abuse they prove the commendation.

They allege herewith, that before poets began to be in price,⁹ our nation had set their heart's delight upon action and not imagination, rather doing things worthy to be written than writing things fit to be done. What that before-time was, I think scarcely Sphinx¹ can tell, since no memory is so ancient that hath the precedence of poetry. And certain it is, that in our plainest homeliness yet never was the Albion² nation without poetry. Marry, this argument, though it be levelled against poetry, yet is it indeed a chain

2. Sidney is principally aiming at Plato's *Symposium* and *Phaedrus*.

3. Plato makes this distinction in *Sophist*. Icastic or "likeness-making" art occurs "whenever someone produces an imitation by keeping to the proportions of length, breadth and depth of his model, and also by keeping to the appropriate colours of his parts" (235d–e). Fantastic art produces "appearances that aren't likenesses" (236c), either by representing things which do not exist or by inaccurately representing those which do.

4. The early Renaissance painters were almost invariably skilled mathematicians and architects.

5. All biblical references: Abraham prepares

to sacrifice Isaac in Genesis 22; Judith kills Holofernes, a general of Nebuchadnezzar who is besieging her city, after tricking him into a drunken stupor, in Judith 12 (a book of the Apocrypha); David fights and slays the Philistine giant Goliath in 1 Samuel 17 [editor's note].

6. Pleased by ill things.

7. Right, entitlement.

8. Rampart, defensive mound of earth. ["Physic": medicine—editor's note.]

9. Esteem.

1. In Greek mythology, the riddling monster bested by Oedipus [editor's note].

2. Britain. Albion was an ancient name, supposedly predating "Britain."

shot³ against all learning, or bookishness as they commonly term it. Of such mind were certain Goths,⁴ of whom it is written, that having in the spoil of a famous city taken a fair library, one hangman, belike fit to execute the fruits of their wits, who had murdered a great number of bodies, would have set fire in it. 'No,' said another, very gravely, 'take heed what you do, for while they are busy about these toys, we shall with more leisure conquer their countries.'⁵ This indeed is the ordinary doctrine of ignorance, and many words sometimes I have heard spent in it. But because this reason is generally against all learning as well as poetry, or rather all learning but poetry; because it were too large a digression to handle it, or at least too superfluous, since it is manifest that all government of action is to be gotten by knowledge, and knowledge best by gathering many knowledges, which is reading—I only with Horace, to him that is of that opinion, *iubeo stultum esse libenter*.⁶

* * *

But now indeed my burden is great, now Plato's name is laid upon me, whom, I must confess, of all philosophers I have ever esteemed most worthy of reverence; and with good reason, since of all philosophers he is the most poetical. Yet if he will defile the fountain out of which his flowing streams have proceeded, let us boldly examine with what reasons he did it. First, truly, a man might maliciously object that Plato, being a philosopher, was a natural enemy of poets. For indeed, after the philosophers had picked out of the sweet mysteries of poetry the right discerning true points of knowledge, they forthwith putting it in method, and making a school art of that which the poets did only teach by a divine delightfulness, beginning to spurn at their guides, like ungrateful prentices were not content to set up shops for themselves, but sought by all means to discredit their masters; which, by the force of delight, being barred them, the less they could overthrow them, the more they hated them. For indeed, they found for Homer seven cities strave who should have him for their citizen, where many cities banished philosophers as not fit members to live among them.⁷ For only repeating certain of Euripides' verses many Athenians had their lives saved of the Syracusans, where the Athenians themselves thought many philosophers unworthy to live.⁸ Certain poets, as Simonides and Pindarus, had so prevailed with Hiero the First,⁹ that of a tyrant they made him a just king; where Plato could do so little with Dionysius,¹ that he himself of a philosopher was made

3. Cannon shot of two balls joined by a chain.

4. East Germanic tribes; some, in the 5th century C.E., occupied Italy and besieged and sacked Rome; others sacked and burned Athens in the 3d century and again at the end of the 4th century [editor's note].

5. This story of the sack of Athens in 267 C.E. is told by Petrus Patricius in his continuation of Dio Cassius, *Roman Histories* 54, 17. [Patricius (6th c. C.E.), Byzantine historian. Dio (ca. 155–ca. 235 C.E.), Roman administrator and historian who wrote in Greek—editor's note.]

6. "Cheerfully bid him be a fool." Adapted from Horace, *Satires* 1.1.63: "Bid him be miserable."

7. The Homeric anecdote is repeated by Cicero, *Pro Archia poeta* [the oration *On Behalf of the Poet Archias*] 8.19, and became very popular. Among banished philosophers were Empedocles [ca. 493–ca. 433 B.C.E.] from his native town

Acragas, and Anaxagoras [ca. 500–428 B.C.E.] and Protagoras [5th c. B.C.E.] the Sophist from Athens.

8. For "Euripides' verses" see Plutarch, *Life of Nicias*. Socrates was the most celebrated philosopher condemned to death by Athenians.

9. Tyrant (ruler) of Syracuse (478–467/66 B.C.E.), whose court was visited by Pindar in 476. Simonides (ca. 556–468 B.C.E.), Greek lyric and elegiac poet who also visited the court of Hieron about 476 [editor's note].

1. Dionysius II (b. ca. 397 B.C.E.), who became tyrant of Syracuse in 367. Invited to Sicily by an influential Syracusan, Plato tried with little success to mold Dionysius into a philosopher-king. After Dionysius tricked Plato into returning in 361, he temporarily imprisoned the philosopher [editor's note].

a slave.² But who should do thus, I confess, should requite the objections made against poets with like cavillations³ against philosophers, as likewise one should do that should bid one read *Phaedrus* or *Symposium* in Plato,⁴ or the discourse of love in Plutarch,⁵ and see whether any poet do authorize abominable filthiness as they do. Again, a man might ask out of what commonwealth Plato did banish them: in sooth, thence where he himself alloweth community of women.⁶ So as belike this banishment grew not for effeminate wantonness, since little should poetical sonnets be hurtful when a man might have what woman he listed. But I honour philosophical instructions, and bless the wits which bred them, so as they be not abused, which is likewise stretched to poetry.

St Paul himself (who yet, for the credit of poets, allegeth twice two poets, and one of them by the name of a prophet) setteth a watchword upon philosophy—indeed upon the abuse.⁷ So doth Plato upon the abuse, not upon poetry. Plato found fault that the poets of his time filled the world with wrong opinions of the gods, making light tales of that unspotted essence, and therefore would not have the youth depraved with such opinions.⁸ Herein may much be said; let this suffice. The poets did not induce such opinions, but did imitate those opinions already induced. For all the Greek stories can well testify that the very religion of that time stood upon many, and many-fashioned,⁹ gods, not taught so by the poets, but followed according to their nature of imitation. Who list may read in Plutarch the discourses of Isis and Osiris, of the cause why oracles ceased, of the divine providence,¹ and see whether the theology of that nation stood not upon such dreams, which the poets indeed superstitiously observed; and truly, since they had not the light of Christ, did much better in it than the philosophers who, shaking off superstition, brought in atheism. Plato therefore, whose authority I had much rather justly construe than unjustly resist, meant not in general of poets, in those words of which Julius Scaliger saith *qua autoritate barbari quidam atque hispidi abuti velint ad poetas e republica exigendos*,² but only meant to drive out those wrong opinions of the Deity (whereof now, without further law,³ Christianity hath taken away all the hurtful belief), perchance, as he thought, nourished by the then esteemed poets. And a man need go no further than to Plato himself to know his meaning, who in his dialogue called *Ion*⁴ giveth high and rightly divine commendation unto poetry. So as Plato, banishing the abuse, not the thing—not banishing it, but giving due honour unto it—shall be our patron and not our adversary. For indeed I had much

2. The story that Plato was sold into slavery by the Spartan ambassador to whom Dionysius I (ca. 430–367 B.C.E.) had given him is told by Cicero [in *Pro Rabiro Postumo* 9.23]; the Spartans were famous scorers of philosophy.

3. Cavils, petty objections.

4. The sections on love in both *Phaedrus* and *Symposium* concern the love of older for younger men, a key part of educated Greek culture.

5. Plutarch's *Amatorius*, a dialogue that relies heavily on Plato's [editor's note].

6. *Republic* 5 [457c–461e], arguing that women and children should not be considered the property of individual men.

7. St. Paul [early Christian apostle, d. ca. 67 C.E.] twice cites poets, quotes them three times, and demonstrates knowledge of four.

8. *Republic* 2.377–3.392. “Light”: wanton, lascivious.

9. In many forms; able to change their shapes.

1. Essays in Plutarch's *Moralia*: “On Isis and Osiris,” “On the Failure of Oracles,” “On Divine Vengeance.” [“List”: wishes—editor's note.]

2. Whose authority certain barbarous and uncouth men seek to use in order to expel poets from the republic (Latin); *Poetices* 1.2.

3. Ado, or philosophical legislation (pun).

4. *Ion* [see above] is a short and beguilingly ironic dialogue between Socrates and the rhapsode (performer of poetry) Ion, in which Socrates develops a theory of poetic inspiration, but only in order to show that the poet and rhapsode know nothing about anything.

rather, since truly I may do it, show their mistaking of Plato, under whose lion's skin they would make an ass-like braying against poesy,⁵ than go about⁶ to overthrow his authority, whom the wiser a man is, the more just cause he shall find to have in admiration, especially since he attributeth unto poesy more than myself do, namely to be a very inspiring of a divine force far above man's wit, as in the forenamed dialogue is apparent.

Of the other side, who would show the honours have been by the best sort of judgements granted them, a whole sea of examples would present themselves: Alexanders, Caesars, Scipios,⁷ all favourers of poets; Laelius, called the Roman Socrates, himself a poet, so as part of *Heautontimoroumenos* in Terence was supposed to be made by him;⁸ and even the Greek Socrates, whom Apollo confirmed to be the only wise man, is said to have spent part of his old time in putting Aesop's fables into verses.⁹ And, therefore, full evil should it become his scholar Plato to put such words in his master's mouth against poets. But what need more? Aristotle writes the Art of Poesy—and why, if it should not be written? Plutarch teacheth the use to be gathered of them—and how, if they should not be read? And who reads Plutarch's either history or philosophy shall find he trimmeth both their garments with guards¹ of poesy. But I list not to defend poesy with the help of his underling historiography. Let it suffice to have showed it is a fit soil for praise to dwell upon, and what dispraise may set upon it is either easily overcome, or transformed into just commendation.

So that since the excellencies of it may be so easily and so justly confirmed, and the low creeping objections so soon trodden down—it not being an art of lies, but of true doctrine; not of effeminateness, but of notable stirring of courage; not of abusing man's wit, but of strengthening man's wit; not banished, but honoured by Plato—let us rather plant more laurels for to engarland the poets' heads (which honour of being laureate, as besides them only triumphant captains were, is a sufficient authority to show the price they ought to be held in) than suffer the ill-savoured breath of such wrong-speakers once to blow upon the clear springs of poesy.

But since I have run so long a career² in this matter, methinks, before I give my pen a full stop, it shall be but a little more lost time to inquire why England, the mother of excellent minds, should be grown so hard a step-mother to poets, who certainly in wit ought to pass all other, since all only proceedeth from their wit, being indeed makers of themselves, not takers of others.

* * *

5. In the Aesopian fable the ass puts on a lion's skin and passes for a fearsome lion until the wind blows it off, or in another version, until a fox who had earlier heard him braying calls his bluff.

6. Aim, endeavour.

7. Scipio Africanus (ca. 236–184/83 B.C.E.), great Roman general who defeated Hannibal and the Carthaginians [editor's note].

8. Gaius Laelius (born ca. 190 B.C.E.), nicknamed Sapiens ("wise"), appears as a speaker in several of Cicero's dialogues [in *De officiis* 1.90, he is compared to Socrates]. Cicero also records that

Terence's plays were ascribed to him by many; Terence alludes to a debt in the prologues to *Heautontimoroumenos* (*The Self-Tormentor*).

9. Socrates was confirmed to be the wisest man by the Delphic oracle [of Apollo], according to Plato (*Apology* 21a). In Plato's *Phaedro* (60d–61b) he is represented as versifying Aesop in prison.

1. Ornamental trimmings.

2. Most of the early meanings of "career" concern horses—a gallop at full stretch, a race-horse, the jousting area of a tiltyard; Sidney is horse or rider in this image.

Marry, they that delight in poesy itself should seek to know what they do and how they do, and especially look themselves in an unflattering glass of reason, if they be inclinable unto it. For poesy must not be drawn by the ears: it must be gently led, or rather it must lead, which was partly the cause that made the ancient learned affirm it was a divine gift and no human skill, since all other knowledges lie ready for any that hath strength of wit. A poet no industry can make, if his own genius be not carried into it, and therefore is it an old proverb—*orator fit, poeta nascitur*.³ Yet confess I always, that as the fertilest ground must be manured, so must the highest-flying wit have a Daedalus⁴ to guide him. That Daedalus, they say, both in this and in other, hath three wings to bear itself up into the air of due commendation: that is, art, imitation and exercise. But these, neither artificial rules nor imitative patterns, we much cumber ourselves withal. Exercise indeed we do, but that very fore-backwardly, for where we should exercise to know, we exercise as having known, and so is our brain delivered of much matter which never was begotten by knowledge. For, there being two principal parts, matter to be expressed by words and words to express the matter, in neither we use art or imitation rightly. Our matter is *quodlibet*.⁵ indeed, though wrongly, performing Ovid's verse, *quicquid conabor dicere, versus erit*,⁶ never marshalling it into any assured rank,⁷ that almost the readers cannot tell where to find themselves.

Chaucer, undoubtedly, did excellently in his *Troilus and Criseyde*,⁸ of whom truly I know not whether to marvel more, either that he in that misty time could see so clearly, or that we in this clear age go so stumblingly after him. Yet had he great wants, fit to be forgiven in so reverent an antiquity. I account the *Mirror of Magistrates* meetly furnished of beautiful parts; and in the Earl of Surrey's⁹ lyrics many things tasting of a noble birth, and worthy of a noble mind. The *Shepheardes Calender* hath much poetry in his eclogues, indeed worthy the reading, if I be not deceived. That same framing of his style to an old rustic language I dare not allow, since neither Theocritus in Greek, Virgil in Latin, nor Sannazaro in Italian did affect it.¹ Besides these, I do not remember to have seen but few (to speak boldly) printed that have poetical sinews in them. For proof whereof, let but most of the verses be put in prose, and then ask the meaning; and it will be found that one verse did but beget another, without ordering at the first what should be at the last, which becomes a confused mass of words, with a tingling sound of rhyme, barely accompanied with reason.

3. The orator is made, the poet is born (Latin) [editor's note].

4. In Greek mythology, a consummately skilled Athenian artisan; he fashioned wings of feather and wax so that he and his son, Icarus, could escape King Minos of Crete, but Icarus ignored his warnings, flew too close to the sun, and perished [editor's note].

5. Whatever we want (Latin).

6. Anything I try to say will come out as poetry (Latin); adapting Ovid, *Tristia* (*Sad Things*) 4.10.26 (from past to future tense).

7. Order.

8. The most popular of the poems of Geoffrey Chaucer with the Elizabethans.

9. Henry Howard, earl of Surrey (1517–1547), English poet. A *Mirror for Magistrates* (1559), a collection of Elizabethan poems on the fall of great men in English history (each told in the first person) [editor's note].

1. [Edmund] Spenser's *The Shepheardes Calender* was published anonymously in 1579 and dedicated to Sidney. The language is both archaic and rustic; it was in fact thought that both the Greek poet Theocritus (ca. 300–ca. 250 B.C.E.) in his *Idylls* and Virgil in the *Eclogues* were aiming at a similar effect. Sannazaro, the author of *Arcadia*, was also admired for his *Piscatory Eclogues* (1526).

Our tragedies and comedies not without cause cried out against, observing rules neither of honest civility nor skilful poetry—excepting *Gorboduc* (again, I say, of those that I have seen) which, notwithstanding as it is full of stately speeches and well-sounding phrases, climbing to the height of Seneca's style, and as full of notable morality, which it doth most delightfully teach, and so obtain the very end of poesy, yet in truth it is very defective in the circumstances, which grieveth me, because it might not remain as an exact model of all tragedies.² For it is faulty both in place and time, the two necessary companions of all corporal actions. For where the stage should always represent but one place, and the uttermost time presupposed in it should be, both by Aristotle's precept and common reason, but one day, there is both many days and many places inartificially³ imagined. But if it be so in *Gorboduc*, how much more in all the rest, where you shall have Asia of the one side and Afric of the other, and so many other underkingdoms, that the player, when he cometh in, must ever begin with telling where he is, or else the tale will not be conceived? Now you shall have three ladies walk to gather flowers, and then we must believe the stage to be a garden. By and by we hear news of shipwreck in the same place, and then we are to blame if we accept it not for a rock. Upon the back of that comes out a hideous monster with fire and smoke, and then the miserable beholders are bound to take it for a cave. While in the meantime two armies fly in, represented with four swords and bucklers,⁴ and then what hard heart will not receive it for a pitched field?

Now, of time they are much more liberal. For ordinary it is that two young princes fall in love, after many traverses⁵ she is got with child, delivered of a fair boy, he is lost, groweth a man, falls in love, and is ready to get another child—and all this in two hours' space, which how absurd it is in sense, even sense may imagine, and art hath taught, and all ancient examples justified, and at this day the ordinary players in Italy will not err in.⁶ Yet will some bring in an example of *Eunuchus* in Terence, that containeth matter of two days,⁷ yet far short of twenty years. True it is, and so was it to be played in two days, and so fitted to the time it set forth. And though Plautus have in one place done amiss, let us hit with him, and not miss with him.⁸

But they will say, 'How then shall we set forth a story which containeth both many places and many times?' And do they not know that a tragedy is tied to the laws of poesy and not of history, not bound to follow the story, but having liberty either to feign a quite new matter or to frame the history to the most tragical conveniency?⁹ Again, many things may be told which cannot be showed, if they know the difference betwixt reporting and representing: as,

2. *Gorboduc* was a tragedy in blank verse by Thomas Sackville (1536–1608), who also contributed to *A Mirror for Magistrates*, and Thomas Norton (1532–1584); first presented in 1561, it was printed in 1565. The tragedies of Lucius Annaeus Seneca were used in schools, and their lofty and moralizing language was taken up by earlier Elizabethan dramatists.

3. Inartistically.

4. Shields.

5. Misfortunes. ["Princes": sovereigns of either

sex—editor's note.]

6. Sidney may have witnessed the performance of popular comedies when he was in Padua and Venice in 1574.

7. Sidney confuses *Eunuchus* with another play, probably *Heautontimorumenos*.

8. Scaliger criticizes Plautus' *Captives* for spanning too much time (6.3). [Plautus (d. ca. 184 B.C.E.), Roman comic playwright—editor's note.]

9. Propriety, decorum.

for example, I may speak, though I am here, of Peru, and in speech digress from that to the description of Calicut;¹ but in action I cannot represent it without Pacolet's horse.² And so was the manner the ancients took, by some *nuntius*³ to recount things done in former time or other place. Lastly, if they will represent an history, they must not (as Horace saith) begin *ab ovo*,⁴ but they must come to the principal point of that one action which they will represent.

By example this will be best expressed. I have a story of young Polydorus,⁵ delivered for safety's sake, with great riches, by his father Priamus to Polymnestor, King of Thrace, in the Trojan war time; he, after some years, hearing the overthrow of Priamus, for to make the treasure his own, murdereth the child; the body of the child is taken up by Hecuba; she, the same day, findeth a sleight⁶ to be revenged most cruelly of the tyrant. Where now would one of our tragedy writers begin, but with the delivery of the child? Then should he sail over into Thrace, and so spend I know not how many years, and travel numbers of places. But where doth Euripides? Even with the finding of the body, the rest leaving to be told by the spirit of Polydorus. This need no further to be enlarged; the dullest wit may conceive it.

But besides these gross absurdities, how all their plays be neither right tragedies nor right comedies, mingling kings and clowns, not because the matter so carrieth it, but thrust in the clown by head and shoulders to play a part in majestical matters, with neither decency nor discretion, so as neither the admiration and commiseration nor the right sportfulness is by their mongrel tragicomedy obtained. I know Apuleius did somewhat so, but that is a thing recounted with space of time, not represented in one moment.⁷ And I know the ancients have one or two examples of tragicomedies, as Plautus hath *Amphitryo*,⁸ but if we mark them well, we shall find that they never, or very daintily,⁹ match hornpipes and funerals. So falleth it out that, having indeed no right comedy in that comical part of our tragedy, we have nothing but scurrility unworthy of any chaste ears, or some extreme show of doltishness, indeed fit to lift up a loud laughter, and nothing else, where the whole tract¹ of a comedy should be full of delight, as the tragedy should be still maintained in a well-raised admiration.

But our comedians think there is no delight without laughter, which is very wrong, for though laughter may come with delight, yet cometh it not of delight, as though delight should be the cause of laughter; but well may one thing breed both together. Nay, rather in themselves they have, as it were, a kind of contrariety. For delight we scarcely do, but in things that have a conveniency² to ourselves or to the general nature; laughter almost ever cometh of things most disproportioned to ourselves and nature. Delight hath a joy in it, either permanent or present; laughter hath only a scornful tickling. For

1. Calicut (modern Kozhikode), on the west coast of India, was a major trading port.

2. The flying horse of the enchanter Pacolet in the popular late-medieval romance *Valentine and Orson*.

3. Messenger (Latin).

4. From the egg (Latin). See Horace's *Ars Poetica*, line 147 [editor's note].

5. The story and characters appear in Euripides, *Hecuba* (ca. 424 B.C.E.); Hecuba, Priam's wife, was enslaved after the fall of Troy [editor's note].

6. Trick, stratagem.

7. Apuleius was the 2d-century C.E. author of the *Metamorphosis* (known as *The Golden Ass*), a fantastical story with many inset narratives which influenced Sidney's *Arcadia*.

8. In the prologue to *Amphitryo*, Plautus explicitly describes his play as a tragicomedy.

9. Sparingly, deftly.

1. Course, duration.

2. Suitability, congruity.

example, we are ravished with delight to see a fair woman, and yet are far from being moved to laughter. We laugh at deformed creatures, wherein certainly we cannot delight. We delight in good chances; we laugh at mischances. We delight to hear the happiness of our friends or country, at which he were worthy to be laughed at that would laugh. We shall, contrarily, laugh sometimes to find a matter quite mistaken and go down the hill against the bias in the mouth of some such men as, for the respect of them, one shall be heartily sorry he cannot choose but laugh, and so is rather pained than delighted with laughter.³ Yet deny I not, but that they may go well together. For as in Alexander's picture well set out we delight without laughter, and in twenty mad antics⁴ we laugh without delight, so in Hercules painted with his great beard and furious countenance in a woman's attire, spinning at Omphale's commandment,⁵ it breedeth both delight and laughter: for the representing of so strange a power in love procureth delight, and the scornfulness of the action stirreth laughter. But I speak to this purpose, that all the end of the comical part be not upon such scornful matters as stir laughter only, but, mixed with it, that delightful teaching which is the end of poesy. And the great fault even in that point of laughter, and forbidden plainly by Aristotle,⁶ is that they stir laughter in sinful things, which are rather execrable than ridiculous; or in miserable, which are rather to be pitied than scorned. For what is it to make folks gape at a wretched beggar, and a beggarly clown;⁷ or, against law of hospitality, to jest at strangers, because they speak not English so well as we do? What do we learn, since it is certain *nil habet infelix paupertas durius in se, / quam quod ridiculus homines facit*?⁸ But rather a busy loving courtier, and a heartless threatening Thraso, a self-wise-seeming schoolmaster, a wry-transformed traveller:⁹ these if we saw walk in stage names, which we play naturally—therein were delightful laughter and teaching delightfulness, as, in the other, the tragedies of Buchanan¹ do justly bring forth a divine admiration. But I have lavished out too many words of this play matter. I do it because, as they are excelling parts of poesy, so is there none so much used in England, and none can be more pitifully abused; which, like an unmannerly daughter showing a bad education, causeth her mother Poesy's honesty² to be called in question.

Other sort of poetry almost have we none, but that lyrical kind of songs and sonnets, which, Lord, if He gave us so good minds, how well it might be employed, and with how heavenly fruits, both private and public, in singing the praises of the immortal beauty, the immortal goodness of that God who

3. The gist of this rather perplexing sentence is that sometimes one will laugh rather painfully when people one respects drop clangers or speak with unintended irony. "Against the bias": metaphor from bowls, the slope of the ground counteracting the swerve of the ball.

4. Grotesque plays or characters.

5. Following a prophecy, Hercules had to sell himself into slavery to cure his madness. He was bought by Omphale, queen of Lydia, and a love affair developed; while Omphale wore Hercules' lionskin, Hercules wore dresses and wove or span at her feet. "Furious": mad.

6. See Aristotle, *Nicomachean Ethics* 4.8, 1128a [editor's note].

7. Peasant.

8. Of all the woes of luckless poverty none is harder to endure than this, that it exposes men to ridicule (Latin); Juvenal, *Satires* 3.152–53.

9. Thraso is a braggart in Terence. Sidney created a "self-wise-seeming schoolmaster" in Rombus, in his brief entertainment the *Lady of May* (1578 or 1579). The other character types came to be familiar in the plays of Shakespeare and his contemporaries. "Wry-transformed": diverted, twisted from a natural course.

1. George Buchanan (1506–1582), Scottish humorist and author, tutor to Mary, Queen of Scots, and James VI of Scotland [editor's note].

2. Honour, chastity.

giveth us hands to write and wits to conceive; of which we might well want words, but never matter, of which we could turn our eyes to nothing, but we should ever have new-budding occasions. But truly, many of such writings as come under the banner of irresistible love, if I were a mistress, would never persuade me they were in love, so coldly they apply fiery speeches, as men that had rather read lovers' writings, and so caught up certain swelling phrases (which hang together like a man that once told my father that the wind was at northwest and by south, because he would be sure to name winds enough), than that in truth they feel those passions; which easily, as I think, may be betrayed by that same forcibleness or *energeia*³ (as the Greeks call it) of the writer. But let this be a sufficient, though short, note that we miss the right use of the material point of poesy.

Now, for the outside of it, which is words or (as I may term it) diction, it is even well worse, so is that honey-flowing matron Eloquence apparelled, or rather disguised, in a courtesan-like painted affectation: one time with so far-fet words that may seem monsters but must seem strangers to any poor Englishman; another time with coursing of a letter, as if they were bound to follow the method of a dictionary;⁴ another time with figures and flowers extremely winter-starved. But I would this fault were only peculiar to versifiers, and had not as large possession among prose-printers, and, which is to be marvelled, among many scholars, and, which is to be pitied, among some preachers. Truly, I could wish, if at least I might be so bold to wish in a thing beyond the reach of my capacity, the diligent imitators of Tully and Demosthenes,⁵ most worthy to be imitated, did not so much keep Nizolian paper-books of their figures and phrases as, by attentive translation,⁶ as it were, devour them whole, and make them wholly theirs. For now they cast sugar and spice upon every dish that is served to the table, like those Indians, not content to wear earrings at the fit and natural place of the ears, but they will thrust jewels through their nose and lips, because they will be sure to be fine.⁷

* * *

But what? Methinks I deserve to be pounded⁸ for straying from poetry to oratory. But both have such an affinity in the wordish consideration, that I think this digression will make my meaning receive the fuller understanding, which is not to take upon me to teach poets how they should do, but only, finding myself sick among the rest, to show some one or two spots of the common infection grown among the most part of writers, that acknowledging ourselves somewhat awry, we may bend to the right use both of matter and manner; whereto our language giveth us great occasion, being indeed capable of any excellent exercising of it. I know some will say it is a mingled language.⁹ And why not so much the better, taking the best of both

3. A vigour of style "inwardly working to stir to the mind." "Betrayed": betrayed.

4. Sidney describes the passion for alliteration prevalent in early Elizabethan poetry. "Coursing": hunting.

5. Athenian statesman (384–322 B.C.E.) considered the greatest Greek orator, as Cicero (Tully) was considered the greatest Roman orator [editor's note].

6. Transformation, adaptation. ["Nizolian paper-

books": commonplace books like those of the Italian lexicographer Marius Nizolius (16th c.)—editor's note.]

7. This picture is based on early reports from travellers to South America.

8. Impounded, shut up in a pound like a stray animal.

9. That is, mixed of Anglo-Saxon and Norman French, as well as absorbing many Latin loan words.

the other:¹ Another will say it wanteth grammar. Nay, truly, it hath that praise that it wants not grammar: for grammar it might have, but it needs it not, being so easy in itself, and so void of those cumbersome differences of cases, genders, moods, and tenses, which I think was a piece of the Tower of Babylon's curse,² that a man should be put to school to learn his mother tongue. But for the uttering sweetly and properly the conceits of the mind, which is the end of speech, that hath it equally with any other tongue in the world, and is particularly happy in compositions of two or three words together, near the Greek, far beyond the Latin, which is one of the greatest beauties can be in a language.

Now, of versifying there are two sorts, the one ancient, the other modern. The ancient marked the quantity of each syllable, and according to that framed his verse. The modern observing only number,³ with some regard of the accent, the chief life of it standeth in that like sounding of the words which we call rhyme. Whether of these be the more excellent would bear many speeches: the ancient no doubt more fit for music, both words and time⁴ observing quantity, and more fit lively to express divers passions by the low or lofty sound of the well-weighed syllable; the latter likewise with his rhyme striketh a certain music to the ear, and in fine, since it doth delight, though by another way, it obtains the same purpose, there being in either sweetness and wanting in neither majesty. Truly, the English, before any vulgar⁵ language I know, is fit for both sorts. For, for the ancient, the Italian is so full of vowels that it must ever be cumbered with elisions; the Dutch⁶ so, of the other side, with consonants that they cannot yield the sweet sliding fit for a verse; the French in his whole language hath not one word that hath his accent in the last syllable saving two, called *antepenultima*; and little more hath the Spanish, and therefore very gracelessly may they use dactyls.⁷ The English is subject to none of these defects. Now, for the rhyme,⁸ though we do not observe quantity, yet we observe the accent very precisely, which other languages either cannot do, or will not do so absolutely. That *caesura*, or breathing place, in the midst of the verse neither Italian nor Spanish have; the French and we never almost fail of. Lastly, even the very rhyme itself, the Italian cannot put it in the last syllable, by the French named the masculine rhyme, but still⁹ in the next to the last, which the French call the female, or the next before that, which the Italian term *sdruc-ciola*:¹ the example of the former is 'buono' / 'suono', of the *sdruc-ciola* is 'femina' / 'semina'. The French, of the other side, hath both the male, as 'bon' / 'son', and the female, as 'plaise' / 'taise', but the *sdruc-ciola* he hath not; where the English hath all three, as 'due' / 'true', 'father' / 'rather', 'motion' / 'potion'. With much more which might be said, but that already I find the triflingness of this discourse is much too much enlarged.

1. That is, Anglo-Saxon and French.

2. The curse was that the one language of the people be confounded, so "that they may not understand one another's speech"; the story of the Tower of Babel (the Hebrew name for Babylon) is told in Genesis 11 [editor's note].

3. Syllable count as opposed to syllable length (or quantity) [editor's note].

4. That is, musical measure.

5. Vernacular.

6. German (Deutsch).

7. The dactyl is a foot consisting of three syllables, the first long or stressed, the following two short or unstressed; it is the constituent unit of dactylic hexameter, the vehicle of epic verse [in Greek and Latin].

8. That is, the modern (accentual-)syllabic system.

9. Always.

1. Literally, "slippery": that is, the easy sliding together of rhymes of three or more syllables [editor's note].

So that since the ever-praiseworthy poesy is full of virtue-breeding delightfulness, and void of no gift that ought to be in the noble name of learning; since the blames laid against it are either false or feeble; since the cause why it is not esteemed in England is the fault of poet-apes,² not poets; since, lastly, our tongue is most fit to honor poesy, and to be honoured by poesy, I conjure you all that have had the evil luck to read this ink-wasting toy of mine, even in the name of the nine Muses, no more to scorn the sacred mysteries of poesy, no more to laugh at the name of poets, as though they were next inheritors to fools, no more to jest at the reverent title of a rhymers, but to believe with Aristotle that they were the ancient treasures of the Grecians' divinity; to believe with Bembo³ that they were first bringers-in of all civility; to believe with Scaliger that no philosopher's precepts can sooner make you an honest man than the reading of Virgil; to believe with Clauserus, the translator of Cornutus, that it pleased the heavenly Deity, by Hesiod⁴ and Homer, under the veil of fables to give us all knowledge, logic, rhetoric, philosophy natural and moral and *quid non?*;⁵ to believe with me that there are many mysteries contained in poetry which of purpose were written darkly,⁶ lest by profane wits it should be abused; to believe with Landin⁷ that they are so beloved of the gods, that whatsoever they write proceeds of a divine fury; lastly, to believe themselves when they tell you they will make you immortal by their verses. Thus doing, your name shall flourish in the printers' shops; thus doing, you shall be of kin to many a poetical preface; thus doing, you shall be most fair, most rich, most wise, most all—you shall dwell upon superlatives; thus doing, though you be *libertino patre natus*, you shall suddenly grow *Herculeae proles*—*si quid mea carmina possunt*;⁸ thus doing, your soul shall be placed with Dante's Beatrix or Virgil's Anchises.⁹ But if (fie of such a but) you be born so near the dull-making cataract of Nilus that you cannot hear the planet-like music of poetry;¹ if you have so earth-creeping a mind that it cannot lift itself up to look to the sky of poetry, or rather by a certain rustical disdain will become such a mome as to be a Momus of poetry;² then, though I will not wish unto you the ass's ears of Midas,³ nor to be driven by a poet's verses, as Bubonax⁴ was, to hang himself, nor to be rhymed to death, as is said to be done in Ireland;⁵ yet thus much

2. Poetasters, rhymesters.

3. Pietro Bembo (1470–1560), Italian Renaissance grammarian and an editor and author of poetry [editor's note].

4. Greek didactic epic poet (active ca. 700 B.C.E.). Clauserus: Conrad Clauser (16th c.), German humanist. Lucius Annaeus Cornutus (b. ca. 20 C.E.), teacher of rhetoric and Stoic philosophy at Rome [editor's note].

5. What not? (Latin).

6. Obscurely, allegorically.

7. Christoforo Landino (1424–1504), influential Florentine humanist, editor of Dante's *Divina commedia*.

8. A descendant of Hercules—if my songs can achieve anything (Latin); Virgil, *Aeneid* 9.446. *Libertino patre natus*: son of a freedman (Latin); Horace, *Satires* 1.6.6.

9. That is, with the blessed dead; Dante meets Beatrice in heaven in the *Divine Comedy*, and Aeneas finds his father, Anchises, in the Elysian Fields during his journey to the underworld (*Aeneid* 6) [editor's note].

1. Cicero, *Somnium Scipionis* (*Dream of Scipio*)

5.13, likens the inability to hear the music of the spheres (the machinery of cosmic harmony echoed in the hearts of ordered men and the forms of ordered poetry), even though it fills everyone's ears, to the deafness of those who live near the waterfalls [cataract] of the Nile.

2. From the Greek *mōmos*, ridicule, a personification of ridicule, sarcasm and carping criticism, the son or daughter of Night, and a popular character in poetical prefaces. "Mome": block-head, fool.

3. Legendary king of Phrygia; when Midas judged Pan the winner of a musical contest with Apollo, Apollo gave him ass's ears (according to the version told in Ovid, *Metamorphoses* 11.146–93) [editor's note].

4. Sidney fuses the names of two 6th-century B.C.E. Greek figures in a well-known story: Bupalus created a statue caricaturing the poet Hipponax, whose bitter satire in response led the sculptor to hang himself [editor's note].

5. The use of verse charms to kill vermin and people was widely attested in Elizabethan accounts of Ireland.

curse I must send you in the behalf of all poets; that while you live, you live in love, and never get favour for lacking skill of a sonnet, and when you die, your memory die from the earth for want of an epitaph.

1580–81

1595

PIERRE CORNEILLE

1606–1684

Pierre Corneille provoked literary quarrels, infuriated critics, and delighted audiences for the better part of the seventeenth century. Decidedly not a courtly *dramatist*, Corneille was a *playwright*. A member of the emerging bourgeoisie, he wrote plays for money and to please audiences, not to curry favor with the royal or the literary establishment. It is therefore ironic that he is often seen today as the spokesman and exemplar of French classical theater. His promotion of classical “rules” is in part a plea for the value of not taking them too literally.

Corneille was born in the Normandy town of Rouen, France, where his father was a minor administrative official. After undergoing a rigorous and regulated Jesuit education, in which he excelled in Latin, he began legal studies in 1622; two years later he enrolled at the bar of Rouen. He argued only one case, with disastrous results: he stumbled over his words and stuttered, and at the age of nineteen he abandoned a legal career that had just begun. His father then bought him two modest magisterial posts in Rouen, in the department of rivers and forests. In 1629 a troupe of actors passed through Rouen, and Corneille showed them the script for a five-act comedy, *Mélite*. No one quite knows when he composed the play, or what may have inspired him to launch himself suddenly into the world of theater. The troupe took the play to Paris, where it was performed that winter and was the hit of the 1629–30 season. For the next several years, he wrote a new play each season—mostly comedies, but also tragicomedies and tragedies.

In 1637 Corneille’s most famous play, *Le Cid* (based on a Spanish original; its title derived from the Arab word for “lord”), appeared and incited a flurry of critical attention that became known as the “Quarrel of *The Cid*.” The Quarrel originated in the tension between Corneille’s two audiences: the public and the critics. The public loved *Le Cid*, whose success was demonstrated even at the level of language: a new expression, “beau comme *Le Cid*” (as fine as *Le Cid*), entered the Parisian vernacular. The critics, on the other hand, sought to demonstrate the moral threat posed by the play, and in a series of pamphlets they attacked it and its author. In *Le Cid* a young woman, torn between love and duty, seems about to marry the man who has just killed her father. Such behavior, the critics argued, offends both reason and moral values. Drawing on the classical authority of both ARISTOTLE and HORACE, they insisted on the didactic function of the theater. A play’s moral instruction, they claimed, was achieved by strict adherence to the rules of classical theater; these included the unities of time, place, and action and—more important—the need for both verisimilitude (*vraisemblance*) and decorum (*bienséance*). The critics held that a play should not only please, but please according to the rules. Louis XIII’s chief minister, Cardinal de Richelieu, considered the stage the site for enacting a universal public virtue. He had founded the Académie Française (the French Academy) just two years before the staging of *Le Cid*, and the Quarrel offered

him the public forum to assert his public moral authority. After a year of literary skirmishes—pamphlets and protests on the subversive nature of art and the need for public virtue—Richelieu, who had once included Corneille among his privileged “Five Authors,” stepped in: with the authority of absolutism and the Académie, he proclaimed *Le Cid* contrary to the rules of *vraisemblance*. Corneille retreated to Rouen and indirectly answered the attacks by composing two tragedies on Roman themes, *Horace* (1639) and *Cinna* (1642). Both works adhere to the classical rules of composition.

In his conformity to the very rules that had been invoked against him, Corneille was implicitly siding with his critics and using the controversy to rethink his own baroque-ness. The term *baroque*, derived from the artistic extravagance originally associated with the architecture of Catholic Spain and Italy, refers to a recurrent stylistic tendency rather than simply to a period, art form, or culture. In France the baroque is seen as extending the exuberance of the Renaissance, while classicism is seen as taming it. The baroque is based on energy, antithesis, exaggeration, and the stretching and transgressing of boundaries; the classical is based on balance and on the intensity of restraint. To the French, paradoxically, Shakespeare is too “baroque”—mixed, impure, multileveled, imperfect. In French classical theater, the forces of the baroque are internalized and held in precarious equilibrium within the self. Corneille succeeded in finding within classical rules a framework more suitable for his dramas of subjective conflict than that offered by the more diffuse and extravagant spectacles of the baroque theater that had inspired his earlier works. In 1642 he also wrote *Polyeucte martyr*, treating a Christian subject in the style of a classical work. The four plays of this period (*Le Cid*, *Horace*, *Cinna*, and *Polyeucte*) constitute what was later termed Corneille’s tetralogy.

The luxuriant growth of the French language called for a century earlier by the poets JOACHIM DU BELLAY and Pierre de Ronsard had undergone a severe pruning in the early seventeenth century by a strict legislator of classical verse forms, François de Malherbe, and the golden age of French classical theater (called “neoclassical” in England) had begun. Malherbe prescribed the decorum of verse, which was followed quite faithfully for the next two centuries, both in theater and in lyric poetry: the twelve-syllable line, called an “alexandrine,” was expected to break in the middle and not run on to the next line without a grammatical justification; in addition, rhyme should alternate between “masculine” and “feminine” endings. Corneille continued to be an anomalous champion of this theatrical and poetic regulation.

By the mid-1640s, Corneille was clearly the master of the French stage; he continued to live in Rouen, while traveling frequently to Paris. Married in 1641, he led the life of a provincial Catholic bourgeois with his wife and, eventually, seven children. In 1644 his first collection of plays was published. Now under the new political regime, the regency of Anne of Austria and her prime minister, Cardinal Mazarin (both Richelieu and Louis XIII had died), Corneille continued in his fame. In 1647, when he was considered for the third time, Corneille was elected to the French Academy.

During the revolt (known as “La Fronde”) of a group of powerful nobles against the monarchy, Corneille’s plays waned somewhat in popularity, though he wrote several “machine plays” that delighted crowds with their spectacular special effects and settings. Whenever a play of his was not well received, Corneille tended to retreat from public life. During one of his retreats he translated and published Thomas à Kempis’s fifteenth-century Latin treatise *The Imitation of Jesus Christ* (1656); while it was obviously a radical shift from theatrical comedies, the translation was a great popular success.

His plays of the 1660s—mostly tragedies—were less popular than his earlier works. Times had changed: Corneille was still respected, but two younger playwrights—Racine and Molière—were beginning to steal the hearts of audiences and the favor

of the court of the "Sun King," Louis XIV. Racine began his career by attacking Corneille, and the rivalry reached a head when, in 1670, Corneille and Racine were each urged to write a tragedy on the same topic (the doomed love between a Roman emperor and the queen of Palestine), unaware of the other's intention. Racine's *Bérénice* was deemed superior to Corneille's *Tite et Bérénice*, and Racine subsequently went on to write his greatest plays. Corneille continued to write, too, but with diminishing success; his last play, *Suréna, général des Parthes*, was produced in 1675. He died in 1684; in the following year his younger brother, Thomas Corneille, also a playwright, was given his seat in the French Academy, with the blessing of the belatedly gracious Racine.

More than twenty years after the Quarrel of *Le Cid*, Corneille wrote and published a defense of his dramatic style. The defense took the form of *Trois Discours sur le poème dramatique* (1660, *Three Discourses on Dramatic Poetry*), which was published in the seventh edition of his theatrical works. His discourses had a double aim: on the one hand, he needed to uphold the authority of Aristotle and the "ancients" against the frenzy and formlessness of the baroque; on the other, he needed to defend his theatrical practices against the rigid interpretation of that same Aristotle, whose authority had underpinned the Academy's criticism of *Le Cid*. Although he is often seen as a rigid apologist for classical form, Corneille actually argues for flexibility, for a practical adaptation of the sometimes unclear statements made in the *Poetics*, suiting the spirit but not always the letter of Aristotle's description of a well-made tragedy.

Corneille's *Trois Discours* directly responded to the publication in 1657 of the Abbé d'Aubignac's *Pratique du théâtre* (*The Practice of Theater*), but the essays were obviously part of a much larger critical dialogue that had been going on throughout Corneille's career—a dialogue that had in many ways begun the year *Le Cid* opened in Paris. In *An Essay of Dramatic Poesy* (1668; see below), the English dramatist JOHN DRYDEN took up the issues with equal intensity. In the *Discourses*, written to introduce the three volumes of Corneille's own plays (the play printed under the author's supervision being a relatively recent departure from ancient practice), Corneille cites only himself among living dramatists, referring often to the ancients. The three essays each endorse Aristotelian ideas but argue that the strict rules of French classical theater are based on an overly literal interpretation of the *Poetics*. Again and again, Corneille claims that everyone agrees with Aristotle—they just don't agree on what he means.

Corneille opens the first discourse by quoting Aristotle's declaration that the sole purpose of drama is to please the spectator, and he repeatedly demonstrates that this desire to please the spectator will serve as his first axiom, to which the other rules of classical theater will often, but not always, be subordinate. The moralists of the seventeenth century, citing Aristotle, argued that the classical conventions necessarily led to didactic theater. But Corneille makes the didactic function secondary to entertainment. Though citing the same sources—Aristotle and Horace—he interprets them to challenge received ideas and to serve his own aesthetic ends. For example, in the first *Discours*, on the matter of *bienséance*, he views Aristotle's statement that a character's morals must be "good" not as a call for "naive depiction of vices and virtues," but rather as an insistence on character development: each character must be true to his or her history. To support his claim, he lists many examples from classical Greek theater of heroes who are adulterers or killers; here, says Corneille, classical theater transcends the simplistic idea that audiences need moral heroes to be "good" and adulterers and killers to be "bad" and therefore punished. It is more important to portray human behavior as it is, in keeping with a character's birth, family, and social status, than to offer flawless paragons of moral behavior.

In the second *Discours*, Corneille discusses the Aristotelian ideas on the nature of tragedy, especially the ways in which the tragic hero elicits pity and fear from the

audience, which in turn leads to a purging, or catharsis, of those passions. He argues that human emotions are complicated and that the oppositions inherent in human nature, such as the contradictory forces of love and duty, will evoke pity and empathy from the audience. While classical theory prescribes that all actions should be both probable and necessary, some of the most intense tragic effects are created by predicaments that are not, at least according to *bienséance*, probable. Yet these unlikely events can nevertheless reveal something fundamental about human nature.

"Of the Three Unities of Action, Time, and Place," our selection, continues in the tone of the first two discourses. Using many examples from his own plays and quoting liberally from Aristotle's *Poetics*, Corneille in this third *Discours* both justifies his own dramatic works and explains the theories behind them. Above all, he is a pragmatist—a successful playwright and seasoned craftsman who has refused to submit to the prescriptive dicta of theatrical critics of his time. He knows that a play must please, even dazzle the audience.

Here he shows how the three unities can, at times, assist in the overall aim of theater. He begins by discussing the unity of action, which, for Corneille, does not require only one action on stage. "One complete action" may contain several other less-developed actions, which may or may not take place on the stage. He allows for some action to take place offstage between acts, and he also allows for particular actions that do not necessarily bring about the principal action. He does advise the writer to avoid actions that have happened before the time of the play, since such narrations of prior events will burden the spectator's memory, and he criticizes the multiple subplots that characterize Shakespearean drama.

The unity of time is founded on Aristotle's statement that the action of a play should be contained "within a single circuit of the sun." Corneille dismisses the argument as to whether Aristotle's maxim referred to a twelve-hour day or a twenty-four-hour day, offering instead the principle of proportion. A portrait will "gain in excellence" as it closely resembles reality. Since a play lasts about two hours, the action represented should come as close to two hours as possible. Yet precision in this unity may make the spectator aware of an unnatural need to compress the action; therefore, as with most theatrical strictures, Corneille wishes to allow latitude, and above all to "leave the matter of duration to the imagination of the spectators."

Corneille similarly calls for a judicious approach to the unity of place. Baroque plays, which sometimes spanned continents, were clearly in violation of *vraisemblance*. But a confined space like that of the theater itself—royal apartments, for example—might turn out to be overly restrictive (Shakespeare could be said to have gotten around this by staging his plays in a theater called the Globe). The concentration provided by a spatial confinement approaching that of the theater itself should always make sense. One should seek unity as much as possible, but at the same time recognize that not every subject can be adapted to its demands.

Within the strictures derived from Aristotle, then, Corneille is arguing for a loosening, not a tightening, of classical rules. His discussion of the unities, often taken to be prescriptive, is really a defense of flexibility. True, he brandishes Aristotle's authority against the exuberance of baroque forms. But his Aristotle can be adapted to fit a wide range of theatrical practices. The point, he concludes, is "to make the ancient rules agree with modern pleasures." Corneille would have been surprised to find that for later playwrights, especially in Germany during the early eighteenth century, he had become the epitome of the cold nobility and rigid formalism of the same classical theater into which he had constantly attempted to breathe life.

"Of the Three Unities of Action, Time, and Place" Keywords: Drama, Formalism, Language, Tradition

Of the Three Unities of Action, Time, and Place¹

The two preceding discourses and the critical examination of the plays which my first two volumes contain have furnished me so many opportunities to explain my thoughts on these matters² that there would be little left for me to say if I absolutely forbade myself to repeat.

I hold then, as I have already said, that in comedy, unity of action consists in the unity of plot or the obstacle to the plans of the principal actors, and in tragedy in the unity of peril, whether the hero falls victim to it or escapes. It is not that I claim that several perils cannot be allowed in the latter or several plots or obstacles in the former, provided that one passes necessarily from one to the other; for then escape from the first peril does not make the action complete since the escape leads to another danger; and the resolution of one plot does not put the actors at rest since they are confounded afresh in another. My memory does not furnish me any ancient examples of this multiplicity of perils linked each to each without the destruction of the unity of action; but I have noted independent double action as a defect in *Horace* and in *Théodore*,³ for it is not necessary that the first kill his sister upon gaining his victory nor that the other give herself up to martyrdom after having escaped prostitution; and if the death of Polyxène and that of Astyanax in Seneca's⁴ *Trojan Women* do not produce the same irregularity I am very much mistaken.

In the second place, the term unity of action does not mean that tragedy should show only one action on the stage. The one which the poet chooses for his subject must have a beginning, a middle, and an end;⁵ and not only are these three parts separate actions which find their conclusion in the principal one, but, moreover, each of them may contain several others with the same subordination. There must be only one complete action, which leaves the mind of the spectator serene; but that action can become complete only through several others which are less perfect and which, by serving as preparation, keep the spectator in a pleasant suspense. This is what must be contrived at the end of each act in order to give continuity to the action. It is not necessary that we know exactly what the actors are doing in the intervals which separate the acts, nor even that they contribute to the action when they do not appear on the stage; but it is necessary that each act leave us in the expectation of something which is to take place in the following one.

If you asked me what Cléopâtre is doing in *Rodogune*⁶ between the time when she leaves her two sons in the second act until she rejoins Antiochus in the fourth, I should be unable to tell you, and I do not feel obliged to

1. Translated by Donald Schier.

2. The principles Corneille had derived from ARISTOTLE'S *Poetics* (see above). The first two discourses were "On the Uses and Elements of Dramatic Poetry" and "Discourse on Tragedy and of the Methods of Treating It, according to Probability and Necessity." Each play also had an *examen* (critical examination) appended by Corneille.

3. Two tragedies by Corneille, written respectively in 1640 and 1645.

4. Seneca the Younger (ca. 4 B.C.E.—65 C.E.), Roman philosopher, statesman, and tragedian.

5. See Aristotle, *Poetics* 7, 1450b.

6. *Rodogune, Princesse des Parthes* (1644), a tragedy by Corneille in which Cleopatra, queen of Syria, promises the throne to the one of her two sons, Antiochus and Seleucus, who will bring to her the head of Rodogune, with whom both are in love. When Seleucus is killed, Cleopatra prepares to poison Antiochus and Rodogune, but ends up drinking the poison herself.

account for her; but the end of this second act prepares us to see an amicable effort by the two brothers to rule and to hide Rodogune from the venomous hatred of their mother. The effect of this is seen in the third act, whose ending prepares us again to see another effort by Antiochus to win back these two enemies one after the other and for what Séleucus does in the fourth, which compels that unnatural mother [Cléopâtre] to resolve upon what she tries to accomplish in the fifth, whose outcome we await with suspense.

In *Le menteur*⁷ the actors presumably make use of the whole interval between the third and fourth acts to sleep; their rest, however, does not impede the continuity of the action between those two acts because the third does not contain a complete event. Dorante ends it with his plan to seek ways to win back the trust of Lucrèce, and at the very beginning of the next he appears so as to be able to talk to one of her servants and to her, should she show herself.

When I say that it is not necessary to account for what the actors do when they are not on stage, I do not mean that it is not sometimes very useful to give such an accounting, but only that one is not forced to do it, and that one ought to take the trouble to do so only when what happens behind the scenes is necessary for the understanding of what is to take place before the spectators. Thus I say nothing of what Cléopâtre did between the second and the fourth acts, because during all that time she can have done nothing important as regards the principal action which I am preparing for; but I point out in the very first lines of the fifth act that she has used the interval between these latter two for the killing of Séleucus, because that death is part of the action. This is what leads me to state that the poet is not required to show all the particular actions which bring about the principal one; he must choose to show those which are the most advantageous, whether by the beauty of the spectacle or by the brilliance or violence of the passions they produce, or by some other attraction which is connected with them, and to hide the others behind the scenes while informing the spectator of them by a narration or by some other artistic device; above all, he must remember that they must all be so closely connected that the last are produced by the preceding and that all have their source in the protasis⁸ which ought to conclude the first act. This rule, which I have established in my first *Discourse*, although it is new and contrary to the usage of the ancients, is founded on two passages of Aristotle. Here is the first of them: "There is a great difference," he says, "between events which succeed each other and those which occur because of others."⁹ The Moors come into the *Cid*¹ after the death of the Count and not because of the death of the Count; and the fisherman comes into *Don Sanche*² after Charles is suspected of being the Prince of Aragon and not because he is suspected of it; thus both are to be criticized. The second passage is even more specific and says precisely "that everything that happens in tragedy must arise necessarily or probably from what has gone before."³

7. *The Liar* (1643), a comedy by Corneille in which a provincial fabulator, Dorante, seeks to impress two Parisian women, Lucrèce and Clarrice.

8. The introductory act or exposition of classical Greek drama (literally, "that which is put for-

ward"; Greek), a term of late antiquity.

9. Aristotle, *Poetics* 10, 1452a.

1. *Le Cid* (1637), a tragedy by Corneille.

2. *Don Sanche d'Aragon* (1649), a heroic comedy by Corneille.

3. Aristotle, *Poetics* 10, 1452a.

The linking of the scenes which unites all the individual actions of each act and of which I have spoken in criticizing *La Suivante*⁴ is a great beauty in a poem and one which serves to shape continuity of action through continuity of presentation; but, in the end, it is only a beauty and not a rule. The ancients did not always abide by it although most of their acts have but two or three scenes. This made things much simpler for them than for us, who often put as many as nine or ten scenes into each act. I shall cite only two examples of the scorn with which they treated this principle: one is from Sophocles,⁵ in *Ajax*, whose monologue before he kills himself has no connection with the preceding scene; the other is from the third act of Terence's⁶ *The Eunuch*, where Antipho's soliloquy has no connection with Chremes and Pythias who leave the stage when he enters. The scholars of our century, who have taken the ancients for models in the tragedies they have left us, have even more neglected that linking than did the ancients, and one need only glance at the plays of Buchanan, Grotius, and Heinsius,⁷ of which I spoke in the discussion of *Polyeucte*,⁸ to agree on that point. We have so far accustomed our audiences to this careful linking of scenes that they cannot now witness a detached scene without considering it a defect; the eye and even the ear are outraged by it even before the mind has been able to reflect upon it. The fourth act of *Cinna*⁹ falls below the others through this flaw; and what formerly was not a rule has become one now through the assiduousness of our practice.

I have spoken of three sorts of linkings in the discussion of *La Suivante*: I have shown myself averse to those of sound, indulgent to those of sight, favorable to those of presence and speech; but in these latter I have confused two things which ought to be separated. Links of presence and speech both have, no doubt, all the excellence imaginable; but there are links of speech without presence and of presence without speech which do not reach the same level of excellence. An actor who speaks to another from a hiding-place without showing himself forms a link of speech without presence which is always effective; but that rarely happens. A man who remains on stage merely to hear what will be said by those whom he sees making their entrance forms a link of presence without speech; this is often clumsy and falls into mere pretense, being contrived more to accede to this new convention which is becoming a precept than for any need dictated by the plot of the play. Thus, in the third act of *Pompée*,¹ Achorée, after having informed Charmion of the reception Caesar gave to the king when he presented to him the head of that hero, remains on the stage where he sees the two of them come together

4. *The Lady's Maid* (1633), a comedy by Corneille; his earlier criticism was in the *examen* to the play.

5. Greek tragic dramatist (ca. 496–406 B.C.E.). *Ajax* (ca. 441) is generally regarded as the earliest of his extant plays.

6. Roman comic dramatist (ca. 190–ca. 159 B.C.E.); *Eunuchus* was produced in 161.

7. Daniël Heinsius (1580–1655), Dutch poet and classical scholar; he published an edition of Aristotle's *Poetics* (1611), and his *De Tragoediae Constitutione* (1611) decisively influenced French classical theater. George Buchanan (1506–1582), Scottish humanist, educator, and man of letters who taught Latin in Paris and was known throughout Europe as a scholar and a Latin poet.

Hugo Grotius (1583–1645), Dutch jurist whose writings also included a number of tragedies.

8. *Polyeucte martyr* (1640), a Christian tragedy by Corneille; this earlier discussion was in the *examen* to the play.

9. *Cinna, ou la clémence d'Auguste* (1641, *Cinna, or the Clemency of Augustus*), a tragedy by Corneille. In an effort to avenge her father, Emilie incites her beloved Cinna to overthrow the emperor, Augustus. He is betrayed by a fellow conspirator, Maxime, also in love with Emilie; the conspirators are, in the end, all pardoned by a merciful Augustus.

1. *La mort de Pompée* (1642, *The Death of Pompey*), a tragedy by Corneille.

merely to hear what they will say and report it to Cléopâtre. Ammon does the same thing in the fourth act of *Andromède*² for the benefit of Phinée, who retires when he sees the king and all his court arriving. Characters who become mute connect rather badly scenes in which they play little part and in which they count for nothing. It is another matter when they hide in order to find out some important secret from those who are speaking and who think they are not overheard, for then the interest which they have in what is being said, added to a reasonable curiosity to find out what they cannot learn in any other way, gives them an important part in the action despite their silence; but in these two examples Ammon and Achorée lend so cold a presence to the scenes they overhear that, to be perfectly frank, whatever feigned reason I give them to serve as pretext for their action, they remain there only to connect the scenes with those that precede, so easily can both plays dispense with what they do.

Although the action of the dramatic poem must have its unity, one must consider both its parts: the complication and the resolution. "The complication is composed," according to Aristotle, "in part of what has happened off stage before the beginning of the action which is there described, and in part from what happens on stage; the rest belongs to the resolution. The change of fortune forms the separation of these two parts. Everything which precedes it is in the first part, and this change, with what follows it, concerns the other."³ The complication depends entirely upon the choice and industrious imagination of the poet and no rule can be given for it, except that in it he ought to order all things according to probability or necessity, a point which I have discussed in the second *Discourse*; to this I add one piece of advice, which is that he involve himself as little as possible with things which have happened before the action he is presenting. Such narrations are annoying, usually because they are not expected, and they disturb the mind of the spectator, who is obliged to burden his memory with what has happened ten or twelve years before in order to understand what he is about to see; but narrations which describe things which happen and take place behind the scenes once the action has started always produce a better effect because they are awaited with some curiosity and are a part of the action which is being shown. One of the reasons why so many illustrious critics favor *Cinna* above anything else I have done is that it contains no narration of the past, the one Cinna makes in describing his plot to Emilie being rather an ornament which tickles the mind of the spectators than a necessary marshaling of the details they must know and impress upon their memories for the understanding of what is to come. Emilie informs them adequately in the first two scenes that he is conspiring against Augustus in her favor, and if Cinna merely told her that the plotters are ready for the following day he would advance the action just as much as by the hundred lines he uses to tell both what he said to them and the way in which they received his words. There are plots which begin at the very birth of the hero like that of *Héraclius*,⁴ but these great efforts of the imagination demand an

2. A successful "machine play" (extravagant spectacle) (1650) by Corneille.

3. Aristotle, *Poetics* 18, 1455b.

4. *Héraclius, empereur d'Orient* (1647), a tragedy by Corneille. In this complicated drama of near-

incest and mistaken identity, the main characters are Héraclius, the legitimate prince; Phocas, the usurping ruler; Martian, son (unbeknownst to him) of Phocas; and Pulchérie, sister of Héraclius.

extraordinary attention of the spectator and often keep him from taking a real pleasure in the first performances, so much do they weary him.

In the resolution I find two things to avoid: the mere change of intention and the machine.⁵ Not much skill is required to finish a poem when he who has served as the obstacle to the plans of the principal actors for four acts desists in the fifth without being constrained to do so by any remarkable event; I have spoken of this in the first *Discourse* and I shall add nothing to that here. The machine requires no more skill when it is used only to bring down a god who straightens everything out when the actors are unable to do so. It is thus that Apollo functions in the *Orestes*:⁶ this prince and his friend Pylades, accused by Tyndarus and Menelaus of the death of Clytemnestra and condemned after prosecution by them, seize Helen and Hermione; they kill, or think they kill the first, and threaten to do the same with the other if the sentence pronounced against them is not revoked. To smooth out these difficulties Euripides seeks nothing subtler than to bring Apollo down from heaven, and he, by absolute authority, orders that Orestes marry Hermione and Pylades Electra; and lest the death of Helen prove an obstacle to this, it being improbable that Hermione would marry Orestes since he had just killed her mother, Apollo informs them that she is not dead, that he has protected her from their blows and carried her off to heaven at the moment when they thought they were killing her. This use of the machine is entirely irrelevant, being founded in no way on the rest of the play, and makes a faulty resolution. But I find a little too harsh the opinion of Aristotle, who puts on the same level the chariot Medea uses to flee from Corinth after the vengeance she has taken on Creon.⁷ It seems to me there is a sufficient basis for this in the fact that she has been made a magician and that actions of hers as far surpassing natural forces as that one have been mentioned in the play. After what she did for Jason at Colchis and after she had made his father Aeson young again following his return, and after she had attached invisible fire to the gift she gave to Creusa, the flying chariot is not improbable and the poem has no need of other preparation for that extraordinary effect. Seneca gives it preparation by this line which Medea speaks to her nurse:

Tuum quoque ipsa corpus hinc mecum aveham;⁸

and I by this one which she speaks to Aegeus

I shall follow you tomorrow by a new road.⁹

5. That is, the *deus ex machina* (god from a machine; Latin); in some Greek tragedies, a sort of crane lowered a god from the sky to provide a quick resolution to an entangled plot.

6. A drama (408 B.C.E.) by Euripides (ca. 485–ca. 406 B.C.E.), the Greek playwright who used the *deus ex machina* most frequently. In the Greek myth, Orestes kills his mother, Clytemnestra, to avenge her murder of his father, Agamemnon. Tyndareus is the father of Clytemnestra and of Helen (of Troy), whose husband is Menelaus; Hermione is Helen's daughter, and Electra is Orestes' sister. Apollo is the Greek god of music and prophecy.

7. At the end of Euripides' *Medea* (431 B.C.E.); see

Poetics 15, 1454b. At Colchis, Medea, a sorceress, helps Jason steal the Golden Fleece, and later marries him; when he chooses to marry the daughter of Creon, king of Corinth (unnamed in Euripides' play, named Creusa in Seneca's), she sends Jason's new wife a robe covered in a deadly ointment and kills Jason's and her two children, escaping in the dragon-drawn chariot of Helios (the sun), her grandfather.

8. Seneca, *Medea*, line 975: "I'll also carry away your corpse from here with me" (Medea is addressing her dead child).

9. Corneille, *Médée* (1635); Aegeus is a legendary king of Athens, whom Medea marries after fleeing Corinth.

Thus the condemnation of Euripides, who took no precautions, may be just and yet not fall on Seneca or on me: and I have no need to contradict Aristotle in order to justify myself on this point.

From the action I turn to the acts, each of which ought to contain a portion of it, but not so equal a portion that more is not reserved for the last than for the others and less given to the first than to the others. Indeed, in the first act one may do no more than depict the moral nature of the characters and mark off how far they have got in the story which is to be presented. Aristotle does not prescribe the number of the acts; Horace limits it to five;¹ and although he prohibits having fewer, the Spaniards are obstinate enough to stop at three and the Italians often do the same thing. The Greeks used to separate the acts by the chanting of the chorus, and since I think it reasonable to believe that in some of their poems they made it chant more than four times, I should not want to say they never exceeded five. This way of distinguishing the acts was less handy than ours, for either they paid attention to what the chorus was chanting or they did not; if they did, the mind of the spectators was too tense and had no time in which to rest; if they did not, attention was too much dissipated by the length of the chant, and when a new act began, an effort of memory was needed to recall to the imagination what had been witnessed and at what point the action had been interrupted. Our orchestra presents neither of these two inconveniences; the mind of the spectator relaxes while the music is playing and even reflects on what he has seen, to praise it or to find fault with it depending on whether he has been pleased or displeased; and the short time the orchestra is allowed to play leaves his impressions so fresh that when the actors return he does not need to make an effort to recall and resume his attention.

The number of scenes in each act has never been prescribed by rule, but since the whole act must have a certain number of lines which make its length proportionate to that of the others, one may include in it more or fewer scenes depending on whether they are long or short to fill up the time which the whole act is to consume. One ought, if possible, to account for the entrance and exit of each actor; I consider this rule indispensable, especially for the exit, and think there is nothing so clumsy as an actor who leaves the stage merely because he has no more lines to speak.

I should not be so rigorous for the entrances. The audience expects the actor, and although the setting represents the room or the study of whoever is speaking, yet he cannot make his appearance there unless he comes out from behind the tapestry, and it is not always easy to give a reason for what he has just done in town before returning home, since sometimes it is even probable that he has not gone out at all. I have never seen anybody take offense at seeing Emilie begin *Cinna* without saying why she has come to her room; she is presumed to be there before the play begins, and it is only stage necessity which makes her appear from behind the scenes to come there. Thus I should willingly dispense from the rigors of the rule the first scene of each act but not the others, because once an actor is on the stage anyone who enters must have a reason to speak to him or, at least, must profit from the opportunity to do so when it offers. Above all, when an actor enters twice in one act, in comedy or in tragedy, he must either lead one to

1. The Roman poet HORACE (65–8 B.C.E.), *Ars Poetica*, lines 189–90 (see above).

expect that he will soon return when he leaves the first time, like Horace in the second act and Julie in the third act of *Horace*, or explain on returning why he has come back so soon.

Aristotle wishes the well-made tragedy to be beautiful and capable of pleasing without the aid of actors and quite aside from performance.² So that the reader may more easily experience that pleasure, his mind, like that of the spectator, must not be hindered, because the effort he is obliged to make to conceive and to imagine the play for himself lessens the satisfaction which he will get from it. Therefore, I should be of the opinion that the poet ought to take great care to indicate in the margin the less important actions which do not merit being included in the lines, and which might even mar the dignity of the verse if the author lowered himself to express them. The actor easily fills this need on the stage, but in a book one would often be reduced to guessing and sometimes one might even guess wrong, unless one were informed in this way of these little things. I admit that this is not the practice of the ancients; but you must also allow me that because they did not do it they have left us many obscurities in their poems which only masters of dramatic art can explain; even so, I am not sure they succeed as often as they think they do. If we forced ourselves to follow the method of the ancients completely, we should make no distinction between acts and scenes because the Greeks did not. This failure on their part is often the reason that I do not know how many acts there are in their plays, nor whether at the end of an act the player withdraws so as to allow the chorus to chant, or whether he remains on stage without any action while the chorus is chanting, because neither they nor their interpreters have deigned to give us a word of indication in the margin.

We have another special reason for not neglecting that helpful little device as they did: this is that printing puts our plays in the hands of actors who tour the provinces and whom we can thus inform of what they ought to do, for they would do some very odd things if we did not help them by these notes. They would find themselves in great difficulty at the fifth act of plays that end happily, where we bring together all the actors on the stage (a thing which the ancients did not do); they would often say to one what is meant for another, especially when the same actor must speak to three or four people one after the other. When there is a whispered command to make, like Cléopâtre's to Laonice which sends her to seek poison,³ an aside would be necessary to express this in verse if we were to do without the marginal indications, and that seems to me much more intolerable than the notes, which give us the real and only way, following the opinion of Aristotle, of making the tragedy as beautiful in the reading as in performance, by making it easy for the reader to imagine what the stage presents to the view of the spectators.

The rule of the unity of time is founded on this statement of Aristotle "that the tragedy ought to enclose the duration of its action in one journey of the sun or try not to go much beyond it."⁴ These words gave rise to a famous dispute as to whether they ought to be understood as meaning a natural day of twenty-four hours or an artificial day of twelve; each of the two opinions has important partisans, and, for myself, I find that there are subjects so difficult

2. Aristotle, *Poetics* 6, 1450b.

3. In *Rodogune*.

4. Aristotle, *Poetics* 5, 1449b.

to limit to such a short time that not only should I grant the twenty-four full hours but I should make use of the license which the philosopher gives to exceed them a little and should push the total without scruple as far as thirty. There is a legal maxim which says that we should broaden the mercies and narrow the rigors of the law, *odia restringenda, favores ampliandi*; and I find that an author is hampered enough by this constraint which forced some of the ancients to the very edge of the impossible. Euripides in *The Suppliants*⁵ makes Theseus leave Athens with an army, fight a battle beneath the walls of Thebes, which was ten or twelve leagues away, and return victorious in the following act; and between his departure and the arrival of the messenger who comes to tell the story of his victory, the chorus has only thirty-six lines to speak. That makes good use of such a short time. Aeschylus⁶ makes Agamemnon come back from Troy with even greater speed. He had agreed with Clytemnestra, his wife, that as soon as the city was taken he would inform her by signal fires built on the intervening mountains, of which the second would be lighted as soon as the first was seen, the third at the sight of the second, and so on; by this means she was to learn the great news the same night. However, scarcely had she learned it from the signal fires when Agamemnon arrives, whose ship, although battered by a storm, if memory serves, must have traveled as fast as the eye could see the lights. *The Cid* and *Pompée*, where the action is a little precipitate, are far from taking so much license; and if they force ordinary probability in some way, at least they do not go as far as such impossibilities.

Many argue against this rule, which they call tyrannical, and they would be right if it were founded only on the authority of Aristotle; but what should make it acceptable is the fact that common sense supports it. The dramatic poem is an imitation, or rather a portrait of human actions, and it is beyond doubt that portraits gain in excellence in proportion as they resemble the original more closely. A performance lasts two hours and would resemble reality perfectly if the action it presented required no more for its actual occurrence. Let us then not settle on twelve or twenty-four hours, but let us compress the action of the poem into the shortest possible period, so that the performance may more closely resemble reality and thus be more nearly perfect. Let us give, if that is possible, to the one no more than the two hours which the other fills. I do not think that *Rodogune* requires much more, and perhaps two hours would be enough for *Cinna*. If we cannot confine the action within the two hours, let us take four, six, or ten, but let us not go much beyond twenty-four for fear of falling into lawlessness and of so far reducing the scale of the portrait that it no longer has its proportionate dimensions and is nothing but imperfection.

Most of all, I should like to leave the matter of duration to the imagination of the spectators and never make definite the time the action requires unless the subject needs this precision, but especially not when probability is a little forced, as in the *Cid*, because precision serves only to make the crowded action obvious to the spectator. Even when no violence is done to a poem by the necessity of obeying this rule, why must one state at the beginning that the sun is rising, that it is noon at the third act, and that the

6. Greek tragic dramatist (525–456 B.C.E.);

Corneille describes the beginning of his *Agamemnon* (458).

sun is setting at the end of the last act? This is only an obtrusive affectation; it is enough to establish the possibility of the thing in the time one gives to it and that one be able to determine the time easily if one wishes to pay attention to it, but without being compelled to concern oneself with the matter. Even in those actions which take no longer than the performance it would be clumsy to point out that a half hour has elapsed between the beginning of one act and the beginning of the next.

I repeat what I have said elsewhere,⁷ that when we take a longer time, as, for instance, ten hours, I should prefer that the eight extra be used up in the time between the acts and that each act should have as its share only as much time as performance requires especially when all scenes are closely linked together. I think, however, that the fifth act, by special privilege, has the right to accelerate time so that the part of the action which it presents may use up more time than is necessary for performance. The reason for this is that the spectator is by then impatient to see the end, and when the outcome depends on actors who are off stage, all the dialogue given to those who are on stage awaiting news of the others drags and action seems to halt. There is no doubt that from the point where Phocas exits in the fifth act of *Héraclius* until Amyntas enters to relate the manner of his death, more time is needed for what happens off stage than for the speaking of the lines in which Héraclius, Martian, and Pulchérie complain of their misfortune. Prusias and Flaminius, in the fifth act of *Nicomède*,⁸ do not have the time they would need to meet at sea, take counsel with each other, and return to the defense of the queen; and the Cid has not enough time to fight a duel with Don Sanche during the conversations of the Infanta with Léonor and of Chimène with Elvire. I was aware of this and yet have had no scruples about this acceleration of which, perhaps, one might find several examples among the ancients, but the laziness of which I have spoken will force me to rest content with this one, which is from the *Andria*⁹ of Terence. Simo slips his son Pamphilus into the house of Glycerium in order to get the old man, Crito, to come out and to clear up with him the question of the birth of his mistress, who happens to be the daughter of Chremes. Pamphilus enters the house, speaks to Crito, asks him for the favor and returns with him; and during this exit, this request, and this re-entry, Simo and Chremes, who remain on stage, speak only one line each, which could not possibly give Pamphilus more than time enough to ask where Crito is, certainly not enough to talk with him and to explain to him the reasons for which he should reveal what he knows about the birth of the unknown girl.

When the conclusion of the action depends on actors who have not left the stage and about whom no one is awaiting news, as in *Cinna* and *Rodogune*, the fifth act has no need of this privilege because then all the action takes place in plain sight, as does not happen when part of it occurs off stage after the beginning of the act. The other acts do not merit the same freedom. If there is not time enough to bring back an actor who has made his exit, or to indicate what he has done since that exit, the accounting can be postponed to the following act; and the music, which separates the two acts, may use up as much time as is necessary; but in the fifth act no postponement is possible: attention is exhausted and the end must come quickly.

7. In the *Examen de Mélièze*, which precedes the present Discourse in the edition published by Corneille [translator's note].

8. A tragedy (1651) by Corneille.

9. *The Maid of Andros* (166 B.C.E.), Terence's first play.

I cannot forget that although we must reduce the whole tragic action to one day, we can nevertheless make known by a narration or in some other more artful way what the hero of the tragedy has been doing for several years, because there are plays in which the crux of the plot lies in an obscurity of birth which must be brought to light, as in *Oedipus*.¹ I shall not say again that the less one burdens oneself with past actions, the more favorable the spectator will be, because of the lesser degree of trouble he is given when everything takes place in the present and no demands are made on his memory except for what he has seen; but I cannot forget that the choice of a day both illustrious and long-awaited is a great ornament to a poem. The opportunity for this does not always present itself, and in all that I have written until now you will find only four of that kind: the day in *Horace* when two nations are to decide the question of supremacy of empire by a battle; and the ones in *Rodogune*, *Andromède*, and *Don Sanche*. In *Rodogune* it is a day chosen by two sovereigns for the signature of a treaty of peace between the hostile crowns, for a complete reconciliation of the two rival governments through a marriage, and for the elucidation of a more than twenty-year-old secret concerning the right of succession of one of the twin princes on which the fate of the kingdom depends, as does the outcome of both their loves. The days in *Andromède* and *Don Sanche* are not of lesser importance, but, as I have just said, such opportunities do not often present themselves, and in the rest of my works I have been able to choose days remarkable only for what chance makes happen on them and not by the use to which public arrangements destined them long ago.

As for the unity of place, I find no rule concerning it in either Aristotle or Horace. This is what leads many people to believe that this rule was established only as a consequence of the unity of one day, and leads them to imagine that one can stretch the unity of place to cover the points to which a man may go and return in twenty-four hours. This opinion is a little too free, and if one made an actor travel post-haste, the two sides of the theater might represent Paris and Rouen. I could wish, so that the spectator is not at all disturbed, that what is performed before him in two hours might actually be able to take place in two hours, and that what he is shown in a stage setting which does not change might be limited to a room or a hall depending on a choice made beforehand; but often that is so awkward, if not impossible, that one must necessarily find some way to enlarge the place as also the time of the action. I have shown exact unity of place in *Horace*, *Polyeucte*, and *Pompée*, but for that it was necessary to present either only one woman, as in *Polyeucte*; or to arrange that the two who are presented are such close friends and have such closely related interests that they can be always together, as in *Horace*; or that they may react as in *Pompée* where the stress of natural curiosity drives Cléopâtre from her apartments in the second act and Cornélie in the fifth; and both enter the great hall of the king's palace in anticipation of the news they are expecting. The same thing is not true of *Rodogune*: Cléopâtre and she have interests which are too divergent to permit them to express their most secret thoughts in the same place. I might say of that play what I have said of

1. The *Oedipus Rex* (ca. 430 B.C.E.) of Sophocles is the best-known treatment of the story (an *Oedipus* of Seneca is also extant); at the climax

of the play Oedipus learns that he has unknowingly killed his father and married his mother. Corneille wrote his *Oedipe* in 1659.

Cinna, where, in general, everything happens in Rome and, in particular, half of the action takes place in the quarters of Auguste and half of it in Emilie's apartments. Following that arrangement, the first act of this tragedy would be laid in Rodogune's antechamber, the second, in Cléopâtre's apartments, the third, in Rodogune's; but if the fourth act can begin in Rodogune's apartments it cannot finish there, and what Cléopâtre says to her two sons one after the other would be badly out of place there. The fifth act needs a throne room where a great crowd can be gathered. The same problem is found in *Héraclius*. The first act could very well take place in Phocas's quarters, the second, in Léontine's apartments; but if the third begins in Pulchérie's rooms, it cannot end there, and it is outside the bounds of probability that Phocas should discuss the death of her brother in Pulchérie's apartments.

The ancients, who made their kings speak in a public square, easily kept a rigorous unity of place in their tragedies. Sophocles, however, did not observe it in his *Ajax*, when the hero leaves the stage to find a lonely place in which to kill himself and does so in full view of the people; this easily leads to the conclusion that the place where he kills himself is not the one he has been seen to leave, since he left it only to choose another.

We do not take the same liberty of drawing kings and princesses from their apartments, and since often the difference and the opposition on the part of those who are lodged in the same palace do not allow them to take others into their confidence or to disclose their secrets in the same room, we must seek some other compromise about unity of place if we want to keep it intact in our poems; otherwise we should have to decide against many plays which we see succeeding brilliantly.

I hold, then, that we ought to seek exact unity as much as possible, but as this unity does not suit every kind of subject, I should be very willing to concede that a whole city has unity of place. Not that I should want the stage to represent the whole city, that would be somewhat too large, but only two or three particular places enclosed within its walls. Thus the scene of *Cinna* does not leave Rome, passing from the apartments of Auguste to the house of Emilie. *Le Menteur* takes place in the Tuileries and in the Place Royale at Paris, and *La Suite*² shows us the prison and Mélisse's house at Lyons. *The Cid* increases even more the number of particular places without leaving Seville; and since the close linking of scenes is not observed in that play, the stage in the first act is supposed to represent Chimène's house, the Infante's apartments in the king's palace, and the public square; the second adds to these the king's chamber. No doubt there is some excess in this freedom. In order to rectify in some way this multiplication of places when it is inevitable, I should wish two things done: first, that the scene should never change in a given act but only between the acts, as is done in the first three acts of *Cinna*; the other, that these two places should not need different stage settings and that neither of the two should ever be named, but only the general place which includes them both, as Paris, Rome, Lyons, Constantinople, and so forth. This would help to deceive the spectator, who, seeing nothing that would indicate the difference in the places, would not notice the change, unless it was maliciously and critically pointed out, a thing which few are capable of doing, most spectators being warmly intent upon

2. *La Suite du Menteur* (1643, *Sequel to the Liar*), a comedy by Corneille.

the action which they see on the stage. The pleasure they take in it is the reason why they do not seek out its imperfections lest they lose their taste for it; and they admit such an imperfection only when forced, when it is too obvious, as in *Le Menteur* and *La Suite*, where the different settings force them to recognize the multiplicity of places in spite of themselves.

But since people of opposing interests cannot with verisimilitude unfold their secrets in the same place, and since they are sometimes introduced into the same act through the linking of scenes which the unity of place necessarily produces, one must find some means to make it compatible with the contradiction which rigorous probability finds in it, and consider how to preserve the fourth act of *Rodogune* and the third of *Héraclius*, in both of which I have already pointed out the contradiction which lies in having enemies speak in the same place. Jurists allow legal fictions, and I should like, following their example, to introduce theatrical fictions by which one could establish a theatrical place which would not be Cléopâtre's chamber nor Rodogune's, in the play of that name, nor that of Phocas, of Léontine or of Pulchérie in *Héraclius*, but a room contiguous to all these other apartments, to which I should attribute these two privileges: first, that each of those who speaks in it is presumed to enjoy the same secrecy there as if he were in his own room; and second, that whereas in the usual arrangement it is sometimes proper for those who are on stage to go off, in order to speak privately with others in their rooms, these latter might meet the former on stage without shocking convention, so as to preserve both the unity of place and the linking of scenes. Thus Rodogune, in the first act, encounters Laonice, whom she must send for so as to speak with her; and, in the fourth act, Cléopâtre encounters Antiochus on the very spot where he has just moved Rodogune to pity, even though in utter verisimilitude the prince ought to seek out his mother in her own room since she hates the princess too much to come to speak to him in Rodogune's, which, following the first scene, would be the locus of the whole act, if one did not introduce that compromise which I have mentioned into the rigorous unity of place.

Many of my plays will be at fault in the unity of place if this compromise is not accepted, for I shall abide by it always in the future when I am not able to satisfy the ultimate rigor of the rule. I have been able to reduce only three plays, *Horace*, *Polyeucte*, and *Pompée*, to the requirements of the rule. If I am too indulgent with myself as far as the others are concerned, I shall be even more so for those which may succeed on the stage through some appearance of regularity. It is easy for critics to be severe; but if they were to give ten or a dozen plays to the public, they might perhaps slacken the rules more than I do, as soon as they have recognized through experience what constraint their precision brings about and how many beautiful things it banishes from our stage. However that may be, these are my opinions, or if you prefer, my heresies concerning the principal points of the dramatic art, and I do not know how better to make the ancient rules agree with modern pleasures. I do not doubt that one might easily find better ways of doing that, and I shall be ready to accept them when they have been put into practice as successfully as, by common consent, mine have been.

JOHN DRYDEN

1631–1700

John Dryden worked expertly in poetry, drama, criticism, and translation. He was a true literary professional, an eminent (if controversial) public writer who took pride in his craft and prepared the way for later writers who built upon what he had done—ALEXANDER POPE and SAMUEL JOHNSON in particular. He occupies a central place in the history of English criticism.

Biographical evidence suggests that Dryden's middle-class parents supported the Puritan cause and Parliament. Dryden was educated at Westminster School and at Trinity College, Cambridge, receiving his degree in 1654.

His first important poem, *Heroic Stanzas* (1658, published 1659), eulogized Oliver Cromwell, the Puritan religious, military, and political leader and the lord protector of England (1653–58). Dryden was present at Cromwell's funeral, as were the Puritan poets John Milton and Andrew Marvell. In 1660, when Charles II assumed the throne eleven years after the execution of his father, Charles I, Dryden celebrated the event in his poem *Astraea Redux* ("justice restored"). This and later shifts in his political and religious positions led many critics to charge that he was an opportunist; but as Johnson noted in his *Life of Dryden*, "if he changed, he changed with the nation."

Annus Mirabilis ("year of wonders," 1667), a historical poem that describes two events of 1666, the English defeat of the Dutch naval fleet and the Great Fire in London that destroyed two-thirds of the city, helped win Dryden the poet laureateship in 1668. Other celebrated poems include the mock-heroic "Mac Flecknoe" (1682), a model for Pope's *Dunciad*; the political satires *Absalom and Achitophel* (1681) and *The Medal* (1682); and two religious poems, "Religio Laici" ("a layman's religion," 1682), which is a defense of Anglicanism, and *The Hind and the Panther* (1687), which criticizes the Anglican Church and reflects Dryden's conversion to Catholicism.

Dryden also was the major dramatist of his day. His best comedy is *Marriage à la Mode* (1671), and his most noteworthy tragedies are *Aureng-Zebe* (in rhymed couplets, 1675) and *All for Love, or The World Well Lost* (in blank verse, 1677). The last of these, influenced by French neoclassical theory, adapts Shakespeare's *Antony and Cleopatra* to the three unities of action, place, and time (see PIERRE CORNEILLE). In addition to plays and dramatic criticism, Dryden produced skillful translations of such classical authors as Persius, Juvenal, Plutarch, and Virgil; some scholars have judged his *Fables, Ancient and Modern* (1700), consisting of translations and paraphrases of Ovid, BOCCACCIO, and Chaucer, to be his finest achievement. Dryden's critical writings also form a significant and serious body of work. From his defenses, prefaces, dedications, prologues, and epilogues—and his poems on or to other writers and artists—we can piece together his literary and critical views.

Dryden occupies a key place in the history of English prose and criticism. His relaxed, conversational style, MATTHEW ARNOLD stated in the nineteenth century, is "such as we would all gladly use if we only knew how." Dryden examined the nature of comedy and tragedy, satire, poetry, and translation. He knew well, and was influenced by, Greek, Roman, and neoclassical French texts and theories; at the same time, he valued English writers from Chaucer to Ben Jonson and Shakespeare and sought to mediate among classical, modern, and national literary traditions.

Dryden's judgments are solid and sensible. "A man should have a reasonable, philosophical, and in some measure mathematical head to be a complete and excellent poet," he once observed, "and besides this should have experience in all sorts of humors and manners of men; should be thoroughly skilled in conversation and should have a great knowledge of mankind in general." His formulations are frequently witty and his advice cogent, as in his preface to the *Fables*: "An Author is not

to write all he can, but only all he ought." Dryden respects authority and precedent without being weighed down by them: "If the plays of the Ancients are more correctly plotted, ours are more beautifully written. . . . 'Tis not enough that Aristotle has said so, for Aristotle drew his models of tragedy from Sophocles and Euripides; and if he had seen ours, might have changed his mind." His tone is urbane, cultured, and civilized; and like that of Arnold and T. S. ELIOT, his criticism benefits from his own wide range of experience in creative writing.

Dryden's strengths and limits as a critic are displayed in his best-known critical work, the lengthy conversation *An Essay of Dramatic Poesy* (1668; rev. 1684), from which we take our selection. His stated purpose is "to vindicate the honor of our English writers from the censure of those who unjustly prefer the French before them." Through his four speakers, he treats the relationship between the ancients and the moderns, French dramatic theory and English practice, and the use of rhyme in drama, commenting along the way, as in our excerpt, on Shakespeare, Jonson, and other authors. Samuel Johnson maintained of the *Essay* that "modern English prose begins here"; he identifies Dryden as "the father of English criticism." But while the *Essay* is confident, leisurely, graceful, exploratory, and spirited, it is nonetheless a little slow and sometimes pedantic. Dryden favors balance, counterpoint, argument; he uses the "essay" form to undertake a tentative inquiry. He seeks to break down and complicate distinctions, opening up such apparently fixed terms as *propriety* and *decorum*. But the *Essay* overall lacks the energy, boldness, and edge of Dryden's best satiric poems.

Dryden is an informed, judicious critic who made important contributions to the understanding and study of literary tradition, genre, and translation. Perhaps he could even be identified as the first modern critic, in his effort to make literary criticism and dramatic theory more analytical, comparative, speculative, and scientific. Dryden's work as a playwright sharpened his sense of literature as an institution always undergoing development and change—he was keenly aware of the diverse, evolving interests of the audiences and readers whom he sought to delight and teach. For all his knowledge of Greek and Roman texts and respect for cultural and literary authority, Dryden was not bound to the past. His criticism was connected to his creative work—he sought to explain and defend it, including the new principles that it exemplified. Dryden is a leader in the distinguished line of England's poet-critics that begins with SIR PHILIP SIDNEY and includes Johnson, SAMUEL TAYLOR COLERIDGE, Arnold, and Eliot.

An Essay of Dramatic Poesy Keywords: Drama, The Canon/Tradition, Enlightenment Theory, Language, Poetry, Vernacular Language

From An Essay of Dramatic Poesy

* * *

"To begin, then, with Shakspeare.¹ He was the man who of all modern, and perhaps ancient poets, had the largest and most comprehensive soul. All the images of nature were still present to him, and he drew them, not laboriously, but luckily; when he describes anything, you more than see it, you feel it too. Those who accuse him to have wanted learning, give him the greater commendation: he was naturally learned; he needed not the spectacles of

1. In this excerpt, Neander (the Dryden character) is speaking and weighing the merits of Shakespeare.

books to read nature; he looked inwards, and found her there. I cannot say he is everywhere alike; were he so, I should do him injury to compare him with the greatest of mankind. He is many times flat, insipid; his comic wit degenerating into clenches,² his serious swelling into bombast. But he is always great, when some great occasion is presented to him; no man can say he ever had a fit subject for his wit, and did not then raise himself as high as above the rest of poets,

Quantum lenta solent inter viburna cupressi.³

The consideration of this made Mr. Hales of Eaton⁴ say, that there was no subject of which any poet ever writ, but he would produce it much better done in Shakspeare; and however others are now generally preferred before him, yet the age wherein he lived, which had contemporaries with him Fletcher and Jonson,⁵ never equalled them to him in their esteem: and in the last king's court,⁶ when Ben's reputation was at highest, Sir John Suckling,⁷ and with him the greater part of the courtiers, set our Shakspeare far above him.

"Beaumont and Fletcher, of whom I am next to speak, had, with the advantage of Shakspeare's wit, which was their precedent, great natural gifts, improved by study: Beaumont especially being so accurate a judge of plays, that Ben Jonson, while he lived, submitted all his writings to his censure, and, 'tis thought, used his judgment in correcting, if not contriving, all his plots. What value he had for him, appears by the verses he writ to him;⁸ and therefore I need speak no farther of it. The first play that brought Fletcher and him in esteem was their *Philaster*.⁹ for before that, they had written two or three very unsuccessfully, as the like is reported of Ben Jonson, before he writ *Every Man in his Humour*.¹ Their plots were generally more regular than Shakspeare's, especially those which were made before Beaumont's death; and they understood and imitated the conversation of gentlemen much better; whose wild debaucheries, and quickness of wit in repartees, no poet before them could paint as they have done. Humour,² which Ben Jonson derived from particular persons, they made it not their business to describe: they represented all the passions very lively, but above all, love. I am apt to believe the English language in them arrived to its highest perfection: what words have since been taken in, are rather superfluous than ornamental. Their plays are now the most pleasant and frequent entertainments of the stage; two of theirs being acted through the year for one of Shakspeare's or Jonson's: the reason is, because there is a certain gaiety in their comedies, and pathos in their more serious plays, which suit generally with all men's humours. Shakspeare's language is likewise a little obsolete, and Ben Jonson's wit comes short of theirs.

2. Puns, quibbles.

3. As do cypresses among the bending shrubs (Latin). From Virgil, *Eclogues* 1.125 (37 B.C.E.).

4. John Hales (1584–1656), a fellow of Eton, one of England's most famous endowed boarding schools (founded in 1440).

5. Ben Jonson (1572–1637), English dramatist and poet. John Fletcher (1579–1625), English dramatist who collaborated with Francis Beaumont (1584–1616) on a number of plays from

1606 to 1613 (each also wrote plays on his own).

6. Charles I (1600–1649, reigned 1625–49).

7. English poet and courtier (1609–1642).

8. The epigram "To Francis Beaumont" (1616).

9. Produced in 1608 or 1609.

1. Produced in 1598.

2. That is, a dominating passion or propensity; the phrase "comedy of humours" was applied to Jonson's comic dramas and characters.

"As for Jonson, to whose character I am now arrived, if we look upon him while he was himself (for his last plays were but his dotages),³ I think him the most learned and judicious writer which any theatre ever had. He was a most severe judge of himself, as well as others. One cannot say he wanted wit, but rather that he was frugal of it. In his works you find little to retrench or alter. Wit, and language, and humour also in some measure, we had before him; but something of art was wanting to the drama till he came. He managed his strength to more advantage than any who preceded him. You seldom find him making love in any of his scenes, or endeavouring to move the passions; his genius was too sullen and saturnine⁴ to do it gracefully, especially when he knew he came after those who had performed both to such an height. Humour was his proper sphere; and in that he delighted most to represent mechanic people.⁵ He was deeply conversant in the ancients, both Greek and Latin, and he borrowed boldly from them: there is scarce a poet or historian among the Roman authors of those times whom he has not translated in *Sejanus* and *Catiline*.⁶ But he has done his robberies so openly, that one may see he fears not to be taxed by any law. He invades authors like a monarch; and what would be theft in other poets is only victory in him. With the spoils of these writers he so represents old Rome to us, in its rites, ceremonies, and customs, that if one of their poets had written either of his tragedies, we had seen less of it than in him. If there was any fault in his language, 'twas that he weaved it too closely and laboriously, in his comedies⁷ especially: perhaps, too, he did a little too much Romanise our tongue, leaving the words which he translated almost as much Latin as he found them: wherein, though he learnedly followed their language, he did not enough comply with the idiom of ours. If I would compare him with Shakspeare, I must acknowledge him the more correct poet, but Shakspeare the greater wit. Shakspeare was the Homer, or father of our dramatic poets; Jonson was the Virgil, the pattern of elaborate writing;⁸ I admire him, but I love Shakspeare. To conclude of him; as he has given us the most correct plays, so in the precepts which he has laid down in his *Discoveries*,⁹ we have as many and profitable rules for perfecting the stage, as any wherewith the French can furnish us."¹

* * *

1668, 1684

3. Dryden is referring here to such late and mediocre plays as *The New Inn* (1629) and *A Tale of a Tub* (1633).

4. Heavy, melancholy, sullen.

5. Manual workers, artisans.

6. Jonson's two Roman plays, 1603 and 1611.

7. In the first edition of the *Essay*, Dryden wrote "in his serious plays."

8. The *Iliad* and the *Odyssey*, attributed to the Greek poet Homer (ca. 8th c. B.C.E.), provided

the model for later epic poetry, and Virgil (70–19 B.C.E.) was highly self-conscious about his relation to his predecessor when he wrote the *Aeneid*, the Roman national epic.

9. Jonson's *Timber, or Discoveries Made upon Men and Matter* (1640) is a series of notes and extracts on writing and other subjects.

1. Most notably in PIERRE CORNEILLE'S "Of the Three Unities" (1660; see above).

BARUCH SPINOZA

1632–1677

Modern secularism and postmodern philosophies of immanence are both indebted to the seventeenth-century philosopher Baruch Spinoza. Usually classified (along with his near contemporaries René Descartes and Gottfried Leibniz) as one of the “rationalist” philosophers, Spinoza’s stringent monism contests the Cartesian dualisms of body and spirit, subject and object. For Spinoza, God is identified with nature. Rather than existing in some transcendental, heavenly sphere, he dwells within creation—a creation that is rational through and through, and thus comprehensible to humans if their reason is properly exercised. No revelation through sacred scripture is required to apprehend the divine (or the nature of the universe), since reason is adequate to that task. It follows that Spinoza approaches the Bible as one would any other book produced by humans, and that approach has had profound consequences for subsequent theories of interpretation.

Born in Amsterdam, Spinoza was a member of the Marrano community of Jews who had fled the persecutions inflicted on them in Portugal in the early 1600s. (The term *marrano* is derived from an Arabic word meaning “forbidden,” or “anathematized.”) The Marranos had come to Portugal from Spain after that country expelled its entire Jewish population in 1492. To live in Portugal, these exiles had to convert to Christianity—and Spinoza’s parents had been arrested and charged with secretly carrying on Jewish practices. They left Portugal in 1615, eventually making their way to Amsterdam; there, in 1627, they joined a growing Marrano community that was trying to reestablish its traditional religion after a century of disuse. Spinoza spoke Portuguese at home, used Spanish as his primary reading language, studied Hebrew in the religious schools he attended, and spoke Dutch in his encounters with his non-Jewish compatriots. His family was reasonably prosperous, and he received a strict religious education within the tight-knit Marrano community, which was tolerated by but not assimilated into Dutch society. His mother, stepmother, and father had all died by the time Spinoza was twenty-one, and he went into the family’s import business with his elder brother.

His business affairs and his intellectual interests had already brought Spinoza into contact with Amsterdam’s non-Jewish citizens, especially various radical Protestant sectarians, prior to his (in)famous excommunication from the Jewish community when he was twenty-three. Speculation about the reasons for his banishment has been endless, but there are no extant documents detailing its cause. The text of the 1656 excommunication itself is often quoted: “By decree of the angels and by command of the holy men, we excommunicate, expel, curse and damn Baruch de Espinoza, with the consent of God. . . . We warn that none may contact him orally or in writing, nor do him any favor, nor stay under the same roof with him, nor read any paper he made or wrote.” Though the language sounds remarkably harsh, it was in fact standard for such writs and not crafted specifically against Spinoza. More important, such excommunications—which were fairly common (more than one hundred were issued in the seventy years from 1630 to 1700)—were usually temporary, and reprobates could reconcile with the community in various ways. What makes Spinoza’s case distinctive is that he left the community, lived the rest of his life among non-Jews, and did not (as far as we know) make any effort at reconciliation.

After his expulsion, Spinoza lived with the radical thinker and bookseller Franciscus van den Enden, from whom he learned Latin, the language he used in all his philosophical writings. By 1658, Spinoza had begun putting down his philosophical thoughts in several pieces that he never finished; these have survived and now form

part of his complete works. He had also moved out of Amsterdam to the village of Rijnsburg, after having been attacked on the streets of Amsterdam. There he took up the craft of grinding lenses, which would provide his livelihood for the rest of his life. His first published work, *Principles of Cartesian Philosophy* (1663), already shows him struggling against Cartesian dualism. In this same period, he began work on *Ethics*, the major statement of his full philosophical system. He interrupted work on *Ethics* to write the *Theological-Political Treatise*, a book he apparently thought would persuade (even placate) those who thought him a dangerous radical. He did take the precaution of publishing the book anonymously (in 1670)—and with a false title page in order to protect the printer from prosecution. Spinoza's faith in rational argument was not borne out by the reception to his book: it was roundly condemned even as the secret of its authorship was soon uncovered. But Spinoza was not arrested, and the book itself was not banned until shortly after his death. However, the furor it caused led Spinoza to circulate the finished *Ethics* only among a very limited circle, while providing instructions for its publication after his death.

Even though Spinoza was condemned as a dangerous freethinker and published hardly anything during his lifetime, he was fairly well-known in contemporary philosophical circles in England, France, and Germany, as well as in Holland. Leibniz knew of his work and even made a pilgrimage to visit him; in 1673 the University of Heidelberg offered him a chair in philosophy, which he declined. Spinoza moved to The Hague in 1671, and he died of tuberculosis six years later at the age of forty-four.

As Jonathan Israel among contemporary Spinozists has conclusively shown, in his time Spinoza's monistic identification of God with nature was deemed heretically atheist, pantheist, or both. It stood at the center of the "radical Enlightenment" that developed a thoroughgoing revision of the received Judeo-Christian tradition (especially in its Aristotelian form as developed most fully by THOMAS AQUINAS). Israel's work, along with the debates around the meaning of "secularism" sparked by Charles Taylor's *A Secular Age* (2007), is partially responsible for the heightened interest in Spinoza in our own time. For writers such as GILLES DELEUZE and ANTONIO NEGRI, Spinoza's denial of a transcendent divine—or of any extraterrestrial force or power—has provided an opening toward an alternative metaphysics. Furthermore, Spinoza's denial of mind-body dualism has inspired contemporary neuroscientists, even as his long discussion of the emotions in *Ethics* has been revisited by contemporary theorists interested in affect and the emotions.

Our selection, from the *Theological-Political Treatise*, highlights a different aspect of Spinoza's legacy: his contribution to the theory of interpretation. Broadly speaking, literary criticism as a practice and an academic discipline in the West draws on two sources: the Greco-Roman tradition encapsulated in works by ARISTOTLE, LONGINUS, and HORACE (among others); and the Judeo-Christian tradition articulated by writers such as AUGUSTINE OF HIPPO, MOSES MAIMONIDES, and DANTE ALIGHIERI. Where the classical writers mostly emphasize matters of form, genre, and rhetorical effect, the Judeo-Christian writers are focused on meaning. Their work is concerned with interpretation of the Bible, a sacred text whose import is not immediately manifest. A method of interpretation, a hermeneutics, is required to discern the meaning of biblical passages, which are often understood to be allegorical or symbolic. They claim that the text does not speak straightforwardly, and will yield its meaning only to a skilled (and learned) interpreter, often a scholar or a priest.

Spinoza is clearly in this Judeo-Christian tradition, not only because his primary text to interpret is the Bible but also because he assumes that interpretation is a complex affair. However, the method of interpretation he demonstrates in reading the Bible challenges received orthodox doctrines about the Bible's provenance and

meaning. Most provocatively, he denies the long-established claim that Moses is the author of the Pentateuch (the first five books of the Bible). Indeed, he insists that the Bible is the work of human authors, written by them over a period of years. More generally, Spinoza begins what comes to be known as the "historical" interpretation of the Bible, a practice that rests on the insistence that knowing the text's origins, its historical context, and the ways its words were understood in the writer's time are crucial elements for an accurate understanding of its meaning. His approach takes interpretation of the Bible out of the control of religious authorities and hands it over to skilled philologists—scholar-linguists steeped in the history of cultures. Spinoza treats this sacred text as he would any humanly produced work. Hence Spinoza's work is connected to the secularization often deemed characteristic of the move from the Middle Ages into modernity.

Irrespective of the religious controversies in which Spinoza was embedded, his description of how to go about interpreting a text still resonates with the practice of critics concerned that interpretation be accurate. Spinoza emphasizes that readers must not let their preconceived notions influence what they understand the text to be saying. To correctly read a text requires an act of historical imagination, wedded to a scholarly knowledge of historical facts. No special revelation is necessary: our own native abilities as reasoners, as readers, provide us with everything we need to interpret accurately. But Spinoza does not mean (and here he is arguing against the views of Maimonides) that we should assume the text in front of us to be reasonable. We should not impose on the text our view of what makes rational sense: we are trying to discover what its author thought or meant, not what we think. We are not going to be aided by divine revelation, but we need to be using our native reason in a way that curbs its desire to make things plausible or logical according to our present sense of rightness. Instead, we have to learn everything we can about the author, about the context in which he or she was writing, about the status of the language used at the time of writing, and about the prevailing beliefs and accepted knowledge of that time. All of this depends on learning the exact provenance of the text in question. Who wrote it and when? Has it been transmitted to us in its original form—or has it been changed in the process of transmission or through translation? Has its institutional status—as canonical (authorized) or apocryphal (unauthorized)—altered its presentation or its reception? And do we have the philological skills to understand the words deployed, since a language changes over time? The Hebrew that hardly existed as a spoken tongue in seventeenth-century Amsterdam is not the same language that the authors of the Hebrew Bible used.

Spinoza keeps telling us that we can successfully interpret texts, despite the manifold difficulties he identifies. His confidence is rooted in the successes of the science of his time. Just as science uncovers the mysteries of Nature, he tells us, a reason-driven method of interpretation can uncover many mysteries of the Bible. He meant this assurance to be comforting, wildly underestimating the hostility to the idea that a sacred text like the Bible should be treated scientifically, that it should be examined just as we might a body in the anatomy theater. At the same time, he also hedges his historical approach, claiming that the Bible's pronouncements on "moral conduct," presumably because they are held to be universally true for all time, do not pose the same kinds of obstacles to interpretation that the rest of the text does. It does not require scrupulous and scholarly hermeneutics to understand the Bible's moral messages. He sees fairly clearly, in other words, that his historical method implies (at the very least) a kind of relativism against which he needs to guard. Later writers concerned with hermeneutics, such as FRIEDRICH SCHLEIERMACHER and Hans-Georg Gadamer, would struggle with this issue of the extent to which our ability to understand writers from radically different times and cultures is limited by the prejudices that inform our thinking in the present.

Spinoza's compelling description of what is required to engage and understand a text from another era sets the terms of a challenge that literary criticism continually has to face.

Theological-Political Treatise Keywords: Authorship, The Canon/Tradition, Enlightenment Theory, Hermeneutics, Interpretation Theory, Language, Modernity, Philology, Religion

*From Theological-Political Treatise*¹

Chapter 7. Of the Interpretation of Scripture

On every side we hear men saying that the Bible is the Word of God, teaching mankind true blessedness, or the path to salvation. But the facts are quite at variance with their words, for people in general seem to make no attempt whatsoever to live according to the Bible's teachings. We see that nearly all men parade their own ideas as God's Word, their chief aim being to compel others to think as they do, while using religion as a pretext. We see, I say, that the chief concern of theologians on the whole has been to extort from Holy Scripture their own arbitrarily invented ideas, for which they claim divine authority. In no other field do they display less scruple and greater temerity than in the interpretation of Scripture, the mind of the Holy Spirit, and if while so doing they feel any misgivings, their fear is not that they may be mistaken in their understanding of the Holy Spirit and may stray from the path to salvation, but that others may convict them of error, thus annihilating their personal prestige and bringing them into contempt.

Now if men were really sincere in what they profess with regard to Holy Scripture, they would conduct themselves quite differently; they would not be racked by so much quarrelling and such bitter feuding, and they would not be gripped by this blind and passionate desire to interpret Scripture and to introduce innovations in religion. On the contrary, they would never venture to accept as Scriptural doctrine what was not most clearly taught by Scripture itself. And finally, those sacrilegious persons who have had the hardihood to alter Scripture in several places would have been horrified at the enormity of the crime and would have stayed their impious hands. But ambition and iniquity have reached such a pitch that religion takes the form not so much of obedience to the teachings of the Holy Spirit as of defending what men have invented. Indeed, religion is manifested not in charity but in spreading contention among men and in fostering the bitterest hatred, under the false guise of zeal in God's cause and a burning enthusiasm. To these evils is added superstition, which teaches men to despise reason and Nature, and to admire and venerate only that which is opposed to both. It is therefore not surprising that, to make Scripture appear more wonderful and awe-inspiring, they endeavour to explicate it in such a way that it seems diametrically opposed both to reason and to Nature. So they imagine

1. Translated by Samuel Shirley.

that the most profound mysteries lie hidden in the Bible, and they exhaust themselves in unraveling these absurdities while ignoring other things of value. They ascribe to the Holy Spirit whatever their wild fancies have invented, and devote their utmost strength and enthusiasm to defending it. For human nature is so constituted that what men conceive by pure intellect, they defend only by intellect and reason, whereas the beliefs that spring from the emotions are emotionally defended.

In order to escape from this scene of confusion, to free our minds from the prejudices of theologians and to avoid the hasty acceptance of human fabrications as divine teachings, we must discuss the true method of Scriptural interpretation and examine it in depth; for unless we understand this we cannot know with any certainty what the Bible or the Holy Spirit intends to teach. Now to put it briefly, I hold that the method of interpreting Scripture is no different from the method of interpreting Nature, and is in fact in complete accord with it. For the method of interpreting Nature consists essentially in composing a detailed study of Nature from which, as being the source of our assured data, we can deduce the definitions of the things of Nature. Now in exactly the same way the task of Scriptural interpretation requires us to make a straightforward study of Scripture, and from this, as the source of our fixed data and principles, to deduce by logical inference the meaning of the authors of Scripture. In this way—that is, by allowing no other principles or data for the interpretation of Scripture and study of its contents except those that can be gathered only from Scripture itself and from a historical study of Scripture—steady progress can be made without any danger of error, and one can deal with matters that surpass our understanding with no less confidence than those matters which are known to us by the natural light of reason.

But to establish clearly that this is not merely a sure way, but the only way open to us, and that it accords with the method of interpreting Nature, it should be observed that Scripture frequently treats of matters that cannot be deduced from principles known by the natural light; for it is chiefly made up of historical narratives and revelation. Now an important feature of the historical narratives is the appearance of miracles; that is, as we showed in the previous chapter,² stories of unusual occurrences in Nature, adapted to the beliefs and judgment of the historians who recorded them. The revelations, too, were adapted to the beliefs of the prophets, as we showed in chapter 2;³ and these do, indeed, surpass human understanding. Therefore knowledge of all these things—that is, of almost all the contents of Scripture—must be sought from Scripture alone, just as knowledge of Nature must be sought from Nature itself.

As for the moral doctrines that are also contained in the Bible, although these themselves can be demonstrated from accepted axioms, it cannot be

2. Chapter 6, where Spinoza claims that because God does not contravene natural laws, a miracle must be understood “simply [as] an event whose natural cause we . . . cannot explain by comparison with any other normal event.”

3. Spinoza argues that the authors of the various biblical books held the accepted scientific views of their times, though such views would be

understood as mistaken by later readers. The Hebrew prophets, who lived from ca. 1000 B.C.E. to ca. 450 B.C.E., were religious leaders of the Jewish people (*prophētēs* in Greek means “advocate”) and authors of the “prophetic books” (the books in the Hebrew Bible that bear their names). Among the prominent prophets are Isaiah, Ezekiel, Samuel, and Jeremiah.

proved from such axioms that Scripture teaches these doctrines: this can be established only from Scripture itself. Indeed, if we want to testify, without any prejudgment, to the divinity of Scripture, it must be made evident to us from Scripture alone that it teaches true moral doctrine; for it is on this basis alone that its divinity can be proved. We have shown that the chief characteristic which established the certainty of the prophets was that their minds were directed to what was right and good; hence this must be made evident to us, too, before we can have faith in them. We have already shown that miracles can never give proof of God's divinity, apart from the fact that they could be wrought even by a false prophet. Therefore the divinity of Scripture must be established solely from the fact that it teaches true virtue. Now this can be established only from Scripture. If this could not be done, our acceptance of Scripture and our witness to its divinity would argue great prejudice on our part. Therefore all knowledge of Scripture must be sought from Scripture alone.

Finally, Scripture does not provide us with definitions of the things of which it speaks, any more than Nature does. Therefore, just as definitions of the things of Nature must be inferred from the various operations of Nature, in the same way definitions must be elicited from the various Biblical narratives as they touch on a particular subject. This, then, is the universal rule for the interpretation of Scripture, to ascribe no teaching to Scripture that is not clearly established from studying it closely. What kind of study this should be, and what are the chief topics it should include, must now be explained.

1. It should inform us of the nature and properties of the language in which the Bible was written and which its authors were accustomed to speak. Thus we should be able to investigate, from established linguistic usage, all the possible meanings of any passage. And since all the writers of both the Old and the New Testaments were Hebrews, a study of the Hebrew language must undoubtedly be a prime requisite not only for an understanding of the books of the Old Testament, which were written in that language, but also for the New Testament. For although the latter books were published in other languages,⁴ their idiom is Hebraic.

2. The pronouncements made in each book should be assembled and listed under headings, so that we can thus have to hand all the texts that treat of the same subject. Next, we should note all those that are ambiguous or obscure, or that appear to contradict one another. Now here I term a pronouncement obscure or clear according to the degree of difficulty with which the meaning can be elicited from the context, and not according to the degree of difficulty with which its truth can be perceived by reason. For the point at issue is merely the meaning of the texts, not their truth. I would go further: in seeking the meaning of Scripture we should take every precaution against the undue influence, not only of our own prejudices, but of our faculty of reason insofar as that is based on the principles of natural cognition. In order to avoid confusion between true meaning and truth of fact, the former must be sought simply from linguistic usage, or from a process of reasoning that looks to no other basis than Scripture.

4. The 27 books of the New Testament are written in Hellenistic Greek (Koine). Jesus and the apostles are believed to have spoken Aramaic, a Semitic language related to Hebrew.

For further clarification, I shall give an example to illustrate all that I have here said. The sayings of Moses,⁵ “God is fire,” and “God is jealous,” are perfectly clear as long as we attend only to the meanings of the words; and so, in spite of their obscurity from the perspective of truth and reason, I classify these sayings as clear. Indeed, even though their literal meaning is opposed to the natural light of reason, this literal meaning must nevertheless be retained unless it is in clear opposition to the basic principles derived from the study of Scripture. On the other hand, if these statements in their literal interpretation were found to be in contradiction with the basic principles derived from Scripture, they would have to be interpreted differently (that is, metaphorically) even though they were in complete agreement with reason. Therefore the question as to whether Moses did or did not believe that God is fire must in no wise be decided by the rationality or irrationality of the belief, but solely from other pronouncements of Moses. In this particular case, since there are several other instances where Moses clearly tells us that God has no resemblance to visible things in heaven or on the earth or in the water, we must hence conclude that either this statement or all those others must be explained metaphorically. Now since one should depart as little as possible from the literal meaning, we should first enquire whether this single pronouncement, ‘God is fire,’ admits of any other than a literal meaning; that is, whether the word ‘fire’ can mean anything other than ordinary natural fire. If the word ‘fire’ is not found from linguistic usage to have any other meaning, then neither should this statement be interpreted in any other way, however much it is opposed to reason, and all other passages should be made to conform with it, however much they accord with reason. If this, too, should prove impossible on the basis of linguistic usage, then these pronouncements would have to be regarded as irreconcilable, and we should therefore suspend judgment regarding them. However, since the word ‘fire’ is also used in the sense of anger or jealousy (Job ch. 31 v. 12), Moses’ pronouncements are easily reconciled, and we can properly conclude that these two statements, ‘God is fire’ and ‘God is jealous’ are one and the same statement.

Again, as Moses clearly teaches that God is jealous and nowhere tells us that God is without passions or emotions, we must evidently conclude that Moses believed this, or at least that he intended to teach this, however strongly we may be convinced that this opinion is contrary to reason. For, as we have shown, it is not permissible for us to manipulate Scripture’s meaning to accord with our reason’s dictates and our preconceived opinions; all knowledge of the Bible is to be sought from the Bible alone.

3. Finally, our historical study should set forth the circumstances relevant to all the extant books of the prophets, giving the life, character and pursuits of the author of every book, detailing who he was, on what occasion and at what time and for whom and in what language he wrote. Again, it should relate what happened to each book, how it was first received, into whose hands it fell, how many variant versions there were, by whose decision

5. Jewish leader, to whom the first five books of the Hebrew Bible (the Pentateuch) are traditionally attributed; for the sayings, see Deuteronomy 4.24. Theologians still dispute whether Moses is a mythical figure or actually existed (with dates

for his life ranging from 1500 B.C.E. to 1300 B.C.E.). Spinoza’s denial that Moses is the author of the Pentateuch, a denial based on internal evidence from those five books, is highly unorthodox.

it was received into the canon, and, finally, how all the books, now universally regarded as sacred, were united into a single whole. All these details, I repeat, should be available from a historical study of Scripture; for in order to know which pronouncements were set forth as laws and which as moral teaching, it is important to be acquainted with the life, character and interests of the author. Furthermore, as we have a better understanding of a person's character and temperament, so we can more easily explain his words. Again, to avoid confusing teachings of eternal significance with those which are of only temporary significance or directed only to the benefit of a few, it is also important to know on what occasion, at what period, and for what nation or age all these teachings were written down. Finally, it is important to know the other details we have listed so that, in addition to the authenticity of each book, we may also discover whether or not it may have been contaminated by spurious insertions, whether errors have crept in, and whether these have been corrected by experienced and trustworthy scholars. All this information is needed by us so that we may accept only what is certain and incontrovertible, and not be led by blind impetuosity to take for granted whatever is set before us.

Now when we possess this historical account of Scripture and are firmly resolved not to assert as the indubitable doctrine of the prophets anything that does not follow from this study or cannot be most clearly inferred from it, it will then be time to embark on the task of investigating the meaning of the prophets and the Holy Spirit. But for this task, too, we need a method and order similar to that which we employ in interpreting Nature from the facts presented before us. Now in examining natural phenomena we first of all try to discover those features that are most universal and common to the whole of Nature, to wit, motion-and-rest and the rules and laws governing them which Nature always observes and through which she constantly acts; and then we advance gradually from these to other less universal features. In just the same way we must first seek from our study of Scripture that which is most universal and forms the basis and foundation of all Scripture; in short, that which is commended in Scripture by all the prophets, as doctrine eternal and most profitable for all mankind. For example, that God exists, one alone and omnipotent, who alone should be worshipped, who cares for all, who loves above all others those who worship him and love their neighbours as themselves. These and similar doctrines, I repeat, are taught everywhere in Scripture so clearly and explicitly that no one has ever been in any doubt as to its meaning on these points. But what God is, in what way he sees and provides for all things and similar matters, Scripture does not teach formally, and as eternal doctrine. On the contrary, we have clearly shown that the prophets themselves were not in agreement on these matters, and therefore on topics of this kind we should make no assertion that claims to be the doctrine of the Holy Spirit, even though the natural light of reason may be quite decisive on that point.

Having acquired a proper understanding of this universal doctrine of Scripture, we must then proceed to other matters which are of less universal import but affect our ordinary daily life, and which flow from the universal doctrine like rivulets from their source. Such are all the specific external actions of true virtue which need a particular occasion for their exercise. If there be found in Scripture anything ambiguous or obscure

regarding such matters, it must be explained and decided on the basis of the universal doctrine of Scripture. If any passages are found to be in contradiction with one another, we should consider on what occasion, at what time, and for whom they were written. For example, when Christ says, "Blessed are they that mourn, for they shall be comforted,"⁶ we do not know from this text what kind of mourners are meant. But as Christ thereafter teaches that we should take thought for nothing save only the kingdom of God and His righteousness, which he commends as the highest good (Matth. ch. 6 v. 33), it follows that by mourners he means only those who mourn for man's disregard of the kingdom of God and His righteousness; for only this can be the cause of mourning for those who love nothing but the kingdom of God, or justice, and utterly despise whatever else fortune has to offer.

So, too, when Christ says, "But if a man strike you on the right cheek, turn to him the left also"⁷ and the words that follow, if he were laying this command on judges in the role of lawgiver, this precept would have violated the law of Moses. But he expressly warns against this (Matth. ch. 5 v. 17). Therefore we should consider who said this, to whom, and at what time. This was said by Christ, who was not ordaining laws as a lawgiver, but was expounding his teachings as a teacher, because (as we have already shown) he was intent on improving men's minds rather than their external actions. Further, he spoke these words to men suffering under oppression, living in a corrupt commonwealth where justice was utterly disregarded, a commonwealth whose ruin he saw to be imminent. Now we see that this very same teaching, which Christ here expounds when the ruin of the city was imminent, was also given by Jeremiah⁸ in similar circumstances at the first destruction of the city (Lamentations ch. 3 v. 30). Thus it was only at the time of oppression that the prophets taught this doctrine which was nowhere set forth as law; whereas Moses (who did not write at a time of oppression, but—please note—was concerned to found a good commonwealth), although he likewise condemned revenge and hatred against one's neighbour, yet demanded an eye for an eye. Therefore it clearly follows simply on Scriptural grounds that this teaching of Christ and Jeremiah concerning the toleration of injury and total submission to the wicked applies only in situation where justice is disregarded and at times of oppression, but not in a good commonwealth. Indeed, in a good commonwealth where justice is upheld, everyone who wants to be accounted as just has the duty to go before a judge and demand justice for wrongdoing (Lev. ch. 5 v. 1), not out of revenge (Lev. ch. 19 v. 17, 18), but with the purpose of upholding justice and the laws of his country, and to prevent the wicked from rejoicing in their wickedness. All this plainly in accord with the natural reason. I could produce many more similar examples, but I think this is sufficient to explain my meaning and the usefulness of this method, which is my only object at present.

Now up to this point we have confined our investigation to those Scriptural pronouncements which are concerned with moral conduct, and which

6. Matthew 5.6.

7. Matthew 5.39.

8. Jewish prophet (active 626/27—ca. 580 B.C.E.).

"The city" is Jerusalem, destroyed by the Babylonians in 586 B.C.E.

can be the more easily elucidated because on such subjects there has never been any real difference of opinion among the writers of the Bible. But other biblical passages which belong only to the field of philosophical speculation do not yield so easily to investigation. The approach is more difficult, for the prophets differed among themselves in matters of philosophical speculation (as we have already shown) and their narratives conform especially to the prejudices of their particular age. So we are debarred from deducing and explaining the meaning of one prophet from some clearer passages in another, unless it is most plainly established that they were of one and the same mind. I shall therefore briefly explain how in such cases we should elicit the meaning of the prophets from the study of Scripture. Here, again, we must begin from considerations of a most general kind, first of all seeking to establish from the clearest Scriptural pronouncements what is prophecy or revelation and what is its essential nature; then what is a miracle, and so on with other subjects of a most general nature. Thereafter we must move on to the beliefs of individual prophets, and from there finally to the meaning of each particular revelation or prophecy, narrative and miracle. We have already pointed out with many apposite examples what great caution we should exercise in these matters to avoid confusing the minds of the prophets and historians with the mind of the Holy Spirit and with factual truth, and so I do not think it necessary to say any more on this subject. But with regard to the meaning of revelation, it should be observed that this method only teaches us how to discover what the prophets really saw or heard, and not what they intended to signify or represent by the symbols in question. The latter we can only guess at, not infer with certainty from the basis of Scripture.

We have thus set out our plan for interpreting Scripture, at the same time demonstrating that this is the only sure road to the discovery of its true meaning. I do indeed admit that those are better informed (if there are any) who are in possession of a sure tradition or true explanation transmitted from the prophets themselves, as the Pharisees⁹ claim, or those who have a pontiff whose interpretation of Scripture is infallible, as the Roman Catholics boast. However, as we cannot be sure either of the tradition in question or of the authority of the pontiff, we cannot base any certain conclusion on them. The latter is denied by the earliest Christians, the former by the most ancient sects of the Jews; and if, furthermore, we examine the succession of years (to mention nothing else) through which this tradition is traced right back to Moses, which the Pharisees have accepted from their Rabbis, we shall find that it is incorrect, as I prove elsewhere. Therefore such a tradition should be regarded with the utmost suspicion; and although our method requires us to accept as uncorrupted a certain tradition of the Jews—namely, the meaning of the words of the Hebrew language, which we have accepted from them—we can be quite sure of the one while doubting the other. For while it may occasionally have been in someone's interest to alter the meaning of some passage, it could never

9. Members of a Jewish religious party (ca. 160 B.C.E.—ca. 70 C.E.) who relied on an oral tradition of scriptural interpretation for their understanding of the Bible; their rivals the Sadducees, in

contrast, refused to go beyond the written Torah. By comparing the Pharisees to the Roman Catholics and their infallible pope, Spinoza makes clear his distaste for their position.

have been to anyone's interest to change the meaning of a word. Indeed, this is very difficult to accomplish, for whoever would try to change the meaning of a word would also have to explain all the writers who wrote in that language and used that word in its accepted meaning, in each case taking account of the character or intention of the writer; or else he would have to falsify the text, a task requiring much circumspection. Then again, a language is preserved by the learned and unlearned alike, whereas books and the meaning of their contents are preserved only by the learned. Therefore we can readily conceive that the learned may have altered or corrupted the meaning of some passage in a rare book which they had in their possession, but not the meaning of words. Besides which, if anyone should wish to change the customary meaning of a word, he would find it difficult to maintain consistency thereafter both in his writing and in his speaking.

For these and other reasons we may readily assume that it could never have entered anyone's mind to corrupt a language, whereas there may frequently have been an intention to corrupt the meaning of a writer by altering what he wrote or by giving it a wrong interpretation. Therefore, since our method (based on the principle that knowledge of Scripture must be sought only from Scripture) is the only true method, if there is anything that it cannot achieve for us in our pursuit of a complete understanding of Scripture, we must regard this as quite unattainable.

At this point I have to discuss any difficulties and shortcomings in our method which may stand in the way of our acquiring a complete and assured knowledge of the Holy Bible. The first important difficulty in our method is this, that it demands a thorough knowledge of the Hebrew language. Where is this now to be obtained? The men of old who used the Hebrew language have left to posterity no information concerning the basic principles and study of this language. At any rate, we possess nothing at all from them, neither dictionary nor grammar nor textbook on rhetoric. The Hebrew nation has lost all its arts and embellishments (little wonder, in view of the disasters and persecutions it has suffered) and has retained only a few remnants of its language and of its books, few in number. Nearly all the words for fruits, birds, fishes have perished with the passage of time, together with numerous other words. Then again, the meanings of many nouns and verbs occurring in the Bible are either completely unknown or subject to dispute. We are deprived not only of these, but more especially of the knowledge of Hebrew phraseology. The idiom and modes of speech peculiar to the Hebrew nation have almost all been consigned to oblivion by the ravages of time. So we cannot always discover to our satisfaction all the possible meanings which a particular passage can yield from linguistic usage; and there are many passages where the sense is very obscure and quite incomprehensible although the component words have a clearly established meaning.

Besides our inability to present a complete account of the Hebrew language, there is the further problem presented by the composition and nature of that language. This gives rise to so many ambiguities as to render it impossible to devise a method¹ that can teach us with certainty how to

1. That is, impossible for us who are not used to this language and lack a systematic account of its phraseology [Spinoza's note].

discover the true meaning of all Scriptural passages; for apart from the sources of ambiguity that are common to all languages, there are others peculiar to Hebrew which give rise to many ambiguities. These I think it worth listing here.

First, ambiguity and obscurity in the Bible are often caused by the fact that letters involving the same organ of speech are substituted one for another. The Hebrews divide all letters of the alphabet into five classes in accordance with the five oral instruments employed in their pronunciation, namely, the lips, the tongue, the teeth, the palate and the throat. For example, א, ב, ג, ד, ה *alef, het, 'ayin, hē* are called gutturals, and are used one in place of another without any distinction apparent to us. For instance, אל *el*, which means 'to', is often used for על *'al*, which means 'above', and vice-versa. As a result, any parts of a text may often be rendered ambiguous or appear to be meaningless utterances.

A second ambiguity arises from the multiple meanings of conjunctions and adverbs. For example, ו *vav* serves indiscriminately to join and to separate, and can mean 'and', 'but', 'because', 'however' and 'then'. כי *ki* has seven or eight meanings: 'because', 'although', 'if', 'when', 'just as', 'that', 'a burning' and so on. This is the case with almost all particles.

Thirdly—and the source of many ambiguities—verbs in the Indicative mood lack the Present, the Past Imperfect, the Pluperfect and the Future Perfect, and other tenses in common use in other languages. In the Imperative and Infinitive Moods verbs lack all the tenses except the Present, and in the Subjunctive there are no tenses at all. And although all the tenses and moods thus lacking could have been supplied, with ease and even with great elegance, by definite rules deduced from the fundamental principles of language, the writers of old showed complete disregard for such rules, and indiscriminately used Future for Present and Past, and contrariwise Past for Future, and furthermore used Indicative for Imperative and Subjunctive, to the great detriment of clarity.

Besides these three sources of ambiguity in Hebrew there remain two more to be noted, both of which are of far greater importance. First, the Hebrews do not have letters for vowels. Secondly, it was not their custom to punctuate their texts, nor to give them force or emphasis; and although vowels and punctuation thus lacking are usually supplied by points and accents, these cannot satisfy us, having been devised and instituted by men of a later age whose authority should carry no weight with us. The ancient writers did not employ points (that is, vowels and accents), as is abundantly testified; men of later ages added both of these in accordance with their own interpretation of the Bible. Therefore the accents and points that we now have are merely contemporary interpretations, and deserve no more credibility and authority than other commentaries. Those who fail to realise this do not understand the justification of the author of the Epistle to the Hebrews (ch. 11 v. 21) in giving an interpretation of the text of Genesis ch. 47 v. 31 very different from that of the pointed Hebrew text—as if the Apostle ought to have been taught the meaning of Scripture by those who inserted points! In my opinion it is the latter who should be regarded as at

fault. To make this clear to all, and to show how different interpretations arise simply from the absence of vowels, I shall here set down both interpretations.

Those who inserted the points interpreted the passage as follows: ‘and to Israel bent over (or, changing **א** *ayin* into **א** *alef*, a letter of the same organ, towards) the head of the bed.’ The author of the Epistle reads ‘and Israel bent over the head of his staff,’ reading ‘mate’ for ‘*mita*’, the only difference being in the vowels. Now since in this part of the story there is only a question of Jacob’s age, and not of his illness which is mentioned in the next chapter, it seems more probable that the historian intended to say that Jacob bent over the head of his staff (which men of advanced age employ to support themselves), not of the bed; and this is especially so because this interpretation does not require the substitution of one letter for another. Now my purpose in giving this example is not only to harmonise the passage in the Epistle to the Hebrews with the text of Genesis, but also to show how little confidence is to be placed in modern points and accents. Thus he who would interpret Scripture without any prejudice is in duty bound to hold these in doubt and to examine them afresh.

To return to our theme, such being the structure and nature of the Hebrew language, it is quite understandable that such a number of ambiguities must arise that no method can be devised for deciding them all. For we have no grounds for expecting that this can be completely achieved from a comparison of different passages, which we have shown to be the only way to elicit the true meaning from the many senses which a particular passage can yield with linguistic justification. It is only by chance that a comparison of passages can throw light on any particular passage, since no prophets wrote with the deliberate purpose of explaining another’s words, or his own. And furthermore, we can draw no conclusion as to the meaning of one prophet or apostle from the meaning of another except in matters of moral conduct, as we have already convincingly demonstrated; no such conclusions can be drawn when they are dealing with philosophical questions, or are narrating miracles or history. I could bring further examples to prove this point, that there are many inexplicable passages in Scripture; but I prefer to leave this subject for the present, and I shall proceed to a consideration of the points that still remain: the further difficulties we encounter in this true method of Scriptural interpretation, or in what way it falls short.

One further difficulty consequent upon this method is this, that it requires an account of the history of all the biblical books, and this for the most part we cannot provide. As I shall make clear at some length at a later stage, we either have no knowledge at all or but doubtful knowledge of the authors—or if you prefer the expression, the writers—of many of the books. Again, we do not even know on what occasion or at what time these books of unknown authorship were written. Furthermore, we do not know into whose hands all these books fell, or in whose copies so many different readings were found, nor yet again whether there were not many other versions in other hands. When I touched on this topic I did make a brief reference to the importance of knowing all these details, but there I deliberately passed over certain considerations which must now be taken up.

If we read a book relating events which are incredible or incomprehensible, or which is written in a very obscure style, and if we do not know the

author or the time or the occasion of its composition, it will be vain for us to try to achieve a greater understanding of its true meaning. Deprived of all these facts we cannot possibly know what was, or could have been, the author's intention. But if we are fully informed of these facts, we are in a position to form an opinion free from all danger of mistaken assumptions; that is to say, we ascribe to the author, or to him for whom he wrote, no more and no less than his just meaning, concentrating our attention on what the author could have had in mind, or what the time and the occasion demanded. I imagine that everyone is agreed on this; for it often happens that we read in different books stories that are much alike, and form very different judgments of them according to our opinions of the writers. I remember once having read a book about a man named Orlando Furioso³ who used to ride a winged monster in the sky, fly over any regions he chose and singlehanded slay huge numbers of men and giants, together with other similar fantastic happenings which are quite incomprehensible in respect to our intellect. Now I had read a similar story in Ovid about Perseus, and another story in the books of Judges and Kings about Samson, who singlehanded and unarmed slew thousands of men, and of Elijah,⁴ who flew through the air and finally went to heaven in a chariot and horses of fire. These stories, I repeat, are obviously similar, yet we form a very different judgment of each. The first writer was concerned only to amuse, the second had a political motive, the third a religious motive, and it is nothing else but our opinion of the writers that brings us to make these judgments. It is therefore evident that in the case of obscure or incomprehensible writings, it is essential for us to have some knowledge of the authors if we seek to interpret their writings. And for the same reasons, to choose the correct reading out of the various readings of unclear narratives, we have to know in whose manuscript these different readings are found, and whether there were ever some other versions supported by men of greater authority.

In the case of certain books of the Bible, our method of interpretation involves the further difficulty that we do not possess them in the language in which they were first written. The Gospel according to Matthew and undoubtedly the Epistle to the Hebrews were written in Hebrew, it is commonly held, but are not extant in that form. There is some doubt as to the language in which the Book of Job was written. Ibn Ezra,⁵ in his commentaries, asserts that it was translated into Hebrew from another language, and that this is the reason for its obscurity. I say nothing of the apocryphal books,⁶ since their authority is of a very different kind.

Such then, is a full account of the difficulties involved in this method of interpreting Scripture from its own history, such as we possess. These difficulties, which I undertook to recount, I consider so grave that I have no hesitation in affirming that in many instances we either do not know the

3. Hero of the epic poem *Orlando Furioso* (published 1532) by Italian poet Ludovico Ariosto.

4. Hebrew prophet (9th c. B.C.E.) whose story is told in 1 Kings 17–19 and 2 Kings 1–2. Ovid (43 B.C.E.–17 C.E.), Roman poet who told the story of the legendary Greek hero Perseus in *Metamorphoses* 4.603–5.249. Samson: legendary Jewish

warrior and judge (see Judges 13–16).

5. Abraham ben Meir ibn Ezra (ca. 1090–1167), Spanish poet, scholar, and biblical exegete.

6. Writings not included in authorized or canonical editions of the Bible (e.g., Judith, the Wisdom of Solomon).

true meaning of Scripture or we can do no more than make conjecture. But on the other hand I must again emphasise, with regard to all these difficulties, that they can prevent us from grasping the meaning of the prophets only in matters beyond normal comprehension, which can merely be imagined; it is not true of matters open to intellectual perception, whereof we can readily form a clear conception.⁷ For things which of their own nature are readily apprehended can never be so obscurely worded that they are not easily understood; as the proverb says, 'a word to the wise is enough.' Euclid, whose writings are concerned only with things exceedingly simple and perfectly intelligible, is easily made clear by anyone in any language; for in order to grasp his thought and to be assured of his true meaning there is no need to have a thorough knowledge of the language in which he wrote. A superficial and rudimentary knowledge is enough. Nor need we enquire into the author's life, pursuits and character, the language in which he wrote, and for whom and when, nor what happened to his book, nor its different readings, nor how it came to be accepted and by what council. And what we here say of Euclid can be said of all who have written on matters which of their very nature are capable of intellectual apprehension.

Thus we can conclude that, with the help of such a historical study of Scripture as is available to us, we can readily grasp the meanings of its moral doctrines and be certain of their true sense. For the teachings of true piety are expressed in quite ordinary language, and being directed to the generality of people they are therefore straightforward and easy to understand. And since true salvation and blessedness consist in true contentment of mind and we find our true peace only in what we clearly understand, it most evidently follows that we can understand the meaning of Scripture with confidence in matters relating to salvation and necessary to blessedness. Therefore we have no reason to be unduly anxious concerning the other contents of Scripture; for since for the most part they are beyond the grasp of reason and intellect, they belong to the sphere of the curious rather than the profitable.

I consider that I have now displayed the true method of Scriptural interpretation and have sufficiently set forth my opinion on this matter. Furthermore, I have no doubt that it is now obvious to all that this method demands no other light than the natural light of reason. For the nature and virtue of that light consists essentially in this, that by a process of logical deduction that which is hidden is inferred and concluded from what is known, or given as known. This is exactly what our method requires. And although we grant that our method does not suffice to explain with certainty everything that is found in the Bible, this is the consequence not

7. By things comprehensible I mean not only those which can be logically proved but also those which we are wont to accept with moral certainty and to hear without surprise, although they can by no means be proved. Anyone can comprehend Euclid's propositions before they are proved. Similarly, I call comprehensible those narratives, whether of future or past events, that do not exceed human belief, and likewise laws, institutions and customs, although

they cannot be proved with mathematical certainty. But mysterious symbols, and narratives that exceed all human belief, I call incomprehensible. Yet even among these there are many that yield to examination by our method, so that we can perceive the author's meaning [Spinoza's note]. Euclid (active ca. 300 B.C.E.), Greek mathematician whose treatise on geometry, the *Elements*, was used as a textbook into the 19th century.

of the defectiveness of the method but of the fact that the path which it tells us is the true and correct one has never been pursued nor trodden by men, and so with the passage of time has become exceedingly difficult and almost impassable. This I imagine is quite clear from the very difficulties I have recounted.

It now remains for me to examine the views of those who disagree with me. The first to be considered is held by those who maintain that the natural light of reason does not have the power to interpret Scripture, and that a supernatural light is absolutely essential for this task. What they mean by this light that is beyond the natural light I leave them to explain. For my own part, I can only surmise that they wish to admit, using rather obscure terminology, that they too are for the most part in doubt as to the true meaning of Scripture; for if we consider their explanations, we find that they contain nothing of the supernatural—indeed, nothing but the merest conjectures. Let them be compared if you please, with the explanations of those who frankly admit that they possess no other light but the natural light. They will be found to be remarkably similar; that is to say, their explanations are human, the fruit of long thought, and elaborately devised. As to their assertions that the natural light is insufficient for this task, that is plainly false, for two reasons. In the first place, we have already proved that the difficulty of interpreting Scripture arises not from the lack of power of the natural light, but from the negligence (not to say malice) of those who failed to compile a historical study of Scripture while that was still possible. Secondly, everyone will admit, I imagine, that this supernatural light is a divine gift granted only to the faithful. Now the prophets and the apostles preached not only to the faithful, but especially to unbelievers and the impious. So their audiences must have been capable of understanding the meaning of the prophets and the apostles; otherwise these latter would have appeared to be preaching to children and babies, not to men endowed with reason. Moses, too, would have ordained his laws in vain if they could have been understood only by the faithful, who stand in no need of law. Therefore those who look to a supernatural light to understand the meaning of the prophets and the apostles are sadly in need of the natural light; and so I can hardly think that such men possess a divine supernatural gift.

1670

APHRA BEHN

1640–1689

In *A Room of One's Own* (1929), VIRGINIA WOOLF writes that “All women together ought to let flowers fall upon the tomb of Aphra Behn, . . . for it was she who earned them the right to speak their minds.” Behn was the first Englishwoman to earn a living as a writer. As such, she became the model for the commercial woman writer

operating outside the narrow circle of mainstream propriety while trying to gain a place within it. In her critical writing, she reveals the obstacles faced by a woman striving to earn a living in a profession dominated by men. She describes her exclusion from the polite society that would underwrite and support her plays, as well as the different standards applied to her as a woman. Perhaps because of her sex, her literary criticism tells us more about the everyday difficulties faced by practicing dramatists than do the writings of any literary critic of the time. The prefaces to her plays are peopled by theater managers and licensors who threaten to suppress her plays, critics who find them obscene, and audiences who shout them down; there are directors who rewrite her lines and actors who mangle them. Her critical writing, unburdened by the classical university education that was denied to her, undermines the commonplaces of seventeenth-century criticism by setting her practical experience as a playwright against the "rules" of neoclassical orthodoxy articulated by earlier critics such as SIR PHILIP SIDNEY, PIERRE CORNEILLE, and JOHN DRYDEN.

Although the circumstances of Behn's birth remain mired in controversy, she was most probably born Aphra Johnson, and may have been the daughter of Bartholomew Johnson and Elizabeth Denham, baptized in Harbledown outside of Canterbury, England, on December 14, 1640. In her early twenties, Behn went with her family to Suriname (Dutch Guiana), then an English possession, where her father or a relative of her father was nominated to the post of lieutenant-governor. He died en route, but the family settled in Suriname anyway; they remained there until 1664, when England resigned the colony to the Dutch. She describes her life in Suriname in her famous novel *Oroonoko* (1688). On her return to England, she married a city merchant named Behn, a gentleman of Dutch extraction about whom little is known. Her married life was brief: by 1666 her husband was dead, perhaps one of the victims of the plague that swept London in 1665–66, and she was forced to earn a living on her own. In 1666 she was persuaded by Thomas Killebrew, then licensee of the King's Theater, to act as a spy in the second Anglo-Dutch War. But the English government failed to pay even Behn's living expenses while she was in Holland, and she had to borrow money to survive. When she returned to London in 1667, she was imprisoned for failure to pay her debts. Somehow she regained her freedom, and by 1670 she had begun her career as a dramatist with the successful production of *The Forced Marriage* at Lincoln's Inn Fields. She went on to become one of the most prolific writers of the late seventeenth century, surpassed in output only by John Dryden, England's poet laureate.

Behn wrote during the Restoration, which began in 1660 when Charles II returned from exile in France to take the throne after a twenty-year interregnum. The Puritans had closed the theaters at the beginning of the English Civil War, in the early 1640s; the two that now reopened were very different from those of Shakespeare's day, a generation earlier. The most revolutionary change was that women, not boys, played women's roles. The presence of actresses in the Restoration theater undoubtedly enabled Behn to make a successful living writing plays, though women playwrights, like actresses, were never considered quite respectable.

During her career Behn wrote at least eighteen plays, as well as many poems and prose works. In addition she is considered one of the "mothers" of the English novel. Her best and most successful plays were *The Rover* (1677) and *The Lucky Chance* (1687). Though her sex alone was enough to make her a controversial writer, she did not shy away from the political controversies of her day, remaining all her life a staunch royalist. In 1682 she was briefly arrested and charged with "abusive reflections upon persons of quality" for an epilogue she had written chastising the duke of Monmouth, the illegitimate son of Charles II, for his rebellion against his father. She also wrote the first antislavery novel, *Oroonoko*, which was later made into a play by Thomas Southern. On April 16, 1689, Aphra Behn died and was buried in Westminster Abbey—not among the poets in Poets' Corner, but in the cloister. Her

epitaph is attributed to her former lover John Hoyle: "Here lies proof that wit can never be / Defence enough against mortality."

Behn's work as a literary critic—which is limited primarily to the prefaces and dedicatory letters she wrote for her plays—falls into two periods, each marked by a sustained piece of critical writing: the "Epistle to the Reader" prefacing her third play, *The Dutch Lover* (1673), and the preface to *The Lucky Chance*, written toward the end of her career. In these two selections we can see the development of Behn's critical attitudes toward the fashionable literary debates of her day, especially those about propriety and decorum in the drama.

The "Epistle to the Reader" was written when Behn was trying to establish a name for herself in the extremely competitive world of the theater. With characteristic acerbic wit, her "Epistle" exposes the elitist underpinnings of late seventeenth-century literary theory. She is the first English critic to reject outright HORACE's platitude that literature must instruct and delight. Most English writers responded to earlier Puritan attacks on the theater by arguing that plays were a means of inculcating morality, but Behn rejects this approach. She argues that poetry—and drama in particular—rarely if ever improves anyone's morality, nor indeed are plays written with such an end in mind. Their purpose is to entertain, and that is the sole measure of their success. Behn's "apology" for her art does not draw on the authority of the classical tradition embodied by venerable critics such as ARISTOTLE and HORACE. Unlike Dryden, who in *An Essay of Dramatic Poesy* (1668) charts the evolution of the modern stage from classical antiquity, sprinkling his argument liberally with Latin and Greek quotations, Behn has everything to gain from separating her profession—playwriting—from literary activities that required a university education and knowledge of languages to which she was denied access because of her sex. Stripping away the "Academick frippery" that surrounded the debate over the "musty rules of Unity," she suggests that more important than the structural unity of a play's action, time, and plot is the competence of the actors who perform it. Not preoccupied by the classical defense of poetry, she is able to discuss with scathing honesty the realities of competing in the theatrical world of the late seventeenth century.

Behn's prose style is more difficult than is usual even for a seventeenth-century text. In "Epistle to the Reader," she mimics the philosophically dense and incomprehensible language of fashionable intellectual debate as well as the modish slang of the day. Unable to call on the shared intellectual tradition that shaped the literary criticism of contemporaries like Dryden, Behn's criticism is immersed in the day-to-day culture of the fashionable society she hoped would support her efforts as a writer, and these references sometimes seem obscure to all but historians of the period.

Moving from the bantering wit and dense style of the "Epistle" to the later preface to *The Lucky Chance*, a more orthodox statement about literature and a defense against charges of impropriety, one is struck by the difference in tone and content. Perhaps chastened by her imprisonment, or simply reflecting her position in 1687 as a more successful, less marginalized, dramatist, Behn expresses her desire to "tread in those successful Paths my Predecessors have so long thriv'd in, to take those Measures that both the Ancient and Modern Writers have set me," thus linking herself with the tradition she had rejected in her earlier essay. Nevertheless, Behn still eloquently and forthrightly defends her right to compete as a writer on equal terms with men. She attacks the overt sexual biases and double standards of the criticism of her day that condemned a play simply because of the sex of its author, exposing what the late twentieth-century feminist Mary Ellmann, in *Thinking about Women* (1968), called criticism by sexual analogy. Such criticism treats books by women as if they *were* women, indulging in an "intellectual measuring of busts and hips." In pleading for "my Masculine Part the Poet in me," Behn anticipates the feminist analyses of critics such as SANDRA M. GILBERT and SUSAN GUBAR, who argue that the Western tradition of literature has gendered authorship as a masculine activity, thereby creating, in women, an "anxiety of authorship."

It would be a mistake, however, to make too great a claim for Behn's feminism. Her libertine pose masked a conservative royalist politics and a desire for access to the elite society that excluded her. She saw herself as an exception to the rule of women's exclusion from the profession of writing rather than as a pathbreaker demonstrating the error of that rule. Her outspokenness and her refusal to conform politely to the dictates of modesty and propriety led later generations of critics, like Dr. John Doran, writing in his *Annals of the English Stage* (1864), to dismiss her as "a mere harlot who danced through uncleanness and dared them to follow," but these same qualities have made her a figure of great interest to feminist critics.

The Dutch Lover Keywords: Drama, Enlightenment Theory, Feminist Criticism, Gender, Women's Literature

Preface to *The Lucky Chance* Keywords: Drama, Enlightenment Theory, Feminist Criticism, Gender, Women's Literature

From The Dutch Lover

Epistle to the Reader

Good, Sweet, Honey, Sugar-candied
READER¹

(Which I think is more than any one has call'd you yet.) I must have a word or two with you before you do advance into the Treatise; but 'tis not to beg your pardon for diverting you from your affairs, by such an idle Pamphlet as this is, for I presume you have not much to do, and therefore are to be obliged to me for keeping you from worse employment, and if you have a better, you may get you gone about your business: but if you will mispend your time, pray lay the fault upon your self; for I have dealt pretty fairly in the matter, and told you in the Title Page what you are to expect within. Indeed, had I hung out a sign of the Immortality of the Soul, of the Mystery of Godliness, or of Ecclesiastical Policie, and then had treated you with Indiscernibility, and Essential Spissitude (words,² which though I am no competent Judge of, for want of Languages, yet I fancy strongly ought to mean just nothing) with a company of Apocryphal midnight tales cull'd out of the choicest insignificant Authors; If I had only prov'd in Folio that *Apollonius*³ was a naughty Knave, or had presented you with two or three of the worst principles transcrib'd out of the peremptory and ill natur'd, (though prettily ingenious) Doctor of *Malmsbury*⁴ undigested, and ill manag'd by

1. In the prefaces to the printed texts of plays, the habit of mocking readers often complemented the mockery of audiences in prologues [except as indicated, all notes are Janet M. Todd's].

2. The habit of confounding the public with difficult words was much mocked.

3. Apollonius is probably Apollonius of Tyana, a Greek philosopher following Pythagoras (6th c. B.C.E.). He was born at the beginning of the Christian era, and to some skeptics such as

Charles Blount (and later Voltaire [1694–1778]) he represented a coherent and admirable moral alternative to Christ and his teaching. "In Folio" indicated a full sized sheet of paper or parchment folded only once, therefore a volume of the largest size.

4. Thomas Hobbes (1588–1679), born in Wiltshire, was an influential materialist whose avoidance of Christian concepts provoked much abuse and argument. [Malmsbury: Malmesbury, a town in Wiltshire—editor's note.]

a silly, fancy, ignorant, impertinent,⁵ ill educated Chaplain, I were then indeed sufficiently in fault; but having inscrib'd Comedy on the beginning of my Book, you may guess pretty near what peny-worths you are like to have, and ware⁶ your money and your time accordingly.

I would not yet be understood to lessen the dignity of Playes, for surely they deserve a place among the middle, if not the better sort of Books, for I have heard that most of that which bears the name of Learning, and which has abused such quantities of Ink and Paper, and continually employs so many ignorant, unhappy souls for ten, twelve, twenty years in the University⁷ (who yet poor wretches think they are doing something all the while) as Logick, &c. and several other things (that shall be nameless, lest I should mispel them) are much more absolutely nothing than the errantest Play that e're was writ. Take notice, Reader, I do not assert this purely upon my own knowledge, but I think I have known it very fully prov'd, both sides being fairly heard, and seen some ingenious opposers of it most abominably baffled in the Argument: Some of which I have got so perfectly by rote, that if this were a proper place for it, I am apt to think myself could almost make it clear; and as I would not undervalue Poetry, so neither am I altogether of their judgement, who believe no wisdom in the world beyond it. I have often heard indeed (and read) how much the World was anciently oblig'd to it for most of that which they call'd Science, which my want of letters makes me less assur'd of than others happily may be: but I have heard some wise men say, that no considerable part of the useful knowledge was this way communicated, and on the other way, that it hath serv'd to propagate so many idle superstitions, as all the benefits it hath or can be guilty of, can never make sufficient amends for, which unaided by the unluckey charms of Poetry, could never have possess'd a thinking Creature such as man. However true this is, I am my self well able to affirm that none of all our English Poets, and least the Dramatique (so I think you call them) can be justly charg'd with too great reformation of mens minds or manners, and for that I may appeal to general experiment, if those who are the most assiduous Disciples of the Stage, do not make the fondest⁸ and the lowdest crew about this Town; for if you should unhappily converse [with] them through the year, you will not find one dram of sence amongst a Club of them, unless you will allow for such a little Link-Boys⁹ Ribaldry, thick larded with unseasonable oaths, & impudent defiance of God, and all things serious, and that at such a senceless damn'd unthinking rate, as, if 'twere well distributed, would spoil near half the Apothecaries trade, and save the sober people of the Town the charge of Vomits;¹ And it was smartly said, (how prudently I cannot tell) by a late learned Doctor, who, though himself no great asserter of a Deity, (as you'll believe by that which follows) yet was observed to be continually perswading of this sort of men (if I for once may call them so) of the necessity and truth of our Religion; and being ask'd how he came to bestir himself so much this way, made answer, that it was because their ignorance and indiscreet debauch made them a scandal to the profession of

6. Spend [editor's note].

7. The colleges at Oxford and Cambridge University followed a very traditional curriculum, which Behn more than once criticized [editor's

note].

8. Most foolish, most idiotic [editor's note].

9. Boys employed to carry torches to light people through the streets.

1. Purges [editor's note].

Atheism. And for their wisdom and design, I never knew it reach beyond the invention of some notable expedient, for the speedier ridding them of their estate, (a devilish clog to Wit and Parts) than other grouling² Mortals know, or battering half a dozen fair new Windows in a Morning after their debauch, whilst the dull unjantee³ Rascal they belong to is fast asleep. But I'll proceed no farther in their character, because that miracle of Wit (in spight of Academick frippery) the mighty *Echard*⁴ hath already done it to my satisfaction; and whoever undertakes a Suppliment to any thing he hath discours'd, had better for their reputation be doing nothing.

Besides, this Theam is worn too thread-bare by the whiffing⁵ would-be Wits of the Town, and of both the stone-blind-eyes of the Kingdom. And therefore to return to that which I before was speaking of, I will have leave to say that in my judgement the increasing number of our latter Plays have not done much more towards the amending of mens Morals, or their Wit, than hath the frequent Preaching, which this last age hath been pester'd with, (indeed without all Controversie they have done less harm) nor can I once imagine what temptation any one can have to expect it from them: for, sure I am, no Play was ever writ with that design.⁶ If you consider Tragedy, you'll find their best of characters unlikely patterns for a wise man to pursue: For he that is the Knight of the Play, no sublunary feats must serve his Dulcinea;⁷ for if he can't bestride the Moon, he'll ne'er make good his business to the end, and if he chance to be offended, he must without considering right or wrong confound all things he meets, and put you half a score likely tall fellows into each pocket; and truly if he come not something near this pitch, I think the Tragedies not worth a farthing; for Playes were certainly intended for the exercising of mens passions, not their understandings, and he is infinitely far from wise, that will bestow one moments private meditation on such things: And as for Comedie, the finest folks you meet with there, are still unfitter for your imitation, for though within a leaf or two of the Prologue, you are told that they are people of Wit, good Humour, good Manners, and all that: yet if the Authors did not kindly add their proper names, you'd never know them by their characters; for whatsoever's the matter, it hath happen'd so spightfully in several Playes, which have been prettie well receiv'd of late, that even those persons that were meant to be the ingenious Censors of the Play, have either prov'd the most debauch'd, or most unwittie people in the Companie: nor is this error very lamentable, since as I take it Comedie was never meant, either for a converting or confirming Ordinance.⁸ In short, I think a Play the best diversion⁹ that wise men have; but I do also think them nothing so, who do discourse as formallie about the rules of it, as if 'twere the grand affair of

2. Growling [editor's note].

3. Dull, not showy [editor's note].

4. John Eachard mocked the university education of the clergy. [Eachard (1637–1697), college head and satirist—editor's note.]

5. Moving inconstantly, "as if driven by a puff of wind," *Johnson's Dictionary* [published in 1755 by SAMUEL JOHNSON].

6. Throughout the century the stage had been attacked by Puritans as a pernicious influence on the morals of the spectators. Many play-

wrights including Dryden sought to counter this by urging the ethical and moral base of their work. [JOHN DRYDEN (1631–1700), English playwright, poet, and critic—editor's note.]

7. A reference to Cervantes' *Don Quixote* [1605, 1616], where the hero's beloved is called Dulcinea. *Don Quixote* was famous for his lofty but unrealisable ideals. ["Sublunary": terrestrial, of this world—editor's note.]

8. Authoritative direction.

9. Entertainment [editor's note].

humane life. This being my opinion of Plays, I studied only to make this as entertaining as I could, which whether I have been successful in, my gentle Reader, you may for your shilling judge.¹ To tell you my thoughts of it, were to little purpose, for were they very ill, you may be sure I would not have expos'd it; nor did I so till I had first consulted most of those who have a reputation for judgement of this kind; who were at least so civil (if not kind) to it as did encourage me to venture it upon the Stage, and in the Press: Nor did I take their single word for it, but us'd their reasons as a confirmation of my own.

Indeed that day 'twas Acted first, there comes me into the Pit, a long, lithier, phlegmatick, white, ill-favour'd, wretched Fop,² an officer in Masquerade newly transported with a Scarfe & Feather³ out of *France*, a sorry Animal that has nought else to shield it from the uttermost contempt of all mankind, but that respect which we afford to Rats and Toads, which though we do not well allow to live, yet when considered as a part of God's Creation, we make honourable mention of them. A thing, Reader—but no more of such a Smelt:⁴ This thing, I tell ye, opening that which serves it for a mouth, out issued such a noise as this to those that sate about it, that they were to expect a woful Play, God damn him, for it was a womans. Now how this came about I am not sure, but I suppose he brought it piping hot from some, who had with him the reputation of a villanous Wit: for Creatures of his size of sence talk without all imagination, such scraps as they pick up from other folks. I would not for a world be taken arguing with such a propertie as this; but if I thought there were a man of any tolerable parts, who could upon mature deliberation distinguish well his right-hand from his left, and justly state the difference between the number of sixteen and two, yet had this prejudice upon him; I would take a little pains to make him know how much he errs. For waving the examination,⁵ why women having equal education with men, were not as capable of knowledge, of whatever sort as well as they: I'll only say as I have touch'd before, that Plays have no great room for that which is mens great advantage over women, that is Learning: We all well know that the immortal *Shakespears* Playes (who was not guilty of much more of this than often falls to womens share)⁶ have better pleas'd the World than *Johnsons* works, though by the way 'tis said that *Benjamin* was no such Rabbi neither, for I am inform'd his Learning was but Grammer high;⁷ (sufficient indeed to rob poor *Salust*⁸ of his

1. Costs of seats in the theatre varied but on the whole the cheapest seats in the gallery went for a shilling. In the pit a seat was about half a crown [i.e., 2½ shillings] and in the boxes four shillings.

2. Lither means lazy or sluggish according to *Elisha Coles' An English Dictionary* (1676); phlegmatic means "full of Phlegme, the cold and moist humour of the body"; a fop is a foolish dandy. [Coles (1640–1680), a schoolmaster who was among the earliest English lexicographers—editor's note.]

3. Military dandyism.

4. A simpleton [editor's note].

5. Refraining from an investigation into [editor's note].

6. Much was made of Shakespeare's lack of university education which allowed him to be a use-

ful predecessor for a female playwright. See Dryden's *An Essay of Dramatic Poesy* (1668): "He was naturally learn'd; he needed not the spectacles of books to read Nature. . . ."

7. In the Restoration Ben Jonson [1572–1637] was the most esteemed of the dramatists writing before the Interregnum. "Grammer high" indicated the level achieved at a grammar school, where learned languages were grammatically taught. ["The Interregnum": 1649–60, the period between Charles I's execution and the Restoration of the monarchy and the accession of Charles II—editor's note.]

8. Sallust (86–34 B.C.E.) was a Roman historian whose works on the Catiline conspiracy [in 63 B.C.E.] provided many plots for English playwrights. Jonson's *Catiline* was performed in 1611.

best Orations) and it hath been observ'd, that they are apt to admire him most confoundedly, who have just such a scantling of it as he had; and I have seen a man the most severe of *Johnsons* Sect,⁹ sit with his Hat remov'd less than a hairs breadth from one sullen posture for almost three hours at the Alchymist; who at that excellent Play of *Harry the Fourth*¹ (which yet I hope is far enough from Farce) hath very hardly kept his Doublet whole; but affectation hath always had a greater share both in the actions and discourse of men than truth and judgement have: and for our Modern ones, except our most unimitable Laureat,² I dare to say I know of none that write at such a formidable rate, but that a woman may well hope to reach their greatest hights. Then for their musty rules of Unity,³ and God knows what besides, if they meant any thing, they are enough intelligible, and as practible by a woman; but really methinks they that disturb their heads with any other rules of Playes besides the making them pleasant, and avoiding of scurrility, might much better be employ'd in studying how to improve mens too too imperfect knowledge of that ancient English Game, which hight long Laurence:⁴ And if Comedy should be the Picture of ridiculous mankind, I wonder any one should think it such a sturdy task, whilst we are furnish'd with such precious Originals as him, I lately told you of; if at least that Character do not dwindle into Farce, and so become too mean an entertainment for those persons who are us'd to think. Reader, I have a complaint or two to make to you, and I have done; Know then this Play was hugely injur'd in the Acting, for 'twas done so imperfectly as never any was before, which did more harm to this than it could have done to any of another sort; the Plot being busie (though I think not intricate) and so requiring a continual attention, which being interrupted by the intolerable negligence of some that acted in it, must needs much spoil the beauty on't. My Dutch Lover⁵ spoke but little of what I intended for him, but supply'd it with a deal of idle stuff, which I was wholly unacquainted with, till I had heard it first from him; so that Jack-pudding⁶ ever us'd to do: which though I knew before, I gave him yet the part, because I knew him so acceptable to most o'th' lighter Periwigs about the Town, and he indeed did vex me so, I could almost be angry: Yet, but Reader, you remember, I suppose, a fusty

9. A reference to those believing in the rules of drama such as Thomas Shadwell [1643–1692], who had had success with *The Sullen Lovers* (1688) and *The Humourists* (1671). In his preface to the printed text of the former he praised the three unities and declared that all playwrights should imitate Jonson in the creation of humour characters, "though none are like to come near; he being the onely person that appears to me to have made perfect Representations of Humane Life."

1. *The Alchemist* by Jonson and *Henry IV* by Shakespeare. The line between proper comedy and farce was frequently drawn. For example in his preface to *An Evening's Love* (1671) Dryden wrote, "Comedy consists . . . of natural actions and characters; . . . Farce . . . of forced humours, and unnatural events."

2. John Dryden became poet laureate in 1668 [editor's note].

3. The three unities of time, place, and action;

see above SIR PHILIP SIDNEY, PIERRE CORNEILLE, and Dryden [editor's note].

4. A Long Lawrence was an instrument marked with signs about three inches long like a short ruler or totem with eight sides. Each side had a different set of markings of strokes, zigzags and crosses. A game of chance was played especially at Christmas, each player rolling the Long Lawrence and losing or winning pins or tokens according to which side came up. The term "Lawrence" may have come from the marks, seeming like the bars of a gridiron on which St. Lawrence was martyred. See Alice Bertha Gomme, *The Traditional Games of England, Scotland, and Ireland* (London, 1894).

5. Behn may be referring to the famous comic actor Edward Angel when she blamed the actor playing Haunce [the Dutch Lover] for ad-libbing instead of following her lines.

6. Low-class buffoon [editor's note].

piece of Latine that has past from hand to hand this thousand years they say (and how much longer I can't tell) in favour of the dead.⁷ I intended him a habit much more notably ridiculous, which if it can ever be important was so here, for many of the Scenes in the three last Acts depended upon the mistakes of the Colonel for *Haunce*, which the ill-favour'd likeness of their Habits is suppos'd to cause. Lastly, my Epilogue was promis'd me by a Person⁸ who had surely made it good, if any, but he failing of his word, deputed one, who has made it as you see, and to make out your peny-worth you have it here. The Prologue is by misfortune lost. Now, Reader, I have eas'd my mind of all I had to say, and so sans farther complying, Adieu.

1673

Preface to *The Lucky Chance*

The little Obligation I have to some of the witty Sparks¹ and Poets of the Town, has put me on a Vindication of this Comedy from those Censures that Malice, and ill Nature have thrown upon it, tho in vain: The Poets I heartily excuse, since there is a sort of Self-Interest in their Malice, which I shou'd rather call a witty Way they have in this Age, of Railing at every thing they find with pain successful, and never to shew good Nature and speak well of any thing; but when they are sure 'tis damn'd, then they afford it that worse Scandal, their Pity. And nothing makes them so through-sticht an Enemy as a full Third Day,² that's Crime enough to load it with all manner of Infamy; and when they can no other way prevail with the Town, they charge it with the old never failing Scandal—That's 'tis not fit for the Ladys: As if (if it were as they falsly give it out) the Ladys were oblig'd to hear Indecencys only from their Pens and Plays; and some of them have ventur'd to treat 'em as Coursely as 'twas possible, without the least Reproach from them; and in some of their most Celebrated Plays have entertained 'em with things, that if I should here strip from their Wit and Occasion that conducts 'em in and makes them proper, their fair Cheeks would perhaps wear a natural Colour³ at the reading them: yet are never taken Notice of, because a Man writ them, and they may hear that from them they blush at from a Woman—But I make a Challenge to any Person of common Sense and Reason—that is not wilfully bent on ill Nature, and will in spite of Sense wrest a double *Entendre* from every thing, lying upon the Catch for a Jest or a Quibble, like a Rook for a Cully;⁴ but any unprejudic'd Person that knows not the Author, to read any of my Comedy

7. The proverb is *De mortuis nil nisi bonum*, Speak well of the dead.

8. Possibly a reference to Edward Ravenscroft with whom Behn was friendly at the time. His failure might have been due to a bout of venereal disease. Ravenscroft wrote the epilogue for Behn's *The Town-Fopp* (1676). [Ravenscroft (ca. 1654–1707), British playwright—editor's note.]

1. Fops, dandies [except as indicated, all subse-

quent notes are Janet M. Todd's].

2. Good payment from the third night's profits, the traditional recompense for the playwright; through-sticht: complete, from a stitch that went right through the cloth.

3. A blush rather than cosmetic paint.

4. A card-sharper or a cheat for a victim. ["Quibble": a pun—editor's note.]

and compare 'em with others of this Age, and if they find one Word that can offend the chastest Ear, I will submit to all their peevish Cavills; but Right or Wrong they must be Criminal because a Woman's; condemning them without having the Christian Charity, to examine whether it be guilty or not, with reading, comparing, or thinking; the Ladies taking up any Scandal on Trust from some conceited Sparks, who will in spight of Nature be Wits and *Beaus*; then scatter it for Authentick all over the Town and Court, poysoning of others Judgment with their false Notions, condemning it to worse than Death, Loss of Fame. And to fortifie their Detraction, charge me with all the Plays that have ever been offensive; though I wish with all their Faults I had been the Author of some of those they have honour'd me with.

For the farther Justification of this Play; it being a Comedy of Intrigue, Dr. *Davenant*⁵ out of Respect to the Commands he had from Court, to take great Care that no Indecency should be in Plays, sent for it and nicely look't it over, putting out any thing he but imagin'd the Criticks would play with. After that, Sir Roger *L'Estrange*⁶ read it and licens'd it, and found no such Faults as 'tis charg'd with: Then Mr. *Killigrew*,⁷ who more severe than any, from the strict Order he had, perus'd it with great Circumspection; and lastly the Master Players, who you will I hope in some Measure esteem Judges of Decency and their own Interest, having been so many Years Prentice to the Trade of Judging.

I say, after all these Supervisors the Ladys may be convinc'd, they left nothing that cou'd offend, and the Men of their unjust Reflections on so many Judges of Wit and Decencys. When it happens that I challenge any one, to point me out the least Expression of what some have made their Discourse, they cry, *That Mr. Leigh*⁸ *opens his Night Gown, when he comes into the Bride-chamber*; if he do, which is a Jest of his own making, and which I never saw, I hope he has his Cloaths on underneath? And if so, where is the Indecency? I have seen in that admirable Play of *Oedipus*,⁹ the Gown open'd wide, and the Man shown in his Drawers and Wastecoat, and never thought it an Offence before. Another cries, *Why we know not what they mean, when the Man takes a Woman off the Stage, and another is thereby cuckolded*; is that any more than you see in the most Celebrated of your Plays? as the *City Politicks*, the *Lady Mayoress*, and the *Old Lawyers Wife*,¹ who goes with a Man she never saw before, and comes out again the joyfull'st Woman alive, for having made her Husband a Cuckold with such Dexterity, and yet I see nothing unnatural nor obscene: 'tis proper for the Characters. So in that lucky Play of the *London Cuckolds*,² not to recite Particulars. And in that good Comedy of

5. Charles Davenant (1656–1714), eldest son of Sir William Davenant, who received the patent for the Duke's Company after the Restoration. Charles was co-owner of the United Company, which put on *The Lucky Chance*; he was also an M.P. and helped in the licensing of plays. ["M.P.": member of Parliament—editor's note.]

6. Licensor of published works throughout most of the Restoration and a man much admired by Behn for his propagandist efforts for the royal government [1616–1704].

7. Charles Killigrew (1655–1725), co-owner of the United Company and Master of the Revels. He was responsible for the content of performed plays.

8. Anthony Leigh [d. 1692], the famous comic actor. The offending action is specified in the stage directions.

9. A play of 1678 by Nathaniel Lee and Dryden; in act 2, scene 1, Oedipus enters sleepwalking in his shirt. [JOHN DRYDEN (1631–1700), English playwright, poet, and critic—editor's note.]

1. *City Politicks*: John Crowne's Tory play performed in the season of 1682–83. The Lady Mayoress and the Old Lawyers Wife are two characters who make their husbands cuckolds.

2. A popular play of Behn's friend, Edward Ravenscroft, performed in 1681. It has three cuckolds in it.

Sir Courtly Nice,³ the *Taylor to the young Lady*—in the fam'd *Sir Fopling, Dorimont* and *Bellinda*,⁴ see the very Words—In *Valentinian*,⁵ see the Scene between the *Court Bawds*. And *Valentinian* all loose and ruff'd a Moment after the Rape, and all this you see without scandal, and a thousand others. The *Moor of Venice* in many places. The *Maids Tragedy*—see the Scene of undressing the Bride, and between the *King* and *Amintor*, and after between the *King* and *Evadne*⁶—All these I Name as some of the best Plays I know; If I should repeat the Words exprest in these Scenes I mention, I might justly be charg'd with coarse ill Manners, and very little Modesty, and yet they so naturally fall into the places they are design'd for, and so are proper for the Business, that there is not the least Fault to be found with them; though I say those things in any of mine wou'd damn the whole Peice, and alarm the Town. Had I a Day or two's time, as I have scarce so many Hours to write this in (the Play, being all printed off and the Press waiting,) I would sum up all your Beloved Plays, and all the things in them that are past with such Silence by; because written by Men: such Masculine Strokes in me, must not be allow'd. I must conclude those Women (if there be any such) greater Criticks in that sort of Conversation than my self, who find any of that sort of mine, or any thing that can justly be reproach't. But 'tis in vain by dint of Reason or Comparison to convince the obstinate Criticks, whose Business is to find Fault, if not by a loose and gross Imagination to create them, for they must either find the Jest, or make it; and those of this sort fall to my share, they find Faults of another kind for the Men Writers. And this one thing I will venture to say, though against my Nature, because it has a Vanity in it: That had the Plays I have writ come forth under any Mans Name, and never known to have been mine; I appeal to all unbyast Judges of Sense, if they had not said that Person had made as many good Comedies, as any one Man that has writ in our Age; but a Devil on't the Woman damns the Poet.

Ladies, for its further Justification to you, be pleas'd to know, that the first Copy of this Play was read by several Ladys of very great Quality, and unquestioned Fame, and received their most favourable Opinion, not one charging it with the Crime, that some have been pleas'd to find in the Acting. Other Ladys who saw it more than once, whose Quality and Vertue can sufficiently justifie any thing they design to favour, were pleas'd to say, they found an Entertainment in it very far from scandalous; and for the Generality of the Town, I found by my Receipts it was not thought so Criminal. However, that shall not be an Incouragement to me to trouble the Criticks with new Occasion of affronting me, for endeavouring at least to divert;

3. John Crowne's comedy from 1685, *The Taylor to the Young Lady*, uses double entendres in his talk with the young woman and her aunt in act 2, scene 2.

4. Etherege's *Man of Mode; or, Sir Fopling Flutter* (1676). The hero, Dorimant, sleeps with Belinda and then describes the pleasure. [George Etherege (1635–1692), English comic playwright—editor's note.]

5. Edward Hyde, Lord Rochester's 1684 revision of Francis Beaumont (ca. 1584–1616) and John Fletcher's (1579–1625) earliest play, which con-

cerns the rape of Lucina by the emperor Valentinian. Beaumont and Fletcher were younger contemporaries of Shakespeare, known for their popular collaborations [editor's note].

6. *The Maid's Tragedy* was a popular play by Beaumont and Fletcher, revived in the Restoration; in it the King forces a marriage between Amintor and Evadne his mistress and indulges in bawdy remarks about the wedding night and the failure of consummation. The *Moor of Venice*: Shakespeare's *Othello* [1603–04], one of the first plays to be performed on the Restoration stage.

and at this rate, both the few Poets that are left, and the Players who toil in vain, will be weary of their Trade.

I cannot omit to tell you, that a Wit of the Town, a Friend of mine at *Wills Coffee House*,⁷ the first Night of the Play, cry'd it down as much as in him lay, who before had read it and assured me he never saw a prettier Comedy. So complaisant one pestilent Wit will be to another, and in the full Cry make his Noise too; but since 'tis to the witty Few I speak, I hope the better Judges will take no Offence, to whom I am oblig'd for better Judgments; and those I hope will be so kind to me, knowing my Conversation not at all addicted to the Indecencys alledged, that I would much less practice it in a Play, that must stand the Test of the censuring World. And I must want common Sense, and all the Degrees of good Manners, renouncing my Fame, all Modesty and Interest for a silly Sawcy fruitless Jest, to make Fools laugh, and Women blush, and wise Men asham'd; My self all the while, if I had been guilty of this Crime charg'd to me, remaining the only stupid, insensible. Is this likely, is this reasonable to be believ'd by any body, but the wilfully blind? All I ask, is the Privilege for my Masculine Part the Poet in me, (if any such you will allow me) to tread in those successful Paths my Predecessors have so long thriv'd in, to take those Measures that both the Ancient and Modern Writers have set me, and by which they have pleas'd the World so well. If I must not, because of my Sex, have this Freedom, but that you will usurp all to your selves; I lay down my Quill, and you shall hear no more of me, no not so much as to make Comparisons, because I will be kinder to my Brothers of the Pen, than they have been to a defenceless Woman; for I am not content to write for a Third day only. I value Fame as much as if I had been born a *Hero*; and if you rob me of that, I can retire from the ungrateful World, and scorn its fickle Favours.

1687

7. A famous London coffeehouse in Covent Garden kept by Will Unwin.

GIAMBATTISTA VICO

1668–1744

The Italian philosopher Giambattista Vico is noted for his original insights into the origins and development of language and culture. An advocate of a holistic philological approach to the study of society, centered on language, he produced wide-ranging analyses that addressed issues not only in history and sociology but also in jurisprudence, philosophy, theology, politics, rhetoric, and poetics. His most celebrated accomplishment, from the perspective of the twenty-first century, is his monumental *Scienza nuova* (*New Science*), which he issued in three editions (1725, 1730, 1744). Anticipating the developmental theories of G. W. F. HEGEL and KARL MARX, this work presents the now-famous theory of the three periods of social development, which he terms the ages of the gods, heroes, and men. Among the distinctive

features of each period are differences in language and literature as well as in government and law.

Vico's Theory of Ideal Eternal History

| Three Ages | Three Types of Government | Three Types of Language | Three Types of Jurisprudence |
|---------------|--|--|------------------------------|
| Age of gods | Divine government exercised through auspices and oracle | Wordless (hieroglyphic) language using gestures and physical objects | Mystic theology |
| Age of heroes | Heroes' government based on presumed natural superiority | Heroic emblems (symbolic language) using similes, metaphors, images, and descriptions of nature | Civil equity |
| Age of men | Human government through democracies and monarchies | Civilized (epistolary, vernacular) language established by popular convention over which the people are absolute lords | Natural equity |

The general sense, as in Hegel and Marx, is that human nature is not absolute but historical, a product of changing social institutions and material configurations. For literary theory, the most important claims of Vico's *New Science* are its arguments for the origin of human society in the prerational poetic nature of human beings and for the primordial status of four "master tropes" of rhetoric: metaphor, synecdoche, metonymy, and irony.

Born in Naples, Vico was the son of a bookseller. He received an education in Scholastic philosophy and in rhetoric from a series of Neapolitan clergymen, becoming proficient in Latin literature. By the age of seventeen, Vico was applying himself to the study of civil and canon (church) law while writing poetry on the side as a pleasant diversion. He became accomplished enough as a poet that for much of his life he was often called on by the aristocracy to write occasional verse for important public events, such as weddings or funerals. He briefly studied law at the University of Naples, but he relied mostly on local tutors and self-education. As a young man, he befriended a group of "modern" intellectuals, known as the Investigators, who critiqued or rejected the authority of the "ancients." Central to this controversial group was the new philosophy of Galileo Galilei (1564–1642), Francis Bacon (1561–1626), and René Descartes (1596–1650), as well as the "alternative" classical views of the Greek philosopher Epicurus (341–270 B.C.E.) and the Roman poet Lucretius (ca. 94–55 B.C.E.). Reflecting the widespread intellectual changes in Europe that have come to be known as the Enlightenment, the group was largely concerned with putting science and philosophy on a rational and empirical foundation.

In 1699 Vico became professor of rhetoric at the University of Naples, a position he held for more than forty years. His early annual orations, now available in *On Humanistic Education* (1993), address the proper methods and functions of education. During this time he joined the Palatine Academy, an eclectic group of modern intellectuals committed to the emerging values of the Enlightenment. As befitted his education and intellectual associations, Vico was interested in a wide variety of

subjects, including the physical sciences and mathematics. In 1710 he published his first major work, *De antiquissima Italorum sapientia* (*On the Most Ancient Wisdom of the Italians*), which attempts to reconstruct the nonrationalistic philosophy of a pre-Roman civilization via the etymological study of Latin words. Here and in his other works, Vico strove to be a persuasive philologist, as he studied cultures and their histories through languages, especially etymologies. His philological work was not valued in his own time, but it was later admired by such leading twentieth-century critics as ERICH AUERBACH and EDWARD W. SAID. Vico's next important publication, *Il diritto universale* (1720–22, *Universal Right*), focused on the historical origin and development of jurisprudence. In chronological order, it traced the emergence of different types of society, identifying a particular form of law with each while also making important links to various linguistic, literary, and religious forms. Later, at the invitation of a nobleman, Vico also published his autobiography (1725–28), the first modern example of its kind.

In 1725 Vico published the first edition of his *New Science*. As a study of the non-rationalistic origins and historical development of “pagan” (pre-Christian, non-Jewish) societies, it strongly resembles the two major works that preceded it. He considered the *New Science* his most important work, which would reveal the underlying order in the diversity of the pagan nations just as Isaac Newton's *Principia Mathematica* (1687) had unveiled the eternal laws of nature. Vico was deeply disappointed by the book's reception, however, which tended to be unfavorable when not indifferent. Feeling misunderstood and unacknowledged, he described himself as “a foreigner in his own country.” In 1735 he was appointed the official historian to Charles Bourbon, then king of Naples and Sicily, but he remained primarily concerned with revising his *New Science*. He published a second edition in 1730 and prepared a third, which appeared shortly after his death in 1744.

Our selections, taken from the third edition, begin with Vico's discussion of the historical stages that pagan nations have traversed. Comparing the various ancient histories of the Egyptians, Chaldeans, Scythians, Phoenicians, Greeks, and Romans, he reveals an underlying universal pattern—the expression of a divine providence working in the world, reducing multiplicity to order. The necessary course (*corso*) that the nations must run passes through the ages of the gods, heroes, and men. Each age is characterized by a particular kind of nature, custom, jurisprudence, government, and language. A distinctive feature of Vico's sequence of ages—unlike the classical movement from golden to iron age—is its susceptibility to what he calls a “recourse” (*ricorso*) or recurrence, which suggests that a nation may retrace a previous stage or all three.

One of Vico's main concerns is the poetic nature of the first human beings in the age of the gods, the “master key” of his science. As he explains it, the first human beings apprehended the world in a “poetic” manner. With vigorous imaginations and robust senses, but feeble powers of reasoning, they responded to their unknown world with passionate fear and wonder, creating sublime images of nature. In this regard, Vico's portrait of the early poets is different from LONGINUS's classical theory of sublimity, locating the sources of great writing in the lack of rationality rather than in individual genius. A bit later, Jean-Jacques Rousseau (1712–1778) would make a similar argument about the origin of languages. The point, for Vico, is that the poetic nature of the first human beings inaugurated their world. In support of this view, he notes that the first poets anthropomorphized nature and accounted for the unknown in human and metaphorical terms. Vico's famous examples include the “primitive” human response to the terror of lightning and thunder, as well as the mythical belief in the ancient existence of giants. While the former led to the imaginative creation of an angry sky god, Jupiter, the latter illustrates the etymological origin of Roman nobles, derived from the Greek and Latin words for indigenous people (*autochthones* and *indigenae*).

Vico suggests that the religions—as well as the logic, morals, economics, politics, physics, cosmography, astronomy, geography, and history—of the pagan nations are rooted in poetic and rhetorical responses to nature. In some sense the foundations of civil society can be said to reside in the modifications of the minds and institutions of human beings. But such modifications are not so much analytical or rational as they are poetic or, more precisely, rhetorical. Metaphor, synecdoche, metonymy, and irony, Vico's four master figures, shape human beings' apprehension of the world.

Vico's thought exerted significant influence on nineteenth- and twentieth-century cultural theorists. Karl Marx refers approvingly to Vico's fundamentally historical understanding of human nature in a famous footnote to *Capital* (1867), and the critique of dominant Enlightenment forms of rationalism built into Vico's poetic and rhetorical theory of culture has inspired critics of modernity such as Isaiah Berlin. (In this latter regard, Vico's work bears comparison with MARTIN HEIDEGGER's later theories of poetry: both thinkers assign poetry a fundamental role in world building.) Many contemporary theorists would reject Vico's totalizing idea of "ideal eternal history" as well as the privileged position of Christianity in his providentialist historiography. However, Edward W. Said credits Vico as a major influence who offers a corrective of Western tendencies to devalue the Orient. According to Said, Vico stresses the organic interconnectedness of all cultures (Eastern and Western) and makes the important point that humans create their own knowledge and history. Finally, Vico pioneers the concern with rhetorical tropes as foundational to human life developed by such twentieth-century thinkers as ROMAN JAKOBSON, HAYDEN WHITE, PAUL DE MAN, and HAROLD BLOOM, a great admirer of Vichian poetics.

From New Science¹

* * *

[31] Thus, by studying the common nature of nations in the light of divine providence, my *New Science*, or new metaphysics, discovers the origins of divine and human institutions in the pagan nations.² And on the basis of these origins, my Science establishes a system of the natural law of the nations, which progresses with great regularity and consistency in all three ages through which the Egyptians said they had passed in the entire course of world history. These three ages are the following:

(1) The age of the gods, when the pagan peoples believed that they were living under divine government, and that all their actions were commanded by auspices³ and oracles, which are the most ancient institutions in secular history.

(2) The age of the heroes, when heroes ruled everywhere in aristocratic states by virtue of their presumed natural superiority to the plebeians.

(3) And finally, the age of men, when all recognized their equality in human nature, so that they first established democracies and later monarchies, which are the two forms of human government.

1. Translated by David Marsh.

2. Heathen peoples; pre-Christian non-Hebrew

gentile societies.

3. Those who prophesy from the flight of birds.

[32] Corresponding to these three types of nature and government, three kinds of language were spoken, which constitute the lexicon of my *New Science*:

(1) The first dates from the age of families when pagan peoples had just embraced civilization. We find that it was a mute or wordless language which used gestures or physical objects bearing a natural relationship to the ideas they wanted to signify.

(2) The second language used heroic emblems—such as similes, comparisons, images, metaphors, and descriptions of nature—as the principal lexicon of its heroic language, which was spoken in the age when heroes ruled.

(3) The third language was the human or civilized language which used vocabulary agreed on by popular convention, and of which the people are the absolute lords. This language is proper to democracies and monarchies, for in those states it is the people who determine the meaning of the laws, which are binding for nobles and plebeians alike. Hence, once the laws of any nation are written in the common speech, knowledge of them is no longer in the hands of the nobility. Previously, the nobles of every nation, who were also priests, kept their laws in a secret language like a sacred object. This is the natural reason for the secrecy in which the Roman patricians kept their laws before popular liberty was established.

These are precisely the three languages which the Egyptians said had been spoken earlier in their world, corresponding exactly in both number and order to the three ages through which their world had passed:

(1) The first was the *hieroglyphic* language, a sacred and secret language using mute gestures, as befits religions, in which observance is more important than speech.

(2) The second was the *symbolic* language using resemblances, like the heroic language I have just described.

(3) Finally, the third was the *epistolary* or vernacular language, which was used for the common business of everyday life. These three kinds of language were found among the Chaldaeans, Scythians, Egyptians, Germanic peoples, and all the other nations of pagan antiquity. (Hieroglyphic writing persisted later among the Egyptians simply because they were closed to foreign nations longer, which also explains why the Chinese still use ideograms. But the use of hieroglyphics by other nations proves that the Egyptians' presumption of their own remote antiquity is groundless.)

[33] My *Science* sheds light on the origins of both languages and letters, which were previously the despair of historians and philologists,⁴ whose bizarre and grotesque opinions I shall review. The unfortunate reason for their error is obvious: they simply assumed that nations developed languages first, and then letters. Yet languages and letters were born as twins and developed at the same pace through all three kinds. We find precise evidence for such origins in the stages of the Latin language which I discovered in the first edition of my *New Science*. (Earlier, I remarked that this work contains three sections which I do not regret writing; this is the second of them.) This evidence has offered me many discoveries about the history, government, and law of the ancient Romans, as the reader will find in countless passages of

4. Those who study culture and its history through languages, especially through historical and comparative linguistics.

the present work. Following my example, scholars of Oriental languages, of Greek, and especially of German among the modern languages, which is a mother tongue, will be able to make discoveries about antiquities that surpass their expectations and mine.

[34] In seeking the basic principle of the common origins of languages and letters, we find that the first peoples of pagan antiquity were, by a demonstrable necessity of their nature, *poets* who spoke by means of *poetic symbols*. This discovery provides the master key of my New Science, but making it has cost me nearly an entire scholarly career spent in tireless researches. For to our more civilized natures, the poetic nature of the first people is utterly impossible to imagine, and can be understood only with the greatest effort. Their symbols were certain *imaginative general categories*, or archetypes. These were largely images of animate beings, such as gods and heroes, which they formed in their imagination, and to which they assigned all the specifics and particulars comprised by each generic category. (In precisely this way, the myths of civilized ages, such as the plots of the New Comedy,⁵ are rational archetypes derived from moral philosophy; and from these myths, our comic poets create in their characters these imaginative archetypes, which are simply the most complete ideas of human types in each genre.) We find, then, that the divine and heroic symbols were true myths, or true mythical speech. And we discover that, in describing the early age of the Greek peoples, the meaning of their allegories is based on identity rather than analogy, and is thus historical rather than philosophical.

These archetypes—which is what myths are in essence—were created by people endowed with vigorous imaginations but feeble powers of reasoning. So they prove to be true poetic statements, which are feelings clothed in powerful passions, and thus filled with sublimity and arousing wonder. We further find that poetic expression springs from two sources: the poverty of language, and the need to explain and be understood. This engendered the vividness of heroic speech, which was the direct successor of the mute language of the divine age, which had conveyed ideas through gestures and objects naturally related to them. Eventually, following the inevitable natural course of human institutions, the Assyrians, Syrians, Phoenicians, Egyptians, Greeks, and Romans developed languages, which began with heroic verse, then passed to iambs,⁶ and finally ended in prose. This progression is confirmed by the history of ancient poetry. And it explains why we find so many natural versifiers are born in German-speaking lands, particularly in the peasant region of Silesia; and why the first authors in Spanish, French, and Italian wrote in verse.

[35] From these three languages, we may derive a conceptual dictionary, which properly defines words in all the different articulate languages. In this work, I shall refer, when necessary, to this dictionary, of which the reader will find a detailed sample in the first edition of my Science. In that passage, I studied the timeless attributes of the fathers who lived in the age when lan-

5. A genre of Greek drama from about 320 B.C.E. to the mid-3d century B.C.E. that offers a mildly satiric view of contemporary Athenian society, focusing especially on family life.

6. Poetic metrical feet (each composed of a short

and a long syllable) that approximate the rhythm of conversation. "Heroic verse": the formal dactylic hexameter (a 6-foot line, based on the syllable pattern long-short-short) of Greek and Latin epic.

guages were formed, both in the state of families and in the first heroic cities. Then, in fifteen different languages, both living and dead, I derived proper definitions of the words for father, which varied according to their different attributes. (Of the three sections in that edition which satisfy me, this is the third.) This lexicon proves necessary if we are to learn the language of the ideal eternal history through which the histories of all nations in time pass. And it is necessary if we are to be scientific in citing authorities that confirm our observations about the natural law of nations, and about particular kinds of jurisprudence.

[36] There were, then, *three* languages, proper to *three* ages in which *three* kinds of government ruled, conforming to *three* kinds of civil natures, which change as nations follow their course. And we find that these languages were accompanied by an appropriate kind of jurisprudence, which in each age followed the same order.⁷

* * *

[51] We have reviewed the vain opinions held by the pagan nations, and especially the Egyptians, concerning their own antiquity as a necessary preamble to all our knowledge of the pagan world. We proceed in two ways: (1) by seeking to determine methodically this important starting-point, the precise time and place in which pagan civilization began in the world; and (2) by seeking to offer human reasons to support our Christian faith. (This faith begins from the truth that the first people in the world were the Jews, descended from Adam, who was created by the true God at the world's creation.) Accordingly, the first science we must study is mythology, meaning the interpretation of myths: for all pagan histories have mythical origins, and the myths of the pagan nations were their first histories. By applying this method, we shall discover the beginnings of the sciences as well as of the nations: for the sciences could only arise within nations that were already formed. Throughout my *New Science*, I show that the sciences sprang from institutions necessary or useful to humankind, which were later perfected as ingenious individuals refined them. This must be the starting-point of universal history, whose origins and principles were previously lacking, as all scholars agree.

* * *

[331] Still, in the dense and dark night which envelops remotest antiquity, there shines an eternal and inextinguishable light. It is a truth which cannot be doubted: *The civil world⁸ is certainly the creation of humankind.* And consequently, the principles of the civil world can and must be discovered *within the modifications of the human mind.* If we reflect on this, we can only wonder why all the philosophers have so earnestly pursued a knowledge of the world of nature, which only God can know as its creator, while they neglected to study the world of nations, or civil world, which people can in fact know because they created it. The cause of this paradox

7. The three types of jurisprudence are mystic theology, civil equity (reason of state), and natural equity.

8. The totality of institutions constituting pagan human societies governed by law.

is that infirmity of the human mind noted in Axiom 63.⁹ Because it is buried deep within the body, the human mind naturally tends to notice what is corporeal, and must make a great and laborious effort to understand itself, just as the eye sees all external objects, but needs a mirror to see itself.

* * *

[342] In its first principal aspect, then, my New Science must be a *rational civil theology of divine providence*, which was previously lacking in philosophy. For some philosophers were completely unaware of the existence of providence. The Epicureans¹ said that human affairs are set in motion by the blind collision of atoms; and the Stoics² said they are drawn along by an inexorable chain of causes and effects. And other philosophers merely considered providence within the order of natural things, calling their metaphysics a 'natural theology'. While contemplating the providential aspect of God, they confirmed its existence through the physical order of nature, which they observed in the motions of physical bodies like the spheres and the elements, as well as in the final cause revealed in lesser natural phenomena.

By contrast, the philosophers should have discussed providence as revealed in the economy of civil institutions. This is clear from the proper meaning of the word 'divinity', which was applied to providence. This noun derives from the Latin verb *divinari*, to divine: in other words, to understand either what is hidden from men, meaning the future, or what is hidden within them, meaning their conscience. Properly speaking, then, divinatory providence is the first and principal part of the subject of jurisprudence, or divine institutions; while the second and complementary part of jurisprudence, or human institutions, must derive from divinatory institutions. My New Science is therefore a demonstration, as it were, of *providence as historical fact*. That is, it must provide a history of the orders and institutions which providence bestowed on the great polity of humankind without the knowledge or advice of humankind, and often contrary to human planning. For although by its creation our world is temporal and particular, the orders which providence establishes in it are universal and eternal.

* * *

[349] Thus, my New Science also traces the *ideal eternal history* through which the history of every nation passes in time; and it follows each nation in its birth, growth, maturity, decline, and fall. Now, according to the first irrefutable principle stated above, the world of nations is clearly a human creation, and its nature reflected in the human mind. Hence, I would venture to say that anyone who studies my Science will retrace this ideal eternal history for himself, recreating it by the criterion that it *had to*, *has to*, and *will have to* be so. For there can be no more certain history than that which is recounted

9. Vico's notion of axioms, which form the base of his philosophical system developed across *New Science*, is not derived wholly through pure reasoning; it is rooted in probability and circumstance. Axiom 63 states, "Because of the senses, the human mind naturally tends to view itself externally in the body, and it is only with great difficulty that it can understand itself by means of reflection. This axiom offers us this universal

principle of etymology in all languages: words are transferred from physical objects and their properties to signify what is conceptual and spiritual." In subsequent references to his axioms, Vico contextualizes and defines their meaning.

1. Followers of the Greek philosopher Epicurus (341–270 B.C.E.).

2. Followers of the Greek philosopher Zeno (335–263 B.C.E.).

by its creator. In this way, my Science proceeds like geometry which, by constructing and contemplating its basic elements, creates its own world of measurable quantities. So does my Science, but with greater reality, just as the orders of human affairs are more real than points, lines, surfaces, and figures. This is an indication that my proofs are divine and should afford my reader something like divine pleasure. For in God knowledge and creation are the same thing.

* * *

[361] In the axioms, we established that all the histories of the pagan nations had mythical origins; that among the Greeks, who are the source of all our knowledge of pagan antiquity, the first wise men were theological poets; and that all temporal institutions by nature have crude origins. When we turn to poetic wisdom, we must regard its origins in the same light. Poetic wisdom has come down to us exalted by a supreme and sovereign esteem which springs both from the conceit of the nations and, to a greater extent, from the conceit of scholars.³ For it was the conceit of scholars that led the Egyptian high priest Manetho⁴ to convert all of Egypt's mythical history into a sublime natural theology, as Axiom 55 states, just as it led the Greeks to convert their myths into philosophy. These two peoples did this not only because they had both inherited extremely filthy stories, as Axiom 54 states, but also for the five following reasons.

[362] The first reason was their reverence for religion, for it was by their myths that the pagan nations were everywhere founded on the basis of religion. The second was the great effect of their religion, namely the civil world, which is so wisely ordered that it can only be the result of superhuman wisdom. The third reason was the opportunity which their myths, bolstered by a religious veneration and believed to contain great wisdom, offered the philosophers for investigating and pondering lofty philosophical topics, as we shall see later. The fourth reason was the facility with which philosophers could express their sublime philosophical meditations in language they happily inherited from the poets. The fifth and final reason, which stands for all the others, was that the philosophers could confirm their theories by appealing to the authority of religion and the wisdom of the poets. Of these five reasons, the first two inspired the praise which the philosophers, even in their error, bestowed on divine providence for ordering the world of nations; while by the fifth they bore witness to this same providence. The third and fourth reasons are illusions which divine providence tolerated so that philosophers could understand and recognize providence for what it truly is, an attribute of the true God.

[363] Throughout this work, I shall show that everything that the poets sensed in their popular wisdom was later understood by the philosophers in their esoteric wisdom. We may say, then, that the poets were the *sense* of

3. Conceits are forms of excessively high regard for one's own worth or virtue. Among nations conceit is demonstrated by the claim of nearly every pagan nation to have been the origin of civilization; among scholars it is manifested in the attribution of one's own knowledge and wis-

dom to various kinds of ancient writings.

4. Egyptian priest and historian (active ca. 280 B.C.E.); his *History of Egypt*, which covered rulers from mythical times to 323, became the basis of our conventional numbering of dynasties.

mankind, and the philosophers its *intellect*. Thus, what Aristotle⁵ said in particular about the individual is also true in general about humankind: 'Nothing is found in the intellect which was not found first in the senses', *Nihil est in intellectu quin prius fuerit in sensu*. This means that the human mind can only understand a thing after the senses have furnished an impression of it, which is what today's metaphysicians call an occasion. For the mind uses the intellect whenever it 'gathers' something insensible from a sense impression, and this act of gathering is the proper meaning of the Latin verb *intelligere*, to understand.

[364] Before discussing poetic wisdom, we must consider what wisdom is in general. Wisdom is the faculty governing all the disciplines that teach the arts and sciences which perfect our humanity. Plato⁶ defines wisdom as the perfecter of humankind. People essentially consist of mind and spirit, or (we may say) of intellect and will. Wisdom must perfect both these parts, beginning with the intellect. For once the mind is illuminated by a knowledge of what is highest, it will lead the spirit to choose what is best. The highest institutions in the universe are those we call divine, because they turn our reason and understanding towards God. The best institutions are those we call human, because they serve the well-being of the entire human race. Hence, true wisdom must teach us the knowledge of divine institutions in order to direct human institutions towards the highest good. Indeed, I believe that Marcus Terentius Varro,⁷ who deserved to be called 'the most learned of the Romans', followed this two-part plan in constructing his *Divine and Human Institutions*, a great work which we have regrettably lost through the injustice of time. In my Science, I shall discuss these same topics as best I can, given the imperfections of my learning and the poverty of my erudition.

[365] Among the pagans, wisdom began with the Muse, whom Homer,⁸ in a golden passage of the *Odyssey*, defines as the knowledge of good and evil, or what was later called divination. (By contrast, God founded the true religion of the Jews—from which Christianity arose—on the natural prohibition of divination, which is naturally denied to people, as Axiom 24 states.) At first, the Muse must properly have been the science of divining by the auspices, which was the popular wisdom of all nations. This popular wisdom contemplated God in the attribute of His providence, so that from *divinari*, to divine, His essence was called divinity. And we shall soon see that the theological poets, who clearly founded the civilization of Greece, were experts in this wisdom, which is why the Romans called judicial astrologers 'professors of wisdom'. Next, wisdom was ascribed to people who were famous for the useful counsels they gave to humankind: hence the so-called Seven Sages, or Wise Men, of Greece.⁹ Later, wisdom was broadened to include people who wisely ordered and governed commonwealths for the good of their peoples and nations. Still later, the term was extended to the knowledge

5. Greek philosopher (384–322 B.C.E.; see above); the reference is to *On the Soul* 3.8, 432a.

6. Greek philosopher (ca. 427–ca. 347 B.C.E.; see above).

7. Roman scholar (116–27 B.C.E.).

8. Greek epic poet (ca. 8th c. B.C.E.). Homer's *Iliad* begins "Sing, Muse, . . ."

9. Seven statesmen and thinkers of the early 5th century B.C.E., credited with formulating pithy aphorisms (e.g., "Know thyself"; "Avoid extremes"). Plato (*Protagoras* 343a) names them as Solon of Athens, Chilon of Sparta, Thales of Miletus, Bias of Priene, Cleobulus of Lindus, Pittacus of Mitylene, and Myson of Chen.

of divine things in nature, or metaphysics, which is accordingly called a divine science. (In seeking to know man's mind in God, metaphysics recognizes God as the source of all truth, and hence as the regulator of all good. Thus, metaphysics essentially serves the good of the human race, whose survival depends on its universal belief in the *provident* nature of divinity. Plato perhaps deserved to be called divine because he demonstrated this providence. By contrast, any doctrine which denies the providential aspect of God should be called folly rather than wisdom.) Finally, among the Jews and then among us Christians, the knowledge of the eternal things revealed by God was called wisdom. Perhaps because they regarded such wisdom as the knowledge of true good and true evil, the early Tuscans called it 'science in divinity'.

[366] We must, then, distinguish three kinds of theology: (1) poetic theology, which was proper to the theological poets, and was the civil theology of all the pagan nations; (2) natural theology, which is proper to the metaphysicians; and (3) our Christian theology, which combines civil and natural theology with the highest revealed theology. (This division is truer than the one proposed by Varro, who regarded poetic theology as the third kind. In fact, the poetic theology of the pagans was the same as their civil theology. But since Varro was misled by the common error that the myths contained profound mysteries of sublime philosophy, he thought that poetic theology combined both the civil and natural kinds.) All three kinds of theology are connected by their contemplation of divine providence, and in fact divine providence directed human institutions so that poetic and natural theology prepared the nations for revealed theology. For poetic theology governed them through certain sensible signs, which they believed to be divine counsels sent by the gods to humankind; while natural theology demonstrates providence by eternal and insensible arguments. Hence, these two disposed the nations to accept revealed theology by virtue of a supernatural faith, which is superior not only to our senses but to human reason itself.

[367] Our discussion of poetic wisdom starts from the following three propositions. (1) Metaphysics is the sublime science which assigns specific subjects to the sciences we call subordinate. (2) The wisdom of the ancients was that of the theological poets, who were undoubtedly the first wise men of the pagan world, as Axiom 44 states. (3) And by nature all things must have crude origins. These three propositions lead us to trace the beginnings of poetic wisdom to a crude metaphysics, from which various sciences branch out as if from a tree trunk. On one side, we find the branches of logic, ethics, economics, and politics, which are all poetic sciences. On the other, we find further poetic sciences: physics, with her daughters cosmography and astronomy; and astronomy's two daughters, chronology and geography, whom she endows with certainty.

With these sciences in mind, I shall trace clearly and distinctly how the founders of pagan civilization used their poetic wisdom. We shall see how they used their natural theology or metaphysics to imagine the gods; their logic to invent languages; their ethics to create heroes; their household economy to found families; and their politics to found cities. We shall see how they used their physics to establish the divine principles of all things; their human physiology to create themselves, in a certain sense;

their cosmography to envision a universe of gods; and their astronomy to transfer planets and constellations from the earth to the heavens. And we shall see how they used their chronology to establish the starting-point of time reckoning; and how the Greeks, to cite one example, used their geography to describe the entire world within their own homeland.

[368] In this way, my New Science simultaneously offers a *history of the ideas, customs, and deeds of humankind*. From these three topics, we shall derive the principles of the history of human nature, which are the principles of universal history that we previously seemed to lack.

[369] The founders of pagan antiquity must have descended from the races of Ham, Japheth, and Shem, who one by one gradually renounced the true religion of their common father Noah.¹ This religion was the only bond which kept them within human society, both in the union of marriage and hence in their family groups. When they renounced it and began to couple promiscuously, they dissolved their marriages and dispersed their families. In this way, they began to wander like brutes through the earth's great forest. (The race of Ham wandered through southern Asia into Egypt and the rest of Africa; that of Japheth through northern Asia, or Scythia, into Europe; and that of Shem through central Asia to the Near East.) They were scattered widely as they fled from the wild beasts which abounded in the great forest, and as they pursued women who in that state were wild, timid, and intractable. And they were further separated as they sought pasture and water.

Since mothers abandoned their children, they grew up without hearing any human speech, or learning any human behaviour, and sank to an utterly bestial and brutish state. In this state, mothers merely nursed their infants and let them wallow naked in their own faeces, abandoning them for ever once they were weaned. Wallowing in their faeces (whose nitrous salts wondrously enriched the soil), these children struggled to make their way through the great forest, now grown dense after the recent flood. And as their muscles expanded and contracted in this struggle, the children absorbed more and more nitrous salts. At the same time, these children lacked that fear of gods, fathers, and teachers which tempers the most exuberant phase of childhood. As a result, their flesh and bones must have grown inordinately large, and they became so vigorous and robust that they turned out to be giants.

(This upbringing was even more brutish than that to which Caesar and Tacitus² attribute the gigantic stature of the Germans, as Axiom 26 states. This upbringing also explains the gigantic stature of the Goths reported by Procopius,³ and that of the Patagonians,⁴ who are said to live near the Strait of Magellan. On this subject, natural scientists have written numerous absurdities, which have been assembled by Jean Chassagnon⁵ in his

1. The builder of the biblical ark; all humans born after the Flood were descended from his sons (Genesis 6–9).

2. Roman historian (ca. 55–ca. 120 C.E.), author of *Germania*. Julius Caesar (100–44 B.C.E.), Roman military and political leader who wrote about the Germans in his *Commentaries on the Gallic War*.

3. Byzantine historian (ca. 500–ca. 565), who

observed and wrote about Justinian's war against the Goths—East Germanic tribes who had occupied Italy in the 3d and 4th centuries—in his *History of the Wars*.

4. Native tribes of Patagonia, the southernmost region of South America.

5. Jean Chassagnon (1531–1598), French author of *De gigantibus* (1580).

treatise *On Giants*. Great skulls and bones of an enormous size have been found and are still being found today, for the most part in the mountains—which is an important fact to which I shall return. The size of these remains is further exaggerated by popular traditions, for reasons I shall discuss in their place.)

[370] After the flood, these giants were scattered throughout the earth. We have seen that such giants are found in Greek mythology; and Latin historians unwittingly confirm their existence in ancient Italy. For they write that the most ancient peoples of Italy, known as the Aborigines, called themselves ‘autochthonous’, which is synonymous with ‘sons of Earth’, which to the Greeks and Romans meant nobles. Appropriately, the Greeks called the sons of Earth ‘giants’, just as their myths called the Earth the mother of giants. Hence, we should translate the Greek *autochthones* in Latin as *indigenae*, indigenous people, which properly means the native sons of a land. For in Latin the native gods of a people or nation were called *dii indigetes*, as if to say *inde geniti*, born there, or as we now say more succinctly *ingeniti*, inborn. (The syllable *de* is one of the redundancies of the early languages which I shall discuss later. Thus, the early Latins said *induperator* for *imperator*, commander; and the Law of the Twelve Tables⁶ reads *endoiacito* for *iniicito*, to lay hands on. This may be why armistices came to be called *induciae*, truces, as if from *iniiciae*: for to make a peace treaty was *icere foedus*, to strike an agreement.) To return to my point, from *indigena* the Romans derived *ingenuus*, whose first and proper meaning was noble—as in the *artes ingenuae*, noble arts. Eventually, the adjective came to mean free. (Still, the phrase *artes liberales*, liberal arts, retained the sense of noble arts.) For the nobles alone made up the free populations of the first cities; whereas the plebeians in them were slaves or the precursors of slaves.

* * *

[374] In reasoning about the wisdom of the ancient pagans, all the philosophers and philologists should have begun with these first men, who were stupid, insensate, and horrid beasts, that is, giants in the proper sense I have just described. (In *The Church Before the Law*, Father Jacques Boulduc⁷ says that the biblical term giants means ‘pious, venerable, and illustrious men’. But this can be true only of the noble giants who established pagan religions by divination and gave their name to the age of giants.) And these scholars should have begun with metaphysics, since it finds its proofs not in the external world, but within the modifications of the reflective mind. The world of nations was clearly a human creation, and hence its principles should have been sought within the human mind. And to the extent that human nature coincides with that of animals, it must rely on the senses as the sole means of knowing things.

[375] As the first wisdom of the pagan world, poetic wisdom must have begun with a metaphysics which, unlike the rational and abstract metaphysics of today’s scholars, sprang from the senses and imagination of the first people. For they lacked the power of reason, and were entirely guided

6. The earliest Roman law codes, drawn up in 450–451 B.C.E.

7. French priest and author (ca. 1575–1646).

by their vigorous sensations and vivid imaginations, as Axiom 36 states. This metaphysics was their own poetry, which sprang from an innate poetic faculty: for they were naturally endowed with sense and imagination. Their poetry also sprang naturally from their ignorance of causes. For, as Axiom 35 states, ignorance is the mother of wonder; and being ignorant of all things, the first people were amazed by everything. In them, poetry began as literally *divine*. For whenever something aroused their feelings of wonder, they imagined its cause as a god. And at the same time, whatever aroused their wonder they endowed with a substantial being based on their own ideas. This is the nature of children, whom we see picking up inanimate objects in play and talking with them as if they were living persons, as Axiom 37 states.

Lactantius⁸ observed how early people saw gods in the objects of their wonder, as Axiom 38 states. This is now confirmed by the behaviour of the American Indians, who call gods all the things that exceed their limited understanding. To them, we may add the ancient Germans who lived near the Arctic Ocean. According to Tacitus, they said they could *hear* the sun at night as it passed by sea from west to east, and they claimed to *see* the gods.⁹ Such crude and simple nations give us a clearer understanding of the founders of the pagan world who are discussed here.

[376] In this manner, the earliest people of the pagan nations created things according to their own ideas: for they were the children of the nascent human race, as Axiom 37 states. Yet their act of creation was infinitely removed from the creation of God, who by his perfect understanding knows things and creates them in this knowledge. In their robust ignorance, the earliest people could create only by using their imagination, which was grossly physical. Yet this very physicality made their creation wonderfully sublime, and this sublimity was so great and powerful that it excited their imaginations to ecstasy. By virtue of this imaginative creation, they were called poets, which in Greek means creators. Great poetry has three tasks: (1) *to invent sublime myths* which are suited to the popular understanding; (2) *to excite to ecstasy*¹ so that poetry attains its purpose; and this purpose is (3) *to teach the masses to act virtuously*, just as the poets have taught themselves. The natural origin of this human institution gave rise to that invariable property, nobly expressed by Tacitus, that frightened people vainly ‘imagine a thing and at once believe it’, *fingunt simul creduntque*.²

[377] Now, this was clearly the nature of the first founders of pagan civilization when the heavens thundered for the first time since the flood. This happened in Mesopotamia a century after the flood,³ and in the rest of the world two centuries after it. For that much time was necessary for the moisture of the universal flood to dry out, so that the earth could send into the air any dry exhalations or flammable matter that might have generated lightning. As was inevitable when such a violent phenomenon filled the sky for the first time, the heavens now produced the most frightening thunderclaps and light-

8. Firmianus Lactantius (ca. 240–ca. 320 C.E.), Roman Christian writer and rhetorician. Vico refers to *Divine Institutions* 1.15.

9. A reference to Tacitus, *Germania* 45.

1. Vico uses *excesso* in the Latin sense of *excessus mentis*, “ecstasy” [translator’s note].

2. Tacitus, *Annales* 5.10.

3. That is, Noah’s Flood (Genesis 7).

ning bolts. At this time, a few giants, who must have been the most robust, were living scattered through the forests of the mountain heights, which is where the most robust animals have their lairs. Suddenly frightened and thunderstruck by this inexplicably great phenomenon, they raised their eyes and observed the heavens. In this state, such people by nature possessed only robust physical strength and expressed their violent passions by shouting and grunting. So they imagined the heavens as a great living body, and in this manifestation, they called the sky Jupiter. (The nature of the human mind in such cases leads it to attribute its own nature to an external phenomenon, as Axiom 32 states.) And they thought that Jupiter, the first god of the so-called greater clans, was trying to speak to them through the whistling of his bolts and the crashing of his thunder.

The giants now began to exercise that natural curiosity which is the daughter of ignorance and the mother of knowledge, and which is born when wonder arouses the human mind, as Axiom 39 states. This natural trait still persists tenaciously among the common people. When they see a comet, parheliion,⁴ or any unusual natural phenomenon, especially in the heavens, they grow curious and then quite anxious to learn its significance, as Axiom 39 states. And when they wonder at the marvellous effect of a magnet on iron, they arrive at the conclusion that the magnet has a secret sympathy for iron—and this in the present age, when our minds are keener and even enlightened by philosophy. Indeed, they view all of nature as a vast living body that feels passions and emotions, as Axiom 32 states.

[378] The countless abstract expressions which permeate our languages today have divorced our civilized thought from the senses, even among the common people. The art of writing has greatly refined the nature of our thought; and the use of numbers has intellectualized it, so to speak, even among the masses, who know how to count and reckon. As a result, we are by nature incapable of forming the vast image of that mistress which some call 'Sympathetic Nature'. (In fact, people who mouth this expression have literally nothing in mind; for a mental falsehood is nothing, and the imagination is powerless to form vast images of falsity.) We are likewise incapable of entering into the vast imaginative powers of the earliest people. Their minds were in no way abstract, refined, or intellectualized; rather, they were completely sunk in their senses, numbed by their passions, and buried in their bodies. This is why I said earlier that we can barely understand, and by no means imagine, the thinking of the early people who founded pagan antiquity.

[379] In this manner, the first theological poets invented the first divine myth, which was the greatest myth ever invented: Jupiter, the king and father of gods and men, in the act of hurling a thunderbolt. The figure of Jupiter was so poetic—that is, popular, exciting, and instructive—that its inventors at once believed it, and they feared, revered, and worshipped Jupiter in frightful religions, which I shall discuss later. These people now believed that everything they saw, imagined, or even did themselves was Jupiter—which illustrates the trait of the human mind noted by Tacitus in

4. A bright spot tinged with color that can appear on a parhelic circle (a luminous halo parallel to the horizon at the altitude of the sun).

Axiom 34. And they endowed all the universe and its parts with the being of an animate substance. This is the civil and historical meaning of the poetic tag 'all things are full of Jupiter', *Iovis omnia plena*.⁵ Later, Plato interpreted this to mean the ether that permeates and fills everything in the universe.⁶ But in fact, the theological poets thought that Jupiter was no higher than the mountain tops. And since these early people communicated by signs, they naturally believed that lightning bolts and thunderclaps were signs made to them by Jupiter. (Later, from Latin *nuo*, to make a sign by nodding, they derived *numen*, divine will, by an idea which is utterly sublime and worthy to express divine majesty.) They believed that Jupiter commanded by signs, that these signs were physical words, and that nature was Jupiter's language.

The science of this language the pagans universally believed to be divination, which the Greeks called theology, meaning the science of the gods' speech. This is how Jupiter was assigned to the fearful kingdom of lightning, which made him the king of gods and men. He acquired two titles: *optimus*, best, meaning *fortissimus*, strongest (in early Latin *fortis* meant the same as classical *bonus*, good); and *maximus*, greatest, alluding to his body, which was as vast as the heavens. Because he did not destroy the human race with his bolts, he acquired the title Soter or Saviour. (This first beneficent act gave rise to religion, which is the first of the three basic principles of my New Science.) And because he stayed the giants from their brutish wandering, so that they became the rulers of the nations, he acquired the title Stator, or Stayer. (Latin historians give too restricted a meaning to this title when they cite a single historical event, and observe that, during a battle with the Sabines, Jupiter was invoked by Romulus and 'stayed' the Romans from flight.)⁷

[380] This is the origin of those many Jupiters, whose existence amazes the philologists. Each pagan nation had its own Jupiter, and the Egyptians in their conceit said that their Jupiter Ammon was the oldest of all, as Axiom 3 states. In fact, all these Jupiters are mythical references to natural history, which show that the flood was universal, as Axiom 42 states.

[381] Thus, if we bear in mind the principles of poetic archetypes formulated in Axioms 47–49, we see that Jupiter was born naturally in poetry as a *divine archetype* or *imaginative universal*, to whom the ancient pagans with their poetic nature referred every aspect of divination. In this way, their poetic wisdom began with the poetic metaphysics of contemplating God in his attribute of providence. And they called themselves theological poets, meaning wise men or sages who understood the speech of the gods expressed in Jupiter's auspices. They were also properly called divines in the sense of diviners, from the Latin verb *divinari*, which properly means to divine or predict. Their science was called the Muse, which Homer defines as the knowledge of good and evil. (This meant divination, which God prohibited to Adam when he established the true religion, as Axiom 24 states.) And for their mystical theology, the poets were in Greek called *mystae*, initi-

5. Virgil, *Eclogues* 3.60 (ca. 37 B.C.E.).

6. Plato, *Cratylus* 412d.

7. Romulus, mythical founder of Rome, procured wives for his citizens by inviting the Sabi-

nes, a group of neighboring tribes, to a festival and seizing the women; this led to a series of wars (which ended with Romulus as king). For Jupiter Stator, see, e.g., Livy 1.12.6.

ates, a term which Horace⁸ learnedly translates as ‘interpreters of the gods’, for they explained the divine mysteries of the auspices and oracles. In this science, every pagan nation had its own sibyl, and we find mention of twelve of them. Sibyls⁹ and oracles are the most ancient institutions of the pagan world.

[382] All these remarks tally with the passage from Lactantius,¹ cited in Axiom 38, who describes the origins of idolatry by saying that the earliest people, being simple and uncouth, invented gods ‘in terror of their manifest power’. Thus, it was fear that invented gods in the world; and not fear inspired by other people, but fear born within their own minds, as Axiom 40 states. This origin of idolatry also reveals the origin of divination, since they were born as twins. In turn, these institutions were followed by sacrifices, which were offered to ‘procure’ the auspices, that is, to interpret them correctly.

[383] We find confirmation of this origin of poetry in this invariable property: the proper subject of poetry is a believable impossibility. Thus, while it is impossible that physical objects have intelligence, people believed that the thundering heavens were Jupiter. This is why poets are so fond of singing the wonders created by the spells of sorceresses. To explain this, we must posit a hidden sense that nations have of God’s omnipotence. This sense in turn engenders another by which all peoples are naturally led to offer infinite honours to divinity. This was the manner in which the poets founded religions among the pagans.

[384] These remarks overturn all the previous theories about the origins of poetry, from Plato and Aristotle in antiquity to our own Francesco Patrizi, Julius Caesar Scaliger, and Ludovico Castelvetro.² Unlike them, we have discovered that poetry was born sublime precisely because it lacked rationality. This is why no later discipline—philosophy, poetics, or criticism—ever equalled or surpassed the sublimity of poetry. Hence, it is Homer’s privilege to be the foremost of all the sublime or heroic poets, in terms of both merit and age. My discovery of the true origins of poetry dispels the common belief in the *incomparable wisdom* of the ancients, which scholars have eagerly sought to discover, from Plato to Bacon in his *Wisdom of the Ancients*.³ For this wisdom was in fact the *popular wisdom* of the lawgivers who founded mankind, rather than the *esoteric wisdom* of a few lofty philosophers. Hence, as in the case of Jupiter, we shall judge absurd all the *mystical senses* of profound philosophy which scholars have given to Greek myths and Egyptian hieroglyphics. By contrast, we shall judge natural the *historical sense* which they naturally preserved.

* * *

[400] Metaphysics contemplates things in all the categories of their being, but it becomes logic when it considers them in the categories by

8. Roman poet and satirist (65–8 B.C.E.). Vico refers to *Ars Poetica*, line 391 (see above).

9. That is, female prophets (the most famous in Italy was at Cumae, west of modern Naples).

1. Lactantius, *Divine Institutions* 1.15.

2. Vico names three Italian Renaissance philosophers noted for their critical engagement with clas-

sical literary theory, particularly Aristotle’s *Poetics*: Francesco Patrizi (1529–1597), Julius Caesar Scaliger (1484–1558), and Lodovico Castelvetro (1505–1571).

3. *On the Wisdom of the Ancients* (1609), by the English philosopher Francis Bacon (1561–1626).

which they are signified. Hence, now that we have considered poetry as a poetic metaphysics, by which the theological poets imagined most physical objects to be divine substances, we may consider it as a *poetic logic*, by which it signifies those substances.

[401] The word logic comes from Greek *logos*, which at first properly meant fable, or *fabula* in Latin, which later changed into Italian *favella*, speech. In Greek, a fable was also called *mythos*, myth, from which is derived Latin *mutus*, mute. For speech was born in the mute age as a mental language, which Strabo⁴ in a golden passage says existed before any spoken or articulated language: this is why in Greek *logos* means both word and idea. Appropriately, divine providence ordained that this language arose in a religious age, for it is the invariable property of religion that meditation is more important than speech. As Axiom 57 states, the first language employed by the nations in their mute age must have originated with signs, gestures, or physical objects which had a natural relation to the ideas expressed. Hence, Greek *logos* also meant thing, and the Hebrew word for word (translated by Greek *logos* and Latin *verbum*) also meant deed, as Thomas Gataker⁵ observes in *The Style of the New Testament*. We find that *mythos* was also defined as *vera narratio*, or true narration. According to Plato and later Iamblichus,⁶ this is the natural speech which was once spoken in the world; but as Axiom 57 notes, this was mere conjecture on their part. Hence, Plato's effort to discover this speech in his dialogue *Cratylus* proved vain, and he was criticized for it by Aristotle and Galen.⁷ In fact, the earliest speech, that of the theological poets, did not use words which suited the nature of the things they expressed. (This was the sacred language invented by Adam, on whom God bestowed divine *onomatopoesia*, nomenclature, which is the art of assigning names to things according to their nature.)⁸ Rather, their first speech was a *fantastic speech based on animate substances*, most of which they imagined to be divine.

[402] For example, the theological poets understood Jupiter, Cybele or Berecynthia, and Neptune⁹ in this way. At first, pointing mutely, they interpreted them as the substances of the sky, earth, and sea, which they imagined to be animate deities; and, trusting the truth of their senses, they believed they were gods. In this way, they used these three deities to explain everything related to the sky, earth, and sea, which is the function of poetic archetypes explained in Axioms 47–9. And they used other deities to signify various subspecies of each major god: for example, Flora for flowers and Pomona for fruits. Today we reverse this mental process when we deal with intellectual notions, such as the faculties of the human mind, the emotions, virtues, vices, sciences, and arts. For we generally imagine them as feminine personifications, to which we refer their various properties, causes, and effects. And when we wish to express our understanding of intellectual notions, our imagination must assist us in explaining them and in giving them human form, as

4. Greek geographer (ca. 64 B.C.E.–ca. 23 C.E.).

5. English Puritan churchman (1574–1654); he published *De Novi Instrumenti Stylo, Dissertatio* in 1648.

6. Greek Neoplatonic philosopher (ca. 250–ca. 325 C.E.).

7. Greek physician and philosopher (129–ca. 199 C.E.).

8. See Genesis 2.19–20.

9. Roman god of the sea. Cybele and Berecynthia: two names for the same goddess, the Greco-Roman “Great Mother” worshipped in cult.

painters of allegories do. By contrast, the theological poets could not use their understanding, and so performed the contrary operation, which is far more sublime. They attributed senses and emotions to physical bodies, even bodies as vast as the sky, earth, and sea, as we have just seen. Later, as their vast imaginations diminished and their powers of abstraction increased, these deities shrank to diminutive symbols of themselves. Since the origins of these human institutions were buried in obscurity, metonymy¹ dressed these symbols in the learned guise of allegory. Jupiter grew so small and light that an eagle now carries him in its flight. Neptune rides the sea in a dainty coach. And Cybele is seated on a lion.

* * *

[404] All the primary figures of speech are corollaries of poetic logic. The most luminous figure, and hence the most basic and common, is metaphor. Metaphor is especially prized when, by the metaphysics just described, it confers sense and emotion on insensate objects. The first poets attributed to physical bodies the being of animate substances, endowed with limited powers of sense and emotion like their own. In this way, they created myths about them; and every such metaphor is a miniature myth. This gives us a criterion for dating the origin of metaphors in various languages. For example, all metaphors based on analogies between physical objects and the products of abstract thought must date from an age in which philosophies were just beginning to take shape. We find proof of this in the fact that in every language the terms used in the fine arts and advanced sciences are of rustic origin.

[405] Noteworthy too is the fact that in all languages most expressions for inanimate objects employ metaphors derived from the human body and its parts, or from human senses and emotions. Thus, we say *head* for top or beginning; *front* or *brow*, and *shoulders* or *back*, for before and behind; *eyes* of vines [Latin *oculi*, buds]; *lights* [Italian *lumi*] for entrances to a house; *mouth* for any opening; *lip* for the rim of a pitcher or other container. We speak of the *tooth* of a plough, rake, saw, or comb; the *beards* of plants and their roots; a *tongue* of the sea; the *throat* of rivers and mountains [French *gorge*]; a *neck* of land; and the *arm* of a river. We say *hand* for a small number; *lap* of the sea for a gulf [Latin *sinus*, bay]; and *flanks* and *sides* for lateral portions. We speak of the *coast* [Italian *costiera*, rib] of the sea, and the *leg* or *foot* of countries. We say *heart* for the centre (as the Romans said *umbilicus*, navel); *foot* for end, and *plan* [Latin *planta*, footprint] for base or foundation. We speak of the *flesh* and the *bones* [English *stones*] of fruit; a *vein* of water, rock, or ore; the *blood* of the vine, meaning wine; and the *bowels* of the earth. Similarly, the sky or sea *smiles* on us; the wind *whistles*; the waves *murmur*, and a body *groans* under a great weight. In antiquity, the farmers in Latium used to say that the fields were *thirsty*, the crops were *distressed*, and grains *ran riot*. Even today farmers say that plants *fall in love*, vines *go mad*, and fir-trees *weep* with sap. And countless other examples can be cited in any language.

1. A rhetorical trope or figure of speech in which one word is substituted for another to which it is related in some way other than resemblance (e.g., by contiguity, as in "crown" used for "king").

All this follows from Axiom 1: 'In his ignorance, man makes himself the measure of the universe.' And in the examples cited, man has reduced the entire world to his own body. Now, rational metaphysics teaches us that man becomes all things through understanding, *homo intelligendo fit omnia*. But with perhaps greater truth, this imaginative metaphysics shows that man becomes all things by not understanding, *homo non intelligendo fit omnia*. For when man understands, he extends his mind to comprehend things; but when he does not understand, he makes them out of himself and, by transforming himself, becomes them.

[406] Using their poetic logic, which was a product of poetic metaphysics, the early poetic peoples named things in two ways: (1) by using sensible ideas, which are the source of metonymy; and (2) by using particular ideas, which are the source of synecdoche.²

(1) Metonymy which substitutes the author for the work originated because authors were more often named than their works. Metonymy which substitutes the object for its form and accidents originated because they could not abstract forms and qualities, as Axiom 49 states. And metonymy of cause for effect created miniature myths, in which causes were imagined as feminine personifications clothed in their effects, such as ugly Poverty, sad Old Age, and pale Death.

[407] (2) Synecdoche became metaphor when people raised particulars to universals or united parts to form wholes. At first, only human beings were properly called mortals, since they were the only ones who sensed their mortality. The use of 'head' for man or person, so common in vernacular Latin, reflects the age when people lived in woodlands and only a man's head could be seen at a distance. (By contrast, the word 'man' is an abstraction, a sort of philosophical category comprising the body and its parts, the mind and its faculties, and the heart and its feelings.) Similarly, Latin *tignum*, beam, and *culmen*, stalk of straw, must have properly meant rafter and straw when houses were thatched. Later, as cities became more ornate, *tignum* came to mean all construction materials, and *culmen* the completion of a building. Thus, *tectum*, roof, came to mean the entire house, because in the earliest times a covering overhead was all that was needed to make a house. And *puppis*, poop, came to mean a ship, because its height made it the first part visible to people ashore; just as people said 'sail' for ship during the medieval return of barbarism. Thus, *mucro*, point, came to mean a sword, since it was the point which early people felt and which aroused their fright. (By contrast, the word 'sword' is an abstraction, a general category comprising pommel, hilt, edge, and point.) Similarly, the material meant the whole thing formed from it—witness 'iron' for sword—because they could not abstract the form from its material.

In Ovid,³ we find the poetic phrase, 'It was the third harvest', *Tertia messis erat*, which combines synecdoche and metonymy. This combination was doubtless born of natural necessity, since it must have taken more than a thousand years for this astronomical idea to arise among the nations. Even today, farmers outside Florence say 'We have reaped so many times' to indi-

2. A rhetorical trope or figure of speech in which a part is substituted for a whole or vice versa, as in "all hands on deck."

3. Roman poet (43 B.C.E.–17 C.E.). Vico quotes *Heroides* 6.59.

cate a number of years. Likewise, Virgil joins two synecdoches and a metonymy in his verse, 'After several ears of grain I shall marvel seeing my kingdoms', *Post aliquot, mea regna videns, mirabor aristas*.⁴ This phrase exposes the awkward way in which people of the early rustic age expressed themselves. They signified years by saying 'ears of grain', *aristas*, which is more particular than 'harvest'. But because the phrase is so awkward, textbooks have judged it a rhetorical extravagance.

[408] Irony could clearly arise only in an age capable of reflection, because it consists of a falsehood which reflection disguises in a mask of truth. From this emerges an important principle of human institutions, which confirms the origin of poetry discovered in my Science. Since the pagan world's earliest people were as simple as children, who are by nature truthful, they could invent nothing false in their early myths. These myths must therefore have been *true narratives*, as we have defined them.

[409] All figures of speech may be reduced to these four types—metaphor, metonymy, synecdoche, and irony—which were previously thought to be the ingenious inventions of writers. But my discussion of them proves that they were in fact necessary modes of expression in all the early poetic nations, and originally had natural and proper meanings. These expressions became figurative only later, as the human mind developed and invented words which signified abstract forms, that is, generic categories comprising various species, or relating parts to a whole. Knowing this, we may begin to demolish two common errors of the grammarians: that prose is the proper form of speech, and poetic speech improper; and that men spoke first in prose and later in verse.

* * *

[779] We have seen that poetic wisdom justly deserves supreme and sovereign praise on two counts. (1) As is clearly and consistently recognized, poetic wisdom founded pagan civilization. Even while striving to affirm this, the conceits of nations and scholars have in fact denied it. For the nations have imagined poetic wisdom as a vain magnificence, while scholars have distorted it with incongruous philosophical wisdom. (2) As popular tradition relates, poetic wisdom created sages who were equally great as philosophers, lawmakers, generals, historians, orators, and poets. But in creating them, this wisdom formed them only roughly: this is how we see them in their myths, in which we perceive the embryonic outlines, as it were, of all esoteric wisdom. We may conclude that in their myths the nations used crude and physical language to describe the principles of the world of sciences. Later, this was elucidated by the specialized researches of scholars who used rational argument and general rules. All this confirms the thesis of [this book], that the theological poets were the sense of human wisdom, as the philosophers were its intellect.

4. *Eclogues* 1.69, by the Roman poet Virgil (70–19 B.C.E.).

JOSEPH ADDISON

1672–1719

The English poet, dramatist, and essayist Joseph Addison is best known as the coauthor with Richard Steele of an influential series of periodical essays, published in *The Tatler* (April 12, 1709–January 2, 1711) and *The Spectator* (first series, March 1, 1711–December 6, 1712; second series, 1714). He is distinguished for his clear, orderly prose style, which did much to elevate the status of the essay as a literary form, and for his skillful descriptions of character, which helped prepare the way for later eighteenth-century pioneers in a new English genre, the novel. Addison was an important cultural and literary figure, particularly for middle-class readers. As he explained in *Spectator* No. 10: “It was said of Socrates that he brought philosophy down from heaven to inhabit among men; and I shall be ambitious to have it said of me that I have brought philosophy out of closets and libraries, schools and colleges, to dwell in clubs and assemblies, at tea-tables and in coffeehouses.” Addison achieved this goal and became a model for generations of critics and essayists.

Addison was educated at Oxford, where he excelled in classical studies and composed Latin verse that JOHN DRYDEN admired. By his early twenties, Addison had already published poetry, but he was as intent on political advancement as on literary success. He used his literary talents to praise leading statesmen of the Whig political party, which sought to limit royal power. His career reached its height in 1713, when his neoclassical tragedy *Cato* was produced in London; it focuses on the Roman republican Cato (95–46 B.C.E.), who chose suicide rather than submit to the dictator Julius Caesar. SAMUEL JOHNSON judged *Cato* “rather a poem in dialogue than a drama,” and modern scholars have found it tedious; but it was a popular success and was frequently performed, in part because many interpreted it as a commentary on the English political scene.

Successful in both literature and politics, Addison was appointed undersecretary of state (1706); secretary to Lord Wharton, the lord lieutenant in Ireland (1709); and chief secretary for Ireland (1715). He served as lord commissioner for trade (1716), and on retirement he was rewarded with a generous pension. He had entered Parliament as a Whig in 1708 and held his seat until his death in 1719.

Addison's partnership with the Irish writer and Whig supporter Steele—whom he had known since their school days together—began in 1709. He contributed 42 essays to Steele's *Tatler*, and collaborated with Steele on 36 others; he wrote even more—274 essays of a total of 555—for their joint venture *The Spectator*. *The Tatler* appeared three times a week, *The Spectator* every day except Sunday (both were later published in book form). These periodicals gave Addison a means to fulfill his cultural mission. He concurred with the ideal that Steele defined for *The Tatler*, which was “to enliven Morality with Wit, and to temper Wit with Morality,” thereby offering men and women a guide to virtue. But together with urbane, witty sketches of fictional characters (notably the eccentric, kindly country gentleman Sir Roger de Coverley) and advice on conduct were essays devoted to the writings of John Locke, John Milton, and others. Addison claimed that each copy that was purchased was in turn passed on to twenty people or more, and he hoped that his lucid treatment of important topics in literature and philosophy would significantly influence the public's critical judgment and taste.

In our first selection, *Spectator* No. 62, Addison examines the nature of wit, one of the most complex, shifting terms in poetics. In a broad sense, it means the natural ability to perceive and understand, keen intelligence, quick and subtle perception; but it refers more specifically to the capacity of writers to perceive and express

relationships between seemingly disparate or incongruous things in striking, paradoxical, surprising figures of speech. From the seventeenth through the eighteenth centuries, wit was a central topic in literary theory and criticism. ALEXANDER POPE defined it most memorably—"True Wit is Nature to Advantage drest, / What oft was Thought, but ne'er so well Exprest" (*An Essay on Criticism*, 1711; see below)—but Dryden and Johnson also discuss it in detail.

For the Romantics and Victorians, wit mattered less than imagination. Sometimes too, in this period and even earlier, wit was simultaneously praised and devalued, taken as a sign of quickness in repartee but not necessarily of serious or profound reflection. As Voltaire remarked in his *Philosophical Dictionary* (1764), "he who cannot shine by thought, seeks to bring himself into notice by a witticism." In this sense, it was frequently associated with satire, comedy, and humor. But in the modern period, T. S. ELIOT, F. R. LEAVIS, and CLEANTH BROOKS reinvigorated the serious meanings of wit and enriched critical understanding of the play of irony and paradox, linking it to the best in the English poetical tradition.

Addison begins by quoting John Locke's distinction between *wit*, which emphasizes congruity and resemblance, and *judgment*, which stresses distinction and difference. But he adds that true wit requires a verbal effect that delights and surprises the reader. The resemblance must not be unduly common or familiar, nor wholly verbal—ideas as well as words are involved. Most of Addison's discussion treats such "mixed wit," but he ends by moving outward from the writer's use of language to the responses of readers, anticipating the intricate issues of aesthetics probed later in the century by DAVID HUME, IMMANUEL KANT, and other philosophers and theorists. Like Dryden and the French critic Jean Regnaud de Segrain (1624–1701), Addison aims to teach readers to value wit in its best forms and not to rest content with simpler uses, however appealing at first these might be; indeed, he connects wit with the quality of humanity.

In our second selection, from *Spectator* No. 412, Addison examines the imagination. He reiterates his point about the uncommon and the new, describing the pleasure that we receive when our sight is refreshed by a surprising and gratifying view of an object or scene that gives us a new idea of something that we thought we already understood. Addison's discussion of "greatness" reflects the interest in the sublime sparked by the French critic Nicolas Boileau's 1674 translation of *On Sublimity*, a Greek text attributed to LONGINUS (first century C.E.; see above). Like wit, *the sublime* is a complex term and literary category. It connotes majesty, awe, nobility, and spiritual, moral, and intellectual excellence. In some discussions, it chiefly refers to something *in* natural scenes and landscapes. At the same time, the term often evokes the response of viewers—their sensations and feelings that Nature creates, their pleasurable anxiety and incomprehension—a topic that Kant later explored in his *Critique of Judgment* (1790; see below).

For his part, Addison appears especially interested in the viewer, audience, reader—in what one might call the psychology of the sublime. In other papers (e.g., *Spectator* No. 416), he extends his inquiry into the sublime and the beautiful by distinguishing between the primary and secondary pleasures of the imagination; in the first, the viewer responds directly to an object, whereas in the second, he or she is returned to that object through a work of literature or art. Addison suggests that the writer or artist can thus kindle pleasures that rival or exceed those that Nature itself provides.

Addison's brief critical and theoretical papers, while lucid, are rarely profound or deep. Dryden is the more pioneering critic and theorist, and Pope the more brilliantly adroit: Addison does not operate at their level. Nor does he show the sophistication and depth that later critics (including EDMUND BURKE, Johnson, and SAMUEL TAYLOR COLERIDGE) display in treating the same topics. But Addison remains significant for the influential cultural work—the work of the public

intellectual—that he undertook. He read widely in literature and philosophy (both English and French), summarized well what he had discovered, and successfully brought it into the public sphere. In defining terms and making distinctions, Addison gave his readers the critical vocabulary that they needed to sort and categorize the relationship between words and ideas, between the world they inhabited and the literature they consumed. Though he is not as central to the tradition of theory and criticism as are Johnson and Coleridge, Addison is a key influence on both of them.

The Spectator, No. 62 [True and False Wit]

Scribendi recte sapere est et principium et fons.¹

—Horace, *Ars Poet.* 310

Mr. Locke² has an admirable reflection upon the difference of wit and judgment, whereby he endeavours to show the reason why they are not always the talents of the same person. His words are as follow: ‘And hence, perhaps, may be given some reason of that common observation, that men who have a great deal of wit and prompt memories, have not always the clearest judgment, or deepest reason. For wit lying most in the assemblage of ideas, and putting those together with quickness and variety, wherein can be found any resemblance or congruity, thereby to make up pleasant pictures and agreeable visions in the fancy; judgment, on the contrary, lies quite on the other side, in separating carefully one from another, ideas wherein can be found the least difference, thereby to avoid being misled by similitude, and by affinity to take one thing for another. This is a way of proceeding quite contrary to metaphor and allusion; wherein, for the most part, lies that entertainment and pleasantriness of wit which strikes so lively on the fancy, and is therefore so acceptable to all people.’

This is, I think, the best and most philosophical account that I have ever met with of wit, which generally, though not always, consists in such a resemblance and congruity of ideas as this author mentions. I shall only add to it, by way of explanation, that every resemblance of ideas is not that which we call wit, unless it be such an one that gives delight and surprise to the reader. These two properties seem essential to wit, more particularly the last of them. In order therefore that the resemblance in the ideas be wit, it is necessary that the ideas should not lie too near one another in the nature of things; for where the likeness is obvious, it gives no surprise. To compare one man’s singing to that of another, or to represent the whiteness of any object by that of milk and snow, or the variety of its colours by

1. Wisdom is the starting point and source of correct writing (Latin). From *Ars Poetica* (see above) by the Roman lyric poet HORACE (65–8 B.C.E.).

2. John Locke (1632–1704), English philosopher. The “reflection” is in his *Essay Concerning Human Understanding* (1690), 2.11.2.

those of the rainbow, cannot be called wit, unless, besides this obvious resemblance, there be some further congruity discovered in the two ideas that is capable of giving the reader some surprise. Thus when a poet tells us, the bosom of his mistress is as white as snow, there is not wit in the comparison; but when he adds, with a sigh, that it is as cold too, it then grows into wit. Every reader's memory may supply him with innumerable instances of the same nature. For this reason, the similitudes in heroic poets, who endeavour rather to fill the mind with great conceptions, than to divert it with such as are new and surprising, have seldom anything in them that can be called wit. Mr. Locke's account of wit, with this short explanation, comprehends most of the species of wit, as metaphors, similitudes, allegories, enigmas, mottoes, parables, fables, dreams, visions, dramatic writings, burlesque, and all the methods of allusion: as there are many other pieces of wit (how remote soever they may appear at first sight from the foregoing description) which upon examination will be found to agree with it.

As true wit generally consists in this resemblance and congruity of ideas, false wit chiefly consists in the resemblance and congruity sometimes of single letters, as in anagrams, chronograms, lipograms,³ and acrostics; sometimes of syllables, as in echoes and doggerel rhymes; sometimes of words, as in puns and quibbles; and sometimes of whole sentences or poems, cast into the figures of eggs, axes, or altars:⁴ nay, some carry the notion of wit so far, as to ascribe it even to external mimicry; and to look upon a man as an ingenious person, that can resemble the tone, posture, or face of another.

As true wit consists in the resemblance of ideas, and false wit in the resemblance of words, according to the foregoing instances; there is another kind of wit which consists partly in the resemblance of ideas, and partly in the resemblance of words; which for distinction's sake I shall call mixed wit. This kind of wit is that which abounds in Cowley, more than in any author that ever wrote. Mr. Waller⁵ has likewise a great deal of it. Mr. Dryden is very sparing in it. Milton had a genius much above it. Spenser⁶ is in the same class with Milton. The Italians, even in their epic poetry, are full of it. Monsieur Boileau,⁷ who formed himself upon the ancient poets, has everywhere rejected it with scorn. If we look after mixed wit among the Greek writers, we shall find it nowhere but in the epigrammatists. There are indeed some strokes of it in the little poem ascribed to Musæus,⁸ which by that, as well as many other marks, betrays itself to be a modern composition. If we look into the Latin writers, we find none of this mixed wit in Virgil, Lucretius,

3. Compositions in which all words containing a certain letter or letters are omitted. "Chronograms": phrases in which certain letters express a date (e.g., capitalized letters that stand for Roman numerals).

4. Famous examples of such pattern or shaped poems include "The Altar" and "Easter Wings" by George Herbert (1593–1633).

5. Edmund Waller (1606–1687), English poet admired for his development of the heroic couplet. Abraham Cowley (1618–1667), English metaphysical poet. Unusual metaphor is characteristic of metaphysical poetry.

6. Edmund Spenser (ca. 1552–1599), English poet whose works include the unfinished epic *The Faerie Queene*. JOHN DRYDEN (1631–1700), English poet, dramatist, and critic. John Milton (1608–1674), English poet and prose writer; his masterpiece is the epic *Paradise Lost*.

7. Nicolas Boileau (1636–1711), French poet, dramatist, and critic; author of *The Art of Poetry*, a treatise in verse (1674).

8. Greek poet (probably late 5th c. C.E.). "The little poem": *Hero and Leander*, translated in 1635.

or Catullus;⁹ very little in Horace, but a great deal of it in Ovid, and scarce anything else in Martial.¹

Out of the innumerable branches of mixed wit, I shall choose one instance which may be met with in all the writers of this class. The passion of love in its nature has been thought to resemble fire; for which reason the words fire and flame are made use of to signify love. The witty poets therefore have taken an advantage from the doubtful meaning of the word fire, to make an infinite number of witticisms. Cowley observing the cold regard of his mistress's eyes,² and at the same time their power of producing love in him, considers them as burning-glasses made of ice; and finding himself able to live in the greatest extremities of love, concludes the torrid zone to be habitable. When his mistress has read his letter written in juice of lemon by holding it to the fire, he desires her to read it over a second time by love's flames. When she weeps, he wishes it were inward heat that distilled those drops from the limbec.³ When she is absent he is beyond eighty, that is, thirty degrees nearer the pole⁴ than when she is with him. His ambitious love is a fire that naturally mounts upwards; his happy love is the beams of heaven, and his unhappy love flames of hell. When it does not let him sleep, it is a flame that sends up no smoke; when it is opposed by counsel and advice, it is a fire that rages the more by the wind's blowing upon it. Upon the dying of a tree in which he had cut his loves, he observes that his written flames had burned up and withered the tree. When he resolves to give over his passion, he tells us that one burnt like him for ever dreads the fire. His heart is an *Ætna*, that instead of *Vulcan's* shop encloses *Cupid's* forge in it.⁵ His endeavouring to drown his love in wine, is throwing oil upon the fire. He would insinuate to his mistress, that the fire of love, like that of the sun (which produces so many living creatures) should not only warm but beget. Love in another place cooks pleasure at his fire. Sometimes the poet's heart is frozen in every breast, and sometimes scorched in every eye. Sometimes he is drowned in tears, and burnt in love, like a ship set on fire in the middle of the sea.

The reader may observe in every one of these instances, that the poet mixes the qualities of fire with those of love; and in the same sentence speaking of it both as a passion, and as real fire, surprises the reader with those seeming resemblances or contradictions that make up all the wit in this kind of writing. Mixed wit therefore is a composition of pun and true wit, and is more or less perfect as the resemblance lies in the ideas or in the words: its foundations are laid partly in falsehood and partly in truth: reason puts in her claim for one half of it, and extravagance for the other. The only province therefore for this kind of wit, is epigram, or those little occasional poems that in their own nature are nothing else but a tissue of epi-

9. All poets of the Latin "Golden Age," writing in varied genres on a range of subjects: eclogues, georgics, and epic (Virgil, 70–19 B.C.E.); philosophy (Lucretius, ca. 94–55 B.C.E.); and love lyrics and elegy (Catullus, ca. 84–ca. 54 B.C.E.).

1. Roman poet (ca. 40–ca. 104 C.E.), known for his epigrams. Ovid (43 B.C.E.–17 C.E.), Roman poet of outstanding verbal brilliance, author of love poetry and a highly mannered epic, the *Metamorphoses*.

2. In "The Mistress, or Several Copies of Love-Verses" (1647).

3. Alembic: that is, an apparatus used in distillation.

4. That is, 30 degrees nearer than in England, which is roughly 50 degrees north of the equator.

5. Mt. Etna, a volcano in Sicily, was supposed to be the workshop of *Vulcan*, the Roman god of fire, who had a forge; *Cupid*, son of *Vulcan* and *Venus*, was the Roman boy-god of love.

grams. I cannot conclude this head of mixed wit, without owning that the admirable poet out of whom I have taken the examples of it, had as much true wit as any author that ever writ; and indeed all other talents of an extraordinary genius.

It may be expected, since I am upon this subject, that I should take notice of Mr. Dryden's definition of wit; which, with all the deference that is due to the judgment of so great a man, is not so properly a definition of wit, as of good writing in general. Wit, as he defines it, is 'a propriety of words and thoughts adapted to the subject.'⁶ If this be a true definition of wit, I am apt to think that Euclid⁷ was the greatest wit that ever set pen to paper: it is certain there never was a greater propriety of words and thoughts adapted to the subject, than what that author has made use of in his elements. I shall only appeal to my reader, if this definition agrees with any notion he has of wit: if it be a true one, I am sure Mr. Dryden was not only a better poet, but a greater wit than Mr. Cowley; and Virgil a much more facetious man than either Ovid or Martial.

Bouhours,⁸ whom I look upon to be the most penetrating of all the French critics, has taken pains to show that it is impossible for any thought to be beautiful which is not just, and has not its foundation in the nature of things; that the basis of all wit is truth; and that no thought can be valuable, of which good sense is not the ground-work. Boileau has endeavoured to inculcate the same notion in several parts of his writings, both in prose and verse. This is that natural way of writing, that beautiful simplicity, which we so much admire in the compositions of the ancients; and which nobody deviates from, but those who want strength of genius to make a thought shine in its own natural beauties. Poets who want this strength of genius to give that majestic simplicity to nature, which we so much admire in the works of the ancients, are forced to hunt after foreign ornaments, and not to let any piece of wit of what kind soever escape them. I look upon these writers as Goths⁹ in poetry, who, like those in architecture, not being able to come up to the beautiful simplicity of the old Greeks and Romans, have endeavoured to supply its place with all the extravagances of an irregular fancy. Mr. Dryden makes a very handsome observation on Ovid's writing a letter from Dido to Æneas,¹ in the following words: 'Ovid (says he, speaking of Virgil's fiction of Dido and Æneas) takes it up after him, even in the same age, and makes an ancient heroine of Virgil's new-created Dido; dictates a letter for her just before her death to the ungrateful fugitive; and, very unluckily for himself, is for measuring a sword with a man so much superior in force to him, on the same subject. I think I may be judge of this, because I have translated both.

6. Dryden, preface to *The State of Innocence* (1674, 1677): "The definition of wit . . . is only this: that it is a propriety of thoughts and words; or, in other terms, thoughts and words elegantly adapted to the subject."

7. Greek mathematician (active ca. 300 B.C.E.), author of a 13-volume treatise on mathematics, the *Elements*.

8. Dominique Bouhours (1628–1702), Jesuit teacher and grammarian; one of his works was translated into English in 1705 as *The Art of Criticism*.

9. Germanic peoples who invaded the Roman

Empire in the early centuries of the Christian era. "Gothic" at this time has several meanings: Germanic; medieval, not classical; barbarous, crude. It also refers to a medieval architectural style not derived from Greek or Roman models.

1. In one of Ovid's *Heroides* (ca. 16 B.C.E.), which were verse letters between mythological lovers. Dryden's observation is from the dedication to his translation of Virgil's *Aeneid* (1697), Ovid's source for the story of Dido, the legendary founder and queen of Carthage, who killed herself when Æneas, the legendary founder of Rome, deserted her.

The famous author of the art of love² has nothing of his own; he borrows all from a greater master in his own profession, and, which is worse, improves nothing which he finds: nature fails him, and being forced to his old shift, he has recourse to witticism. This passes indeed with his soft admirers, and gives him the preference to Virgil in their esteem.'

Were not I supported by so great an authority as that of Mr. Dryden, I should not venture to observe, that the taste of most of our English poets, as well as readers, is extremely Gothic. He quotes Monsieur Segrain³ for a threefold distinction of the readers of poetry: in the first of which he comprehends the rabble of readers, whom he does not treat as such with regard to their quality, but to their numbers and the coarseness of their taste. His words are as follow: 'Segrain has distinguished the readers of poetry, according to their capacity of judging, into three classes. (He might have said the same of writers too, if he had pleased.) In the lowest form he places those whom he calls *les petits esprits*,⁴ such things as are our upper-gallery audience in a play-house; who like nothing but the husk and rind of wit, prefer a quibble, a conceit, an epigram, before solid sense and elegant expression: these are mob-readers. If Virgil and Martial stood for parliament-men, we know already who would carry it.⁵ But though they make the greatest appearance in the field, and cry the loudest, the best on't is they are but a sort of French Huguenots, or Dutch boors,⁶ brought over in herds, but not naturalised; who have not lands of two pounds per annum in Parnassus,⁷ and therefore are not privileged to poll.⁸ Their authors are of the same level, fit to represent them on a mountebank's stage, or to be masters of the ceremonies in a bear-garden:⁹ yet these are they who have the most admirers. But it often happens, to their mortification, that as their readers improve their stock of sense (as they may by reading better books, and by conversation with men of judgment) they soon forsake them.'

I must not dismiss this subject without observing, that as Mr. Locke in the passage above mentioned has discovered the most fruitful source of wit, so there is another of a quite contrary nature to it, which does likewise branch itself out into several kinds. For not only the resemblance but the opposition of ideas does very often produce wit; as I could show in several little points, turns, and antitheses, that I may possibly enlarge upon in some future speculation.

1711

2. *The Art of Love* is a didactic poem by Ovid.

3. Jean Regnaud de Segrain (1624–1701), French poet who translated Virgil's *Aeneid* and *Georgics*; Dryden quotes from an essay prefixed to that translation.

4. The small-minded (French).

5. That is, the witty Martial would defeat the solemn Virgil in an election.

6. Peasants. Addison here names the largest groups of immigrants in England.

7. Greek mountain sacred to Apollo and the Muses, and thus associated with poetry.

8. Vote. Only those who met certain property requirements could vote.

9. The site of bearbaiting (setting dogs on a chained bear for entertainment).

From The Spectator, No. 412 [On the Sublime]

—*Divisum sic breve fiet opus.*¹

—Martial, *Epigrams*, 4.83

I shall first consider those pleasures of the imagination which arise from the actual view and survey of outward objects. And these, I think, all proceed from the sight of what is great, uncommon, or beautiful. There may, indeed, be something so terrible or offensive, that the horror or loathsomeness of an object may overbear the pleasure which results from its greatness, novelty, or beauty; but still there will be such a mixture of delight in the very disgust it gives us, as any of these three qualifications are most conspicuous and prevailing.

By greatness, I do not only mean the bulk of any single object, but the largeness of a whole view, considered as one entire piece. Such are the prospects of an open champion² country, a vast uncultivated desert, of huge heaps of mountains, high rocks and precipices, or a wide expanse of waters, where we are not struck with the novelty or beauty of the sight, but with that rude kind of magnificence which appears in many of these stupendous works of Nature. Our imagination loves to be filled with an object, or to grasp at anything that is too big for its capacity. We are flung into a pleasing astonishment at such unbounded views, and feel a delightful stillness and amazement in the soul at the apprehension of them. The mind of man naturally hates everything that looks like a restraint upon it, and is apt to fancy itself under a sort of confinement, when the sight is pent up in a narrow compass, and shortened on every side by the neighbourhood of walls or mountains. On the contrary, a spacious horizon is an image of liberty, where the eye has room to range abroad, to expatiate³ at large on the immensity of its views, and to lose itself amidst the variety of objects that offer themselves to its observation. Such wide and undetermined⁴ prospects are as pleasing to the fancy, as the speculations of eternity or infinitude are to the understanding. But if there be a beauty or uncommonness joined with this grandeur, as in a troubled ocean, a heaven adorned with stars and meteors, or a spacious landscape cut out into rivers, woods, rocks, and meadows, the pleasure still grows upon us, as it arises from more than a single principle.

Everything that is new or uncommon raises a pleasure in the imagination, because it fills the soul with an agreeable surprise, gratifies its curiosity, and gives it an idea of which it was not before possessed. We are, indeed, so often conversant with one set of objects, and tired out with so many repeated shows of the same things, that whatever is new or uncommon contributes a little to vary human life, and to divert our minds, for a while, with the strangeness of its appearance: it serves us for a kind of refreshment, and takes off from that satiety we are apt to complain of in our usual and ordinary entertainments. It is this that bestows charms on a

1. Divided thus, the work will be made brief (Latin). From the Roman poet Martial (ca. 40–ca. 104 C.E.), *Epigrams*.

2. Unbroken level plain.

3. Range freely.

4. Open.

monster, and makes even the imperfections of nature please us. It is this that recommends variety, where the mind is every instant called off to something new, and the attention not suffered to dwell too long, and waste itself on any particular object. It is this, likewise, that improves what is great or beautiful, and makes it afford the mind a double entertainment. Groves, fields, and meadows are at any season of the year pleasant to look upon, but never so much as in the opening of the spring, when they are all new and fresh with their first gloss upon them, and not yet too much accustomed and familiar to the eye. For this reason there is nothing that more enlivens a prospect than rivers, jetteaus,⁵ or falls of water, where the scene is perpetually shifting, and entertaining the sight every moment with something that is new. We are quickly tired with looking upon hills and valleys, where everything continues fixed and settled in the same place and posture, but find our thoughts a little agitated and relieved at the sight of such objects as are ever in motion, and sliding away from beneath the eye of the beholder.

But there is nothing that makes its way more directly to the soul than beauty, which immediately diffuses a secret satisfaction and complacency through the imagination, and gives a finishing to anything that is great or uncommon. The very first discovery of it strikes the mind with an inward joy, and spreads a cheerfulness and delight through all its faculties. There is not, perhaps, any real beauty or deformity more in one piece of matter than another, because we might have been so made that whatsoever now appears loathsome to us might have shown itself agreeable; but we find by experience that there are several modifications of matter which the mind, without any previous consideration, pronounces at first sight beautiful or deformed. Thus we see that every different species of sensible⁶ creatures has its different notions of beauty, and that each of them is most affected with the beauties of its own kind. This is nowhere more remarkable than in birds of the same shape and proportion, where we often see the male determined in his courtship by the single grain⁷ or tincture of a feather, and never discovering any charms but in the colour of its species.⁸

* * *

There is a second kind of beauty that we find in the several products of art and nature which does not work in the imagination with that warmth and violence as the beauty that appears in our proper species, but is apt, however, to raise in us a secret delight, and a kind of fondness for the places or objects in which we discover it. This consists either in the gaiety or variety of colours, in the symmetry and proportion of parts, in the arrangement and disposition of bodies, or in a just mixture and concurrence of all together. Among these several kinds of beauty the eye takes most delight in colours. We nowhere meet with a more glorious or pleasing show in nature than what appears in the heavens at the rising and setting of the sun, which is wholly made up of those different stains of light that show themselves in clouds of a different situation. For this reason we find the poets, who are always addressing themselves to the imagination, borrowing more of their epithets from colours than from any other topic.

5. Fountains or jets of water.

6. Endowed with sensation.

7. Hue.

8. We have omitted here 19 lines of Latin verse, probably by Addison himself, describing the courtship of birds.

As the fancy delights in everything that is great, strange, or beautiful, and is still more pleased the more it finds of these perfections in the same object, so it is capable of receiving a new satisfaction by the assistance of another sense. Thus any continued sound, as the music of birds, or a fall of water, awakens every moment the mind of the beholder, and makes him more attentive to the several beauties of the place that lie before him. Thus if there arises a fragrant of smells or perfumes, they heighten the pleasures of the imagination, and make even the colours and verdure of the landscape appear more agreeable; for the ideas of both senses recommend each other, and are pleasanter together than when they enter the mind separately, as the different colours of a picture, when they are well disposed, set off one another, and receive an additional beauty from the advantage of their situation.

1712

ALEXANDER POPE

1688–1744

Scholars have noted dozens of sources—the Roman writers HORACE and Quintilian (ca. 30/35–100 C.E.), the French poet-critic Nicolas Boileau (1636–1711), his English contemporary JOHN DRYDEN, and many more—for Alexander Pope’s versified “art of poetry,” *An Essay on Criticism* (1711); but their labors, though valuable, miss the central point. Pope advanced no claims for the originality of the views he presented, and in the final analysis his poem is memorable less for its doctrine than for the brilliance of its style, which revitalizes familiar teachings and makes them sparkle. It delightfully illustrates Pope’s own view of literary “borrowing”: that “poets, like merchants, should repay with something of their own what they take from others, not, like pirates, make prize of all they meet.” The *Essay* is a sophisticated, witty poem, a compendium of critical principles, with much reading and reflection behind it—from an author who was astonishingly young when it was written.

Pope was born in London in 1688, the year of the Glorious Revolution, when the Catholic King James II was deposed in favor of Protestant William III and Mary II. He was the son of a linen merchant who was Roman Catholic, and thus suffered from the controls of England’s anti-Catholic laws. While not always strictly enforced, these laws were onerous. Catholics were prevented from practicing their religion freely; they could not legally reside within ten miles of London; they were not allowed to attend the universities, vote, or hold public offices or seats in Parliament. In 1711 Pope’s family moved to Binfield in Windsor Forest, thirty miles outside London, a place that Pope described evocatively in one of his best early poems, “Windsor-Forest” (1713).

A local priest taught Greek and Latin to Pope, and he picked up French and Italian during a short term of study in London. Pope’s father encouraged him to write verse, insisting that his son’s rhymes be perfect, and Pope early on crafted “imitations” of Chaucer (ca. 1343–1400), Edmund Spenser (1552–1599), Edmund Waller (1606–1687), and Abraham Cowley (1618–1667). Limitations not simply legal but also physical encouraged him to focus on his literary efforts. Tuberculosis of the bones in childhood had curved Pope’s spine and stunted his growth—he was only

four and a half feet tall—and throughout his life he suffered from frequent and severe headaches.

In addition to *An Essay on Criticism* and “Windsor-Forest,” Pope’s major poems include “The Rape of the Lock” (1712; enlarged ed., 1714); *The Dunciad*, targeting Pope’s literary enemies (first published anonymously in 1728; enlarged eds. 1742, 1743); *Moral Essays* (1731–35); *Imitations of Horace* (1733–38) and their prologue, “An Epistle to Dr. Arbuthnot” (1735); and *An Essay on Man* (1733–34), a philosophical poem designed to “vindicate the ways of God to Man” (1.16). Pope also produced a magnificent translation of the *Iliad* (1715–20), co-translated the *Odyssey* (1725–26), and edited the works of Shakespeare (1725). He had concerns outside literature; his keen interests in painting, sculpture, architecture, and horticulture were expressed in the garden and grotto that he built at Twickenham, a five-acre villa he rented on the Thames, where he moved with his mother after his father’s death in 1718.

An Essay on Criticism was published anonymously on May 15, 1711, a week before the poet’s twenty-third birthday. The manuscript we have is dated in Pope’s hand, “Written in the year 1709,” but elsewhere he put the date of composition as early as 1706. And though he claimed to have written the *Essay* quickly, the manuscript shows that he revised his poem carefully. For later editions, Pope provided a table of contents and divided the 750-line poem into three parts—the second starting at line 201 and the third at line 560.

Pope means his lively heroic couplets to remind readers of principles they already should know. Like many writers in the seventeenth and eighteenth centuries, he judges literature to be plagued by ill-informed, careless, proud, and pompous critics, whose mistaken evaluations of texts mislead authors as well as readers. John Dryden, in “The Author’s Apology for Heroic Poetry” (1677), similarly laments that he and his fellow authors have “fallen into an age of illiterate, censorious, and detracting people, who, thus qualified, set up for critics.” In the *Essay* Pope writes that the dismaying state of criticism reflects a broad historical decline from the Greek and Roman past—the golden age of art, when critics generously sought to advise authors and to instruct readers on how to appreciate them.

The best works of art, Pope maintains, derive from a deeply felt, well-reasoned study of Nature; and studying the great works of the past leads one to see their reliance on the stable principles of harmony and order that Nature itself teaches. This is Pope’s and his age’s neoclassicism—to imitate the ancient authors and adopt the critical precepts that these authors and their texts embody. Like Jonathan Swift, JOSEPH ADDISON, and other significant writers of the early to mid-eighteenth century, Pope particularly admired the authors, notably Virgil, Ovid, and Horace, who had flourished during the reign of the Roman emperor Augustus (27 B.C.E.–14 C.E.), and he sought through his writing to make his own era similarly “Augustan” in its literary production. Reading Homer and Virgil, Pope believed, sharpens taste and judgment and enables us to perceive the intimate relationship between art and Nature. The classic texts are, like Nature, a standard and a guide. Their balance, harmony, and good proportion are evident in their parts as well as demonstrated in the whole. In the prosody of a poem, for example, the sound and meter in a well-proportioned and well-regulated work enact the actions and the sense conveyed (see lines 364–73).

At moments, as when Pope rebukes pride and envy (e.g., lines 201–18), the *Essay* might strike some readers today as less about literature and criticism than about morality. But as Pope sees it, good authors or critics must truly know themselves and possess a finely developed moral sense and purpose. Such people know and abide by the limits of human aspiration, seek models for right aesthetic and moral conduct, and guard against the self-delusion and self-destructiveness of overweening pride.

Some critics contend that Pope uses his chief terms, such as *Nature*, *wit*, and *judgment*, too loosely, and they have claimed that the *Essay* lacks a coherent structure. It is, like Horace's *Ars Poetica*, more associative than logical. It offers encouragement and advice in a sequence of briskly paced observations on the nature of art, the value of the ancients, the importance of the rules, the need to observe decorum in word selection, the connection between artistic creation and criticism, and other topics. The key words are invoked in different passages to enliven the specific point at hand. Rather than using them loosely, Pope deliberately draws on all of their senses.

For example, *wit* (from the Old English *witan*, "to know") is a complex, multivalent word, difficult to pin down, and Pope capitalizes on its range of meanings and implications. It means, first, the mind or the understanding, the faculty of reasoning and thinking. In his *Dictionary* (1755), SAMUEL JOHNSON gives as its "original signification" "the powers of the mind; the mental faculties; the intellects." But wit can also refer, he notes, to a poetic conceit, figure of speech, felicitous phrasing, common sense, inventiveness, astuteness of perception, the capacity to see resemblance in apparently unlike things, cleverness, fancy, genius; it can mean the imaginative power that judgment must temper and control (see, e.g., lines 82–83), even as it also implies judgment itself—wit curbing excessive wit. Pope offers his own definition in perhaps the best-known couplets of the *Essay*:

True Wit is Nature to Advantage drest,
What oft was *Thought*, but ne'er so well *Exprest*,
Something, whose Truth convinc'd at Sight we find,
That gives us back the Image of our Mind. (lines 297–300)

Wit is Nature; it instances something that we have all thought, but whose sheer truth the poet now makes compelling through his or her language. True wit is subtle, sharp, and, above all, surprising—a striking image, a vivid metaphor, a paradoxical figure of speech. Addison and Johnson also delve into the nature of wit, but it is Pope who exemplifies the meanings of this complex word and idea more inventively than any other writer in the canon of eighteenth-century English literature and criticism.

The most memorable assessment of the *Essay* remains Samuel Johnson's: "[The *Essay*] exhibits every mode of excellence that can embellish or dignify didactic composition, selection of matter, novelty of arrangement, justness of precept, splendour of illustration, and propriety of digression." It is a hopeful work, all the more affecting in light of the political quarrels and ferocious literary feuds in which Pope engaged later in his career. These climaxed in his gigantic satire of literary idiocy, *The Dunciad*, in *Four Books*, published in its final form in October 1743. In this great last text of his poetic career, Pope describes the sublime awfulness of hordes of pedants, false poets, and dunces. His dazzling punitive wit here takes on the grotesque grandeur of mock-epic, on a scale eclipsing that displayed in the elegant, highly cultivated early work. *The Dunciad* shows Pope's angry realization of the difficulty in winning wide acceptance for the neoclassical views that he had advocated and had described with both power and grace in *An Essay on Criticism*.

From An Essay on Criticism

———Si quid novisti rectius istis,
Candidus imperti; si non, his utere mecum.
—Horat¹

- 'Tis hard to say, if greater Want of Skill
Appear in *Writing* or in *Judging* ill;
But, of the two, less dang'rous is th' Offence,
To tire our *Patience*, than mis-lead our *Sense*:
5 Some few in *that*, but Numbers err in *this*,
Ten Censure² wrong for one who Writes amiss;
A Fool might once *himself* alone expose,
Now *One* in *Verse* makes many more in *Prose*.
'Tis with our *Judgments* as our *Watches*, none
10 Go just *alike*, yet each believes his own.
In *Poets* as true *Genius* is but rare,
True *Taste* as seldom is the *Critick's* Share;
Both must alike from Heav'n derive their Light,
These *born* to Judge, as well as those to Write.
15 Let such teach others who themselves excell,
And *censure freely* who have *written well*.
Authors are partial to their *Wit*, 'tis true,
But are not *Criticks* to their *Judgment* too?
Yet if we look more closely, we shall find
20 Most have the *Seeds* of Judgment in their Mind;
Nature affords at least a *glimm'ring Light*;
The *Lines*, tho' touch'd but faintly, are drawn right.
But as the slightest Sketch, if justly trac'd,
Is by ill *Colouring* but the more disgrac'd,
25 So by *false Learning* is *good Sense* defac'd;
Some are bewilder'd in the Maze of Schools,
And some made *Coxcombs*³ Nature meant but *Fools*.
In search of *Wit* these lose their *common Sense*,
And then turn Criticks in their own Defence.
30 Each burns alike, who can, or cannot write,
Or with a *Rival's*, or an *Eunuch's* spite.
All *Fools* have still an Itching to deride,
And fain *would* be upon the *Laughing Side*:
If *Mævius* Scribble in *Apollo's*⁴ spight,
35 There are, who *judge* still *worse* than he can *write*.
Some have at first for *Wits*, then *Poets* past,
Turn'd *Criticks* next, and prov'd plain *Fools* at last;
Some neither can for *Wits* nor *Criticks* pass,

1. HORACE (65–8 B.C.E.), *Epistles* 1.6.67–68: "If you know any maxims better than these, be so good as to let me know them; if not, use these as I do."

2. Judge.

3. Pretenders to learning, conceited asses.

4. Greek and Roman god of poetry. Mævius (1st c. B.C.E.), a bad poet to whom both Virgil (*Eclogue* 3) and Horace (*Epode* 10) allude.

- As heavy Mules are neither *Horse* nor *Ass*.
 40 Those half-learn'd Witlings, num'rous in our Isle,
 As half-form'd Insects on the Banks of *Nile*;⁵
 Unfinish'd Things, one knows not what to call,
 Their Generation's so *equivocal*:
 To tell⁶ 'em, wou'd a *hundred Tongues* require,
 45 Or *one vain Wit's*, that might a hundred tire.
 But *you* who seek to *give* and *merit* Fame,
 And justly bear a Critick's noble Name,
 Be sure *your self* and your own *Reach* to know,
 How far your *Genius*, *Taste*, and *Learning* go;
 50 Launch not beyond your Depth, but be discreet,
 And mark *that Point* where Sense and Dulness *meet*.
 Nature to all things fix'd the Limits fit,
 And wisely curb'd proud Man's pretending Wit:
 As on the *Land* while *here* the *Ocean* gains,
 55 In *other Parts* it leaves wide sandy Plains;
 Thus in the *Soul* while *Memory* prevails,
 The solid Pow'r of *Understanding* fails;
 Where Beams of warm *Imagination* play,
 The *Memory's* soft Figures melt away.
 60 One *Science*⁷ only will one *Genius* fit;
 So *vast* is Art,⁸ so *narrow* Human Wit:
 Not only bounded to *peculiar Arts*,
 But oft in *those*, confin'd to *single Parts*.
 Like Kings we lose the Conquests gain'd before,
 65 By vain Ambition still to make them more:
 Each might his *sev'ral Province* well command,
 Wou'd all but *stoop* to what they *understand*.
 First follow NATURE,⁹ and your Judgment frame
 By her just Standard, which is still the same:¹
 70 *Unerring Nature*, still divinely bright,
 One *clear, unchang'd*, and *Universal* Light,
 Life, Force, and Beauty, must to all impart,
 At once the *Source*, and *End*, and *Test* of Art.
 Art from that Fund each *just Supply* provides,
 75 Works *without Show*,² and *without Pomp* presides:
 In some fair Body thus th' informing Soul
 With Spirits feeds, with Vigour fills the whole,
 Each Motion guides, and ev'ry Nerve sustains;
 It *self unseen*, but in th' *Effects*, remains.

5. The ancients believed that forms of animal and insect life were spontaneously generated on the banks of the Nile River.

6. Count.

7. Branch of learning.

8. Pope alludes to a maxim attributed to Hippocrates (ca. 460–ca. 377 B.C.E.), celebrated Greek physician: "Life is short, but art [sometimes translated 'science'] is long, opportunity fleeting, experiment dangerous, judgment diffi-

cult."

9. The term encompasses the physical world, the sum of human experiences, and the principle of order and coherence in the universe.

1. Compare JOHN DRYDEN's claim in *Parallel betwixt Poetry and Painting* (1695): "For Nature is still the same in all ages, and can never be contrary to herself."

2. Pope here recalls the familiar Latin maxim *ars est celare artem* (the art is to conceal the art).

- 80 Some, to whom Heav'n in Wit has been profuse,
 Want as much more, to turn it to its use;
 For *Wit*³ and *Judgment* often are at strife,
 Tho' meant each other's Aid, like *Man* and *Wife*.
 'Tis more to *guide* than *spur* the Muse's Steed;⁴
 85 Restrain his Fury, than provoke his Speed;
 The winged Courser, like a gen'rous⁵ Horse,
 Shows most true Mettle when you *check* his Course.

* * *

- OF all the Causes which conspire to blind
 Man's erring Judgment, and misguide the Mind,
 What the weak Head with strongest Byass⁶ rules,
 Is *Pride*, the *never-failing Vice of Fools*.
 205 Whatever Nature has in *Worth* deny'd,
 She gives in large Recruits⁷ of *needful Pride*;
 For as in *Bodies*, thus in *Souls*, we find
 What wants in *Blood* and *Spirits*, swell'd with *Wind*;
 Pride, where Wit fails, steps in to our Defence,
 210 And fills up all the *mighty Void* of Sense!
 If once right Reason drives *that Cloud* away,
Truth breaks upon us with *resistless Day*;
 Trust not your self; but your Defects to know,
 Make use of ev'ry *Friend*—and ev'ry *Foe*.
 215 A *little Learning* is a dang'rous Thing;
 Drink deep, or taste not the *Pierian*⁸ Spring;
 There *shallow Draughts* intoxicate the Brain,
 And drinking *largely* sobers us again.
 Fir'd at first Sight with what the *Muse* imparts,
 220 In *fearless Youth* we tempt⁹ the Heights of Arts,
 While from the bounded *Level* of our Mind,
Short Views we take, nor see the *Lengths behind*,
 But *more advanc'd*, behold with strange Surprise
 New, distant Scenes of *endless Science* rise!
 225 So pleas'd at first, the towering *Alps* we try,
 Mount o'er the Vales, and seem to tread the Sky;
 Th' Eternal Snows appear already past,
 And the first *Clouds* and *Mountains* seem the last:
 But *those attain'd*, we tremble to survey
 230 The growing Labours of the lengthen'd Way,
 Th' *increasing Prospect tires* our wandring Eyes,

3. *Wit* has a range of meanings, including reasoning power, intelligence, mental soundness, sanity, astuteness of perception or judgment, and the ability to see relationships between seemingly disparate things. It also can refer to a person of sound judgment and perception.

4. Pegasus, the winged horse of classical mythology, identified with inspiration. Muse: one of the 9 daughters of Memory who preside over the arts and all intellectual pursuits.

5. High spirited, noble.

6. Bias, a term from lawn bowling; the irregularity in the shape of the ball that causes it to swerve.

7. Supplies, troops, reinforcements.

8. Belonging to the Pierides, another name for the Muses (the spring is Hippocrene—located on Mt. Helicon, in central Greece—which was sacred to the Muses).

9. Attempt, dare.

Hills peep o'er Hills, and *Alps* on *Alps* arise!
 A perfect Judge will *read* each Work of Wit
 With the same Spirit that its Author *writ*,
 235 Survey the Whole, nor seek slight Faults to find,
 Where *Nature moves*, and *Rapture warms* the Mind;
 Nor lose, for that malignant dull Delight,
 The *gen'rous Pleasure* to be charm'd with Wit.
 But in such Lays¹ as neither *ebb*, nor *flow*,
 240 *Correctly cold*, and *regularly low*,
 That shunning Faults, one quiet *Tenour* keep;
 We cannot *blame* indeed—but we may *sleep*.
 In Wit, as Nature, what affects our Hearts
 Is not th' Exactness of peculiar Parts;
 245 'Tis not a Lip, or *Eye*, we Beauty call,
 But the joint Force and full *Result* of *all*.
 Thus when we view some well-proportion'd Dome,²
 (The *World's* just Wonder, and ev'n *thine* O *Rome*!)
 No single Parts unequally surprize;
 250 All comes *united* to th' admiring Eyes;
 No monstrous Height, or Breadth, or Length appear;
 The *Whole* at once is *Bold*, and *Regular*.
 Whoever thinks a faultless Piece to see,
 Thinks what ne'er was, nor is, nor e'er shall be.
 255 In ev'ry Work regard the *Writer's End*,
 Since none can compass more than they *Intend*;
 And if the *Means* be just, the *Conduct* true,
 Applause, in spite of trivial Faults, is due.³
 As Men of Breeding, sometimes Men of Wit,
 260 T' avoid *great Errors*, must the *less* commit,
 Neglect the Rules each *Verbal Critick* lays,
 For *not* to know some Trifles, is a Praise.
 Most Criticks, fond of some subservient Art,
 Still make the *Whole* depend upon a *Part*,
 265 They talk of *Principles*, but Notions prize,
 And All to one lov'd Folly Sacrifice.
 Once on a time, *La Mancha's* Knight,⁴ they say,
 A certain *Bard* encountring on the Way,
 Discours'd in Terms as just, with Looks as Sage,
 270 As e'er cou'd *Dennis*,⁵ of the *Grecian* Stage;
 Concluding all were desp'rate Sots and Fools,
 Who durst depart from *Aristotle's* Rules.⁶

1. Songs; narrative poems or ballads.

2. Specifically, the dome of St. Peter's Basilica in Rome (16th c.).

3. Compare John Dryden, "The Author's Apology for Heroic Poetry" (1677): "'Tis malicious and unmannerly to snarl at the little lapses of a pen, from which Virgil [Roman poet (70–19 B.C.E.)], author of the greatest Latin epic, the *Aeneid*] himself stands not exempted."

4. Don Quixote, title character of the work by

Miguel de Cervantes (1605, 1615); but Pope's story is taken from a spurious sequel to *Don Quixote* written by Don Alonzo Fernandez de Avellaneda (trans. 1705).

5. John Dennis (1657–1734), English critic and playwright.

6. That is, the "rules" for tragedy and epic derived from his *Poetics* (see above); because ARISTOTLE (384–322 B.C.E.) was born in Stagira (in Macedonia), he was sometimes called "the Stagyrite."

- Our Author, happy in a Judge so nice,⁷
 Produc'd his Play, and beg'd the Knight's Advice,
 275 Made him observe the *Subject* and the *Plot*,
 The *Manners*, *Passions*, *Unities*,⁸ what not?
 All which, exact to *Rule* were brought about,
 Were but a *Combate in the Lists*⁹ left out.
What! Leave the Combate out? Exclaims the Knight;
 280 Yes, or we must renounce the *Stagyrite*.
Not so by Heav'n (he answers in a Rage)
Knights, Squires, and Steeds, must enter on the Stage.
 So vast a Throng the Stage can ne'er contain.
Then build a New, or act it in a Plain.
 285 Thus Criticks, of less Judgment than *Caprice*,
Curious,¹ not *Knowing*, not *exact*, but *nice*,
 Form *short Ideas*; and offend in *Arts*
 (As most in *Manners*) by a *Love to Parts*.
 Some to *Conceit*² alone their Taste confine,
 290 And glitt'ring Thoughts struck out³ at ev'ry Line;
 Pleas'd with a Work where nothing's just or fit;
 One *glaring Chaos* and *wild Heap* of Wit:
 Poets like Painters, thus, unskill'd to trace
 The *naked Nature* and the *living Grace*,
 295 With *Gold* and *Jewels* cover ev'ry Part,
 And hide with *Ornaments* their *Want of Art*.
True Wit is *Nature* to Advantage drest,
 What oft was *Thought*, but ne'er so well *Exprest*,
Something, whose Truth convinc'd at Sight we find,
 300 That gives us back the Image of our Mind:
 As Shades more sweetly recommend the Light,
 So modest Plainness sets off sprightly Wit:
 For *Works* may have more *Wit* than does 'em good,
 As *Bodies* perish through Excess of *Blood*.⁴
 305 Others for *Language* all their Care express,
 And value *Books*, as Women *Men*, for *Dress*:
 Their Praise is still—*The Stile is excellent*:
 The *Sense*, they humbly take upon Content.⁵
Words are like *Leaves*; and where they most abound,
 310 Much *Fruit of Sense* beneath is rarely found.
False Eloquence, like the *Prismatic Glass*,
 Its gawdy Colours spreads on *ev'ry place*,⁶
 The Face of Nature we no more Survey,
 All glares *alike*, without *Distinction* gay:
 315 But true *Expression*, like th' unchanging *Sun*,

7. Precise, overrefined.

8. The neoclassical unities (of action, time, and place) thought to govern drama; see PIERRE CORNEILLE, "Of the Three Unities" (1660; above).

9. Field for jousting.

1. Particular, difficult to satisfy.

2. The extravagant use of similes and metaphors.

3. Produced by a stroke of invention.

4. Standard medical practice of Pope's time included bleeding patients to reduce their "excess of blood."

5. Accept on authority.

6. An allusion to Isaac Newton's *Optics* (1703), which discusses the prism and spectrum.

Clears, and improves whate'er it shines upon,
 It *gilds* all Objects, but it *alters* none.
 Expression is the *Dress of Thought*, and still
 Appears more *decent* as more *suitable*;
 320 A vile Conceit in pompous Words exprest,
 Is like a Clown in regal Purple drest;
 For diff'rent *Styles* with diff'rent *Subjects* sort,
 As several Garbs with Country, Town, and Court.
 Some by *Old Words* to Fame have made Pretence;
 325 Ancients in *Phrase*, meer Moderns in their *Sense*!
 Such *labour'd Nothings*, in so *strange* a *Style*,
Amaze th'unlearn'd, and make the Learned *Smile*.
 Unlucky, as *Fungoso*⁷ in the Play,
 These Sparks with aukward Vanity display
 330 What the Fine Gentleman wore *Yesterday*!
 And but so mimick ancient Wits at best,
 As Apes our Grandsires in their *Doublets drest*.
 In *Words*, as *Fashions*, the same Rule will hold;
 Alike Fantastick, if *too New*, or *Old*;
 335 Be not the *first* by whom the *New* are try'd,
 Nor yet the *last* to lay the *Old* aside.
 But most by *Numbers*⁸ judge a Poet's Song,
 And *smooth* or *rough*, with them, is *right* or *wrong*;
 In the bright *Muse* tho' thousand *Charms* conspire,
 340 Her Voice is all these tuneful Fools admire,
 Who haunt *Parnassus* but to please their Ear,
 Not mend their Minds; as some to *Church* repair,
 Not for the *Doctrine*, but the *Musick* there.
 These *Equal Syllables* alone require,
 345 Tho' oft the Ear the open *Vowels* tire,⁹
 While *Expletives*¹ their feeble Aid *do* join,
 And ten low Words oft creep in one dull Line,
 While they ring round the same *unvary'd Chimes*,
 With sure *Returns* of still *expected Rhymes*.
 350 Where-e'er you find the cooling *Western Breeze*,
 In the next Line, it *whispers thro' the Trees*;
 If *Chrystal Streams* with *pleasing Murmurs* creep,
 The Reader's threaten'd (not in vain) with *Sleep*.
 Then, at the *last*, and *only* Couplet fraught
 355 With some *unmeaning* Thing they call a *Thought*,
 A *needless Alexandrine*² ends the Song,
 That like a wounded Snake, drags its slow length along.
 Leave such to tune their own dull Rhimes, and know

7. A poor student in Ben Jonson's play *Every Man out of His Humour* (1599), who tries without success to keep up with the fashions.

8. Meters.

9. That is, when a word ending in a vowel is followed by a word beginning with one (e.g., "the open"). Throughout this passage, Pope exempli-

fies in his verse the fault or virtue discussed.

1. Words used to complete the number of feet needed in a line of verse without adding to the sense.

2. A line of 12 syllables (rather than the usual 10), like line 357.

- What's *roundly smooth*, or *languishingly slow*;
 360 And praise the *Easie Vigor* of a Line,
 Where *Denham's* Strength, and *Waller's* Sweetness join.³
 True Ease in Writing comes from Art, not Chance,
 As those move easiest who have learn'd to dance.
 'Tis not enough no Harshness gives Offence,
 365 The *Sound* must seem an *Eccho* to the *Sense*.
Soft is the Strain when *Zephyr*⁴ gently blows,
 And the *smooth Stream* in *smoother Numbers* flows;
 But when loud Surges lash the sounding Shore,
 The *hoarse, rough Verse* shou'd like the *Torrent* roar.
 370 When *Ajax*⁵ strives, some Rock's vast Weight to throw,
 The Line too *labours*, and the Words move *slow*;
 Not so, when swift *Camilla*⁶ scours the Plain,
 Flies o'er th'unbending Corn, and skims along the Main.
 Hear how *Timotheus*⁷ vary'd Lays surprize,
 375 And bid Alternate Passions fall and rise!
 While, at each Change, the Son of *Lybian Jove*⁸
 Now *burns* with Glory, and then *melts* with Love;
 Now his *fierce Eyes* with *sparkling Fury* glow;
 Now *Sighs* steal out, and *Tears begin to flow*:
 380 *Persians* and *Greeks* like *Turns of Nature*⁹ found,
 And the *World's Victor* stood subdu'd by *Sound*!
The Pow'r of Musick all our Hearts allow;
 And what *Timotheus* was, is *Dryden* now.
 Avoid *Extreams*; and shun the Fault of such,
 385 Who still are pleas'd *too little*, or *too much*.
 At ev'ry Trifle scorn to take Offence,
 That always shows *Great Pride*, or *Little Sense*;
 Those *Heads* as *Stomachs* are not sure the best
 Which nauseate all, and nothing can digest.
 390 Yet let not each gay *Turn* thy Rapture move,
 For Fools *Admire*, but Men of Sense *Approve*;¹
 As things seem *large* which we thro' *Mists* descry,
Dulness is ever apt to *Magnify*.
 Some *foreign Writers*, some our *own* despise;
 395 The *Ancients* only, or the *Moderns* prize:
 (Thus *Wit*, like *Faith*, by each Man is apply'd
 To *one small Sect*, and All are *damn'd beside*.)

3. Pope, like Dryden before him, admired the English poets John Denham (1615–1669) and, especially, Edmund Waller (1606–1687) for having improved English versification (in particular, the heroic couplet, the form used in this poem).

4. The west wind; a gentle breeze.

5. A Greek hero in the *Iliad*, known for his great strength.

6. A woman warrior who fought against the Trojans in Italy. In *Aeneid* 7.808–11, Virgil describes her ability to skim over ears of wheat (i.e., "corn") and over the sea.

7. Alexander the Great's musician; presented in

Dryden's ode "Alexander's Feast" (1697) as modulating Alexander's moods through the shifts in his music.

8. Alexander the Great (356–323 B.C.E.), who liked to claim that Zeus (identified with the Roman Jupiter) was his father. Priests of the celebrated oracle of Zeus Ammon in Siwa, north of the Libyan desert, greeted Alexander as the son of Zeus.

9. Alternations of feelings.

1. Judge with discrimination (vs. wonder at without comprehension).

Meanly they seek the Blessing to confine,
 And force *that Sun* but on a *Part* to Shine;
 400 Which not alone the Southern Wit sublines,²
 But ripens Spirits in cold *Northern Climes*;
 Which from the first has shone on *Ages past*,
 Enlights the *present*, and shall warm the *last*:
 (Tho' *each* may feel *Increases* and *Decays*,
 405 And see now *clearer* and now *darker Days*)
 Regard not then if Wit be *Old* or *New*,
 But blame the *False*, and value still the *True*.
 Some ne'er advance a Judgment of their own,
 But *catch* the *spreading Notion* of the Town;
 410 They reason and conclude by *Precedent*,
 And own *stale Nonsense* which they ne'er invent.
 Some judge of Authors' *Names*, not *Works*, and then
 Nor praise nor blame the *Writings*, but the *Men*.
 Of all this *Servile Herd* the worst is He
 415 That in *proud Dulness* joins with *Quality*,³
 A constant Critick at the Great-man's Board,
 To *fetch and carry* Nonsense for my Lord.
 What *woful stuff* this Madrigal wou'd be,
 In some starv'd Hackny Sonneteer,⁴ or me?
 420 But let a *Lord* once own the *happy Lines*,
 How the *Wit brightens*! How the *Style refines*!
 Before *his* sacred Name flies ev'ry Fault,
 And each *exalted Stanza teems* with *Thought*!
 The *Vulgar* thus through *Imitation* err;
 425 As oft the *Learn'd* by being *Singular*;
 So much they scorn the Crowd, that if the Throng
 By *Chance* go right, they *purposely* go wrong;
 So Schismatics⁵ the *plain Believers* quit,
 And are but damn'd for having *too much Wit*.
 430 Some praise at Morning what they blame at Night;
 But always think the *last Opinion right*.
 A Muse by these is like a Mistress us'd,
 This hour she's *idoliz'd*, the next *abus'd*,
 While their weak Heads, like Towns unfortify'd,
 435 "Twixt Sense and Nonsense daily change their Side.
 Ask them the Cause; *They're wiser still*, they say;
 And still to Morrow's wiser than to Day.
 We think our *Fathers* Fools, so *wise* we grow;
 Our *wiser Sons*, no doubt, will think *us* so.
 440 Once *School-Divines*⁶ this zealous Isle o'erspread;
 Who knew most *Sentences*⁷ was *deepest read*;

2. Raises up.

3. People of high rank.

4. Hireling poet.

5. Sectarians in religion.

6. Medieval theologians.

7. A reference to Peter Lombard's *Four Books of*

Sentences (ca. 1145–51), which in a long series of questions presents the views of the fathers and doctors of the church on complex doctrinal matters; it became the standard theological text of the Middle Ages.

Faith, Gospel, All, seem'd made to be *disputed*,
 And none had *Sense enough to be Confuted*.
Scotists and *Thomists*,⁸ now, in Peace remain,
 445 Amidst their *kindred Cobwebs* in *Duck-Lane*.⁹
 If *Faith* it self has *diff'rent Dresses* worn,
 What wonder *Modes* in *Wit* shou'd take their Turn?
 Oft, leaving what is Natural and fit,
 The *current Folly* proves the *ready Wit*,¹
 450 And Authors think their Reputation safe,
 Which lives as long as *Fools* are pleas'd to *Laugh*.
 Some valuing those of their own *Side*, or *Mind*,
 Still make themselves the measure of Mankind;
 Fondly² we think we honour Merit then,
 455 When we but praise *Our selves* in *Other Men*.
 Parties in *Wit* attend on those of *State*,
 And publick Faction doubles private Hate.
Pride, *Malice*, *Folly*, against *Dryden* rose,
 In various Shapes of *Parsons*, *Criticks*, *Beaus*,³
 460 But Sense surviv'd, when *merry Jest*s were past;
 For rising Merit will *buoy up* at last.
 Might he return, and bless once more our Eyes,
 New *Blackmores* and new *Milbourns*⁴ must arise;
 Nay shou'd great *Homer* lift his awful⁵ Head,
 465 *Zoilus*⁶ again would start up from the Dead.
Envy will *Merit* as its *Shade* pursue,
 But like a Shadow, proves the *Substance* true;
 For envy'd Wit, like *Sol*⁷ Eclips'd, makes known
 Th' *opposing Body's* Grossness, not its *own*.
 470 When first that Sun too powerful Beams displays,
 It draws up Vapours which obscure its Rays;
 But ev'n those Clouds at last adorn its Way,
 Reflect new Glories, and augment the Day.

* * *

560 LEARN then what MORALS Criticks ought to show,
 For 'tis but *half a Judge's Task*, to *Know*.
 'Tis not enough, Taste, Judgment, Learning, join;
 In all you speak, let Truth and Candor⁸ shine:

8. The two main schools of medieval philosophy were the followers of Duns Scotus (ca. 1270–1308) and of THOMAS AQUINAS (1225–1274).

9. A London street where old books were sold.

1. Facile, clever expression.

2. Foolishly.

3. That is, beaux: fops, dandies, men overly concerned about their dress and appearance. Pope has in mind John Wilmot (1647–1680), second earl of Rochester, and George Villiers (1627–1687), second duke of Buckingham. "Parsons": these included Jeremy Collier (1650–1726), whose *Short View of the Immorality and Profaneness of the English Stage* (1698) targeted Dryden. "Criticks": these included Thomas Shadwell (ca.

1642–1692), an English dramatist and poet who savagely attacked Dryden in the 1680s.

4. Luke Milbourne (1649–1720), a clergyman whose *Notes on Dryden's Virgil* (1698) criticized the translation. Sir Richard Blackmore (1654–1729), physician and poet who criticized Dryden in *Satire against Wit* (1700).

5. Awe-inspiring. Homer (ca. 8th c. B.C.E.), Greek poet to whom the *Iliad* and *Odyssey* are ascribed.

6. A 4th-century B.C.E. philosopher and grammarian notorious for his bitter attacks on the *Iliad* and the *Odyssey*.

7. The sun.

8. Impartiality.

That not alone what to your *Sense* is due,
 565 All may allow; but seek your *Friendship* too.
 Be *silent* always when you *doubt* your *Sense*;
 And *speak*, tho' *sure*, with *seeming Diffidence*:
 Some positive persisting Fops we know,
 Who, if *once wrong*, will needs be *always* so;
 570 But you, with Pleasure own your Errors past,
 And make each Day a *Critick* on⁹ the last.
 'Tis not enough your Counsel still be *true*,
 Blunt Truths more Mischief than *nice Falshoods* do;
 Men must be *taught* as if you taught them *not*;
 575 And Things *unknown* propos'd as Things *forgot*:
 Without *Good Breeding*, *Truth* is disapprov'd;
 That only makes *Superior Sense* *belov'd*.
 Be Niggards of Advice on no Pretence;
 For the *worst Avarice* is that of *Sense*:
 580 With mean Complacence¹ ne'er betray your Trust,
 Nor be so *Civil* as to prove *Unjust*;
 Fear not the Anger of the Wise to raise;
 Those best can *bear Reproof*, who *merit Praise*.
 'Twere well, might Criticks still this Freedom take;
 585 But *Appius*² reddens at each Word you speak,
 And *stares*, *Tremendous!* with a *threatning Eye*,
 Like some *fierce Tyrant* in *Old Tapestry!*
 Fear most to tax an *Honourable Fool*,
 Whose Right it is, *uncensur'd* to be dull;
 590 Such without *Wit* are Poets when they please,
 As without *Learning* they can take *Degrees*.³
 Leave dang'rous *Truths* to unsuccessful *Satyrs*,⁴
 And *Flattery* to fulsome *Dedicators*,
 Whom, when they *Praise*, the World believes no more,
 595 Than when they promise to give *Scribbling* o'er.
 'Tis best sometimes your Censure to restrain,
 And *charitably* let the Dull be *vain*:
 Your Silence there is better than your *Spite*,
 For who can *rail* so long as they can *write*?
 600 Still humming on, their drowzy Course they keep,
 And *lash'd* so long, like *Tops*, are *lash'd asleep*.⁵
 False Steps but help them to renew the Race,
 As after *Stumbling*, *Jades*⁶ will *mend* their Pace.
 What Crouds of these, impenitently bold,
 605 In *Sounds* and jingling *Syllables* grown old,
 Still *run on* Poets in a raging Vein,

9. Critique of, commentary on.

1. Desire to please.

2. John Dennis; Appius, in his tragedy *Appius and Virginia* (1709), was highly sensitive to criticism. Dennis frequently used the word "tremendous."

3. Those in certain positions (e.g., privy council-

lors) could receive university degrees without fulfilling any requirements.

4. Satires.

5. When tops spin rapidly they "sleep," seeming not to move.

6. Worn-out horses.

- Ev'n to the Dregs and *Squeezings* of the *Brain*;
 Strain out the last, dull droppings of their Sense,
 And Rhyme with all the *Rage* of *Impotence*!
- 610 Such shameless *Bards* we have; and yet 'tis true,
 There are as mad, abandon'd *Criticks* too.
 The Bookful Blockhead, ignorantly read,
 With *Loads* of *Learned Lumber* in his Head,
 With his own Tongue still edifies his Ears,
 615 And always *List'ning to Himself* appears.
 All Books he reads, and all he reads assails,
 From *Dryden's Fables* down to *Durfey's Tales*.⁷
 With *him*, most Authors steal their Works, or buy;
*Garth*⁸ did not write his own *Dispensary*.
 620 Name a new *Play*, and *he's* the Poet's *Friend*,
 Nay show'd his Faults—but when wou'd Poets mend?
 No Place so Sacred from such Fops is barr'd,
 Nor is *Paul's Church* more safe than *Paul's Church-yard*.⁹
 Nay, fly to *Altars*; *there* they'll talk you dead;
 625 For Fools rush in where *Angels* fear to tread.
 Distrustful *Sense* with modest Caution speaks;
 It still *looks home*, and *short Excursions* makes;
 But *ratling Nonsense* in full *Vollies* breaks;
 And never shock'd, and never turn'd aside,
 630 *Bursts out*, resistless, with a thundring Tyde!
 But where's the Man, who Counsel *can* bestow,
 Still *pleas'd to teach*, and yet not *proud to know*?
 Unbiass'd, or¹ by *Favour* or by *Spite*;
 Not *dully prepossess*, nor *blindly right*;
 635 Tho' Learn'd, well-bred; and tho' well-bred, sincere;
 Modestly bold, and Humanly severe?
 Who to a *Friend* his Faults can freely show,
 And gladly praise the Merit of a *Foe*?
 Blest with a *Taste* exact, yet unconfin'd;
 640 A *Knowledge* both of *Books* and *Humankind*;
Gen'rous Converse;² a *Soul* exempt from *Pride*;
 And *Love to Praise*, with *Reason* on his Side?
 Such once were *Criticks*, such the Happy *Few*,
Athens and *Rome* in better Ages knew.
 645 The mighty *Stagyrite* first left the Shore,
 Spread all his Sails, and durst the Deeps explore;
 He steer'd securely, and discover'd far,
Led by the Light of the *Mæonian*³ *Star*.
 Poets, a *Race* long unconfin'd and free,

7. *Tales Tragical and Comical* (1704), by Thomas D'Urfey (1653–1723). Dryden's *Fables Ancient and Modern* (1700), a set of verse translations.

8. Sir Samuel Garth (1661–1719), later a friend of Pope's, was (wrongly) accused of falsely claiming authorship of the mock-heroic *The Dispen-*

sary (1699).

9. Where booksellers had stalls.

1. Either.

2. Well-bred conversation.

3. Of Maeonia (region of Asia Minor), where Homer was said to have been born.

650 Still fond and proud of *Savage Liberty*,
 Receiv'd his Laws,⁴ and stood convinc'd 'twas fit
 Who conquer'd *Nature*, shou'd preside o'er Wit.
 Horace still charms with graceful Negligence,
 And without Method talks us into Sense,
 655 Will like a *Friend* familiarly convey
 The truest *Notions* in the *easiest way*.⁵
 He, who Supream in Judgment, as in Wit,
 Might boldly censure, as he boldly writ,
 Yet judg'd with *Coolness* tho' he sung with *Fire*;
 660 His *Precepts* teach but what his *Works* inspire.
 Our *Criticks* take a contrary Extream,
 They judge with *Fury*, but they write with *Fle'me*.⁶
 Nor suffers *Horace* more in wrong *Translations*
 By *Wits*, than *Criticks* in as wrong *Quotations*.
 665 See *Dionysius*⁷ *Homer's* Thoughts refine,
 And call new Beauties forth from ev'ry Line!
 Fancy and Art in gay *Petronius*⁸ please,
 The *Scholar's Learning*, with the *Courtier's Ease*.
 In grave *Quintilian's*⁹ copious Work we find
 670 The justest *Rules*, and clearest *Method* join'd;
 Thus *useful Arms* in *Magazines*¹ we place,
 All rang'd in *Order*, and dispos'd with *Grace*,
 But less to please the Eye, than arm the Hand,
 Still fit for Use, and ready at Command.
 675 Thee, bold *Longinus*!² all the *Nine*³ inspire,
 And bless *their Critick* with a *Poet's Fire*.
 An ardent *Judge*, who Zealous in his Trust,
 With *Warmth* gives Sentence, yet is always *Just*;
 Whose *own Example* strengthens all his Laws,
 680 And *Is himself* that great Sublime he draws.
 Thus long succeeding *Criticks* justly reign'd,
License repress'd, and *useful Laws* ordain'd;
Learning and *Rome* alike in Empire grew
 And *Arts* still follow'd where her *Eagles*⁴ flew;
 685 From the same Foes, at last, both felt their Doom,
 And the same Age saw *Learning* fall, and *Rome*.
 With *Tyranny*, then *Superstition* join'd,
 As that the *Body*, this enslav'd the *Mind*;
 Much was *Believ'd*, but little *understood*,

4. Rules for literary composition.

5. Least formal, highly accessible.

6. Phlegm, thought to cause sluggishness and indifference; it was one of the four humors in early physiology.

7. Dionysius of Halicarnassus, Greek rhetor and historian active in Rome ca. 30–7 B.C.E.

8. Petronius Arbiter, the author of the *Satyricon* (1st c. C.E.); he may have been the courtier Petronius who was the judge on questions of taste at

the court of Nero (emperor 54–68).

9. Roman rhetorician (ca. 30/35–100 C.E.); his “copious work” is the 12-volume *Institutio Oratoria*.

1. Storehouses.

2. Greek rhetorician (1st c. C.E.), to whom the treatise *On Sublimity* is attributed (see above).

3. The 9 Muses.

4. Emblems on the Roman army's banners.

- 690 And to be *dull* was constru'd to be *good*;
 A *second* Deluge Learning thus o'er-run,
 And the *Monks* finish'd what the *Goths* begun.⁵
 At length, *Erasmus*,⁶ that *great*, *injur'd* Name,
 (The *Glory* of the *Priesthood*, and the *Shame*!)
 695 *Stemm'd* the wild *Torrent* of a *barb'rous* Age,
 And drove those *Holy Vandals* off the Stage.
 But see! each *Muse*, in *Leo's*⁷ *Golden Days*,
Starts from her *Trance*, and trims her wither'd Bays!
Rome's ancient *Genius*,⁸ o'er its *Ruins* spread,
 700 Shakes off the *Dust*, and rears his rev'rend Head!
 Then *Sculpture* and her *Sister-Arts* revive;
Stones leap'd to *Form*, and *Rocks* began to *live*;
 With *sweeter Notes* each rising *Temple* rung;
 A *Raphael* painted, and a *Vida*⁹ sung!
 705 Immortal *Vida*! on whose honour'd Brow
 The Poet's *Bays* and Critick's *Ivy*¹ grow:
*Cremona*² now shall ever boast thy Name,
 As next in Place to *Mantua*, next in Fame.
 But soon by Impious Arms from *Latium*³ chas'd,
 710 Their *ancient Bounds* the banish'd *Muses* past;
 Thence Arts o'er all the *Northern World* advance;
 But *Critic Learning* flourish'd most in *France*.
 The *Rules*, a Nation born to serve, obeys,
 And *Boileau*⁴ still in Right of *Horace* sways.
 715 But *we*, brave *Britons*, *Foreign Laws* despis'd,
 And kept *unconquer'd*, and *unciviliz'd*,
 Fierce for the *Liberties of Wit*, and bold,
 We still defy'd the *Romans*, as of old.
 Yet *some* there were, among the *sounder Few*
 720 Of those who *less presum'd*, and *better knew*,
 Who durst assert the *juster Ancient Cause*,
 And here *restor'd* Wit's *Fundamental Laws*.
 Such was the *Muse*, whose *Rules* and *Practice* tell,
Nature's chief Master-piece is writing well.⁵
 725 Such was *Roscomon*⁶—not more *learn'd* than *good*,
 With *Manners* gen'rous as his *Noble Blood*;

5. That is, the medieval theologians put the finishing touches on the damage done to learning by the Goths and Vandals, the Germanic peoples who had earlier sacked Rome.

6. Dutch scholar and philosopher (1466–1536), author of *The Praise of Folly*, a humanist satire on the abuses of learning. He was “the glory of the priesthood” because of his erudition and goodness, and its “shame” in that he was persecuted.

7. Pope Leo X (1475–1521), a patron of learning and the arts during the Italian Renaissance.

8. Guardian or protective spirit of a place.

9. Marco Girolamo Vida (ca. 1480–1566), Italian poet who wrote in Latin. Raphael: Raffaello Sanzio (1483–1520), Italian painter.

1. Symbol of poetry and learning. Bays, or laurel, are strongly associated with Apollo.

2. City in northern Italy. (Vida's birth place, as Mantua was Virgil's).

3. Italy. Rome was sacked by Hapsburg mercenaries in 1527; Pope suggests that learning then fled to other parts of Europe, especially France.

4. Nicolas Boileau (1636–1711), French critic and poet; his works include the poem *L'Art poétique* (1674).

5. Quoted from the *Essay on Poetry* (1682), by Pope's friend and supporter John Sheffield (1647–1721).

6. Wentworth Dillon (ca. 1633–1685), fourth earl of Roscommon, poet and critic; author of the *Essay on Translated Verse* (1684).

To him the Wit of *Greece* and *Rome* was known,
 And ev'ry Author's *Merit*, but his own.
 Such late was *Walsh*,⁷—the Muse's Judge and Friend,
 730 Who justly knew to blame or to commend;
 To Failings *mild*, but *zealous* for Desert;⁸
 The *clearest Head*, and the *sincerest Heart*.
 This humble Praise, lamented *Shade!* receive,
 This Praise at least a grateful Muse may give!
 735 The Muse, whose early Voice you taught to Sing,
 Prescrib'd her Heights, and prun'd her tender Wing,
 (Her Guide now lost) no more attempts to *rise*,
 But in low Numbers short Excursions tries:
 Content, if hence th' Unlearn'd their Wants may view,
 740 The Learn'd reflect on what before they knew:
 Careless of *Censure*, nor too fond of *Fame*,
 Still pleas'd to *praise*, yet not afraid to *blame*,
 Averse alike to *Flatter*, or *Offend*,
 Not *free* from Faults, nor yet too vain to *mend*.

1711

7. William Walsh (1663–1708), whom Dryden praised as “the best critic of our nation”; he was

Pope's friend and mentor.
 8. Degree of merit or demerit, excellence, reward.

SAMUEL JOHNSON

1709–1784

As countless anecdotes attest, Samuel Johnson was cantankerous and dogmatic. He inveighed against the philosopher George Berkeley's (1685–1753) apparent denial of the reality of the external world by kicking a stone and declaring, “I refute him *thus*.” And he coined many mordant aphorisms, such as “The road to hell is paved with good intentions” and “Patriotism is the last refuge of a scoundrel.” Theatrical, deliberately provocative, and beloved by many friends and admired by fellow writers, Johnson is one of the most influential critics in English literary history. “The best part of every author,” Johnson affirmed, “is in general to be found in his book,” and this is true in his own case. Though he often chastised himself for indolence, fearful that salvation would be denied to him because he was not fully using his great gifts, he was in fact astonishingly productive, and in many genres. His literary labors include a monumental *Dictionary of the English Language*, a comprehensive edition of Shakespeare, and the *Lives of the English Poets*, a set of insightful, vividly written biographical and literary portraits of seventeenth- and eighteenth-century authors.

Johnson was born in Lichfield, Staffordshire, a town about 100 miles northwest of London. His father was a bookseller, and his education consisted largely of the volumes in his father's bookshop and the lessons “whipped” into him by the master of the grammar school in Lichfield. He attended Pembroke College at Oxford for only a year, leaving in December 1729 because he lacked the funds to continue. At Oxford, he later recounted, “I was miserably poor, and I thought to fight my way by my literature

and my wit"; the fight, continuing in later years, would leave him in poverty for most of his life.

Johnson was an intense, discerning reader; as the economist Adam Smith recalled, "Johnson knew more books than any man alive." While at Oxford, he pored over the popular devotional tract *A Serious Call to a Devout and Holy Life* (1729), by the schoolmaster and minister William Law. He termed Law's book "the finest piece of hortatory theology in any language," and it is the foundation for the prayers and meditations that he composed later in his life.

In July 1735 Johnson married Elizabeth Jervis Porter, a forty-six-year-old widow and mother of three children. With money from her, Johnson opened a school in Edial, near Lichfield, in 1736. One of his students was David Garrick, who became a poet, essayist, and acclaimed actor. While there, Johnson worked on a historical tragedy, *Irene*, which recounts the story of the love of Sultan Mahomet for the lovely Irene, a Christian slave captured in Constantinople—this play was not performed until 1749, in a production that Garrick organized. The school soon proved a failure, however, in part because Johnson lacked the credential of a university degree.

In 1737 Johnson and Garrick traveled to London; with a population between 650,000 and 700,000, it had become the largest city in Europe. Johnson found it captivating and later famously professed: "Why, Sir, you find no man, at all intellectual, who is willing to leave London. No, Sir, when a man is tired of London, he is tired of life; for there is in London all that life can afford." Once settled there, he began his association with the *Gentleman's Magazine*, contributing to it not only prose and poetry but also, from 1741 to 1744, a series of speeches purporting to represent debates in the House of Commons: he re-created them, relying solely on notes and reports.

Johnson was working on and planning larger projects as well. In 1745 he wrote "Miscellaneous Observations on the Tragedy of Macbeth," along with a proposal for an edition of Shakespeare; in the following year, he outlined his "Plan of a Dictionary of the English Language." His major prose publication of this period was *An Account of the Life of Mr. Richard Savage* (1744), a book that details the trials of a failed poet whom Johnson knew and the tribulations of Grub Street, the address of many literary hacks and desperate writers. In verse his central achievement was "The Vanity of Human Wishes," published in 1749. This solemn, disquieting rumination on the futility of worldly hopes and endeavors was the first composition that Johnson issued under his own name.

In the 1750s Johnson wrote many periodical essays. The best of this work appeared in *The Rambler*, which was published twice weekly from March 1750 to March 1752. The twentieth-century critic Walter Jackson Bate has described these pieces as "saturated with thought to an extent unexceeded by any other writer of English prose since Francis Bacon." Johnson's wife Elizabeth told him at the time: "I thought very well of you before this; but I did not imagine you could have written any thing equal to this." She died on March 17, 1752, three days after the publication of its last number. Johnson also contributed essays to his friend John Hawkesworth's periodical *The Adventurer*; and from 1758 to 1760, he wrote yet another series of essays, titled *The Idler*, which were published in a weekly newspaper, *The Universal Chronicle*. But Johnson's greatest accomplishment of the decade was *A Dictionary of the English Language*, published in two large folio volumes in April 1755. Nine years in the making, and compiled by Johnson and six assistants, it consists of 40,000 defined words and 114,000 quotations that illustrate the meanings.

In one week's time in January 1759, Johnson wrote his only long fictional work, *Rasselas*, so that he could pay for his mother's funeral and settle her debts. Three years later he received from King George III an annual pension of 300 pounds, winning at last a measure of economic security. Soon after, he met the Scotsman James Boswell,

a twenty-two-year-old lawyer less interested in law than in literature and politics. Boswell cultivated Johnson's friendship; watched him in action at literary clubs with Adam Smith, the painter Joshua Reynolds, EDMUND BURKE, and other luminaries; sparred with him in conversation; and gathered facts and anecdotes about him. Boswell made Johnson the subject of what is often called the greatest biography in English, *The Life of Samuel Johnson, LL.D.* (1791).

Johnson's eight-volume edition of Shakespeare was published in October 1765. The much-delayed work was flawed: Johnson neither performed the complete collation of texts he had promised nor examined carefully the sources that Shakespeare had drawn on. He ignored the sonnets and poems, and (like the Romantic critics) treats the plays not as works for the stage but as texts to be read. Nonetheless, the preface—one of our selections—and the many interpretive notes amount to a compelling assessment. Johnson celebrates Shakespeare's gifts in portraying character and revealing truths about human nature and, more important, defends the playwright against charges of violating the dramatic unities of time and place and improperly mixing the genres of tragedy and comedy. Johnson was not the first to propose that authors be granted freedom to depart from classical rules and prescriptions for literary composition, but his authority and formidable style gave this position its irresistible legitimacy. SAMUEL TAYLOR COLERIDGE, William Hazlitt, and other critics in the early 1800s balked at (even as they oversimplified) Johnson's neoclassical principles and disputed his evaluations of authors, yet his support for rule-breaking innovation, in the preface to *Shakespeare* and elsewhere, helped to prepare the literary and cultural ground for the Romantic revolution.

In 1777 Johnson, then sixty-seven, was approached by London booksellers to contribute brief prefaces to a multivolume edition of English poets. Though the original plan was scaled back (instead of including all reputable poets from Chaucer on, the survey began in the seventeenth century with Cowley), Johnson did much more than required, producing in all about 400,000 words of biographical and interpretive text on the fifty-two poets (all male). Each preface follows a three-part plan, as Johnson recounts the author's biography, summarizes the main features of his character, and critically examines the writings; the essays on Cowley, Milton, DRYDEN, POPE, and ADDISON expanded into panoramic studies of the writer's life and works.

The *Lives of the English Poets* (1783) is not a grand act of personal canon making. While Johnson proposed several additions, the choices generally were not his own. He believed in an English literary canon—one that surpassed the literatures of other nations—but this canon could not be determined by any single critic. Unlike such modern critics as T. S. ELIOT, F. R. LEAVIS, and HAROLD BLOOM, who seek through robust arguments to reorder literary rankings that they view as dated and objectionable, Johnson found the test of time decisive. As he explained in the preface to *Shakespeare*, "What has been longest known has been most considered, and what is most considered is best understood."

For Johnson, the best contemporary literature resembles the great literature of the past in its fidelity to the facts of unchanging human nature and in its concern for moral instruction—for guidance in how best to live (that is, how best to bear life's pain). "Nothing can please many," he wrote, "and please long, but just representations of general nature." Thus in our selection from *Rasselas* Johnson emphasizes that "the business of the poet . . . is to examine, not the individual, but the species; to remark general properties and large appearances." "Great thoughts," he observes in the *Life of Cowley* (our final selection), "are always general." Such an appeal to shared values does not entirely preclude literary originality. As "On Fiction," our selection from *The Rambler*, indicates, Johnson could accept the emerging genre of the novel as long as its practitioners stayed alert to their moral duty to readers. Frequently in his criticism he commends poets for their capacity to delight or surprise us, for their powers of verbal invention. But by originality,

Johnson meant what was new and unexpected *and* deeply recognizable—the refreshed, reawakened expression of truths with which readers would already be familiar.

Johnson proposed writing a “History of Criticism as it relates to judging of authours, from Aristotle to the present age,” but he never undertook this daunting project; his general attitude toward critics and criticism must be pieced together from essays, letters, and parts of the preface to *Shakespeare* and the *Lives of the English Poets*. In *Rambler* 92, Johnson comes as close as he does anywhere to defining the work of the critic, stressing “principles,” “rational deduction,” and “science” and concluding: “Criticism reduces those regions of literature under the dominion of science, which have hitherto known only the anarchy of ignorance, the caprices of fancy, and the tyranny of prescription.” Yet on this topic, as often in his writing, Johnson calls attention to facets of literary experience that undercut the positions he elsewhere advocates: he is his own sharpest, most cogent critic. In the preface to *Shakespeare*, he acknowledges the limitations of “the rules of criticism”: “there is always an appeal open from criticism to nature.” Generic categories and literary conventions matter; critics must consider how well or badly an author abides by them. But historical context, Johnson realizes, must be considered as well; as he explains in his *Life of Dryden*, “That which is easy at one time was difficult at another.” Thus even such a highly principled critic could contend, in his *Life of Pope*, that we err when we “judge by principles rather than perception.”

Johnson possessed a strong sense of the power and responsibility of writers; as he emphasizes in *Rambler* 4, novelists must use their talents to correct error and teach good conduct: they should not describe persons and situations—however true-to-life these might be—that could corrupt the minds of readers, particularly the young and inexperienced. The poet has an equal burden. Offended by the mixture of sacred and profane elements in Milton’s pastoral elegy “Lycidas,” Johnson calls the poem vulgar and disgusting, indecent and impious. This assault on “Lycidas” is notorious, yet it is significant less for the stridency of Johnson’s judgment than for the strength of his response, the intensity of his experience as a reader.

The motions of Johnson’s mind are more supple, balanced (if precariously at times), and even contradictory than might be predicted of a voice that is so confident and proud. We should heed his performance as a writer—the behavior of his language, the turns and tones of his subtle and complex sentences and paragraphs—in order to appreciate him fully. The final two paragraphs of the *Life of Cowley*, in which Johnson sums up the achievements of the metaphysical poets after having criticized them, illustrate his flexibility of mind. For modern readers, Johnson’s style and point of view may require some getting accustomed to. But as MATTHEW ARNOLD concluded (“Johnson’s *Lives*,” 1878) in a formulation still pertinent today: “The more we study Johnson, the higher will be our esteem for the power of his mind, the width of his interests, the largeness of his knowledge, the freshness, fearlessness, and strength of his judgments.”

Simul et jucunda et idonea dicere vitae.¹

—Horace, *Ars Poetica*, l. 334

And join both profit and delight in one.

—Creech²

The works of fiction, with which the present generation seems more particularly delighted,³ are such as exhibit life in its true state, diversified only by accidents that daily happen in the world, and influenced by passions and qualities which are really to be found in conversing with mankind.

This kind of writing may be termed not improperly the comedy of romance,⁴ and is to be conducted nearly by the rules of comic poetry. Its province is to bring about natural events by easy means, and to keep up curiosity without the help of wonder: it is therefore precluded from the machines and expedients of the heroic romance, and can neither employ giants to snatch away a lady from the nuptial rites, nor knights to bring her back from captivity; it can neither bewilder its personages in deserts,⁵ nor lodge them in imaginary castles.

I remember a remark made by Scaliger upon Pontanus,⁶ that all his writings are filled with the same images; and that if you take from him his lilies and his roses, his satyrs and his dryads,⁷ he will have nothing left that can be called poetry. In like manner, almost all the fictions of the last age will vanish, if you deprive them of a hermit and a wood, a battle and a shipwreck.

Why this wild strain of imagination found reception so long, in polite and learned ages, it is not easy to conceive; but we cannot wonder that, while readers could be procured, the authors were willing to continue it: for when a man had by practice gained some fluency of language, he had no further care than to retire to his closet, let loose his invention, and heat his mind with incredibilities;⁸ a book was thus produced without fear of criticism, without the toil of study, without knowledge of nature, or acquaintance with life.

The task of our present writers is very different; it requires, together with that learning which is to be gained from books, that experience which can never be attained by solitary diligence, but must arise from general converse, and accurate observation of the living world. Their performances have, as Horace expresses it, *plus oneris quantum veniae minus*,⁹ little indulgence, and

1. Poets wish either to benefit or delight, or else say things at once pleasant and suited to life (Latin). HORACE (65–8 B.C.E.), Roman poet; for the *Ars Poetica*, see above.

2. Thomas Creech (1659–1700), English classical scholar. Here he translates the epigraph above.

3. Possibly Tobias Smollett's *Roderick Random* (1748) and Henry Fielding's *Tom Jones* (1749).

4. An entertaining story of love and adventure, which includes elements of fantasy and myth.

5. Deserts.

6. Jovianus Pontanus (1426–1503), Italian poet. The remark was by Julius Caesar Scaliger, an Italian-born French scholar (1484–1558), in his *Poetics* 5.4.

7. In classical mythology, wood nymphs. "Satyrs": goatlike sylvan deities.

8. Things that cannot be believed. "Closet": "a small room of privacy and retirement" (Johnson's *Dictionary*).

9. Slightly misquoted from Horace, *Epistles* 2.1.170 (translated by Johnson).

therefore more difficulty. They are engaged in portraits of which every one knows the original, and can detect any deviation from exactness of resemblance. Other writings are safe, except from the malice of learning, but these are in danger from every common reader; as the slipper ill executed was censured by a shoemaker who happened to stop in his way at the Venus of Apelles.¹

But the fear of not being approved as just copyers of human manners, is not the most important concern that an author of this sort ought to have before him. These books are written chiefly to the young, the ignorant, and the idle, to whom they serve as lectures of conduct, and introductions into life. They are the entertainment of minds unfurnished with ideas, and therefore easily susceptible of impressions; not fixed by principles, and therefore easily following the current of fancy; not informed by experience, and consequently open to every false suggestion and partial account.

That the highest degree of reverence should be paid to youth, and that nothing indecent should be suffered to approach their eyes or ears; are precepts extorted by sense and virtue from an ancient writer,² by no means eminent for chastity of thought. The same kind, tho' not the same degree of caution, is required in every thing which is laid before them, to secure them from unjust prejudices, perverse opinions, and incongruous combinations of images.

In the romances formerly written, every transaction and sentiment was so remote from all that passes among men, that the reader was in very little danger of making any applications to himself; the virtues and crimes were equally beyond his sphere of activity; and he amused himself with heroes and with traitors, deliverers and persecutors, as with beings of another species, whose actions were regulated upon motives of their own, and who had neither faults nor excellencies in common with himself.

But when an adventurer is levelled with the rest of the world, and acts in such scenes of the universal drama, as may be the lot of any other man; young spectators fix their eyes upon him with closer attention, and hope by observing his behavior and success to regulate their own practices, when they shall be engaged in the like part.

For this reason these familiar histories may perhaps be made of greater use than the solemnities of professed morality, and convey the knowledge of vice and virtue with more efficacy than axioms and definitions. But if the power of example is so great, as to take possession of the memory by a kind of violence, and produce effects almost without the intervention of the will, care ought to be taken that, when the choice is unrestrained, the best examples only should be exhibited; and that which is likely to operate so strongly, should not be mischievous or uncertain in its effects.

The chief advantage which these fictions have over real life is, that their authors are at liberty, tho' not to invent, yet to select objects, and to cull from the mass of mankind, those individuals upon which the attention ought most to be employ'd; as a diamond, though it cannot be made, may be polished by

1. Greek painter (4th c. B.C.E.). The story of the shoemaker correcting the artist's representation comes from the Roman writer Pliny the Elder

(23/4–79 C.E.), *Natural History* 35.84.

2. Juvenal (ca. 55–ca. 140 C.E.), Roman poet; see *Satire* 14.

art, and placed in such a situation, as to display that lustre which before was buried among common stones.

It is justly considered as the greatest excellency of art, to imitate nature; but it is necessary to distinguish those parts of nature, which are most proper for imitation: greater care is still required in representing life, which is so often discoloured by passion, or deformed by wickedness. If the world be promiscuously³ described, I cannot see of what use it can be to read the account; or why it may not be as safe to turn the eye immediately upon mankind, as upon a mirror which shows all that presents itself without discrimination.

It is therefore not a sufficient vindication of a character, that it is drawn as it appears, for many characters ought never to be drawn; nor of a narrative, that the train of events is agreeable to observation and experience, for that observation which is called knowledge of the world, will be found much more frequently to make men cunning than good. The purpose of these writings is surely not only to show mankind, but to provide that they may be seen hereafter with less hazard; to teach the means of avoiding the snares which are laid by Treachery for Innocence, without infusing any wish for that superiority with which the betrayer flatters his vanity; to give the power of counter-acting fraud, without the temptation to practise it; to initiate youth by mock encounters in the art of necessary defence, and to increase prudence without impairing virtue.

Many writers, for the sake of following nature, so mingle good and bad qualities in their principal personages, that they are both equally conspicuous; and as we accompany them through their adventures with delight, and are led by degrees to interest ourselves in their favour, we lose the abhorrence of their faults, because they do not hinder our pleasure, or, perhaps, regard them with some kindness for being united with so much merit.

There have been men indeed splendidly wicked, whose endowments threw a brightness on their crimes, and whom scarce any villainy made perfectly detestable, because they never could be wholly divested of their excellencies; but such have been in all ages the great corrupters of the world, and their resemblance ought no more to be preserved, than the art of murdering without pain.

Some have advanced, without due attention to the consequences of this notion, that certain virtues have their correspondent faults, and therefore that to exhibit either apart is to deviate from probability. Thus men are observed by Swift to be “grateful in the same degree as they are resentful.”⁴ This principle, with others of the same kind, supposes man to act from a brute impulse, and pursue a certain degree of inclination, without any choice of the object; for, otherwise, though it should be allowed that gratitude and resentment arise from the same constitution of the passions, it follows not that they will be equally indulged when reason is consulted; yet unless that consequence be admitted, this sagacious maxim becomes an empty sound, without any relation to practice or to life.

3. In a mixed, disorderly fashion.

4. These are the words of the English poet and critic ALEXANDER POPE (1688–1744), not the Anglo-Irish satirist and poet Jonathan Swift

(1667–1745). The contemporary source is the Swift-Pope *Miscellanies* 2 (1727): 354. “Grateful”: pleasing, agreeable.

Nor is it evident, that even the first motions to these effects are always in the same proportion. For pride, which produces quickness of resentment, will obstruct gratitude, by unwillingness to admit that inferiority which obligation implies; and it is very unlikely, that he who cannot think he receives a favour will acknowledge or repay it.

It is of the utmost importance to mankind, that positions of this tendency should be laid open and confuted; for while men consider good and evil as springing from the same root, they will spare the one for the sake of the other, and in judging, if not of others at least of themselves, will be apt to estimate their virtues by their vices. To this fatal error all those will contribute, who confound the colours of right and wrong, and instead of helping to settle their boundaries, mix them with so much art, that no common mind is able to disunite them.

In narratives, where historical veracity has no place, I cannot discover why there should not be exhibited the most perfect idea of virtue; of virtue not angelical, nor above probability, for what we cannot credit we shall never imitate, but the highest and purest that humanity can reach, which, exercised in such trials as the various revolutions of things shall bring upon it, may, by conquering some calamities, and enduring others, teach us what we may hope, and what we can perform. Vice, for vice is necessary to be shewn, should always disgust; nor should the graces of gaiety, or the dignity of courage, be so united with it, as to reconcile it to the mind. Wherever it appears, it should raise hatred by the malignity of its practices, and contempt by the meanness of its stratagems; for while it is supported by either parts or spirit, it will be seldom heartily abhorred. The Roman tyrant⁵ was content to be hated, if he was but feared; and there are thousands of the readers of romances willing to be thought wicked, if they may be allowed to be wits. It is therefore to be steadily inculcated, that virtue is the highest proof of understanding, and the only solid basis of greatness; and that vice is the natural consequence of narrow thoughts, that it begins in mistake, and ends in ignominy.

1750

From The History of Rasselas, Prince of Abyssinia

Chapter X.

Imlac's History Continued. A Dissertation upon Poetry

"Wherever I¹ went, I found that Poetry was considered as the highest learning, and regarded with a veneration somewhat approaching to that which man would pay to the Angelick Nature. And it yet fills me with wonder, that, in almost all countries, the most ancient poets are considered as the best: whether it be that every other kind of knowledge is an acquisition gradually attained, and poetry is a gift conferred at once; or that the first

5. The emperor Gaius Julius Caesar Germanicus (12–41 C.E.), known as "Caligula." See Suetonius (ca. 69–after 122 C.E.), *Life of Caligula* 30.1.

1. Johnson's spokesman is the philosopher and poet Imlac, who is addressing Prince Rasselas, son of the emperor of Abyssinia.

poetry of every nation surprised them as a novelty, and retained the credit by consent which it received by accident at first: or whether, as the province of poetry is to describe Nature and Passion, which are always the same, the first writers took possession of the most striking objects for description, and the most probable occurrences for fiction, and left nothing to those that followed them, but transcription of the same events, and new combinations of the same images. Whatever be the reason, it is commonly observed that the early writers are in possession of nature, and their followers of art: that the first excel in strength and invention, and the latter in elegance and refinement.²

"I was desirous to add my name to this illustrious fraternity. I read all the poets of Persia and Arabia, and was able to repeat by memory the volumes,³ that are suspended in the mosque of Mecca. But I soon found that no man was ever great by imitation. My desire of excellence impelled me to transfer my attention to nature and to life. Nature was to be my subject, and men to be my auditors: I could never describe what I had not seen: I could not hope to move those with delight or terrour, whose interests and opinions I did not understand.

"Being now resolved to be a poet, I saw every thing with a new purpose; my sphere of attention was suddenly magnified: no kind of knowledge was to be overlooked. I ranged mountains and deserts for images and resemblances, and pictured upon my mind every tree of the forest and flower of the valley. I observed with equal care the crag of the rock and the pinnacles of the palace. Sometimes I wandered along the mazes of the rivulet, and sometimes watched the changes of the summer clouds. To a poet nothing can be useless. Whatever is beautiful, and whatever is dreadful, must be familiar to his imagination: he must be conversant with all that is awfully vast or elegantly little.⁴ The plants of the garden, the animals of the wood, the minerals of the earth, and meteors of the sky, must all concur to store his mind with inexhaustible variety: for every idea is useful for the inforcement or decoration of moral or religious truth;⁵ and he, who knows most, will have most power of diversifying his scenes, and of gratifying his reader with remote allusions and unexpected instruction.

"All the appearances of nature I was therefore careful to study, and every country which I have surveyed has contributed something to my poetical powers."

"In so wide a survey, said the prince, you must surely have left much unobserved. I have lived, till now, within the circuit of those mountains, and yet cannot walk abroad without the sight of something which I had never beheld before, or never heeded."

"The business of a poet, said Imlac, is to examine, not the individual, but the species: to remark general properties and large appearances: he does not number the streaks of the tulip, or describe the different shades in the

2. Johnson's observations here are connected to debates in the period about what constituted poetic originality and whether modern authors could achieve it.

3. Illuminated manuscripts of sacred texts, "suspended" or hung in mosques.

4. Johnson is drawing on EDMUND BURKE's account of the sublime in *A Philosophical Enquiry*

into the *Origin of Our Ideas of the Sublime and Beautiful* (1757; see below).

5. In "A Defence of 'An Essay of Dramatic Poesy'" (1668), JOHN DRYDEN states: "moral truth is the mistress of the poet as much as of the philosopher; poesy must resemble natural truth, but it must be ethical."

verdure of the forest. He is to exhibit in his portraits of nature such prominent and striking features, as recall the original to every mind; and must neglect the minuter discriminations, which one may have remarked, and another have neglected, for those characteristicks which are alike obvious to vigilance and carelessness.

"But the knowledge of nature is only half the task of a poet; he must be acquainted likewise with all the modes of life. His character requires that he estimate the happiness and misery of every condition; observe the power of all the passions in all their combinations, and trace the changes of the human mind as they are modified by various institutions and accidental influences of climate or custom, from the spriteliness of infancy to the despondence of decrepitude. He must divest himself of the prejudices of his age or country; he must consider right and wrong in their abstracted and invariable state; he must disregard present laws and opinions, and rise to general and transcendental⁶ truths, which will always be the same: he must therefore content himself with the slow progress of his name; condemn the applause of his own time, and commit his claims to the justice of posterity. He must write as the interpreter of nature, and the legislator of mankind, and consider himself as presiding over the thoughts and manners of future generations; as a being superiour to time and place.

"His labour is not yet at an end: he must know many languages and many sciences; and, that his stile may be worthy of his thoughts, must, by incessant practice, familiarize to himself every delicacy of speech and grace of harmony."

1759

From Preface to Shakespeare

That praises are without reason lavished on the dead, and that the honours due only to excellence are paid to antiquity, is a complaint likely to be always continued by those, who, being able to add nothing to truth, hope for eminence from the heresies of paradox; or those, who, being forced by disappointment upon consolatory expedients, are willing to hope from posterity what the present age refuses, and flatter themselves that the regard which is yet denied by envy, will be at last bestowed by time.

Antiquity, like every other quality that attracts the notice of mankind, has undoubtedly votaries that reverence it, not from reason, but from prejudice. Some seem to admire indiscriminately whatever has been long preserved, without considering that time has sometimes co-operated with chance; all perhaps are more willing to honour past than present excellence; and the mind contemplates genius through the shades of age, as the eye surveys the sun through artificial opacity. The great contention of criticism is to find the faults of the moderns, and the beauties of the ancients. While an authour is yet living we estimate his powers by his worst performance, and when he is dead, we rate them by his best.

6. "General; pervading many particulars" (Johnson's *Dictionary*).

To works, however, of which the excellence is not absolute and definite, but, gradual and comparative; to works not raised upon principles demonstrative and scientific, but appealing wholly to observation and experience, no other test can be applied than length of duration and continuance of esteem. What mankind have long possessed they have often examined and compared; and if they persist to value the possession, it is because frequent comparisons have confirmed opinion in its favour. As among the works of nature no man can properly call a river deep, or a mountain high, without the knowledge of many mountains, and many rivers; so in the productions of genius, nothing can be stiled excellent till it has been compared with other works of the same kind. Demonstration¹ immediately displays its power, and has nothing to hope or fear from the flux of years; but works tentative and experimental must be estimated by their proportion to the general and collective ability of man, as it is discovered in a long succession of endeavours. Of the first building that was raised, it might be with certainty determined that it was round or square; but whether it was spacious or lofty must have been referred to time. The Pythagorean scale of numbers² was at once discovered to be perfect; but the poems of *Homer*³ we yet know not to transcend the common limits of human intelligence, but by remarking, that nation after nation, and century after century, has been able to do little more than transpose his incidents, new-name his characters, and paraphrase his sentiments.

The reverence due to writings that have long subsisted arises therefore not from any credulous confidence in the superior wisdom of past ages, or gloomy persuasion of the degeneracy of mankind, but is the consequence of acknowledged and indubitable positions, that what has been longest known has been most considered, and what is most considered is best understood.

The Poet, of whose works I have undertaken the revision,⁴ may now begin to assume the dignity of an ancient, and claim the privilege of established fame and prescriptive veneration. He has long outlived his century, the term commonly fixed as the test of literary merit.⁵ Whatever advantages he might once derive from personal allusions, local customs, or temporary opinions, have for many years been lost; and every topick of merriment, or motive of sorrow, which the modes of artificial life afforded him, now only obscure the scenes which they once illuminated. The effects of favour and competition are at an end; the tradition of his friendships and his enmities has perished; his works support no opinion with arguments, nor supply any faction with invectives; they can neither indulge vanity nor gratify malignity; but are read without any other reason than the desire of pleasure, and are therefore praised only as pleasure is obtained; yet, thus unassisted by interest or passion, they have past through variations of taste and changes of manners, and, as they devolved from one generation to another, have received new honours at every transmission.

But because human judgment, though it be gradually gaining upon certainty, never becomes infallible; and approbation, though long continued, may yet be only the approbation of prejudice or fashion; it is proper to inquire,

1. "The highest degree of deducible or argumental evidence" (Johnson's *Dictionary*).

2. The Greek philosopher and mathematician Pythagoras (6th c. B.C.E.) is thought to have discovered the musical ratios of the octave (2:1), the

fifth (3:2), and the fourth (4:3).

3. That is, the *Iliad* and the *Odyssey*, attributed to the Greek poet Homer (ca. 8th c. B.C.E.).

4. That is, the process of editing.

5. See HORACE (65–8 B.C.E.), *Epistles* 2.1.39.

by what peculiarities of excellence *Shakespeare* has gained and kept the favour of his countrymen.

Nothing can please many, and please long, but just representations of general nature. Particular manners can be known to few, and therefore few only can judge how nearly they are copied. The irregular combinations of fanciful invention may delight a-while, by that novelty of which the common satiety of life sends us all in quest; but the pleasures of sudden wonder are soon exhausted, and the mind can only repose on the stability of truth.

Shakespeare is above all writers, at least above all modern writers, the poet of nature; the poet that holds up to his readers a faithful mirror of manners and of life.⁶ His characters are not modified by the customs of particular places, unpractised by the rest of the world; by the peculiarities of studies or professions, which can operate but upon small numbers; or by the accidents of transient fashions or temporary opinions: they are the genuine progeny of common humanity, such as the world will always supply, and observation will always find. His persons act and speak by the influence of those general passions and principles by which all minds are agitated, and the whole system of life is continued in motion. In the writings of other poets a character is too often an individual; in those of *Shakespeare* it is commonly a species.

It is from this wide extension of design that so much instruction is derived. It is this which fills the plays of *Shakespeare* with practical axioms and domestic wisdom. It was said of *Euripides*,⁷ that every verse was a precept; and it may be said of *Shakespeare*, that from his works may be collected a system of civil and oeconomical⁸ prudence. Yet his real power is not shewn in the splendour of particular passages, but by the progress of his fable,⁹ and the tenour of his dialogue; and he that tries to recommend him by select quotations, will succeed like the pedant in *Hierocles*,¹ who, when he offered his house to sale, carried a brick in his pocket as a specimen.

It will not easily be imagined how much *Shakespeare* excels in accommodating his sentiments to real life, but by comparing him with other authours. It was observed of the ancient schools of declamation, that the more diligently they were frequented, the more was the student disqualified for the world, because he found nothing there which he should ever meet in any other place. The same remark may be applied to every stage but that of *Shakespeare*. The theatre, when it is under any other direction, is peopled by such characters as were never seen, conversing in a language which was never heard, upon topicks which will never arise in the commerce of mankind. But the dialogue of this authour is often so evidently determined by the incident which produces it, and is pursued with so much ease and simplicity, that it seems scarcely to claim the merit of fiction, but to have been gleaned by diligent selection out of common conversation, and common occurrences.

Upon every other stage the universal agent is love, by whose power all good and evil is distributed, and every action quickened or retarded. To bring a

7. Greek tragedian (ca. 485–ca. 406 B.C.E.).

8. That is, pertaining to political economy.

9. "The series or contexture of events which con-

stitute a poem epic or dramatic" (Johnson's *Dictionary*).

1. Hierocles of Alexander (5th c. C.E.), Greek Neoplatonic philosopher and author of a book of humorous anecdotes that Johnson translated in 1741.

lover, a lady and a rival into the fable; to entangle them in contradictory obligations, perplex them with oppositions of interest, and harrass them with violence of desires inconsistent with each other; to make them meet in rapture and part in agony; to fill their mouths with hyperbolical joy and outrageous sorrow; to distress them as nothing human ever was distressed; to deliver them as nothing human ever was delivered; is the business of a modern dramatist. For this probability is violated, life is misrepresented, and language is depraved. But love is only one of many passions; and as it has no great influence upon the sum of life, it has little operation in the dramas of a poet, who caught his ideas from the living world, and exhibited only what he saw before him. He knew, that any other passion, as it was regular or exorbitant, was a cause of happiness or calamity.

Characters thus ample and general were not easily discriminated and preserved, yet perhaps no poet ever kept his personages more distinct from each other. I will not say with *Pope*,² that every speech may be assigned to the proper speaker, because many speeches there are which have nothing characteristical; but perhaps, though some may be equally adapted to every person, it will be difficult to find, any that can be properly transferred from the present possessor to another claimant. The choice is right, when there is reason for choice.

Other dramatists can only gain attention by hyperbolical or aggravated characters, by fabulous and unexampled excellence or depravity, as the writers of barbarous romances invigorated the reader by a giant and a dwarf; and he that should form his expectations of human affairs from the play, or from the tale, would be equally deceived. *Shakespeare* has no heroes; his scenes are occupied only by men, who act and speak as the reader thinks that he should himself have spoken or acted on the same occasion: Even where the agency is supernatural the dialogue is level with life. Other writers disguise the most natural passions and most frequent incidents; so that he who contemplates them in the book will not know them in the world: *Shakespeare* approximates the remote, and familiarizes the wonderful; the event which he represents will not happen, but if it were possible, its effects would probably be such as he has assigned; and it may be said, that he has not only shewn human nature as it acts in real exigencies, but as it would be found in trials, to which it cannot be exposed.

This therefore is the praise of *Shakespeare*, that his drama is the mirrour of life; that he who has mazed³ his imagination, in following the phantoms which other writers raise up before him, may here be cured of his delirious extasies, by reading human sentiments in human language, by scenes from which a hermit may estimate the transactions of the world, and a confessor predict the progress of the passions.

His adherence to general nature has exposed him to the censure of critics, who form their judgments upon narrower principles. *Dennis* and *Rhymer* think his *Romans* not sufficiently *Roman*; and *Voltaire*⁴ censures his kings as

4. The pen name of François Marie Arouet

(1694–1778), French Enlightenment writer and critic, who assailed Shakespeare for breaking the classical rules of drama. John Dennis (1657–1734), English playwright and critic. Thomas Rymer (ca. 1642–1713), English critic and historian.

not completely royal. *Dennis* is offended, that *Menenius*,⁵ a senator of *Rome*, should play the buffoon; and *Voltaire* perhaps thinks decency violated when the *Danish Usurper*⁶ is represented as a drunkard. But *Shakespeare* always makes nature predominate over accident; and if he preserves the essential character, is not very careful of distinctions superinduced and adventitious. His story requires Romans or kings, but he thinks only on men. He knew that *Rome*, like every other city, had men of all dispositions; and wanting a buffoon, he went into the senate-house for that which the senate-house would certainly have afforded him. He was inclined to shew an usurper and a murderer not only odious but despicable, he therefore added drunkenness to his other qualities, knowing that kings love wine like other men, and that wine exerts its natural power upon kings. These are the petty cavils of petty minds; a poet overlooks the casual distinction of country and condition, as a painter, satisfied with the figure, neglects the drapery.

The censure which he has incurred⁷ by mixing comick and tragick scenes, as it extends to all his works, deserves more consideration. Let the fact be first stated, and then examined.

Shakespeare's plays are not in the rigorous and critical sense either tragedies or comedies, but compositions of a distinct kind; exhibiting the real state of sublunary⁸ nature, which partakes of good and evil, joy and sorrow, mingled with endless variety of proportion and innumerable modes of combination; and expressing the course of the world, in which the loss of one is the gain of another; in which, at the same time, the reveller is hasting to his wine, and the mourner burying his friend; in which the malignity of one is sometimes defeated by the frolick of another; and many mischiefs and many benefits are done and hindered without design.

Out of this chaos of mingled purposes and casualties the ancient poets, according to the laws which custom had prescribed, selected some the crimes of men, and some their absurdities; some the momentous vicissitudes of life, and some the lighter occurrences; some the terrours of distress, and some the gayeties of prosperity. Thus rose the two modes of imitation, known by the names of *tragedy* and *comedy*, compositions intended to promote different ends by contrary means, and considered as so little allied, that I do not recollect among the *Greeks* or *Romans* a single writer who attempted both.

Shakespeare has united the powers of exciting laughter and sorrow not only in one mind, but in one composition. Almost all his plays are divided between serious and ludicrous characters, and, in the successive evolutions of the design, sometimes produce seriousness and sorrow, and sometimes levity and laughter.

That this is a practice contrary to the rules of criticism will be readily allowed; but there is always an appeal open from criticism to nature. The end of writing is to instruct; the end of the poetry is to instruct by pleasing.⁹ That the mingled drama may convey all the instruction of tragedy or comedy cannot be denied, because it includes both in its alternations of exhibition and approaches nearer than either to the appearance of life, by shewing how great machinations and slender designs may promote or obviate one another,

and the high and the low co-operate in the general system by unavoidable concatenation.

It is objected, that by this change of scenes the passions are interrupted in their progression, and that the principal event, being not advanced by a due gradation of preparatory incidents, wants at last the power to move, which constitutes the perfection of dramattick poetry. This reasoning is so specious, that it is received as true even by those who in daily experience feel it to be false. The interchanges of mingled scenes seldom fail to produce the intended vicissitudes of passion. Fiction cannot move so much, but that the attention may be easily transferred; and though it must be allowed that pleasing melancholy be sometimes interrupted by unwelcome levity, yet let it be considered likewise, that melancholy is often not pleasing, and that the disturbance of one man may be the relief of another; that different auditors have different habits; and that, upon the whole, all pleasure consists in variety.

The players,¹ who in their edition divided our authour's works into comedies, histories, and tragedies, seem not to have distinguished the three kinds by any very exact or definite ideas.

An action which ended happily to the principal persons, however serious or distressful through its intermediate incidents, in their opinion, constituted a comedy. This idea of a comedy continued long amongst us; and plays were written, which, by changing the catastrophe,² were tragedies to-day, and comedies to-morrow.

Tragedy was not in those times a poem of more general dignity or elevation than comedy; it required only a calamitous conclusion, with which the common criticism of that age was satisfied, whatever lighter pleasure it afforded in its progress.

History was a series of actions, with no other than chronological succession, independent on each other, and without any tendency to introduce or regulate the conclusion. It is not always very nicely distinguished from tragedy. There is not much nearer approach to unity of action in the tragedy of *Antony and Cleopatra*, than in the history of *Richard the Second*. But a history might be continued through many plays; as it had no plan, it had no limits.

Through all these denominations of the drama, *Shakespeare's* mode of composition is the same; an interchange of seriousness and merriment, by which the mind is softened at one time, and exhilarated at another. But whatever be his purpose, whether to gladden or depress, or to conduct the story, without vehemence or emotion, through tracts of easy and familiar dialogue, he never fails to attain his purpose; as he commands us, we laugh or mourn, or sit silent with quiet expectation, in tranquillity without indifference.

When *Shakespeare's* plan is understood, most of the criticisms of *Rhymer* and *Voltaire* vanish away. The play of *Hamlet* is opened, without impropriety, by two sentinels; *Iago*³ bellows at *Brabantio's* window, without injury to the scheme of the play, though in terms which a modern audience would not easily endure; the character of *Polonius*⁴ is seasonable and useful; and the Grave-diggers themselves may be heard with applause.

1. John Heminges (d. 1630) and Henry Condell (d. 1627), members of Shakespeare's acting company, produced the Shakespeare First Folio, published in 1623.

2. The climax of a dramatic action.

3. In *Othello* (1603–04).

4. A meddling figure of comedy in *Hamlet*; the gravediggers appear to comic effect later in the play.

Shakespeare engaged in dramatick poetry with the world open before him; the rules of the ancients were yet known to few; the publick judgment was unformed; he had no example of such fame as might force him upon imitation, nor criticks of such authority as might restrain his extravagance: He therefore indulged his natural disposition, and his disposition, as *Rhymers* has remarked, led him to comedy. In tragedy he often writes, with great appearance of toil and study, what is written at last with little felicity; but in his comick scenes, he seems to produce without labour, what no labour can improve. In tragedy he is always struggling after some occasion to be comick; but in comedy he seems to repose, or to luxuriate, as in a mode of thinking congenial to his nature. In his tragick scenes there is always something wanting, but his comedy often surpasses expectation or desire. His comedy pleases by the thoughts and the language, and his tragedy for the greater part by incident and action. His tragedy seems to be skill, his comedy to be instinct.

The force of his comick scenes has suffered little diminution from the changes made by a century and a half, in manners or in words. As his personages act upon principles arising from genuine passion, very little modified by particular forms, their pleasures and vexations are communicable to all times and to all places; they are natural, and therefore durable; the adventitious peculiarities of personal habits, are only superficial dyes, bright and pleasing for a little while, yet soon fading to a dim tinct, without any remains of former lustre; but the discriminations of true passion are the colours of nature; they pervade the whole mass, and can only perish with the body that exhibits them. The accidental compositions of heterogeneous modes are dissolved by the chance which combined them; but the uniform simplicity of primitive qualities neither admits increase, nor suffers decay. The sand heaped by one flood is scattered by another, but the rock always continues in its place. The stream of time, which is continually washing the dissoluble fabricks of other poets, passes without injury by the adamant⁵ of *Shakespeare*.

If there be, what I believe there is, in every nation, a style which never becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language as to remain settled and unaltered; this style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hope of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement, where propriety resides, and where this poet seems to have gathered his comick dialogue. He is therefore more agreeable to the ears of the present age than any other authour equally remote, and among his other excellencies deserves to be studied as one of the original masters of our language.

These observations are to be considered not as unexceptionably constant, but as containing general and predominant truth. *Shakespeare's* familiar dialogue is affirmed to be smooth and clear, yet not wholly without rugged-

5. An impregnable and surpassingly hard substance.

ness or difficulty; as a country may be eminently fruitful, though it has spots unfit for cultivation: His characters are praised as natural, though their sentiments are sometimes forced, and their actions improbable; as the earth upon the whole is spherical, though its surface is varied with protuberances and cavities.

Shakespeare with his excellencies has likewise faults, and faults sufficient to obscure and overwhelm any other merit. I shall shew them in the proportion in which they appear to me, without envious malignity or superstitious veneration. No question can be more innocently discussed than a dead poet's pretensions to renown; and little regard is due to that bigotry which sets candour higher than truth.

His first defect is that to which may be imputed most of the evil in books or in men. He sacrifices virtue to convenience, and is so much more careful to please than to instruct, that he seems to write without any moral purpose. From his writings indeed a system of social duty may be selected, for he that thinks reasonably must think morally; but his precepts and axioms drop casually from him; he makes no just distribution of good or evil, nor is always careful to shew in the virtuous a disapprobation of the wicked; he carries his persons indifferently through right and wrong, and at the close dismisses them without further care, and leaves their examples to operate by chance. This fault the barbarity of his age cannot extenuate; for it is always a writer's duty to make the world better, and justice is a virtue independant on⁶ time or place.

The plots are often so loosely formed, that a very slight consideration may improve them, and so carelessly pursued, that he seems not always fully to comprehend his own design. He omits opportunities of instructing or delighting which the train of his story seems to force upon him, and apparently rejects those exhibitions which would be more affecting, for the sake of those which are more easy.

It may be observed, that in many of his plays the latter part is evidently neglected. When he found himself near the end of his work, and, in view of his reward, he shortened the labour to snatch the profit. He therefore remits his efforts where he should most vigorously exert them, and his catastrophe is improbably produced or imperfectly represented.

He had no regard to distinction of time or place, but gives to one age or nation, without scruple, the customs, institutions, and opinions of another, at the expence not only of likelihood, but of possibility. These faults *Pope* has endeavoured, with more zeal than judgment, to transfer to his imagined interpolators.⁷ We need not wonder to find *Hector* quoting *Aristotle*, when we see the loves of *Theseus* and *Hippolyta*⁸ combined with the *Gothick* mythology of fairies. *Shakespeare*, indeed, was not the only violator of chronology, for in the same age *Sidney*, who wanted not the advantages of learning, has, in his *Arcadia*,⁹ confounded the pastoral with the feudal

Hector: a character in *Troilus and Cressida* (1601–02; see 2.2.165–66); the Greek philosopher *ARISTOTLE* (384–322 B.C.E.) lived centuries after the events in that play are presumed to have occurred.

9. A prose romance (1590) by SIR PHILIP SIDNEY (1554–1586).

times, the days of innocence, quiet and security, with those of turbulence, violence, and adventure.

In his comick scenes he is seldom very successful, when he engages his characters in reciprocations of smartness and contests of sarcasm; their jests are commonly gross, and their pleasantry licentious; neither his gentlemen nor his ladies have much delicacy, nor are sufficiently distinguished from his clowns by any appearance of refined manners. Whether he represented the real conversation of his time is not easy to determine; the reign of *Elizabeth*¹ is commonly supposed to have been a time of stateliness, formality and reserve; yet perhaps the relaxations of that severity were not very elegant. There must, however, have been always some modes of gayety preferable to others, and a writer ought to chuse the best.

In tragedy his performance seems constantly to be worse, as his labour is more. The effusions of passion which exigence forces out are for the most part striking and energetick; but whenever he solicits his invention, or strains his faculties, the offspring of his throes is tumour,² meanness, tediousness, and obscurity.

In narration he affects a disproportionate pomp of diction, and a wearisome train of circumlocution, and tells the incident imperfectly in many words, which might have been more plainly delivered in few. Narration in dramattick poetry is naturally tedious, as it is unanimated and inactive, and obstructs the progress of the action; it should therefore always be rapid, and enlivened by frequent interruption. *Shakespeare* found it an encumbrance, and instead of lightening it by brevity, endeavoured to recommend it by dignity and splendour.

His declamations or set speeches are commonly cold and weak, for his power was the power of nature; when he endeavoured, like other tragick writers, to catch opportunities of amplification, and instead of inquiring what the occasion demanded, to show how much his stores of knowledge could supply, he seldom escapes without the pity or resentment of his reader.

It is incident³ to him to be now and then entangled with an unwieldy sentiment, which he cannot well express, and will not reject; he struggles with it a while, and if it continues stubborn, comprises it in words such as occur, and leaves it to be disentangled and evolved⁴ by those who have more leisure to bestow upon it.

Not that always where the language is intricate the thought is subtle, or the image always great where the line is bulky; the equality of words to things is very often neglected, and trivial sentiments and vulgar ideas disappoint the attention, to which they are recommended by sonorous epithets and swelling figures.⁵

But the admirers of this great poet have never less reason to indulge their hopes of supreme excellence, than when he seems fully resolved to sink them in dejection, and mollify them with tender emotions by the fall of greatness, the danger of innocence, or the crosses of love. He is not long soft and pathetick without some idle conceit, or contemptible equivocation. He no sooner begins to move, than he counteracts himself; and terrour and

pity, as they are rising in the mind, are checked and blasted by sudden frigidity.

A quibble⁶ is to *Shakespeare*, what luminous vapours are to the traveller; he follows it at all adventures; it is sure to lead him out of his way, and sure to engulf him in the mire. It has some malignant power over his mind, and its fascinations are irresistible. Whatever be the dignity or profundity of his disquisition, whether he be enlarging knowledge or exalting affection, whether he be amusing attention with incidents, or enchaining it in suspense, let but a quibble spring up before him, and he leaves his work unfinished. A quibble is the golden apple for which he will always turn aside from his career,⁷ or stoop from his elevation. A quibble, poor and barren as it is, gave him such delight, that he was content to purchase it, by the sacrifice of reason, propriety and truth. A quibble was to him the fatal *Cleopatra* for which he lost the world, and was content to lose it.⁸

It will be thought strange, that, in enumerating the defects of this writer, I have not yet mentioned his neglect of the unities;⁹ his violation of those laws which have been instituted and established by the joint authority of poets and of critics.

For his other deviations from the art of writing I resign him to critical justice, without making any other demand in his favour, than that which must be indulged to all human excellence: that his virtues be rated with his failings: But, from the censure which this irregularity may bring upon him, I shall, with due reverence to that learning which I must oppose, adventure to try how I can defend him.

His histories, being neither tragedies nor comedies are not subject to any of their laws; nothing more is necessary to all the praise which they expect, than that the changes of action be so prepared as to be understood, that the incidents be various and affecting, and the characters consistent, natural, and distinct. No other unity is intended, and therefore none is to be sought.

In his other works he has well enough preserved the unity of action. He has not, indeed, an intrigue regularly perplexed and regularly unravelled: he does not endeavour to hide his design only to discover it, for this is seldom the order of real events, and *Shakespeare* is the poet of nature: But his plan has commonly what *Aristotle* requires, a beginning, a middle, and an end;¹ one event is concatenated with another, and the conclusion follows by easy consequence. There are perhaps some incidents that might be spared, as in other poets there is much talk that only fills up time upon the stage; but the general system makes gradual advances, and the end of the play is the end of expectation.

To the unities of time and place he has shewn no regard; and perhaps a nearer view of the principles on which they stand will diminish their value, and withdraw from them the veneration which, from the time of

6. "A low conceit depending on the sound of words; a pun" (Johnson's *Dictionary*).

7. Course. In Greek mythology, Atalanta lost a footrace to Hippomenes (who thereby won her in marriage) because she paused to pick up three golden apples that he dropped in her path.

8. In *Shakespeare's* tragedy *Antony and Cleopatra*

(1606–07), the renowned soldier Mark Antony is willing to trade his eminent position for the love of the Egyptian queen Cleopatra, the last ruler in the Ptolemaic dynasty.

9. That is, the neoclassical unities of time, place, and action.

1. Aristotle, *Poetics* 7 (see above).

Corneille,² they have very generally received, by discovering that they have given more trouble to the poet, than pleasure to the auditor.

The necessity of observing the unities of time and place arises from the supposed necessity of making the drama credible. The criticks hold it impossible, that an action of months or years can be possibly believed to pass in three hours; or that the spectator can suppose himself to sit in the theatre, while ambassadors go and return between distant kings, while armies are levied and towns besieged, while an exile wanders and returns, or till he whom they saw courting his mistress, shall lament the untimely fall of his son. The mind revolts from evident falsehood, and fiction loses its force when it departs from the resemblance of reality.

From the narrow limitation of time necessarily arises the contraction of place. The spectator, who knows that he saw the first act at *Alexandria*, cannot suppose that he sees the next at *Rome*, at a distance to which not the dragons of *Medea*³ could, in so short a time, have transported him; he knows with certainty that he has not changed his place, and he knows that place cannot change itself; that what was a house cannot become a plain; that what was *Thebes* can never be *Persepolis*.

Such is the triumphant language with which a critick exults over the misery of an irregular poet, and exults commonly without resistance or reply. It is time therefore to tell him by the authority of *Shakespeare*, that he assumes, as an unquestionable principle, a position, which, while his breath is forming it into words, his understanding pronounces to be false. It is false, that any representation is mistaken for reality; that any dramatick fable in its materiality was ever credible, or, for a single moment, was ever credited.

The objection arising from the impossibility of passing the first hour at *Alexandria*, and the next at *Rome*, supposes, that when the play opens, the spectator really imagines himself at *Alexandria*, and believes that his walk to the theatre has been a voyage to *Egypt*, and that he lives in the days of *Antony* and *Cleopatra*. Surely he that imagines this may imagine more. He that can take the stage at one time for the palace of the *Ptolemies*, may take it in half an hour for the promontory of *Actium*.⁴ Delusion, if delusion be admitted, has no certain limitation; if the spectator can be once persuaded, that his old acquaintance are *Alexander* and *Caesar*, that a room illuminated with candles is the plain of *Pharsalia*, or the bank of *Granicus*,⁵ he is in a state of elevation above the reach of reason, or of truth, and from the heights of empyrean poetry, may despise the circumscriptions of terrestrial nature. There is no reason why a mind thus wandering in extasy should count the clock, or why an hour should not be a century in that calenture⁶ of the brains that can make the stage a field.

2. PIERRE CORNEILLE (1606–1684), French tragic dramatist whose very popular play *Le Cid* was criticized for violating the three unities. See his “Of the Three Unities of Action, Time, and Place” (1660; above).

3. According to Greek mythology, after avenging herself on her unfaithful husband, Jason, by murdering their children, Medea departed in a chariot drawn by dragons.

4. On the western coast of Greece, where a naval

battle in 31 B.C.E. ended with Antony’s final defeat.

5. A river in Asia Minor (near the site of Troy) that gave its name to a famous battle at which Alexander the Great (356–323 B.C.E.) routed the Persians (334 B.C.E.). Pharsalia: at Pharsalus, in 48 B.C.E., Julius Caesar (100–44 B.C.E.) defeated his Roman rival Pompey (106–48 B.C.E.).

6. A delirium (specifically, a delusion suffered by sailors who imagine that the sea is a green field).

The truth is, that the spectators are always in their senses, and know, from the first act to the last, that the stage is only a stage, and that the players are only players. They came to hear a certain number of lines recited with just gesture and elegant modulation. The lines relate to some action, and an action must be in some place; but the different actions that compleat a story may be in places very remote from each other; and where is the absurdity of allowing that space to represent first *Athens*, and then *Sicily*, which was always known to be neither *Sicily* nor *Athens*, but a modern theatre?

By supposition, as place is introduced, time may be extended; the time required by the fable elapses for the most part between the acts; for, of so much of the action as is represented, the real and poetical duration is the same. If, in the first act, preparations for war against *Mithridates*⁷ are represented to be made in *Rome*, the event of the war may, without absurdity, be represented, in the catastrophe, as happening in *Pontus*; we know that there is neither war, nor preparation for war; we know that we are neither in *Rome* nor *Pontus*; that neither *Mithridates* nor *Lucullus* are before us. The drama exhibits successive imitations of successive actions; and why may not the second imitation represent an action that happened years after the first, if it be so connected with it, that nothing but time can be supposed to intervene? Time is, of all modes of existence, most obsequious to the imagination; a lapse of years is as easily conceived as a passage of hours. In contemplation we easily contract the time of real actions, and therefore willingly permit it to be contracted when we only see their imitation.

It will be asked, how the drama moves, if it is not credited. It is credited with all the credit due to a drama. It is credited, whenever it moves, as a just picture of a real original; as representing to the auditor what he would himself feel, if he were to do or suffer what is there feigned to be suffered or to be done. The reflection that strikes the heart is not, that the evils before us are real evils, but that they are evils to which we ourselves may be exposed. If there be any fallacy, it is not that we fancy the players, but that we fancy ourselves unhappy for a moment; but we rather lament the possibility than suppose the presence of misery, as a mother weeps over her babe, when she remembers that death may take it from her. The delight of tragedy proceeds from our consciousness of fiction; if we thought murders and treasons real, they would please no more.

Imitations produce pain or pleasure, not because they are mistaken for realities, but because they bring realities to mind. When the imagination is recreated by a painted landscape, the trees are not supposed capable to give us shade, or the fountains coolness; but we consider, how we should be pleased with such fountains playing beside us, and such woods waving over us. We are agitated in reading the history of *Henry* the Fifth, yet no man takes his book for the field of *Agencourt*.⁸ A dramatick exhibition is a book recited with concomitants that encrease or diminish its effect. Familiar

7. King of Pontus (reigned 120–63 B.C.E.), in what is now Turkey, who engaged in 3 wars with Rome; the Roman general Lucullus (ca. 117–57/56 B.C.E.) drove him out of Pontus in 72.

8. Agincourt, a village in France near which an English army under Henry V defeated a much larger French force in 1415.

comedy is often more powerful on the theatre, than in the page; imperial tragedy is always less. The humour of *Petruchio* may be heightened by grimace; but what voice or what gesture can hope to add dignity or force to the soliloquy of *Cato*?⁹

A play read, affects the mind like a play acted. It is therefore evident, that the action is not supposed to be real; and it follows, that between the acts a longer or shorter time may be allowed to pass, and that no more account of space or duration is to be taken by the auditor of a drama, than by the reader of a narrative, before whom may pass in an hour the life of a hero, or the revolutions of an empire.

Whether *Shakespeare* knew the unities, and rejected them by design, or deviated from them by happy ignorance, it is, I think, impossible to decide, and useless to enquire. We may reasonably suppose, that, when he rose to notice, he did not want¹ the counsels and admonitions of scholars and critics, and that he at last deliberately persisted in a practice, which he might have begun by chance. As nothing is essential to the fable, but unity of action, and as the unities of time and place arise evidently from false assumptions, and, by circumscribing the extent of the drama, lessen its variety, I cannot think it much to be lamented, that they were not known by him, or not observed: Nor, if such another poet could arise, should I very vehemently reproach him, that his first act passed at *Venice*, and his next in *Cyprus*.² Such violations of rules merely positive,³ become the comprehensive genius of *Shakespeare*, and such censures are suitable to the minute and slender criticism of *Voltaire*:

*Non usque adeo permiscuit imis
Longus summa dies, ut non, si voce Metelli
Serventur leges, malint a Caesare tolli.*⁴

Yet when I speak thus slightly of dramattick rules, I cannot but recollect how much wit and learning may be produced against me; before such authorities I am afraid to stand, not that I think the present question one of those that are to be decided by mere authority, but because it is to be suspected, that these precepts have not been so easily received but for better reasons than I have yet been able to find. The result of my enquiries, in which it would be ludicrous to boast of impartiality, is, that the unities of time and place are not essential to a just drama, that though they may sometimes conduce to pleasure, they are always to be sacrificed to the nobler beauties of variety and instruction; and that a play, written with nice⁵ observation of critical rules, is to be contemplated as an elaborate curiosity, as the product of superfluous and ostentatious art, by which is shewn, rather what is possible, than what is necessary.

9. The title character of a tragedy by JOSEPH ADDISON (1713); his soliloquy on immortality (5.1.1–40), delivered just before he kills himself, was admired in the 18th century as an expression of noble sentiment. *Petruchio*: the hero in *Shakespeare's* comedy *The Taming of the Shrew* (ca. 1592).

1. Lack.

2. Places that figure in *Shakespeare's* tragedy *Othello*.

3. Arbitrary; not natural.

4. The course of time has not wrought such confusion that the laws would not rather be trampled on by Caesar than saved by Metellus (Latin; trans. J. D. Duff). From Lucan, *Civil War* (ca. 63 C.E.), 3.138–40. Metellus (d. 46 B.C.E.), a Roman politician who committed suicide after his defeat by Julius Caesar, a far superior general.

5. Precise.

He that, without diminution of any other excellence, shall preserve all the unities unbroken, deserves the like applause with the architect, who shall display all the orders of architecture⁶ in a citadel, without any deduction from its strength; but the principal beauty of a citadel is to exclude the enemy; and the greatest graces of a play, are to copy nature and instruct life.

Perhaps, what I have here not dogmatically but deliberately written, may recal the principles of the drama to a new examination. I am almost frightened at my own temerity; and when I estimate the fame and the strength of those that maintain the contrary opinion, am ready to sink down in reverential silence; as *Aeneas* withdrew from the defence of *Troy*, when he saw *Neptune* shaking the wall, and *Juno* heading the besiegers.⁷

Those whom my arguments cannot persuade to give their approbation to the judgment of *Shakespeare*, will easily, if they consider the condition of his life, make some allowance for his ignorance.

Every man's performances, to be rightly estimated, must be compared with the state of the age in which he lived, and with his own particular opportunities; and though to the reader a book be not worse or better for the circumstances of the authour, yet as there is always a silent reference of human works to human abilities, and as the enquiry, how far man may extend his designs, or how high he may rate his native force, is of far greater dignity than in what rank we shall place any particular performance, curiosity is always busy to discover the instruments, as well as to survey the workmanship, to know how much is to be ascribed to original powers, and how much to casual and adventitious help. The palaces of *Peru* or *Mexico* were certainly mean and incommodious habitations, if compared to the houses of *European* monarchs; yet who could forbear to view them with astonishment, who remembered that they were built without the use of iron?

From Lives of the English Poets

From *Cowley*¹

* * *

[ON METAPHYSICAL WIT]

Cowley, like other poets who have written with narrow views and, instead of tracing intellectual pleasure to its natural sources in the mind of man, paid their court to temporary prejudices, has been at one time too much praised and too much neglected at another.

6. Building styles, characterized by the type of classical column used.

7. See Virgil, *Aeneid* (19 B.C.E.) 2.610–14. Aeneas is a heroic warrior, but Neptune and Juno are

gods.

1. The English poet and essayist Abraham Cowley (1618–1667).

Wit, like all other things subject by their nature to the choice of man, has its changes and fashions, and at different times takes different forms. About the beginning of the seventeenth century appeared a race of writers that may be termed the metaphysical poets,² of whom in a criticism on the works of Cowley it is not improper to give some account.

The metaphysical poets were men of learning, and to shew their learning was their whole endeavour; but, unluckily resolving to shew it in rhyme, instead of writing poetry they only wrote verses, and very often such verses as stood the trial of the finger better than of the ear; for the modulation was so imperfect that they were only found to be verses by counting the syllables.

If the father of criticism³ has rightly denominated poetry τέχνη μιμητική, *an imitative art*, these writers will without great wrong lose their right to the name of poets, for they cannot be said to have imitated any thing: they neither copied nature nor life; neither painted the forms of matter nor represented the operations of intellect.

Those however who deny them to be poets allow them to be wits. Dryden confesses of himself and his contemporaries that they fall below Donne in wit, but maintains that they surpass him in poetry.

If Wit be well described by Pope as being 'that which has been often thought, but was never before so well expressed,'⁴ they certainly never attained nor ever sought it, for they endeavoured to be singular in their thoughts, and were careless of their diction. But Pope's account of wit is undoubtedly erroneous; he depresses it below its natural dignity, and reduces it from strength of thought to happiness of language.

If by a more noble and more adequate conception that be considered as Wit which is at once natural and new, that which though not obvious is, upon its first production, acknowledged to be just; if it be that, which he that never found it, wonders how he missed; to wit of this kind the metaphysical poets have seldom risen. Their thoughts are often new, but seldom natural; they are not obvious, but neither are they just; and the reader, far from wondering that he missed them, wonders more frequently by what perverseness of industry they were ever found.

But Wit, abstracted from its effects upon the hearer, may be more rigorously and philosophically considered as a kind of *discordia concors*;⁵ a combination of dissimilar images, or discovery of occult resemblances in things apparently unlike. Of wit, thus defined, they have more than enough. The most heterogeneous ideas are yoked by violence together; nature and art are ransacked for illustrations, comparisons, and allusions; their learning instructs, and their subtilty surprises; but the reader commonly thinks his improvement dearly bought, and, though he sometimes admires, is seldom pleased.

2. A term probably taken from JOHN DRYDEN's complaint about the poetry of John Donne (1572–1631) in *A Discourse Concerning the Original and Progress of Satire* (1693): "He affects the metaphysics . . . and perplexes the minds of the fair sex with nice speculations of philosophy, when he should engage their hearts, and entertain them with the softness of love." See also T. S.

ELIOT, "The Metaphysical Poets" (1921; below).

3. The Greek philosopher ARISTOTLE (384–322 B.C.E.).

4. Slightly misquoted from *An Essay on Criticism* (1711), line 298, by ALEXANDER POPE (1688–1744; see above).

5. Harmonious disharmony (Latin).

From this account of their compositions it will be readily inferred that they were not successful in representing or moving the affections. As they were wholly employed on something unexpected and surprising they had no regard to that uniformity of sentiment, which enables us to conceive and to excite the pains and the pleasure of other minds: they never enquired what on any occasion they should have said or done, but wrote rather as beholders than partakers of human nature; as beings looking upon good and evil, impassive and at leisure; as Epicurean⁶ deities making remarks on the actions of men and the vicissitudes of life, without interest and without emotion. Their courtship was void of fondness and their lamentation of sorrow. Their wish was only to say what they hoped had been never said before.

Nor was the sublime⁷ more within their reach than the pathetic; for they never attempted that comprehension and expanse of thought which at once fills the whole mind, and of which the first effect is sudden astonishment, and the second rational admiration. Sublimity is produced by aggregation, and littleness by dispersion. Great thoughts are always general, and consist in positions not limited by exceptions, and in descriptions not descending to minuteness. It is with great propriety that subtlety, which in its original import means exility⁸ of particles, is taken in its metaphorical meaning for nicety of distinction. Those writers who lay on the watch for novelty could have little hope of greatness; for great things cannot have escaped former observation. Their attempts were always analytick: they broke every image into fragments, and could no more represent by their slender conceits and laboured particularities the prospects of nature or the scenes of life, than he who dissects a sun-beam with a prism can exhibit the wide effulgence of a summer noon.

What they wanted⁹ however of the sublime they endeavoured to supply by hyperbole; their amplification had no limits: they left not only reason but fancy behind them, and produced combinations of confused magnificence that not only could not be credited, but could not be imagined.

Yet great labour directed by great abilities is never wholly lost: if they frequently threw away their wit upon false conceits, they likewise sometimes struck out unexpected truth: if their conceits were far-fetched, they were often worth the carriage.¹ To write on their plan it was at least necessary to read and think. No man could be born a metaphysical poet, nor assume the dignity of a writer by descriptions copied from descriptions, by imitations borrowed from imitations, by traditional imagery and hereditary similes, by readiness of rhyme and volubility of syllables.

In perusing the works of this race of authors the mind is exercised either by recollection or inquiry; either something already learned is to be retrieved, or something new is to be examined. If their greatness seldom elevates, their acuteness often surprises; if the imagination is not always gratified, at least the powers of reflection and comparison are employed; and in the mass of materials, which ingenious absurdity has thrown together, genuine wit

6. That is, free from disturbance. The Greek philosopher Epicurus (341–270 B.C.E.) taught that personal happiness is the highest good, best attained through austere living and the study of philosophy.

7. On the sublime, see the writings of JOSEPH

ADDISON (1672–1719; above) and EDMUND BURKE (1729–1797; below).

8. Smallness in number or size.

9. Lacked.

1. That is, worth the trouble of carrying them so far.

and useful knowledge may be sometimes found, buried perhaps in grossness of expression, but useful to those who know their value, and such as, when they are expanded to perspicuity and polished to elegance, may give lustre to works which have more propriety though less copiousness of sentiment.

1783

DAVID HUME

1711–1776

The Scottish philosopher and historian David Hume responded to and developed the empiricist work of his predecessors John Locke (1632–1704) and George Berkeley (1685–1753). He, too, opposed the rationalist belief in innate ideas and held that knowledge derives from experience. But he moved beyond them toward a position of radical skepticism, denying the possibility of certain knowledge and maintaining that the mind itself is a bundle of sensations. Hume reached the conclusion that we cannot derive and prove a theory of reality at all; we can know only experience and must base our beliefs upon it. The selection below, “Of the Standard of Taste,” develops this view in a provocative way, tracing uncertain linkages between human capacities, personal experiences, and standards.

Hume is one of the major figures of the Enlightenment. Many criticized his skeptical views as extremist and alarming, especially because they challenged religious orthodoxy; yet many others acclaimed him as one of Scotland’s and Europe’s foremost thinkers. In the words of the modern scholar Walter Jackson Bate, “in Hume’s writings, human reason was dissected with such devastating effect that philosophy has never since quite recovered the traditional classical confidence in reason.” This achievement is all the more fascinating from a man described by one friend, the Scottish economist Adam Smith, “as approaching as nearly to the idea of a perfectly wise and virtuous man, as perhaps the nature of human frailty will admit.”

Hume’s major philosophical and moral writings include *A Treatise of Human Nature* (1739–40), usually regarded as his masterpiece and an extraordinary achievement for an author in his mid-twenties; *Essays, On Moral and Political Subjects* (1741); *An Enquiry Concerning Human Understanding*—a simplified version of the *Treatise* (1748); and *An Enquiry Concerning the Principles of Morals* (1751, “of all my writings incomparably the best”). He also wrote *Political Discourses* (1752), *The Natural History of Religion* (1755), and the *History of England* (6 vols., 1754–62), which for decades was the standard work in the field. The extent of Hume’s skepticism is reflected in his late writings on religion, where he disputes all claims for any rational or natural theology; knowing that these ideas would be controversial, he withheld the text of *The Dialogues Concerning Natural Religion* (1779) until after his death.

Born in Edinburgh, David Hume attended the university there. In 1734 he journeyed to Anjou, in northwest France, where he studied and wrote. In 1739 he returned to England to help prepare his *Treatise* for publication. Later in life, Hume

professed that this book was ill-argued and philosophically immature, yet it remains perhaps his most widely read work (particularly the first section, on morals). The poor response to the *Treatise* deeply disappointed him—he remarked that it “fell dead-born from the press”—but the greater success of the later *Essays* led him to hope that he might be selected for the chair of moral philosophy at the University of Edinburgh in 1744. His critics, however, protested that his views were heretical and even atheistic. For example, Hume argued that “the idea of God, as meaning an infinitely intelligent, wise, and good Being, arises from reflecting on the operations of our own mind, and augmenting, without limit, those qualities of goodness and wisdom.” Men and women, so it seems, make their Maker; and Hume’s own calm in the face of such observations disturbed his detractors all the more.

Having failed to receive the academic position he sought, Hume then took leave of Edinburgh for a long period, traveling and serving in a number of educational, military, and diplomatic posts in Scotland, England, and Europe. In 1748 he published his *Enquiry Concerning Human Understanding*, which revised and popularized book 1 of his *Treatise*. Two new sections, “Of Miracles” and “Of a Particular Providence and of a Future State,” show Hume’s dissent from religious belief and doctrine, as does, less directly, the slightly later *Enquiry Concerning the Principles of Morals*. For Hume, sentiments and not the decrees of God are the basis for morality.

From the early 1750s to the mid-1760s, Hume spent most of his time in Edinburgh. In 1752 he was made keeper of the Advocates Library, a post that enabled him to concentrate on the historical research and writing that led to his *History*. In 1763 he took a diplomatic position in Paris, where—admired for his intellectual gifts and personality—he became friends with aristocrats and literary men. Hume spent his final years mostly in Edinburgh, revising and correcting his works. His friends Adam Smith, the writer and playwright S. J. Pratt, and Samuel Johnson’s biographer James Boswell all described how Hume, without a belief in an afterlife, prepared for death—thereby sparking yet more charges of apostasy. The publication in 1779 of Hume’s *Dialogues* and, in 1782, of two essays on suicide and immortality renewed these accusations and criticisms.

Hume is skeptical, but he is also intellectually curious, lucid in his prose, and cogent and complicated in his thought; he is sometimes perplexing and contradictory, but never obscure, in argument. We can gain some sense of the nature of his skepticism by pondering the connection, as he sees it, between one event and another. The *cause* of their connection, Hume argues, is something for which we have no impression and thus no idea; as a result, we ourselves infer this causal link. But while we cannot see or prove the connection, we can say we know that it exists, because of the cause-and-effect relationship that we draw from our experience, which leads us to expect that it will recur.

Our selection, “Of the Standard of Taste,” is a celebrated literary performance, and it bears suggestively on modern and contemporary debates about standards in criticism, reader-response theory, interpretive communities, and canon formation. The essay itself has an unusual origin. In 1756 Hume had prepared a new book for publication, to be titled *Five Dissertations*; its five essays were “The Natural History of Religion,” “Of the Passions,” “Of Tragedy,” “Of Suicide,” and “Of the Immortality of the Soul.” The antireligious thrust of the final two essays, however, made Hume’s publisher fearful, and he was in fact threatened with prosecution should they appear in print. Hume replaced the two troublesome essays with “Of the Standard of Taste,” and the book—retitled *Four Dissertations*—was published early in 1757.

Hume begins with the fact of critical disagreement, the wide variations in “taste” that testify both to the different observations that persons make and to the different terms—or differing meanings attached to the same terms—that they use to describe what they have experienced. In light of all this, he asks, can we ever hope

to identify a “standard of taste”? The first answer seems to be that we cannot. As we ponder the idea of a standard, we find ourselves inclined to say that merit or value is always in the eye of the beholder—thus one person praises an object as beautiful that another, or most others, would say is ugly. How can this atypical view be disputed or, in Hume’s word, “regulated”? We are left with differences in taste, and no standard for discriminating among them in any final sense.

Hume then queries the position that he has just seemed to endorse. Does not common sense tell us all that in poetry John Milton is superior to John Ogilby, and in prose Joseph Addison is superior to John Bunyan? The epic poems of Homer, which gave pleasure to auditors in preclassical times, continue to do the same for readers in England and France in the eighteenth century. His poetry has endured when that by many others (whose compositions once enjoyed a high reputation) has not. Hume therefore proposes that each person has the capacity for recognizing true beauty, which offers after all the prospect of a “true standard of taste and sentiment.” Of course, not all capacities are realized; as Hume puts it, some people lack “*delicacy* of imagination” and are therefore unable to feel the “proper sentiment of beauty.”

More experience: this is Hume’s main remedy for the shortcomings in aesthetic response that afflict some persons. He recommends that they practice an art and reexamine its works, making their taste finer, more subtle and discriminating. Hume stresses the need for comparisons among a range of works only to insist, a moment later, that we examine the object at hand free from “prejudice.” Here, as elsewhere, Hume may appear to be contradicting himself on a point that he seemed to judge crucial. Such shifts are part of the open, flexible, and exploratory nature of his approach.

The slighting reference to the Qur’an in Hume’s essay is unacceptable, and he takes for granted judgments (e.g., Addison’s superiority to Bunyan) that many today would quarrel with—a point that exposes his reliance on the “common sense” of his time. Moreover, his argument has a circularity that is hard to overlook. Some persons, he says, have a finer taste than others. How do we know this? Because it is universally acknowledged to be so.

Though Hume’s style marks him as a writer of the eighteenth century, in some respects his views anticipate certain disquieting ironies of poststructuralist theory. The scholar James Engell has described Hume’s position in this essay in terms that evoke JACQUES DERRIDA: “The standard of taste becomes a presence that is, in a sense, an absence. . . . Hume is saying that in matters of taste, although there is very definitely at any given time in history a center or a standard, we cannot define or find that center—at least we cannot precisely agree what it is. It is always, for us, decentered.” As a philosopher Hume is close to us; we read him often with a shock of recognition.

“Of the Standard of Taste” Keywords: Aesthetics, The Canon/Tradition, Defense of Criticism, Enlightenment Theory, Interpretation Theory, Literary History

Of the Standard of Taste

The great variety of Taste, as well as of opinion, which prevails in the world, is too obvious not to have fallen under every one’s observation. Men of the most confined knowledge are able to remark¹ a difference of taste in the nar-

1. Observe, notice.

row circle of their acquaintance, even where the persons have been educated under the same government, and have early imbibed the same prejudices. But those, who can enlarge their view to contemplate distant nations and remote ages, are still more surprized at the great inconsistency and contrariety. We are apt to call *barbarous* whatever departs widely from our own taste and apprehension: But soon find the epithet of reproach retorted on us. And the highest arrogance and self-conceit is at last startled, on observing an equal assurance on all sides, and scruples, amidst such a contest of sentiment, to pronounce positively in its own favour.

As this variety of taste is obvious to the most careless enquirer; so will it be found, on examination, to be still greater in reality than in appearance. The sentiments of men often differ with regard to beauty and deformity of all kinds, even while their general discourse is the same. There are certain terms in every language, which import blame, and others praise; and all men, who use the same tongue, must agree in their application of them. Every voice is united in applauding elegance, propriety, simplicity, spirit in writing; and in blaming fustian, affectation, coldness, and a false brilliancy: But when critics come to particulars, this seeming unanimity vanishes; and it is found, that they had affixed a very different meaning to their expressions. In all matters of opinion and science, the case is opposite: The difference among men is there oftener found to lie in generals than in particulars; and to be less in reality than in appearance. An explanation of the terms commonly ends the controversy; and the disputants are surprized to find, that they had been quarrelling, while at bottom they agreed in their judgment.

Those who found morality on sentiment, more than on reason, are inclined to comprehend ethics under the former observation, and to maintain, that, in all questions, which regard conduct and manners, the difference among men is really greater than at first sight it appears. It is indeed obvious, that writers of all nations and all ages concur in applauding justice, humanity, magnanimity, prudence, veracity; and in blaming the opposite qualities. Even poets and other authors, whose compositions are chiefly calculated to please the imagination, are yet found from HOMER down to FÉNELON,² to inculcate the same moral precepts, and to bestow their applause and blame on the same virtues and vices. This great unanimity is usually ascribed to the influence of plain reason; which, in all these cases, maintains similar sentiments in all men, and prevents those controversies, to which the abstract sciences are so much exposed. So far as the unanimity is real, this account may be admitted as satisfactory: But we must also allow that some part of the seeming harmony in morals may be accounted for from the very nature of language. The word *virtue*, with its equivalent in every tongue, implies praise; as that of *vice* does blame: And no one, without the most obvious and grossest impropriety, could affix reproach to a term, which in general acceptation is understood in a good sense; or bestow applause, where the idiom requires disapprobation. HOMER's general precepts, where he delivers any such, will never be contro-

2. François Fénelon (1651–1715), French churchman and writer, author of a didactic romance of Homeric characters, *The Adventures of Telemachus* (1699). Telemachus is the son of Odysseus and Penelope. Homer: the epics the *Iliad* (whose

central figure is Achilles) and the *Odyssey* (centered on Odysseus, or Ulysses) were often taken as the starting point of Western literature (ca. 8th c. B.C.E.).

verted; but it is obvious, that, when he draws particular pictures of manners, and represents heroism in ACHILLES and prudence in ULYSSES, he intermixes a much greater degree of ferocity in the former, and of cunning and fraud in the latter, than FENELON would admit of. The sage ULYSSES in the GREEK poet seems to delight in lies and fictions, and often employs them without any necessity or even advantage: But his more scrupulous son, in the FRENCH epic writer, exposes himself to the most imminent perils, rather than depart from the most exact line of truth and veracity.

The admirers and followers of the ALCORAN³ insist on the excellent moral precepts interspersed throughout that wild and absurd performance. But it is to be supposed, that the ARABIC words, which correspond to the ENGLISH, equity, justice, temperance, meekness, charity, were such as, from the constant use of that tongue, must always be taken in a good sense; and it would have argued the greatest ignorance, not of morals, but of language, to have mentioned them with any epithets, besides those of applause and approbation. But would we know, whether the pretended prophet had really attained a just sentiment of morals? Let us attend to his narration; and we shall soon find, that he bestows praise on such instances of treachery, inhumanity, cruelty, revenge, bigotry, as are utterly incompatible with civilized society. No steady rule of right seems there to be attended to; and every action is blamed or praised, so far only as it is beneficial or hurtful to the true believers.

The merit of delivering true general precepts in ethics is indeed very small. Whoever recommends any moral virtues, really does no more than is implied in the terms themselves. That people, who invented the word *charity*, and used it in a good sense, inculcated more clearly and much more efficaciously, the precept, *be charitable*, than any pretended legislator or prophet, who should insert such a *maxim* in his writings. Of all expressions, those, which, together with their other meaning, imply a degree either of blame or approbation, are the least liable to be perverted or mistaken.

It is natural for us to seek a *Standard of Taste*; a rule, by which the various sentiments of men may be reconciled; at least, a decision, afforded, confirming one sentiment, and condemning another.

There is a species of philosophy, which cuts off all hopes of success in such an attempt, and represents the impossibility of ever attaining any standard of taste. The difference, it is said, is very wide between judgment and sentiment. All sentiment is right; because sentiment has a reference to nothing beyond itself, and is always real, wherever a man is conscious of it. But all determinations of the understanding are not right; because they have a reference to something beyond themselves, to wit, real matter of fact; and are not always conformable to that standard. Among a thousand different opinions which different men may entertain of the same subject, there is one, and but one, that is just and true; and the only difficulty is to fix and ascertain it. On the contrary, a thousand different sentiments, excited by the same object, are all right: Because no sentiment represents what is really in the object. It only marks a certain conformity or relation between the object and the organs or faculties of the mind; and if that con-

3. The Qur'an, which collects and records the revelations of the Prophet Muhammad (570–632).

formity did not really exist, the sentiment could never possibly have being. Beauty is no quality in things themselves: It exists merely in the mind which contemplates them; and each mind perceives a different beauty. One person may even perceive deformity, where another is sensible of beauty; and every individual ought to acquiesce in his own sentiment, without pretending to regulate those of others. To seek the real beauty, or real deformity, is as fruitless an enquiry, as to pretend to ascertain the real sweet or real bitter. According to the disposition of the organs, the same object may be both sweet and bitter; and the proverb has justly determined it to be fruitless to dispute concerning tastes. It is very natural, and even quite necessary, to extend this axiom to mental, as well as bodily taste; and thus common sense, which is so often at variance with philosophy, especially with the sceptical kind, is found, in one instance at least, to agree in pronouncing the same decision.

But though this axiom, by passing into a proverb, seems to have attained the sanction of common sense; there is certainly a species of common sense which opposes it, at least serves to modify and restrain it. Whoever would assert an equality of genius and elegance between OGILBY and MILTON, or BUNYAN and ADDISON,⁴ would be thought to defend no less an extravagance, than if he had maintained a mole-hill to be as high as TENERIFFE,⁵ or a pond as extensive as the ocean. Though there may be found persons, who give the preference to the former authors; no one pays attention to such a taste; and we pronounce without scruple the sentiment of these pretended critics to be absurd and ridiculous. The principle of the natural equality of tastes is then totally forgot, and while we admit it on some occasions, where the objects seem near an equality, it appears an extravagant paradox, or rather a palpable absurdity, where objects so disproportioned are compared together.

It is evident that none of the rules of composition are fixed by reasonings *a priori*, or can be esteemed abstract conclusions of the understanding, from comparing those habitudes⁶ and relations of ideas, which are eternal and immutable. Their foundation is the same with that of all the practical sciences, experience; nor are they any thing but general observations, concerning what has been universally found to please in all countries and in all ages. Many of the beauties of poetry and even of eloquence are founded on falsehood and fiction, on hyperboles, metaphors, and an abuse or perversion of terms from their natural meaning. To check the sallies of the imagination, and to reduce every expression to geometrical truth and exactness, would be the most contrary to the laws of criticism; because it would produce a work, which, by universal experience, has been found the most insipid and disagreeable. But though poetry can never submit to exact truth, it must be confined by rules of art, discovered to the author either by genius or observation. If some negligent or irregular writers have pleased, they have not pleased by their transgressions of rule or order, but in spite of these transgressions: They have possessed other beauties, which were conformable to

4. Hume pairs two poets, John Ogilby (1600–1676) and John Milton (1608–1674), and two prose writers, John Bunyan (1628–1688) and JOSEPH ADDISON (1672–1719).

5. Largest of the Canary Islands and site of a volcanic peak.

6. Habits.

just criticism; and the force of these beauties has been able to overpower censure, and give the mind a satisfaction superior to the disgust arising from the blemishes. ARIOSTO⁷ pleases; but not by his monstrous and improbable fictions, by his bizarre mixture of the serious and comic styles, by the want of coherence in his stories, or by the continual interruptions of his narration. He charms by the force and clearness of his expression, by the readiness and variety of his inventions, and by his natural pictures of the passions, especially those of the gay and amorous kind: And however his faults may diminish our satisfaction, they are not able entirely to destroy it. Did our pleasure really arise from those parts of his poem, which we denominate faults, this would be no objection to criticism in general: It would only be an objection to those particular rules of criticism, which would establish such circumstances to be faults, and would represent them as universally blameable. If they are found to please, they cannot be faults; let the pleasure, which they produce, be ever so unexpected and unaccountable.

But though all the general rules of art are founded only on experience and on the observation of the common sentiments of human nature, we must not imagine, that, on every occasion, the feelings of men will be conformable to these rules. Those finer emotions of the mind are of a very tender and delicate nature, and require the concurrence of many favourable circumstances to make them play with facility and exactness, according to their general and established principles. The least exterior hindrance to such small springs, or the least internal disorder, disturbs their motion, and confounds the operation of the whole machine. When we would make an experiment of this nature, and would try the force of any beauty or deformity, we must choose with care a proper time and place, and bring the fancy to a suitable situation and disposition. A perfect serenity of mind, a recollection of thought, a due attention to the object; if any of these circumstances be wanting, our experiment will be fallacious, and we shall be unable to judge of the catholic and universal beauty. The relation, which nature has placed between the form and the sentiment, will at least be more obscure; and it will require greater accuracy to trace and discern it. We shall be able to ascertain its influence not so much from the operation of each particular beauty, as from the durable admiration, which attends those works, that have survived all the caprices of mode and fashion, all the mistakes of ignorance and envy.

The same HOMER, who pleased at ATHENS and ROME two thousand years ago, is still admired at PARIS and at LONDON. All the changes of climate, government, religion, and language, have not been able to obscure his glory. Authority or prejudice may give a temporary vogue to a bad poet or orator; but his reputation will never be durable or general. When his compositions are examined by posterity or by foreigners, the enchantment is dissipated, and his faults appear in their true colours. On the contrary, a real genius, the longer his works endure, and the more wide they are spread, the more sincere is the admiration which he meets with. Envy and jealousy have too much place in a narrow circle; and even familiar acquaintance with his person may diminish the applause due to his performances: But

7. Lodovico Ariosto (1474–1533), Italian poet; his masterpiece is the romantic epic *Orlando Furioso* (1516).

when these obstructions are removed, the beauties, which are naturally fitted to excite agreeable sentiments, immediately display their energy; and while the world endures, they maintain their authority over the minds of men.

It appears then, that, amidst all the variety and caprice of taste, there are certain general principles of approbation or blame, whose influence a careful eye may trace in all operations of the mind. Some particular forms or qualities, from the original structure of the internal fabric, are calculated to please, and others to displease; and if they fail of their effect in any particular instance, it is from some apparent defect or imperfection in the organ. A man in a fever would not insist on his palate as able to decide concerning flavours; nor would one, affected with the jaundice, pretend to give a verdict with regard to colours.⁸ In each creature, there is a sound and a defective state; and the former alone can be supposed to afford us a true standard of taste and sentiment. If, in the sound state of the organ, there be an entire or a considerable uniformity of sentiment among men, we may thence derive an idea of the perfect beauty; in like manner as the appearance of objects in day-light, to the eye of a man in health, is denominated their true and real colour, even while colour is allowed to be merely a phantasm of the senses.

Many and frequent are the defects in the internal organs, which prevent or weaken the influence of those general principles, on which depends our sentiment of beauty or deformity. Though some objects, by the structure of the mind, be naturally calculated to give pleasure, it is not to be expected, that in every individual the pleasure will be equally felt. Particular incidents and situations occur, which either throw a false light on the objects, or hinder the true from conveying to the imagination the proper sentiment and perception.

One obvious cause, why many feel not the proper sentiment of beauty, is the want of that *delicacy* of imagination, which is requisite to convey a sensibility of those finer emotions. This delicacy every one pretends to: Every one talks of it; and would reduce every kind of taste or sentiment to its standard. But as our intention in this essay is to mingle some light of the understanding with the feelings of sentiment, it will be proper to give a more accurate definition of delicacy, than has hitherto been attempted. And not to draw our philosophy from too profound a source, we shall have recourse to a noted story in *DON QUIXOTE*.⁹

It is with good reason, says *SANCHO* to the squire with the great nose, that I pretend to have a judgment in wine: This is a quality hereditary in our family. Two of my kinsmen were once called to give their opinion of a hogshhead, which was supposed to be excellent, being old and of a good vintage. One of them tastes it; considers it; and after mature reflection pronounces the wine to be good, were it not for a small taste of leather, which he perceived in it. The other, after using the same precautions, gives also his verdict in favour of the wine; but with the reserve of a taste of iron, which he could easily distinguish. You cannot imagine how much they were

8. It was thought that to a person whose eye was discolored by jaundice, everything would look yellow.

9. The novel *Don Quixote* (1605, 1615), by Miguel de Cervantes; this story comes from part 2, chapter 13.

both ridiculed for their judgment. But who laughed in the end? On emptying the hogshead, there was found at the bottom, an old key with a leathern thong tied to it.

The great resemblance between mental and bodily taste will easily teach us to apply this story. Though it be certain, that beauty and deformity, more than sweet and bitter, are not qualities in objects, but belong entirely to the sentiment, internal or external; it must be allowed, that there are certain qualities in objects, which are fitted by nature to produce those particular feelings. Now as these qualities may be found in a small degree, or may be mixed and confounded with each other, it often happens, that the taste is not affected with such minute qualities, or is not able to distinguish all the particular flavours, amidst the disorder, in which they are presented. Where the organs are so fine, as to allow nothing to escape them; and at the same time so exact as to perceive every ingredient in the composition: This we call delicacy of taste, whether we employ these terms in the literal or metaphorical sense. Here then the general rules of beauty are of use; being drawn from established models, and from the observation of what pleases or displeases, when presented singly and in a high degree: And if the same qualities, in a continued composition and in a smaller degree, affect not the organs with a sensible delight or uneasiness, we exclude the person from all pretensions to this delicacy. To produce these general rules or avowed patterns of composition is like finding the key with the leathern thong; which justified the verdict of *SANCHO's* kinsmen, and confounded those pretended judges who had condemned them. Though the hogshead had never been emptied, the taste of the one was still equally delicate, and that of the other equally dull and languid: But it would have been more difficult to have proved the superiority of the former, to the conviction of every by-stander. In like manner, though the beauties of writing had never been methodized, or reduced to general principles; though no excellent models had ever been acknowledged; the different degrees of taste would still have subsisted, and the judgment of one man been preferable to that of another; but it would not have been so easy to silence the bad critic, who might always insist upon his particular sentiment, and refuse to submit to his antagonist. But when we show him an avowed principle of art; when we illustrate this principle by examples, whose operation, from his own particular taste, he acknowledges to be conformable to the principle; when we prove, that the same principle may be applied to the present case, where he did not perceive or feel its influence: He must conclude, upon the whole, that the fault lies in himself, and that he wants the delicacy, which is requisite to make him sensible of every beauty and every blemish, in any composition or discourse.

It is acknowledged to be the perfection of every sense or faculty, to perceive with exactness its most minute objects, and allow nothing to escape its notice and observation. The smaller the objects are, which become sensible to the eye, the finer is that organ, and the more elaborate its make and composition. A good palate is not tried by strong flavours; but by a mixture of small ingredients, where we are still sensible of each part, notwithstanding its minuteness and its confusion with the rest. In like manner, a quick and acute perception of beauty and deformity must be the perfection of our mental taste; nor can a man be satisfied with himself

while he suspects, that any excellence or blemish in a discourse has passed him unobserved. In this case, the perfection of the man, and the perfection of the sense or feeling, are found to be united. A very delicate palate, on many occasions, may be a great inconvenience both to a man himself and to his friends: But a delicate taste of wit or beauty must always be a desirable quality; because it is the source of all the finest and most innocent enjoyments, of which human nature is susceptible. In this decision the sentiments of all mankind are agreed. Wherever you can ascertain a delicacy of taste, it is sure to meet with approbation; and the best way of ascertaining it is to appeal to those models and principles, which have been established by the uniform consent and experience of nations and ages.

But though there be naturally a wide difference in point of delicacy between one person and another, nothing tends further to encrease and improve this talent, than *practice* in a particular art, and the frequent survey or contemplation of a particular species of beauty. When objects of any kind are first presented to the eye or imagination, the sentiment, which attends them, is obscure and confused; and the mind is, in a great measure, incapable of pronouncing concerning their merits or defects. The taste cannot perceive the several excellencies of the performance; much less distinguish the particular character of each excellency, and ascertain its quality and degree. If it pronounce the whole in general to be beautiful or deformed, it is the utmost that can be expected; and even this judgment, a person, so unpractised, will be apt to deliver with great hesitation and reserve. But allow him to acquire experience in those objects, his feeling becomes more exact and nice:¹ He not only perceives the beauties and defects of each part, but marks the distinguishing species of each quality, and assigns it suitable praise or blame. A clear and distinct sentiment attends him through the whole survey of the objects; and he discerns that very degree and kind of approbation or displeasure, which each part is naturally fitted to produce. The mist dissipates, which seemed formerly to hang over the object: The organ acquires greater perfection in its operations; and can pronounce, without danger of mistake, concerning the merits of every performance. In a word, the same address and dexterity, which practice gives to the execution of any work, is also acquired by the same means, in the judging of it.

So advantageous is practice to the discernment of beauty, that, before we can give judgment on any work of importance, it will even be requisite, that that very individual performance be more than once perused by us, and be surveyed in different lights with attention and deliberation. There is a flutter or hurry of thought which attends the first perusal of any piece, and which confounds the genuine sentiment of beauty. The relation of the parts is not discerned: The true characters of style are little distinguished: The several perfections and defects seem wrapped up in a species of confusion, and present themselves indistinctly to the imagination. Not to mention, that there is a species of beauty, which, as it is florid and superficial, pleases at first; but being found incompatible with a just expression either of reason

1. Refined.

or passion, soon palls upon the taste, and is then rejected with disdain, at least rated at a much lower value.

It is impossible to continue in the practice of contemplating any order of beauty, without being frequently obliged to form *comparisons* between the several species and degrees of excellence, and estimating their proportion to each other. A man, who has had no opportunity of comparing the different kinds of beauty, is indeed totally unqualified to pronounce an opinion with regard to any object presented to him. By comparison alone we fix the epithets of praise or blame, and learn how to assign the due degree of each. The coarsest daubing contains a certain lustre of colours and exactness of imitation, which are so far beauties, and would affect the mind of a peasant or Indian with the highest admiration. The most vulgar ballads are not entirely destitute of harmony or nature; and none but a person, familiarized to superior beauties, would pronounce their numbers² harsh, or narration uninteresting. A great inferiority of beauty gives pain to a person conversant in the highest excellence of the kind, and is for that reason pronounced a deformity: As the most finished object, with which we are acquainted, is naturally supposed to have reached the pinnacle of perfection, and to be entitled to the highest applause. One accustomed to see, and examine, and weigh the several performances, admired in different ages and nations, can alone rate the merits of a work exhibited to his view, and assign its proper rank among the productions of genius.

But to enable a critic the more fully to execute this undertaking, he must preserve his mind free from all *prejudice*,³ and allow nothing to enter into his consideration, but the very object which is submitted to his examination. We may observe, that every work of art, in order to produce its due effect on the mind, must be surveyed in a certain point of view, and cannot be fully relished by persons, whose situation, real or imaginary, is not conformable to that which is required by the performance. An orator addresses himself to a particular audience, and must have a regard to their particular genius,⁴ interests, opinions, passions, and prejudices; otherwise he hopes in vain to govern their resolutions, and inflame their affections. Should they even have entertained some prepossessions against him, however unreasonable, he must not overlook this disadvantage; but, before he enters upon the subject, must endeavour to conciliate their affection, and acquire their good graces. A critic of a different age or nation, who should peruse this discourse, must have all these circumstances in his eye, and must place himself in the same situation as the audience, in order to form a true judgment of the oration. In like manner, when any work is addressed to the public, though I should have a friendship or enmity with the author, I must depart from this situation; and considering myself as a man in general, forget, if possible, my individual being and my peculiar circumstances. A person influenced by prejudice, complies not with this condition; but obstinately maintains his natural position, without placing himself in that point of

2. Metrical structure.

3. Unreasonable preconceived judgment or conviction; an opinion without just grounds or

sufficient knowledge.

4. Disposition.

view, which the performance supposes. If the work be addressed to persons of a different age or nation, he makes no allowance for their peculiar views and prejudices; but, full of the manners of his own age and country, rashly condemns what seemed admirable in the eyes of those for whom alone the discourse was calculated. If the work be executed for the public, he never sufficiently enlarges his comprehension, or forgets his interest as a friend or enemy, as a rival or commentator. By this means, his sentiments are perverted; nor have the same beauties and blemishes the same influence upon him, as if he had imposed a proper violence on his imagination, and had forgotten himself for a moment. So far his taste evidently departs from the true standard; and of consequence loses all credit and authority.

It is well known, that in all questions, submitted to the understanding, prejudice is destructive of sound judgment, and perverts all operations of the intellectual faculties: It is no less contrary to good taste; nor has it less influence to corrupt our sentiment of beauty. It belongs to *good sense* to check its influence in both cases; and in this respect, as well as in many others, reason, if not an essential part of taste, is at least requisite to the operations of this latter faculty. In all the nobler productions of genius, there is a mutual relation and correspondence of parts; nor can either the beauties or blemishes be perceived by him, whose thought is not capacious enough to comprehend all those parts, and compare them with each other, in order to perceive the consistence and uniformity of the whole. Every work of art has also a certain end or purpose, for which it is calculated; and is to be deemed more or less perfect, as it is more or less fitted to attain this end. The object of eloquence is to persuade, of history to instruct, of poetry to please by means of the passions and the imagination. These ends we must carry constantly in our view, when we peruse any performance; and we must be able to judge how far the means employed are adapted to their respective purposes. Besides, every kind of composition, even the most poetical, is nothing but a chain of propositions and reasonings; not always, indeed, the justest and most exact, but still plausible and specious, however disguised by the colouring of the imagination. The persons introduced in tragedy and epic poetry, must be represented as reasoning, and thinking, and concluding, and acting, suitably to their character and circumstances; and without judgment, as well as taste and invention, a poet can never hope to succeed in so delicate an undertaking. Not to mention, that the same excellence of faculties which contributes to the improvement of reason, the same clearness of conception, the same exactness of distinction, the same vivacity of apprehension, are essential to the operations of true taste, and are its infallible concomitants. It seldom, or never happens, that a man of sense, who has experience in any art, cannot judge of its beauty; and it is no less rare to meet with a man who has a just taste without a sound understanding.

Thus, though the principles of taste be universal, and nearly, if not entirely the same in all men; yet few are qualified to give judgment on any work of art, or establish their own sentiment as the standard of beauty. The organs of internal sensation are seldom so perfect as to allow the general principles their full play, and produce a feeling correspondent to those principles. They either labour under some defect, or are vitiated by some

disorder; and by that means, excite a sentiment, which may be pronounced erroneous. When the critic has no delicacy, he judges without any distinction, and is only affected by the grosser and more palpable qualities of the object: The finer touches pass unnoticed and disregarded. Where he is not aided by practice, his verdict is attended with confusion and hesitation. Where no comparison has been employed, the most frivolous beauties, such as rather merit the name of defects, are the object of his admiration. Where he lies under the influence of prejudice, all his natural sentiments are perverted. Where good sense is wanting, he is not qualified to discern the beauties of design and reasoning, which are the highest and most excellent. Under some or other of these imperfections, the generality of men labour; and hence a true judge in the finer arts is observed, even during the most polished ages, to be so rare a character: Strong sense, united to delicate sentiment, improved by practice, perfected by comparison, and cleared of all prejudice, can alone entitle critics to this valuable character; and the joint verdict of such, wherever they are to be found, is the true standard of taste and beauty.

But where are such critics to be found? By what marks are they to be known? How distinguish them from pretenders? These questions are embarrassing; and seem to throw us back into the same uncertainty, from which, during the course of this essay, we have endeavoured to extricate ourselves.

But if we consider the matter aright, these are questions of fact, not of sentiment. Whether any particular person be endowed with good sense and a delicate imagination, free from prejudice, may often be the subject of dispute, and be liable to great discussion and enquiry: But that such a character is valuable and estimable will be agreed in by all mankind. Where these doubts occur, men can do no more than in other disputable questions, which are submitted to the understanding: They must produce the best arguments, that their invention suggests to them; they must acknowledge a true and decisive standard to exist somewhere, to wit, real existence and matter of fact; and they must have indulgence to such as differ from them in their appeals to this standard. It is sufficient for our present purpose, if we have proved, that the taste of all individuals is not upon an equal footing, and that some men in general, however difficult to be particularly pitched upon, will be acknowledged by universal sentiment to have a preference above others.

But in reality the difficulty of finding, even in particulars, the standard of taste, is not so great as it is represented. Though in speculation, we may readily avow a certain criterion in science and deny it in sentiment, the matter is found in practice to be much more hard to ascertain in the former case than in the latter. Theories of abstract philosophy, systems of profound theology, have prevailed during one age: In a successive period, these have been universally exploded: Their absurdity has been detected: Other theories and systems have supplied their place, which again gave place to their successors: And nothing has been experienced more liable to the revolutions of chance and fashion than these pretended decisions of science. The case is not the same with the beauties of eloquence and poetry. Just expressions of passion and nature are sure, after a little time, to gain public

applause, which they maintain for ever. ARISTOTLE, and PLATO, and EPICURUS, and DESCARTES,⁵ may successively yield to each other: But TERENCE and VIRGIL⁶ maintain an universal, undisputed empire over the minds of men. The abstract philosophy of CICERO⁷ has lost its credit: The vehemence of his oratory is still the object of our admiration.

Though men of delicate taste be rare, they are easily to be distinguished in society, by the soundness of their understanding and the superiority of their faculties above the rest of mankind. The ascendant, which they acquire, gives a prevalence to that lively approbation, with which they receive any productions of genius, and renders it generally predominant. Many men, when left to themselves, have but a faint and dubious perception of beauty, who yet are capable of relishing any fine stroke, which is pointed out to them. Every convert to the admiration of the real poet or orator is the cause of some new conversion. And though prejudices may prevail for a time, they never unite in celebrating any rival to the true genius, but yield at last to the force of nature and just sentiment. Thus, though a civilized nation may easily be mistaken in the choice of their admired philosopher, they never have been found long to err, in their affection for a favourite epic or tragic author.

But notwithstanding all our endeavours to fix a standard of taste, and reconcile the discordant apprehensions of men, there still remain two sources of variation, which are not sufficient indeed to confound all the boundaries of beauty and deformity, but will often serve to produce a difference in the degrees of our approbation or blame. The one is the different humours of particular men; the other, the particular manners and opinions of our age and country. The general principles of taste are uniform in human nature: Where men vary in their judgments, some defect or perversion in the faculties may commonly be remarked; proceeding either from prejudice, from want of practice, or want of delicacy; and there is just reason for approving one taste, and condemning another. But where there is such a diversity in the internal frame or external situation as is entirely blameless on both sides, and leaves no room to give one the preference above the other; in that case a certain degree of diversity in judgment is unavoidable, and we seek in vain for a standard, by which we can reconcile the contrary sentiments.

A young man, whose passions are warm, will be more sensibly touched with amorous and tender images, than a man more advanced in years, who takes pleasure in wise, philosophical reflections concerning the conduct of life and moderation of the passions. At twenty, OVID may be the favourite author; HORACE at forty; and perhaps TACITUS⁸ at fifty. Vainly would we, in such cases, endeavour to enter into the sentiments of others, and divest ourselves of those propensities, which are natural to us. We choose our favourite author as we do our friend, from a conformity of humour and disposition. Mirth or passion, sentiment or reflection; whichever of these most

5. Hume names four philosophers: the Greeks ARISTOTLE (384–322 B.C.E.), PLATO (ca. 427–ca. 347 B.C.E.), and Epicurus (341–270 B.C.E.), and the French René Descartes (1596–1650).

6. Roman poet (70–19 B.C.E.). Terence (ca. 190–159 B.C.E.), Roman comic playwright.

7. Roman statesman and orator (106–43 B.C.E.).

8. Roman public official and historian (ca. 55–ca. 120 C.E.). Ovid (43 B.C.E.–17 C.E.), Roman poet best known for his love poetry. HORACE (65–8 B.C.E.), Roman lyric poet and satirist whose works often reflected his own life.

predominates in our temper, it gives us a peculiar sympathy with the writer who resembles us.

One person is more pleased with the sublime; another with the tender; a third with raillery. One has a strong sensibility to blemishes, and is extremely studious of correctness: Another has a more lively feeling of beauties, and pardons twenty absurdities and defects for one elevated or pathetic⁹ stroke. The ear of this man is entirely turned towards conciseness and energy; that man is delighted with a copious, rich, and harmonious expression. Simplicity is affected by one; ornament by another. Comedy, tragedy, satire, odes, have each its partizans, who prefer that particular species of writing to all others. It is plainly an error in a critic, to confine his approbation to one species or style of writing, and condemn all the rest. But it is almost impossible not to feel a predilection for that which suits our particular turn and disposition. Such preferences are innocent and unavoidable, and can never reasonably be the object of dispute, because there is no standard, by which they can be decided.

For a like reason, we are more pleased, in the course of our reading, with pictures and characters, that resemble objects which are found in our own age or country, than with those which describe a different set of customs. It is not without some effort, that we reconcile ourselves to the simplicity of ancient manners, and behold princesses carrying water from the spring, and kings and heroes dressing their own victuals. We may allow in general, that the representation of such manners is no fault in the author, nor deformity in the piece; but we are not so sensibly touched with them. For this reason, comedy is not easily transferred from one age or nation to another. A FRENCHMAN or ENGLISHMAN is not pleased with the ANDRIA of TERENCE, or CLITIA of MACHIAVEL;¹ where the fine lady, upon whom all the play turns, never once appears to the spectators, but is always kept behind the scenes, suitably to the reserved humour of the ancient GREEKS and modern ITALIANS. A man of learning and reflection can make allowance for these peculiarities of manners; but a common audience can never divest themselves so far of their usual ideas and sentiments, as to relish pictures which no wise resemble them.

But here there occurs a reflection, which may, perhaps, be useful in examining the celebrated controversy concerning ancient and modern learning; where we often find the one side excusing any seeming absurdity in the ancients from the manners of the age, and the other refusing to admit this excuse, or at least, admitting it only as an apology for the author, not for the performance. In my opinion, the proper boundaries in this subject have seldom been fixed between the contending parties. Where any innocent peculiarities of manners are represented, such as those above mentioned, they ought certainly to be admitted; and a man, who is shocked with them, gives an evident proof of false delicacy and refinement. The poet's *monument more durable than brass*,² must fall to the ground like common brick

9. That is, full of pathos or feeling.

1. Niccolò Machiavelli (1469–1527), Italian political theorist; he wrote the play *Clizia* in

1525. In *Andria* (166 B.C.E.), the young woman at the center of the action never speaks a word.

2. Horace, *Odes* 3.30.1.

or clay, were men to make no allowance for the continual revolutions of manners and customs, and would admit of nothing but what was suitable to the prevailing fashion. Must we throw aside the pictures of our ancestors, because of their ruffs and fardingales?³ But where the ideas of morality and decency alter from one age to another, and where vicious manners are described, without being marked with the proper characters of blame and disapprobation; this must be allowed to disfigure the poem, and to be a real deformity. I cannot, nor is it proper I should, enter into such sentiments; and however I may excuse the poet, on account of the manners of his age, I never can relish the composition. The want of humanity and of decency, so conspicuous in the characters drawn by several of the ancient poets, even sometimes by HOMER and the GREEK tragedians, diminishes considerably the merit of their noble performances, and gives modern authors an advantage over them. We are not interested in the fortunes and sentiments of such rough heroes: We are displeased to find the limits of vice and virtue so much confounded: And whatever indulgence we may give to the writer on account of his prejudices, we cannot prevail on ourselves to enter into his sentiments, or bear an affection to characters, which we plainly discover to be blameable.

The case is not the same with moral principles, as with speculative opinions of any kind. These are in continual flux and revolution. The son embraces a different system from the father. Nay, there scarcely is any man, who can boast of great constancy and uniformity in this particular. Whatever speculative errors may be found in the polite writings of any age or country, they detract but little from the value of those compositions. There needs but a certain turn of thought or imagination to make us enter into all the opinions, which then prevailed, and relish the sentiments or conclusions derived from them. But a very violent effort is requisite to change our judgment of manners, and excite sentiments of approbation or blame, love or hatred, different from those to which the mind from long custom has been familiarized. And where a man is confident of the rectitude of that moral standard, by which he judges, he is justly jealous of it, and will not pervert the sentiments of his heart for a moment, in complaisance to any writer whatsoever.

Of all speculative errors, those, which regard religion, are the most excusable in compositions of genius; nor is it ever permitted to judge of the civility or wisdom of any people, or even of single persons, by the grossness or refinement of their theological principles. The same good sense, that directs men in the ordinary occurrences of life, is not hearkened to in religious matters, which are supposed to be placed altogether above the cognizance of human reason. On this account, all the absurdities of the pagan system of theology must be overlooked by every critic, who would pretend to form a just notion of ancient poetry; and our posterity, in their turn, must have the same indulgence to their forefathers. No religious principles can ever be imputed as a fault to any poet, while they remain merely principles, and

3. Farthingales: supports (such as hoops) that expanded skirts to extend them at the hip line. "Ruffs": stiff collars.

take not such strong possession of his heart, as to lay him under the imputation of *bigotry* or *superstition*. Where that happens, they confound the sentiments of morality, and alter the natural boundaries of vice and virtue. They are therefore eternal blemishes, according to the principle abovementioned: nor are the prejudices and false opinions of the age sufficient to justify them.

It is essential to the ROMAN catholic religion to inspire a violent hatred of every other worship, and to represent all pagans, mahometans,⁴ and heretics as the objects of divine wrath and vengeance. Such sentiments, though they are in reality very blameable, are considered as virtues by the zealots of that communion, and are represented in their tragedies and epic poems as a kind of divine heroism. This bigotry has disfigured two very fine tragedies of the FRENCH theatre, POLIEUCTE and ATHALIA;⁵ where an intemperate zeal for particular modes of worship is set off with all the pomp imaginable, and forms the predominant character of the heroes. "What is this," says the sublime JOAD to JOSABET, finding her in discourse with MATHAN, the priest of BAAL, "Does the daughter of DAVID speak to this traitor? Are you not afraid, lest the earth should open and pour forth flames to devour you both? Or lest these holy walls should fall and crush you together? What is his purpose? Why comes that enemy of God hither to poison the air, which we breathe, with his horrid presence?" Such sentiments are received with great applause on the theatre of PARIS; but at LONDON the spectators would be full as much pleased to hear ACHILLES tell AGAMEMNON, that he was a dog in his forehead, and a deer in his heart, or JUPITER threaten JUNO with a sound drubbing, if she will not be quiet.⁶

RELIGIOUS principles are also a blemish in any polite composition, when they rise up to superstition, and intrude themselves into every sentiment, however remote from any connection with religion. It is no excuse for the poet, that the customs of his country had burthened⁷ life with so many religious ceremonies and observances, that no part of it was exempt from that yoke. It must for ever be ridiculous in PETRARCH⁸ to compare his mistress, LAURA, to JESUS CHRIST. Nor is it less ridiculous in that agreeable libertine, BOCCACE,⁹ very seriously to give thanks to GOD ALMIGHTY and the ladies, for their assistance in defending him against his enemies.

1757

4. Muslims.

5. *Athalie* (1691), by Jean Racine; Hume quotes from 3.5. *Polyeucte* (1641–42), play by PIERRE CORNEILLE.

6. See Homer, *Iliad* 1.225, 565–67. Hume's point is that English audiences are unmoved by the tragedies' Catholic sentiments.

7. Burdened.

8. Francesco Petrarca (1304–1374), Italian poet,

scholar, and humanist; Laura is the subject of a series of love lyrics titled *Canzoniere* or *Rima* (see, e.g., no. 3 for the comparison to Jesus).

9. GIOVANNI BOCCACCIO (1313–1375), Italian poet and writer. His most famous work, the *Decameron* (1351–53), is a collection of 100 tales supposedly told over 10 days; Hume refers here to the introduction to "The Fourth Day."

IMMANUEL KANT

1724–1804

Immanuel Kant's massive contributions to modern metaphysics, epistemology, and ethics aside, his *Critique of Judgment* (1790) ranks with ARISTOTLE's *Poetics* among our most influential philosophical treatises on art. Kant's book is a compendium of the beliefs about and ideals for art that have come to be called *aestheticism* (the separation of artistic concerns and values into their own sphere, which is seen as superior to all others). The branch of philosophy dealing with the nature of beauty, art, and taste first arose in the mid-eighteenth century in the work of Edmund Alexander Baumgarten, DAVID HUME, and EDMUND BURKE. Kant's *Critique of Judgment* responds to and augments their earlier work while giving art an exalted place within human existence, a place that justifies the new philosophical interest in art as a distinct sphere of human activity. The specifics of Kant's characterization of art resonate throughout the Romantic and modernist periods and have become a frequent target of contemporary theorists and philosophers.

Kant was born in Königsberg, East Prussia, where he attended the university, became a professor at that same university, and died shortly after his retirement. He never married and he never traveled outside of East Prussia. His regular, uneventful life is summed up in the legend that Königsberg residents set their clocks by his appearance for his afternoon walk at precisely the same time each day. His early work was mostly in the natural sciences, with one excursion into aesthetics: *Observations on the Feeling of the Beautiful and Sublime* (1764). In this work, he argues that such feelings are purely subjective, precisely the position he sets himself against when later revisiting the same terrain in his *Critique of Judgment*.

Kant's major work begins with the *Critique of Pure Reason* (1781), in which he develops his "critical philosophy" to overcome David Hume's subjectivist skepticism. This "first critique" was followed by two others: the *Critique of Practical Reason* (1788) and the *Critique of Judgment*. The three books cover the true, the good, and the beautiful, respectively. By *critique* Kant meant a delineation of the fundamental or "transcendental" conditions necessary to any particular mental process. Thus the *Critique of Pure Reason* presents the mental forms (or categories) that must be in place within the perceiving subject for any successful apprehension of the external world. He insists that these universals (for example, cause and effect, or unity) are implanted within every human being and underwrite the very possibility of "understanding" (that is, the ability to process, organize, and comprehend the data given to our senses by the outside world). We can never directly know what he calls "things-in-themselves," because we process sensory data through preexisting mental categories.

The *Critique of Practical Reason* attempts to provide a universal foundation for morals, which concern nonphysical ideas, not material realities. Kant's basic claim is that practical reason in each individual dictates the same fundamental moral dictum, which he called the categorical (i.e., unconditional) imperative: never do anything that you could not willingly endorse being done by everyone else in the world.

The first two critiques create a gap between the physical (sensible) and nonphysical (supersensible) worlds. Understanding deals with the physical world of cause and effect, where each occurrence has been determined by prior events. Reason emanates from a supersensible realm of freedom. Pure reason names the "forms" or "categories" through which understanding grasps sensible things. Practical reason provides the maxims, notably the famous categorical imperative, through which the self legislates to itself the laws of proper conduct. The ability to reason makes humans free, but they are also physical creatures subject to physical causality. *The Critique of*

Judgment exists to bridge this gap between what Kant sees as two aspects of human nature. The very word *aesthetic*, whose Greek root means “of the senses,” aids Kant’s effort to connect the sensory to the supersensible. Beauty is experienced through the senses, but points us beyond mere sensation. Aesthetic ideas, Kant tells us in §49, combine the images we gather from the sensible world with “much that is ineffable, but the feeling of which quickens our cognitive powers and connects language, which otherwise would be mere letters, with spirit.” Thus Kant describes “the use of imagination for cognition” in the standard eighteenth-century way: cognitive imagination produces mental images of absent realities. But he also introduces an “aesthetic” imagination, one that creates sensible forms through which to communicate to others content that is spiritual, emotional, and otherwise well-nigh unnameable. And this imagination, like beauty itself, is represented as free “from any instruction by rules, but still as purposive.” By bodying forth ideas, the aesthetic joins the physical and nonphysical worlds.

That Kant fixes on the aesthetic experience of beauty to solve a pressing problem in his own large-scale system has been irrelevant to many of the artists and writers who subsequently adopted or adapted his characterization of art. The literature on the *Critique of Judgment* divides into two traditions, one focusing on Kant’s overall philosophical project and the other focusing on the theory of art that can be derived from Kant’s work; our selection is slanted toward the latter, but to understand Kant’s way of approaching the whole topic of art we must also take into account his broader philosophical goal and system.

Kant’s primary aim is to establish the “subjective universality” of the judgment that something is beautiful or sublime. Judgment in general is the determination of whether a particular instance qualifies as one thing or another. For example, given the number “10,” I judge it to be an even number because I recognize that it is divisible by 2. Or when I judge the object in front of me to be a table, I am (Kant says) simply “subsuming” a particular thing under the general concept of table, a concept I already possess. Such judgments are “determinative” and “objective.” Since the concepts *even number* and *table* already exist and unambiguously provide the rule my judgment follows, there is little room for error or disagreement.

The statements “it’s beautiful” and “it’s a table” are identical in form, yet we are much more likely to disagree over the former. Why? Kant’s answer has two parts. On the one hand, by saying “it’s beautiful” rather than “I think it’s beautiful,” I am making a claim to validity beyond my individual, subjective preferences. On the other hand, *beautiful* is not a determinative concept like *table* or *even number*: judgments about beauty are instead “reflective,” occurring in the absence of a firm rule or standard, and hence are more likely to generate disagreement. The beautiful is often original, surprising, and a departure from the norm (conversely, the norm can seem too regular, boring, and academic). The ability to judge well amid such uncertainties is called *taste*—and some people have better taste than others (though Kant would insist that everyone has the potential to achieve the highest possible taste).

In considering the notion of taste, Kant is (once again) engaging with David Hume. While accepting Hume’s contention that taste is something learned, Kant believes that he failed in “Of the Standard of Taste” (1757; see above) to defend against the possible conclusion that it is culturally relative. Kant’s solution is to distinguish between what is “agreeable,” what is “good,” and what is “beautiful.” (As a rule of thumb, reading Kant becomes much easier when one pays attention to what distinctions he draws and why.) The good is a matter of reason—and of what we *should* desire. The agreeable is a matter of the senses—and of what we physically desire. The beautiful mixes the sensible with the nonsensible—and involves no desire whatsoever: thus Kant calls judgments of beauty “disinterested.” Perhaps nothing Kant advanced has been as influential as this severance of the beautiful

from interest. His basic notion is that a sensory experience of pleasure can move from the subjective ("that is pleasing to me") to the objective ("that should please everyone") only if purged of its individual, interested elements.

Kant uses the example of the difference between taste in food and taste in flowers. My daughter and I can agree that cotton candy is sweet, but she likes and desires it while I dislike and do not desire it. There is no disputing taste in such matters precisely because it is tied to idiosyncratic, physiological appetites. But Kant believes that things change when we perceive a field of flowers—or a painting of flowers. The flowers have no purpose in relation to my life or my physical needs. I can contemplate them disinterestedly, and thus my judgment about their beauty is not connected to their gratifying my personal sensibility. My statement "they are beautiful" solicits, Kant says, the agreement of everyone else in a way that my statement "I like green beans" does not.

The understanding of art that follows from this analysis was widely adopted. MATTHEW ARNOLD's "Function of Criticism at the Present Time" (1864; see below) is an important attempt to extend the ideal of disinterestedness to criticism; more recent critics have attempted to refute the notion (see our selections by PIERRE BOURDIEU and TERRY EAGLETON). Crucially, Kant's argument leads him to elevate artistic form over matter. Because he is trying to demote the physical appeal of the aesthetic, he claims that the formal properties of the observed object, not its physical and material properties, most influence judgments of beauty. Sensual responses are subjective (later writers also consider them vulgar), failing to rise above the level of the agreeable. This distinction is still used today by some to distinguish pornography from art with sexual content. In addition, the valorization of form over matter resurfaces in the various modernist versions of "abstract" and "nonrepresentational" art that emerge between 1850 (Flaubert's desire to write a novel about nothing) and 1950 (abstract expressionism).

Disinterestedness as an aesthetic ideal also entails distinguishing between the useful and the nonutilitarian work of art. At its most extreme, it generates the credo of aestheticism: "art for art's sake" (for example, see our selections from WALTER PATER and OSCAR WILDE). The beautiful object should not be tainted with any mundane purpose. The troubled relationship between art and commerce stems in part from this dream of an art that can transcend all petty worldly concerns. Kant expresses this aim in a famous formula: the beautiful object reveals "purposiveness without purpose." That is, the object is comprehensible only if we assume it was made by a purposive agent (an *a priori* condition of aesthetic judgment that Kant's "critique" reveals), even though it has no particular, determinative purpose. The formal coherence of flowers is incomprehensible apart from a general assumption of their "purposiveness," although we can ascribe no particular purpose to them. Art objects aspire to general purposiveness in the absence of any concrete purpose.

As we apprehend such objects, we respond with "free play" of the mind (a notion further developed by FRIEDRICH VON SCHILLER, among many others). The aesthetic therefore provides an experience of freedom within the physical world of causal determination. Aesthetic experience is crucial to Kant because it makes possible a "harmony" between our human freedom and our physical immersion in the world—the feeling that is the true foundation of our experiences of beauty. And because such harmony is available to all humans, I can solicit their agreement with my particular judgments of beauty. But in any particular case, I may not succeed in gaining others' agreement. Kant is careful to say that beauty is only an "ideal," not a "concept." The example is singular, but it carries a general significance. Each artwork, like every judgment about beauty, solicits its audience's approval both as a particular and as an example of a kind, a genre, or an act of criticism. For that reason, there is no rule of beauty: its validity for everyone will always be "exemplary."

For Kant, beauty intimates the harmony within our dual human nature as free and physical beings. Beauty ultimately refers to the subjective experience of this harmony rather than to any property in the object that promotes that experience. Hence aesthetic experience is “subjective”; but because all humans are susceptible to the experience of harmony, this response possesses a “universality” usually absent in subjective judgments. Kant goes even further when he calls beauty “the symbol of morality” (§59) and comes close to providing beauty a purpose and an interest. His own interests in writing the third critique certainly come to light in this statement: he wants the experience of the beautiful to signify that humans live in an “intelligible” universe, that the ideas and precepts generated by human reason are in tune with the nature of the universe itself. The experience of beauty tells us that mind and world fit.

The sublime, in contrast, shows us a misfit between mind and world. When we experience a hurricane or an earthquake, nature appears to dwarf human concerns and capabilities. Kant distinguishes between two types of sublimity. The mathematical sublime is anything so large that the imagination cannot encompass it; we thus cannot form an adequate image of this “absolutely great” thing. The dynamical sublime reveals a power beyond human scope; it dwarfs our capacities and inspires fear or, even better, respect. The sublime, according to Kant, allows us to glimpse things beyond comprehension and to experience the limits of the sensible, physical world, generating feelings of awe and terror. This experience of the limits of the sensible, of its inability to encompass aspects of our mental world, reminds us of “the superiority of the rational vocation of our cognitive powers over the greatest power of sensibility” (§27). But even while performing this important function of pointing us away from the sensible toward the mysterious supersensible, the sublime remains disquieting because in doing so it indicates a split between the two. It is just this experience of disjunction that Kant needs to subsume within the grander overarching experience of harmony that comes with the beautiful. Thus he writes “that the concept of the sublime in nature is not nearly as important and rich in implications as that of the beautiful in nature” (§23).

Kant inherits the notion of the sublime as a central feature of the aesthetic from LONGINUS and Burke, but he addresses it mostly to contain it. Thus, his sensibility is noticeably at odds with the Romantic and postmodernist writers for whom the sublime registers the gulf between human aspirations and what the world renders possible, or the recurrent artistic experience of struggling to express the ineffable with the limited material resources (sound, paint, words, stone) afforded to the arts. Such writers as JEAN-FRANÇOIS LYOTARD and PAUL DE MAN have found Kant's reflections on the sublime suggestive even while criticizing his attempts to retain beauty's elevation over the sublime.

In fact, attitudes toward Kant are something of a litmus test among contemporary theorists. Section 40 encapsulates what we might call Kant's liberal optimism—his belief that disinterested judgments can enable “unprejudiced,” “broadened” thinking and pave the way toward “enlightenment” and agreement. The *sensus communis*, an understanding shared by all humans, serves as both the guarantor (since everyone potentially possesses it) and the end result of the discussions surrounding differing judgments. Anti-Kantians (often proponents of the sublime) deny the possibility of such common ground for discussion and eventual agreement, arguing that the translation of different viewpoints into a common language always already erases or represses the very differences that constitute the disagreement.

It might seem surprising that the *Critique of Judgment* has been an extraordinarily influential text on art. After all, in some ways, the book is hardly about art at all. Most of Kant's examples come from nature, and *aesthetic* in his usage refers more to what is experienced through the senses than to something specifically artistic. Like Aristotle, he focuses on the spectator's response rather than on artistic production, but without Aristotle's interest in the elements or properties of the

art object. Kant apparently believes that it makes no difference whether the object is natural or human-made. Even when he does distinguish art from nature in §43, Kant is more concerned with preserving art's freedom—aligning it with beauty against the determined world of science and the utilitarian concerns of craft—than with examining the consequences of art's being (by definition) artificial. He never considers why the beauties offered by nature do not suffice, or what art can do that nature cannot.

Not surprisingly, Kant's influential description of the genius (the creative artist) highlights freedom above all else. The genius has a natural gift, a talent, which enables the production of exemplary and original beautiful works in the absence of any preexisting formula or rule for that production. Art is valued, in part, because the genius expresses "what is ineffable" in such a way as to make it "universally communicable." The creative imagination, in other words, produces artistic images that body forth mental states (judgments and feelings) that resist determinate expression. Because communicability is so central for Kant, genius must be tempered, even disciplined, by taste, which brings genius's originality back into contact with common sense (*sensus communis*).

Although there were always dissenters, Kant's general account of the aesthetic as formal, free, nonutilitarian, disinterested, and nonsensory was the prevailing orthodoxy for almost two centuries. That so many contemporary theorists have written against the *Critique of Judgment* testifies to the continuing importance of the understanding of art that it enshrines and that they have attempted to revise.

***Critique of Judgment* Keywords:** Aesthetics, Enlightenment Theory, Formalism, Representation

From Critique of Judgment¹

From Introduction

Judgment in general is the ability to think the particular as contained under the universal. If the universal (the rule, principle, law) is given, then judgment, which subsumes the particular under it, is *determinative* (even though [in its role] as transcendental judgment it states a priori the conditions that must be met for subsumption under that universal to be possible). But if only the particular is given and judgment has to find the universal for it, then this power is merely *reflective*.

ON THE AESTHETIC PRESENTATION OF THE PURPOSIVENESS² OF NATURE

What is merely subjective in the presentation of an object, i.e., what constitutes its reference to the subject and not to the object, is its aesthetic character; but whatever in it serves, or can be used, to determine the object

1. Translated by Werner S. Pluhar, who occasionally retains the original German words or adds information in brackets in the text. Unless otherwise specified, parenthetical terms are in Latin and are translated in the text.

2. The general sense that a thing was formed by a purposive hand, although without a specific function or purpose (a key term in Kant's aesthetic theory). "Aesthetic": pertaining to an individual's sensory experiences.

(for cognition)³ is its logical validity. In the cognition of an object of sense these two references [to the subject and to the object] occur together.

* * *

[T]hat subjective [feature] of a presentation *which cannot at all become an element of cognition* is the *pleasure* or *displeasure* connected with that presentation. For through this pleasure or displeasure I do not cognize anything in the object of the presentation, though it may certainly be the effect of some cognition. Now a thing's purposiveness, insofar as it is presented in the perception of the thing, is also not a characteristic of the object itself (for no such characteristic can be perceived), even though it can be inferred from a cognition of things. Therefore, the subjective [feature] of the presentation which cannot at all become an element of cognition is the purposiveness that precedes the cognition of an object and that we connect directly with this presentation even if we are not seeking to use the presentation of the object for cognition. Therefore, in this case we call the object purposive only because its presentation is directly connected with the feeling of pleasure, and this presentation itself is an aesthetic presentation of purposiveness. The only question is whether there is such a presentation of purposiveness at all.

When pleasure is connected with mere apprehension (*apprehensio*) of the form of an object of intuition, and we do not refer the apprehension to a concept so as to give rise to determinate cognition, then we refer the presentation not to the object but solely to the subject; and the pleasure cannot express anything other than the object's being commensurate with the cognitive powers that are, and insofar as they are, brought into play when we judge reflectively, and hence [expresses] merely a subjective formal purposiveness of the object. For this apprehension of forms by the imagination could never occur if reflective judgment did not compare them, even if unintentionally, at least with its ability [in general] to refer intuitions to concepts. Now if in this comparison a given presentation unintentionally brings the imagination (the power of a priori intuitions) into harmony with the understanding (the power of concepts), and this harmony arouses a feeling of pleasure, then the object must thereupon be regarded as purposive for the reflective power of judgment. A judgment of this sort is an aesthetic judgment about the object's purposiveness; it is not based on any concept we have of the object, nor does it provide such a concept. When the form of an object (rather than what is material in its presentation, viz., in sensation) is judged in mere reflection on it (without regard to a concept that is to be acquired from it) to be the basis of a pleasure in such an object's presentation, then the presentation of this object is also judged to be connected necessarily with this pleasure, and hence connected with it not merely for the subject apprehending this form but in general for everyone who judges [it]. The object is then called beautiful, and our ability to judge by such a pleasure (and hence also with universal validity) is called taste.

* * *

3. The process in which sense data plus the categories of understanding ("pure reason") combine in our ability to apprehend and name objects in the external world.

From *Book I. Analytic of the Beautiful*

§1. A JUDGMENT OF TASTE IS AESTHETIC

If we wish to decide whether something is beautiful or not, we do not use understanding to refer the presentation to the object so as to give rise to cognition; rather, we use imagination⁴ (perhaps in connection with understanding) to refer the presentation to the subject and his feeling of pleasure or displeasure. Hence a judgment of taste is not a cognitive judgment and so is not a logical judgment but an aesthetic one, by which we mean a judgment whose determining basis *cannot be other than subjective*. But any reference of presentations, even of sensations, can be objective (in which case it signifies what is real [rather than formal] in an empirical presentation); excepted is a reference to the feeling of pleasure and displeasure—this reference designates nothing whatsoever in the object, but here the subject feels himself, [namely] how he is affected by the presentation.

To apprehend a regular, purposive building with one's cognitive power (whether the presentation is distinct or confused) is very different from being conscious of this presentation with a sensation of liking. Here the presentation is referred only to the subject, namely, to his feeling of life, under the name feeling of pleasure or displeasure, and this forms the basis of a very special power of discriminating and judging. This power does not contribute anything to cognition, but merely compares the given presentation in the subject with the entire presentational power, of which the mind becomes conscious when it feels its own state. The presentations given in a judgment may be empirical (and hence aesthetic), but if we refer them to the object, the judgment we make by means of them is logical. On the other hand, even if the given presentations were rational, they would still be aesthetic if, and to the extent that, the subject referred them, in his judgment, solely to himself (to his feeling).

§2. THE LIKING THAT DETERMINES A JUDGMENT OF
TASTE IS DEVOID OF ALL INTEREST

Interest is what we call the liking we connect with the presentation of an object's existence. Hence such a liking always refers at once to our power of desire, either as the basis that determines it, or at any rate as necessarily connected with that determining basis. But if the question is whether something is beautiful, what we want to know is not whether we or anyone cares, or so much as might care, in any way, about the thing's existence, but rather how we judge it in our mere contemplation of it (intuition or reflection). Suppose someone asks me whether I consider the palace I see before me beautiful. I might reply that I am not fond of things of that sort, made merely to be gaped at. Or I might reply like that Iroquois *sachem* who said

4. The ability to represent in thought the features experienced in the sense perception of the external world.

that he liked nothing better in Paris than the eating-houses.⁵ I might even go on, as *Rousseau*⁶ would, to rebuke the vanity of the great who spend the people's sweat on such superfluous things. I might, finally, quite easily convince myself that, if I were on some uninhabited island with no hope of ever again coming among people, and could conjure up such a splendid edifice by a mere wish, I would not even take that much trouble for it if I already had a sufficiently comfortable hut. The questioner may grant all this and approve of it; but it is not to the point. All he wants to know is whether my mere presentation of the object is accompanied by a liking, no matter how indifferent I may be about the existence of the object of this presentation. We can easily see that, in order for me to say that an object is *beautiful*, and to prove that I have taste, what matters is what I do with this presentation within myself, and not the [respect] in which I depend on the object's existence. Everyone has to admit that if a judgment about beauty is mingled with the least interest then it is very partial and not a pure judgment of taste. In order to play the judge in matters of taste, we must not be in the least biased in favor of the thing's existence but must be wholly indifferent about it.

There is no better way to elucidate this proposition, which is of prime importance, than by contrasting the pure disinterested liking that occurs in a judgment of taste with a liking connected with interest, especially if we can also be certain that the kinds of interest I am about to mention are the only ones there are.

§3. A LIKING FOR THE AGREEABLE IS CONNECTED WITH INTEREST

Agreeable is what the senses like in sensation.

* * *

Now, that a judgment by which I declare an object to be agreeable expresses an interest in that object is already obvious from the fact that, by means of sensation, the judgment arouses a desire for objects of that kind, so that the liking presupposes something other than my mere judgment about the object: it presupposes that I have referred the existence of the object to my state insofar as that state is affected by such an object. This is why we say of the agreeable not merely that we *like* it but that it *gratifies* us. When I speak of the agreeable, I am not granting mere approval: the agreeable produces an inclination. Indeed, what is agreeable in the liveliest way requires no judgment at all about the character of the object, as we can see in people who aim at nothing but enjoyment (this is the word we use to mark the intensity of the gratification): they like to dispense with all judging.

5. Kant's reference has been traced to Pierre François Xavier de Charlevoix, *History and General Description of New France* (Paris, 1744) [translator's note]. Charlevoix (1682–1761),

French Jesuit explorer.

6. Jean-Jacques Rousseau (1712–1778), Swiss-born French political philosopher and novelist.

§4. A LIKING FOR THE GOOD IS CONNECTED WITH INTEREST

Good is what, by means of reason, we like through its mere concept. We call something (viz., if it is something useful) *good for* [this or that] if we like it only as a means. But we call something *intrinsically good* if we like it for its own sake. In both senses of the term, the good always contains the concept of a purpose, consequently a relation of reason to a volition (that is at least possible), and hence a liking for the existence of an object or action. In other words, it contains some interest or other.

In order to consider something good, I must always know what sort of thing the object is [meant] to be, i.e., I must have a [determinate] concept of it. But I do not need this in order to find beauty in something. Flowers, free designs, lines aimlessly intertwined and called foliage: these have no significance, depend on no determinate concept, and yet we like [*gefallen*] them. A liking [*Wohlgefallen*] for the beautiful must depend on the reflection, regarding an object, that leads to some concept or other (but it is indeterminate which concept this is). This dependence on reflection also distinguishes the liking for the beautiful from [that for] the agreeable, which rests entirely on sensation.⁷

It is true that in many cases it seems as if the agreeable and the good are one and the same. Thus people commonly say that all gratification (especially if it lasts) is intrinsically good, which means roughly the same as to be (lastingly) agreeable and to be good are one and the same. Yet it is easy to see that in talking this way they are merely substituting one word for another by mistake, since the concepts that belong to these terms are in no way interchangeable. Insofar as we present an object as agreeable, we present it solely in relation to sense; but if we are to call the object good [as well], and hence an object of the will, we must first bring it under principles of reason, using the concept of a purpose. [So] if something that gratifies us is also called *good*, it has a very different relation to our liking. This is [also] evident from the fact that in the case of the good there is always the question whether it is good merely indirectly or good directly (i.e., useful, or intrinsically good), whereas in the case of the agreeable this question cannot even arise, since this word always signifies something that we like directly. (What we call beautiful is also liked directly.)

* * *

But despite all this difference between the agreeable and the good, they do agree in this: they are always connected with an interest in their object. This holds not only for the agreeable—see §3—and for what is good indirectly (useful), which we like as the means to something or other that is agreeable, but also for what is good absolutely and in every respect, i.e., the moral good, which carries with it the highest interest. For the good is the object of the will (a power of desire that is determined by reason). But to will something and to have a liking for its existence, i.e., to take an interest in it, are identical.

7. That is, the pleasure derived from beauty is related to the indeterminate concept of purposiveness; thus judgments of beauty stand

between the pure sensuousness of the agreeable and the pure rationality of the good.

§5. COMPARISON OF THE THREE SORTS OF LIKING,
WHICH DIFFER IN KIND

Both the agreeable and the good refer to our power of desire and hence carry a liking with them, the agreeable a liking that is conditioned pathologically by stimuli (*stimuli*), the good a pure practical liking that is determined not just by the presentation of the object but also by the presentation of the subject's connection with the existence of the object; i.e., what we like is not just the object but its existence as well. A judgment of taste, on the other hand, is merely *contemplative*, i.e., it is a judgment that is indifferent to the existence of the object: it [considers] the character of the object only by holding it up to our feeling of pleasure and displeasure. Nor is this contemplation, as such, directed to concepts, for a judgment of taste is not a cognitive judgment (whether theoretical or practical) and hence is neither *based* on concepts, nor directed to them as *purposes*.

Hence the agreeable, the beautiful, and the good designate three different relations that presentations have to the feeling of pleasure and displeasure, the feeling by reference to which we distinguish between objects or between ways of presenting them. The terms of approbation which are appropriate to each of these three are also different. We call *agreeable* what GRATIFIES us, *beautiful* what we just LIKE, good what we ESTEEM, or *endorse* [*billigen*], i.e., that to which we attribute [*setzen*] an objective value. Agreeableness holds for nonrational animals too; beauty only for human beings, i.e., beings who are animal and yet rational, though it is not enough that they be rational (e.g., spirits) but they must be animal as well; the good, however, holds for every rational being as such, though I cannot fully justify and explain this proposition until later. We may say that, of all these three kinds of liking, only the liking involved in taste for the beautiful is disinterested and *free*, since we are not compelled to give our approval by any interest, whether of sense or of reason. So we might say that [the term] liking, in the three cases mentioned, refers to *inclination*, or to *favor*, or to *respect*. For FAVOR is the only free liking. Neither an object of inclination, nor one that a law of reason enjoins on us as an object of desire, leaves us the freedom to make an object of pleasure for ourselves out of something or other. All interest either presupposes a need or gives rise to one; and, because interest is the basis that determines approval, it makes the judgment about the object unfree.

Consider, first, the interest of inclination, [which occurs] with the agreeable. Here everyone says: Hunger is the best sauce; and to people with a healthy appetite anything is tasty provided it is edible. Hence if people have a liking of this sort, that does not prove that they are selecting [*Wahl*] by taste. Only when their need has been satisfied can we tell who in a multitude of people has taste and who does not.

EXPLICATION OF THE BEAUTIFUL INFERRED FROM THE FIRST MOMENT⁸

Taste is the ability to judge an object, or a way of presenting it, by means of a liking or disliking *devoid of all interest*. The object of such a liking is called *beautiful*.

8. The "analytic of the beautiful" of book 1 is divided into four "moments," which treat beauty in terms of quality, quantity, purposes, and liking for the object, respectively.

§6. THE BEAUTIFUL IS WHAT IS PRESENTED WITHOUT CONCEPTS
AS THE OBJECT OF A *UNIVERSAL* LIKING

This explication of the beautiful can be inferred from the preceding explication of it as object of a liking devoid of all interest. For if someone likes something and is conscious that he himself does so without any interest, then he cannot help judging that it must contain a basis for being liked [that holds] for everyone. He must believe that he is justified in requiring a similar liking from everyone because he cannot discover, underlying this liking, any private conditions, on which only he might be dependent, so that he must regard it as based on what he can presuppose in everyone else as well. He cannot discover such private conditions because his liking is not based on any inclination he has (nor on any other considered interest whatever): rather, the judging person feels completely *free* as regards the liking he accords the object. Hence he will talk about the beautiful as if beauty were a characteristic of the object and the judgment were logical (namely, a cognition of the object through concepts of it), even though in fact the judgment is only aesthetic and refers the object's presentation merely to the subject. He will talk in this way because the judgment does resemble a logical judgment inasmuch as we may presuppose it to be valid for everyone. On the other hand, this universality cannot arise from concepts. For from concepts there is no transition to the feeling of pleasure or displeasure (except in pure practical laws; but these carry an interest with them, while none is connected with pure judgments of taste). It follows that, since a judgment of taste involves the consciousness that all interest is kept out of it, it must also involve a claim to being valid for everyone, but without having a universality based on concepts. In other words, a judgment of taste must involve a claim to subjective universality.

§7. COMPARISON OF THE BEAUTIFUL WITH THE AGREEABLE AND
THE GOOD IN TERMS OF THE ABOVE CHARACTERISTIC

As regards the *agreeable* everyone acknowledges that his judgment, which he bases on a private feeling and by which he says that he likes some object, is by the same token confined to his own person. Hence, if he says that canary wine is agreeable he is quite content if someone else corrects his terms and reminds him to say instead: It is agreeable to *me*. This holds moreover not only for the taste of the tongue, palate, and throat, but also for what may be agreeable to any one's eyes and ears. To one person the color violet is gentle and lovely, to another lifeless and faded. One person loves the sound of wind instruments, another that of string instruments. It would be foolish if we disputed about such differences with the intention of censuring another's judgment as incorrect if it differs from ours, as if the two were opposed logically. Hence about the agreeable the following principle holds: *Everyone has his own taste* (of sense).

It is quite different (exactly the other way round) with the beautiful. It would be ridiculous if someone who prided himself on his taste tried to justify [it] by saying: This object (the building we are looking at, the garment that man is wearing, the concert we are listening to, the poem put up

to be judged) is beautiful *for me*. For he must not call it *beautiful* if [he means] only [that] *he* likes it. Many things may be charming and agreeable to him; no one cares about that. But if he proclaims something to be beautiful, then he requires the same liking from others; he then judges not just for himself but for everyone, and speaks of beauty as if it were a property of things. That is why he says: The *thing* is beautiful, and does not count on other people to agree with his judgment of liking on the ground that he has repeatedly found them agreeing with him; rather, he *demand*s that they agree. He reproaches them if they judge differently, and denies that they have taste, which he nevertheless demands of them, as something they ought to have. In view of this [*sofern*], we cannot say that everyone has his own particular taste. That would amount to saying that there is no such thing as taste at all, no aesthetic judgment that could rightfully lay claim to everyone's assent.

* * *

§8. IN A JUDGMENT OF TASTE THE UNIVERSALITY OF THE LIKING IS PRESENTED ONLY AS SUBJECTIVE

* * *

We must begin by fully convincing ourselves that in making a judgment of taste (about the beautiful) we require [*ansinnen*] *everyone* to like the object, yet without this liking's being based on a concept (since then it would be the good), and that this claim to universal validity belongs so essentially to a judgment by which we declare something to be *beautiful* that it would not occur to anyone to use this term without thinking of universal validity; instead, everything we like without a concept would then be included with the agreeable. For as to the agreeable we allow everyone to be of a mind of his own, no one requiring [*zumuten*] others to agree with his judgment of taste. But in a judgment of taste about beauty we always require others to agree. Insofar as judgments about the agreeable are merely private, whereas judgments about the beautiful are put forward as having general validity (as being public), taste regarding the agreeable can be called taste of sense, and taste regarding the beautiful can be called taste of reflection, though the judgments of both are aesthetic (rather than practical) judgments about an object, [i.e.,] judgments merely about the relation that the presentation of the object has to the feeling of pleasure and displeasure. But surely there is something strange here. In the case of the taste of sense, not only does experience show that its judgment (of a pleasure or displeasure we take in something or other) does not hold universally, but people, of their own accord, are modest enough not even to require others to agree (even though there actually is, at times, very widespread agreement in these judgments too). Now, experience teaches us that the taste of reflection, with its claim that its judgment (about the beautiful) is universally valid for everyone, is also rejected often enough: What is strange is that the taste of reflection should nonetheless find itself able (as it actually does) to conceive of judgments that can demand such agreement, and that it does in fact require this agreement from everyone for each of its judgments. What the people who make

these judgments dispute about is not whether such a claim is possible; they are merely unable to agree, in particular cases, on the correct way to apply this ability.

* * *

If we judge objects merely in terms of concepts, then we lose all presentation of beauty. This is why there can be no rule by which someone could be compelled to acknowledge that something is beautiful. No one can use reasons or principles to talk us into a judgment on whether some garment, house, or flower is beautiful. We want to submit the object to our own eyes, just as if our liking of it depended on that sensation. And yet, if we then call the object beautiful, we believe we have a universal voice, and lay claim to the agreement of everyone, whereas any private sensation would decide solely for the observer himself and his liking.

We can see, at this point, that nothing is postulated in a judgment of taste except such a *universal voice* about a liking unmediated by concepts. Hence all that is postulated is the *possibility* of a judgment that is aesthetic and yet can be considered valid for everyone. The judgment of taste itself does not *postulate* everyone's agreement (since only a logically universal judgment can do that, because it can adduce reasons); it merely *requires* this agreement from everyone, as an instance of the rule, an instance regarding which it expects confirmation not from concepts but from the agreement of others. Hence the universal voice is only an idea. (At this point we are not yet inquiring on what this idea rests.) Whether someone who believes he is making a judgment of taste is in fact judging in conformity with that idea may be uncertain; but by using the term beauty he indicates that he is at least referring his judging to that idea, and hence that he intends it to be a judgment of taste. For himself, however, he can attain certainty on this point, by merely being conscious that he is separating whatever belongs to the agreeable and the good from the liking that remains to him after that. It is only for this that he counts on everyone's assent, and he would under these conditions [always] be justified in this claim, if only he did not on occasion fail to observe these conditions and so make an erroneous judgment of taste.

§9. INVESTIGATION OF THE QUESTION WHETHER IN A JUDGMENT OF TASTE THE FEELING OF PLEASURE PRECEDES THE JUDGING OF THE OBJECT OR THE JUDGING PRECEDES THE PLEASURE

The solution of this problem is the key to the critique of taste and hence deserves full attention.

If the pleasure in the given object came first, and our judgment of taste were to attribute only the pleasure's universal communicability to the presentation of the object, then this procedure would be self-contradictory. For that kind of pleasure would be none other than mere agreeableness in the sensation, so that by its very nature it could have only private validity, because it would depend directly on the presentation by which the object is *given*.

Hence it must be the universal communicability of the mental state, in the given presentation, which underlies the judgment of taste as its subjective

condition, and the pleasure in the object must be its consequence. Nothing, however, can be communicated universally except cognition, as well as presentation insofar as it pertains to cognition; for presentation is objective only insofar as it pertains to cognition, and only through this does it have a universal reference point with which everyone's presentational power is compelled to harmonize. If, then, we are to think that the judgment about this universal communicability of the presentation has a merely subjective determining basis, i.e., one that does not involve a concept of the object, then this basis can be nothing other than the mental state that we find in the relation between the presentational powers [imagination and understanding] insofar as they refer a given presentation to *cognition in general*.

When this happens, the cognitive powers brought into play by this presentation are in free play, because no determinate concept restricts them to a particular rule of cognition. Hence the mental state in this presentation must be a feeling, accompanying the given presentation, of a free play of the presentational powers directed to cognition in general. Now if a presentation by which an object is given is, in general, to become cognition, we need *imagination* to combine the manifold of intuition, and *understanding*⁹ to provide the unity of the concept uniting the [component] presentations. This state of *free play* of the cognitive powers, accompanying a presentation by which an object is given, must be universally communicable; for cognition, the determination of the object with which given presentations are to harmonize (in any subject whatever) is the only way of presenting that holds for everyone.

But the way of presenting [which occurs] in a judgment of taste is to have subjective universal communicability without presupposing a determinate concept; hence this subjective universal communicability can be nothing but [that of] the mental state in which we are when imagination and understanding are in free play (insofar as they harmonize with each other as required for *cognition in general*). For we are conscious that this subjective relation suitable for cognition in general must hold just as much for everyone, and hence be just as universally communicable, as any determinate cognition, since cognition always rests on that relation as its subjective condition.

Now this merely subjective (aesthetic) judging of the object, or of the presentation by which it is given, precedes the pleasure in the object and is the basis of this pleasure, [a pleasure] in the harmony of the cognitive powers. But the universal subjective validity of this liking, the liking we connect with the presentation of the object we call beautiful, is based solely on the mentioned universality of the subjective conditions for judging objects.

* * *

EXPLICATION OF THE BEAUTIFUL INFERRED FROM THE SECOND MOMENT

Beautiful is what, without a concept, is liked universally.

* * *

9. The a priori mental categories. "The manifold of intuition": the sense data that we receive from the outside world.

§11. A JUDGMENT OF TASTE IS BASED ON NOTHING BUT
THE *FORM OF PURPOSIVENESS* OF AN OBJECT
(OR OF THE WAY OF PRESENTING IT)

Whenever a purpose is regarded as the basis of a liking, it always carries with it an interest, as the basis that determines the judgment about the object of the pleasure. Hence a judgment of taste cannot be based on a subjective purpose. But a judgment of taste also cannot be determined by a presentation of an objective purpose, i.e., a presentation of the object itself as possible according to principles of connection in terms of purposes, and hence it cannot be determined by a concept of the good. For it is an aesthetic and not a cognitive judgment, and hence does not involve a *concept* of the character and internal or external possibility of the object through this or that cause; rather, it involves merely the relation of the presentational powers to each other, insofar as they are determined by a presentation.

Now this relation, [present] when [judgment] determines an object as beautiful, is connected with the feeling of a pleasure, a pleasure that the judgment of taste at the same time declares to be valid for everyone. Hence neither an agreeableness accompanying the presentation, nor a presentation of the object's perfection and the concept of the good, can contain the basis that determines [such a judgment]. Therefore the liking that, without a concept, we judge to be universally communicable and hence to be the basis that determines a judgment of taste, can be nothing but the subjective purposiveness in the presentation of an object, without any purpose (whether objective or subjective), and hence the mere form of purposiveness, insofar as we are conscious of it, in the presentation by which an object is *given us*.

* * *

§13. A PURE JUDGMENT OF TASTE IS INDEPENDENT
OF CHARM AND EMOTION

All interest ruins a judgment of taste and deprives it of its impartiality, especially if, instead of making the purposiveness precede the feeling of pleasure as the interest of reason does, that interest bases the purposiveness on the feeling of pleasure; but this is what always happens in an aesthetic judgment that we make about something insofar as it gratifies or pains us. Hence judgments affected in this way can make either no claim at all to a universally valid liking, or a claim that is diminished to the extent that sensations of that kind are included among the bases determining the taste. Any taste remains barbaric if its liking requires that *charms* and *emotions* be mingled in, let alone if it makes these the standard of its approval.

And yet, (though beauty should actually concern only form), charms are frequently not only included with beauty, as a contribution toward a universal aesthetic liking, but are even themselves passed off as beauties, so that the matter of the liking is passed off as the form.¹ This is a misunderstanding-

1. That is, material embellishments are mistakenly thought to be the source of beauty.

ing that, like many others having yet some basis in truth, can be eliminated by carefully defining these concepts.

A *pure judgment of taste* is one that is not influenced by charm or emotion (though these may be connected with a liking for the beautiful), and whose determining basis is therefore merely the purposiveness of the form.

§14. ELUCIDATION BY EXAMPLES

Aesthetic judgments, just like theoretical (i.e., logical) ones, can be divided into empirical and pure. Aesthetic judgments are empirical if they assert that an object or a way of presenting it is agreeable or disagreeable; they are pure if they assert that it is beautiful. Empirical aesthetic judgments are judgments of sense (material aesthetic judgments); only pure aesthetic judgments (since they are formal) are properly judgments of taste.

Hence a judgment of taste is pure only insofar as no merely empirical liking is mingled in with the basis that determines it. But this is just what happens whenever charm or emotion have a share in a judgment by which something is to be declared beautiful.

Here again some will raise objections, trying to make out, not merely that charm is a necessary ingredient in beauty, but indeed that it is sufficient all by itself to [deserve] being called beautiful.

* * *

But the view that the beauty we attribute to an object on account of its form is actually capable of being heightened by charm is a vulgar error that is very prejudicial to genuine, uncorrupted, solid [*gründlich*] taste. It is true that charms may be added to beauty as a supplement: they may offer the mind more than that dry liking, by also making the presentation of the object interesting to it, and hence they may commend to us taste and its cultivation, above all if our taste is still crude and unpracticed. But charms do actually impair the judgment of taste if they draw attention to themselves as [if they were] bases for judging beauty. For the view that they contribute to beauty is so far off the mark that it is in fact only as aliens that they must, indulgently, be granted admittance when taste is still weak and unpracticed, and only insofar as they do not interfere with the beautiful form.

In painting, in sculpture, indeed in all the visual arts, including architecture and horticulture insofar as they are fine arts, *design* is what is essential; in design the basis for any involvement of taste is not what gratifies us in sensation, but merely what we like because of its form. The colors that illuminate the outline belong to charm. Though they can indeed make the object itself vivid to sense, they cannot make it beautiful and worthy of being beheld. Rather, usually the requirement of beautiful form severely restricts [what] colors [may be used], and even where the charm [of colors] is admitted it is still only the form that refines the colors.

All form of objects of the senses (the outer senses or, indirectly, the inner sense as well) is either *shape* or *play*; if the latter, it is either play of shapes (in space, namely, mimetic art and dance), or mere play of sensations (in time). The *charm* of colors or of the agreeable tone of an instrument may be added, but it is the *design* in the first case and the *composition* in the second that constitute the proper object of a pure judgment of taste; that the

purity of the colors and of the tones, or for that matter their variety and contrast, seem to contribute to the beauty, does not mean that, because they themselves are agreeable, they furnish us, as it were, with a supplement to, and one of the same kind as, our liking for the form. For all they do is to make the form intuitable more precisely, determinately, and completely, while they also enliven the presentation by means of their charm, by arousing and sustaining the attention we direct toward the object itself.

Even what we call *ornaments* (*parerga*²), i.e., what does not belong to the whole presentation of the object as an intrinsic constituent, but [is] only an extrinsic addition, does indeed increase our taste's liking, and yet it too does so only by its form, as in the case of picture frames, or drapery on statues, or colonnades around magnificent buildings. On the other hand, if the ornament itself does not consist in beautiful form but is merely attached, as a gold frame is to a painting so that its charm may commend the painting for our approval, then it impairs genuine beauty and is called *finery*.

Emotion, a sensation where agreeableness is brought about only by means of a momentary inhibition of the vital force followed by a stronger outpouring of it, does not belong to beauty at all. But sublimity (with which the feeling of emotion is connected) requires a different standard of judging from the one that taste uses as a basis. Hence a pure judgment of taste has as its determining basis neither charm nor emotion, in other words, no sensation, which is [merely] the matter of an aesthetic judgment.

* * *

§ 16. A JUDGMENT OF TASTE BY WHICH WE DECLARE AN
OBJECT BEAUTIFUL UNDER THE CONDITION OF
A DETERMINATE CONCEPT IS NOT PURE

There are two kinds of beauty, free beauty (*pulchritudo vaga*) and merely accessory beauty (*pulchritudo adhaerens*). Free beauty does not presuppose a concept of what the object is [meant] to be. Accessory beauty does presuppose such a concept, as well as the object's perfection in terms of that concept. The free kinds of beauty are called (self-subsistent) beauties of this or that thing. The other kind of beauty is accessory to a concept (i.e., it is conditioned beauty) and as such is attributed to objects that fall under the concept of a particular purpose.

Flowers are free natural beauties. Hardly anyone apart from the botanist knows what sort of thing a flower is [meant] to be; and even he, while recognizing it as the reproductive organ of a plant, pays no attention to this natural purpose when he judges the flower by taste. Hence the judgment is based on no perfection of any kind, no intrinsic purposiveness to which the combination of the manifold might refer. Many birds (the parrot, the humming-bird, the bird of paradise) and a lot of crustaceans in the sea are [free] beauties themselves [and] belong to no object determined by concepts as to its purpose, but we like them freely and on their own account. Thus design *à la grecque*,³ the foliage on borders or on wallpaper, etc., mean

2. Byworks, subordinate things (Greek).

3. The phrase *à la grecque* [in the style of the Greeks; French] was apparently used in the eighteenth century—and is still used by some

present-day French art historians—to characterize the classicism in what is now called the Louis XVI style [translator's note].

nothing on their own: they represent [*vorstellen*] nothing, no object under a determinate concept, and are free beauties. What we call fantasias in music (namely, music without a topic [*Thema*]), indeed all music not set to words, may also be included in the same class.

When we judge free beauty (according to mere form) then our judgment of taste is pure. Here we presuppose no concept of any purpose for which the manifold is to serve the given object, and hence no concept [as to] what the object is [meant] to represent; our imagination is playing, as it were, while it contemplates the shape, and such a concept would only restrict its freedom.

* * *

§17. ON THE IDEAL OF BEAUTY

There can be no objective rule of taste, no rule of taste that determines by concepts what is beautiful. For any judgment from this source [i.e., taste] is aesthetic, i.e., the basis determining it is the subject's feeling and not the concept of an object. If we search for a principle of taste that states the universal criterion of the beautiful by means of determinate concepts, then we engage in a fruitless endeavor, because we search for something that is impossible and intrinsically contradictory. The universal communicability of the sensation (of liking or disliking)—a universal communicability that is indeed not based on a concept—[I say that] the broadest possible agreement among all ages and peoples regarding this feeling that accompanies the presentation of certain objects is the empirical criterion [for what is beautiful]. This criterion, although weak and barely sufficient for a conjecture, [does suggest] that a taste so much confirmed by examples stems from [a] deeply hidden basis, common to all human beings, underlying their agreement in judging the forms under which objects are given them.

That is why we regard some products of taste as *exemplary*. This does not mean that taste can be acquired by imitating someone else's. For taste must be an ability one has oneself; and although someone who imitates a model may manifest skill insofar as he succeeds in this, he manifests taste only insofar as he can judge that model himself. From this, however, it follows that the highest model, the archetype of taste, is a mere idea, an idea which everyone must generate within himself and by which he must judge any object of taste, any example of someone's judging by taste, and even the taste of everyone [else].

Idea properly means a rational concept, and *ideal* the presentation of an individual being as adequate to an idea. Hence that archetype of taste, which does indeed rest on reason's indeterminate idea of a maximum, but which still can be presented not through concepts but only in an individual exhibition, may more appropriately be called the ideal of the beautiful. Though we do not have such an ideal in our possession, we do strive to produce it within us. But it will be merely an ideal of the imagination, precisely because it does not rest on concepts but rests on an exhibition, and the power of exhibition is the imagination.

* * *

EXPLICATION OF THE BEAUTIFUL INFERRED
FROM THE THIRD MOMENT

Beauty is an object's form of *purposiveness* insofar as it is perceived in the object *without the presentation of a purpose*.⁴

§ 18. WHAT THE MODALITY OF A JUDGMENT OF TASTE IS

About any presentation I can say at least that there is a *possibility* for it (as a cognition) to be connected with a pleasure. About that which I call *agreeable* I say that it *actually* gives rise to pleasure in me. But we think of the *beautiful* as having a *necessary* reference to liking. This necessity is of a special kind. It is not a theoretical objective necessity, allowing us to cognize a priori that everyone *will feel* this liking for the object I call beautiful. Nor is it a practical objective necessity, where, through concepts of a pure rational will that serves freely acting beings as a rule, this liking is the necessary consequence of an objective law and means nothing other than that one absolutely (without any further aim) ought to act in a certain way. Rather, as a necessity that is thought in an aesthetic judgment, it can only be called *exemplary*, i.e., a necessity of the assent of *everyone* to a judgment that is regarded as an example of a universal rule that we are unable to state. Since an aesthetic judgment is not an objective and cognitive one, this necessity cannot be derived from determinate concepts and hence is not apodeictic.⁵ Still less can it be inferred from the universality of experience (from a thorough agreement among judgments about the beauty of a certain object). For not only would experience hardly furnish a sufficient amount of evidence for this, but a concept of the necessity of these judgments cannot be based on empirical judgments.

§ 19. THE SUBJECTIVE NECESSITY THAT WE ATTRIBUTE
TO A JUDGMENT OF TASTE IS CONDITIONED

A judgment of taste requires everyone to assent; and whoever declares something to be beautiful holds that everyone *ought* to give his approval to the object at hand and that he too should declare it beautiful. Hence the *ought* in an aesthetic judgment, even once we have [*nach*] all the data needed for judging, is still uttered only conditionally. We solicit everyone else's assent because we have a basis for it that is common to all. Indeed, we could count on that assent, if only we could always be sure that the instance had been subsumed correctly under that basis, which is the rule for the approval.

* * *

4. It might be adduced as a counterinstance to this explication that there are things in which we see a purposive form without recognizing a purpose in them [but which we nevertheless do not consider beautiful]. Examples are the stone utensils sometimes excavated from ancient burial mounds, which are provided with a hole as if for a handle. Although these clearly betray in their shape a purposiveness whose purpose is unknown, we do not declare them beautiful on that account. And yet, the very fact that we

regard them as work[s] of art already forces us to admit that we are referring their shape to some intention or other and to some determinate purpose. That is also why we have no direct liking whatever for their intuition. A flower, on the other hand, e.g., a tulip, is considered beautiful, because in our perception of it we encounter a certain purposiveness that, given how we are judging the flower, we do not refer to any purpose whatever [Kant's note].

5. Absolutely certain.

§22. THE NECESSITY OF THE UNIVERSAL ASSENT THAT WE THINK IN A
JUDGMENT OF TASTE IS A SUBJECTIVE NECESSITY THAT WE PRESENT
AS OBJECTIVE BY PRESUPPOSING A COMMON SENSE

Whenever we make a judgment declaring something to be beautiful, we permit no one to hold a different opinion, even though we base our judgment only on our feeling rather than on concepts; hence we regard this underlying feeling as a common rather than as a private feeling. But if we are to use this common sense in such a way, we cannot base it on experience; for it seeks to justify us in making judgments that contain an ought: it does not say that everyone *will* agree with my judgment, but that he *ought* to. Hence the common sense, of whose judgment I am at that point offering my judgment of taste as an example, attributing to it *exemplary* validity on that account, is a mere ideal standard. With this standard presupposed, we could rightly turn a judgment that agreed with it, as well as the liking that is expressed in it for some object, into a rule for everyone. For although the principle is only subjective, it would still be assumed as subjectively universal (an idea necessary for everyone); and so it could, like an objective principle, demand universal assent insofar as agreement among different judging persons is concerned, provided only we were certain that we had subsumed under it correctly.

That we do actually presuppose this indeterminate standard of a common sense is proved by the fact that we presume to make judgments of taste. But is there in fact such a common sense, as a constitutive principle of the possibility of experience, or is there a still higher principle of reason that makes it only a regulative principle for us, [in order] to bring forth in us, for higher purposes, a common sense in the first place? In other words, is taste an original and natural ability, or is taste only the idea of an ability yet to be acquired and [therefore] artificial, so that a judgment of taste with its requirement for universal assent is in fact only a demand of reason to produce such agreement in the way we sense? In the latter case the *ought*, i.e., the objective necessity that everyone's feeling flow along with the particular feeling of each person, would signify only that there is a possibility of reaching such agreement; and the judgment of taste would only offer an example of the application of this principle. These questions we neither wish to nor can investigate at this point. For the present our task is only to analyze the power of taste into its elements, and to unite these ultimately in the idea of a common sense.

EXPLICATION OF THE BEAUTIFUL INFERRED FROM THE FOURTH MOMENT

Beautiful is what without a concept is cognized as the object of a *necessary* liking.

GENERAL COMMENT ON THE FIRST DIVISION⁶ OF THE ANALYTIC

If we take stock of the above analyses, we find that everything comes down to the concept of taste, namely, that taste is an ability to judge an object in reference to the *free lawfulness* of the imagination. Therefore, in a judgment of taste the imagination must be considered in its freedom. This

6. That is, the first book—the analytic of the beautiful.

implies, first of all, that this power is here not taken as reproductive, where it is subject to the laws of association, but as productive and spontaneous (as the originator of chosen forms of possible intuitions). Moreover, [second,] although in apprehending a given object of sense the imagination is tied to a determinate form of this object and to that extent does not have free play (as it does [e.g.] in poetry), it is still conceivable that the object may offer it just the sort of form in the combination of its manifold as the imagination, if it were left to itself [and] free, would design in harmony with the *understanding's lawfulness* in general. And yet, to say that the *imagination is free and yet lawful of itself*, i.e., that it carries autonomy with it, is a contradiction. The understanding alone gives the law. But when the imagination is compelled to proceed according to a determinate law, then its product is determined by concepts (as far as its form is concerned); but in that case the liking, as was shown above, is a liking not for the beautiful but for the good (of perfection, at any rate, formal perfection), and the judgment is not a judgment made by taste. It seems, therefore, that only a lawfulness without a law, and a subjective harmony of the imagination with the understanding without an objective harmony—where the presentation is referred to a determinate concept of an object—is compatible with the free lawfulness of the understanding (which has also been called purposiveness without a purpose) and with the peculiarity of a judgment of taste.

From *Book II. Analytic of the Sublime*

§23. TRANSITION FROM THE POWER OF JUDGING THE BEAUTIFUL
TO THAT OF JUDGING THE SUBLIME

The beautiful and the sublime are similar in some respects. We like both for their own sake, and both presuppose that we make a judgment of reflection rather than either a judgment of sense or a logically determinative one. Hence in neither of them does our liking depend on a sensation, such as that of the agreeable, nor on a determinate concept, as does our liking for the good; yet we do refer the liking to concepts, though it is indeterminate which concepts these are. Hence the liking is connected with the mere exhibition or power of exhibition, i.e., the imagination, with the result that we regard this power, when an intuition is given us, as harmonizing with the *power of concepts*, i.e., the understanding or reason, this harmony furthering [the aims of] these. That is also why both kinds of judgment are *singular* ones that nonetheless proclaim themselves universally valid for all subjects, though what they lay claim to is merely the feeling of pleasure, and not any cognition of the object.

But some significant differences between the beautiful and the sublime are also readily apparent. The beautiful in nature concerns the form of the object, which consists in [the object's] being bounded. But the sublime can also be found in a formless object, insofar as we present *unboundedness*, either [as] in the object or because the object prompts us to present it, while yet we add to this unboundedness the thought of its totality. So it seems that we regard the beautiful as the exhibition of an indeterminate concept of the understanding, and the sublime as the exhibition of an

indeterminate concept of reason.⁷ Hence in the case of the beautiful our liking is connected with the presentation of *quality*, but in the case of the sublime with the presentation of *quantity*. The two likings are also very different in kind. For the one liking ([that for] the beautiful) carries with it directly a feeling of life's being furthered, and hence is compatible with charms and with an imagination at play. But the other liking (the feeling of the sublime) is a pleasure that arises only indirectly: it is produced by the feeling of a momentary inhibition of the vital forces followed immediately by an outpouring of them that is all the stronger. Hence it is an emotion, and so it seems to be seriousness, rather than play, in the imagination's activity. Hence, too, this liking is incompatible with charms, and, since the mind is not just attracted by the object but is alternately always repelled as well, the liking for the sublime contains not so much a positive pleasure as rather admiration and respect, and so should be called a negative pleasure.

But the intrinsic and most important distinction between the sublime and the beautiful is presumably the following. If, as is permissible, we start here by considering only the sublime in natural objects (since the sublime in art is always confined to the conditions that [art] must meet to be in harmony with nature), then the distinction in question comes to this: (Independent) natural beauty carries with it a purposiveness in its form, by which the object seems as it were predetermined for our power of judgment, so that this beauty constitutes in itself an object of our liking. On the other hand, if something arouses in us, merely in apprehension and without any reasoning on our part, a feeling of the sublime, then it may indeed appear, in its form, contrapurposive for our power of judgment, incommensurate with our power of exhibition, and as it were violent to our imagination, and yet we judge it all the more sublime for that.

We see from this at once that we express ourselves entirely incorrectly when we call this or that *object of nature* sublime, even though we may quite correctly call a great many natural objects beautiful; for how can we call something by a term of approval if we apprehend it as in itself contrapurposive? Instead, all we are entitled to say is that the object is suitable for exhibiting a sublimity that can be found in the mind. For what is sublime, in the proper meaning of the term, cannot be contained in any sensible form but concerns only ideas of reason, which, though they cannot be exhibited adequately, are aroused and called to mind by this very inadequacy, which can be exhibited in sensibility. Thus the vast ocean heaved up by storms cannot be called sublime. The sight of it is horrible; and one must already have filled one's mind with all sorts of ideas if such an intuition is to attune it to a feeling that is itself sublime, inasmuch as the mind is induced to abandon sensibility and occupy itself with ideas containing a higher purposiveness.

Independent natural beauty reveals to us a technic of nature that allows us to present nature as a system in terms of laws whose principle we do not find anywhere in our understanding; the principle of a purposiveness directed to our use of judgment as regards appearances. Under this principle,

7. *Reason* refers to our mental work with nonphysical ideas; *understanding* refers to apprehension and cognition of the physical world.

appearances must be judged as belonging not merely to nature as governed by its purposeless mechanism, but also to [nature considered by] analogy with art. Hence even though this beauty does not actually expand our cognition of natural objects, it does expand our concept of nature, namely, from nature as mere mechanism to the concept of that same nature as art, and that invites us to profound investigations about [how] such a form is possible. However, in what we usually call sublime in nature there is such an utter lack of anything leading to particular objective principles and to forms of nature conforming to them, that it is rather in its chaos that nature most arouses our ideas of the sublime, or in its wildest and most ruleless disarray and devastation, provided it displays magnitude and might. This shows that the concept of the sublime in nature is not nearly as important and rich in implications as that of the beautiful in nature, and that this concept indicates nothing purposive whatever in nature itself but only in what *use* we can make of our intuitions of nature so that we can feel a purposiveness within ourselves entirely independent of nature. For the beautiful in nature we must seek a basis outside ourselves, but for the sublime a basis merely within ourselves and in the way of thinking that introduces sublimity into our presentation of nature. This is a crucial preliminary remark, which separates our ideas of the sublime completely from the idea of a purposiveness of *nature*, and turns the theory of the sublime into a mere appendix to our aesthetic judging of the purposiveness of nature. For through these ideas we do not present a particular form in nature, but only develop [the] purposive use that the imagination makes of the presentation of nature.

* * *

§25. EXPLICATION OF THE TERM SUBLIME

We call *sublime* what is *absolutely* [*schlechthin*] *large*. To be large [*groß*] and to be a magnitude [*Größe*] are quite different concepts (*magnitudo* and *quantitas*). Also, *saying simply* [*schlechtweg*] (*simpliciter*) that something is large is quite different from saying that it is *absolutely large* (*absolute, non comparative magnum*⁸). The latter is *what is large beyond all comparison*.

* * *

The above explication can also be put as follows: *That is sublime in comparison with which everything else is small*. We can easily see here that nothing in nature can be given, however large we may judge it, that could not, when considered in a different relation, be degraded all the way to the infinitely small, nor conversely anything so small that it could not, when compared with still smaller standards, be expanded for our imagination all the way to the magnitude of a world; telescopes have provided us with a wealth of material in support of the first point, microscopes in support of the second. Hence, considered on this basis, nothing that can be an object of the senses is to be called sublime. [What happens is that] our imagination strives to progress toward infinity, while our reason demands absolute totality as a real idea, and so [the imagination,] our power of estimating the

8. Absolutely, not comparatively, large (Latin).

magnitude of things in the world of sense, is inadequate to that idea. Yet this inadequacy itself is the arousal in us of the feeling that we have within us a supersensible power; and what is absolutely large is not an object of sense, but is the use that judgment makes naturally of certain objects so as to [arouse] this (feeling), and in contrast with that use any other use is small. Hence what is to be called sublime is not the object, but the attunement⁹ that the intellect [gets] through a certain presentation that occupies reflective judgment.

Hence we may supplement the formulas already given to explicate the sublime by another one: *Sublime is what even to be able to think proves that the mind has a power surpassing any standard of sense.*

§26. ON ESTIMATING THE MAGNITUDE OF NATURAL THINGS,
AS WE MUST FOR THE IDEA OF THE SUBLIME

* * *

In order for the imagination to take in a quantum intuitively, so that we can then use it as a measure or unity in estimating magnitude by numbers, the imagination must perform two acts: *apprehension* (*apprehensio*), and *comprehension* (*comprehensio aesthetica*). Apprehension involves no problem, for it may progress to infinity. But comprehension becomes more and more difficult the farther apprehension progresses, and it soon reaches its maximum, namely, the aesthetically largest basic measure for an estimation of magnitude. For when apprehension has reached the point where the partial presentations of sensible intuition that were first apprehended are already beginning to be extinguished in the imagination, as it proceeds to apprehend further ones, the imagination then loses as much on the one side as it gains on the other; and so there is a maximum in comprehension that it cannot exceed.

This serves to explain a comment made by *Savary* in his report on Egypt:¹ that in order to get the full emotional effect from the magnitude of the pyramids one must neither get too close to them nor stay too far away. For if one stays too far away, then the apprehended parts (the stones on top of one another) are presented only obscurely, and hence their presentation has no effect on the subject's aesthetic judgment; and if one gets too close, then the eye needs some time to complete the apprehension from the base to the peak, but during that time some of the earlier parts are invariably extinguished in the imagination before it has apprehended the later ones, and hence the comprehension is never complete. Perhaps the same observation can explain the bewilderment or kind of perplexity that is said to seize the spectator who for the first time enters St. Peter's Basilica in Rome. For he has the feeling that his imagination is inadequate for exhibiting the idea of a whole, [a feeling] in which imagination reaches its maximum, and as it strives to expand that maximum, it sinks back into itself, but consequently comes to feel a liking [that amounts to an] emotion [*rührendes Wohlgefallen*].

I shall say nothing for now regarding the basis of this liking, a liking connected with a presentation from which one would least expect it, namely, a presentation that makes us aware of its own inadequacy and hence also of its

9. That is, the mental sensation that attends perceiving an object that exceeds the capacity of our senses.

1. *Lettres sur l'Égypte* (1785–86, *Letters on Egypt*), by Claude-Étienne Savary (1750–1788), French traveler and Orientalist.

subjective unpurposiveness for the power of judgment in its estimation of magnitude. Here I shall only point out that if the aesthetic judgment in question is to be *pure* (*unmixed with any teleological* and hence rational judgment), and if we are to give an example of it that is fully appropriate for the critique of *aesthetic* judgment, then we must point to the sublime not in products of art (e.g., buildings, columns, etc.), where both the form and the magnitude are determined by a human purpose, nor in natural things *whose very concept carries with it a determinate purpose* (e.g., animals with a known determination in nature), but rather in crude nature (and even in it only insofar as it carries with it no charm, nor any emotion aroused by actual danger), that is, merely insofar as crude nature contains magnitude. For in such a presentation nature contains nothing monstrous (nor anything magnificent or horrid); it does not matter how far the apprehended magnitude has increased, just as long as our imagination can comprehend it within one whole. An object is *monstrous* if by its magnitude it nullifies the purpose that constitutes its concept. And *colossal* is what we call the mere exhibition of a concept if that concept is almost too large for any exhibition (i.e., if it borders on the relatively monstrous); for the purpose of exhibiting a concept is hampered if the intuition of the object is almost too large for our power of apprehension. A pure judgment about the sublime, on the other hand, must have no purpose whatsoever of the object as the basis determining it, if it is to be aesthetic and not mingled with some judgment of understanding or of reason.

* * *

Since the presentation of anything that our merely reflective power of judgment is to like without an interest must carry with it a purposiveness that is subjective and yet universally valid, but since in the sublime (unlike the beautiful) our judging is not based on a purposiveness of the *form* of the object, the following questions arise: What is this subjective purposiveness, and how does it come to be prescribed as a standard, thereby providing a basis for a universally valid liking accompanying the mere estimation of magnitude—an estimation that has been pushed to the point where the ability of our imagination is inadequate to exhibit the concept of magnitude?

When the imagination performs the combination [*Zusammensetzung*] that is required to present a magnitude, it encounters no obstacles and on its own progresses to infinity, while the understanding guides it by means of numerical concepts, for which the imagination must provide the schema; and in this procedure, which is involved in the logical estimation of magnitude, there is indeed something objectively purposive under the concept of a purpose (since any measuring is a purpose).

* * *

The infinite, however, is absolutely large (not merely large by comparison). Compared with it everything else (of the same kind of magnitudes) is small. But—and this is most important—to be able even to think the infinite as *a whole* indicates a mental power that surpasses any standard of sense. For [thinking the infinite as a whole while using a standard of sense] would require a comprehension yielding as a unity a standard that would have a determinate relation to the infinite, one that could be stated in numbers; and this is impossible. If the human mind is nonetheless to *be able*

even to think the given infinite without contradiction, it must have within itself a power that is supersensible, whose idea of a noumenon² cannot be intuited but can yet be regarded as the substrate underlying what is mere appearance, namely, our intuition of the world. For only by means of this power and its idea do we, in a pure intellectual estimation of magnitude, comprehend the infinite in the world of sense *entirely under* a concept, even though in a mathematical estimation of magnitude *by means of numerical concepts* we can never think it in its entirety. Even a power that enables us to think the infinite of supersensible intuition as given (in our intelligible substrate) surpasses any standard of sensibility. It is large beyond any comparison even with the power of mathematical estimation—not, it is true, for [the pursuit of] a theoretical aim on behalf of our cognitive power, but still as an expansion of the mind that feels able to cross the barriers of sensibility with a different (a practical) aim.

Hence nature is sublime in those of its appearances whose intuition carries with it the idea of their infinity. But the only way for this to occur is through the inadequacy of even the greatest effort of our imagination to estimate an object's magnitude. In the mathematical estimation of magnitude, however, the imagination is equal to the task of providing, for any object, a measure that will suffice for this estimation, because the understanding's numerical concepts can be used in a progression and so can make any measure adequate to any given magnitude. Hence it must be the *aesthetic* estimation of magnitude where we feel that effort, our imagination's effort to perform a comprehension that surpasses its ability to encompass [*begreifen*] the progressive apprehension in a whole of intuition, and where at the same time we perceive the inadequacy of the imagination—unbounded though it is as far as progressing is concerned—for taking in and using, for the estimation of magnitude, a basic measure that is suitable for this with minimal expenditure on the part of the understanding. Now the proper unchangeable basic measure of nature is the absolute whole of nature, which, in the case of nature as appearance, is infinity comprehended. This basic measure, however, is a self-contradictory concept (because an absolute totality of an endless progression is impossible). Hence that magnitude of a natural object to which the imagination fruitlessly applies its entire ability to comprehend must lead the concept of nature to a supersensible substrate (which underlies both nature and our ability to think), a substrate that is large beyond any standard of sense and hence makes us judge as *sublime* not so much the object as the mental attunement in which we find ourselves when we estimate the object.

Therefore, just as the aesthetic power of judgment in judging the beautiful refers the imagination in its free play to the *understanding* so that it will harmonize with the understanding's *concepts* in general (which concepts they are is left indeterminate), so in judging a thing sublime it refers the imagination to *reason* so that it will harmonize subjectively with reason's *ideas* (which ideas they are is indeterminate), i.e., so that it will produce a mental attunement that conforms to and is compatible with the one that an influence by determinate (practical) ideas would produce on feeling.

2. Something as it is in itself (which Kant sets against *phenomenon*, a "mere appearance" grasped through the senses).

This also shows that true sublimity must be sought only in the mind of the judging person, not in the natural object the judging of which prompts this mental attunement. Indeed, who would want to call sublime such things as shapeless mountain masses piled on one another in wild disarray, with their pyramids of ice, or the gloomy raging sea? But the mind feels elevated in its own judgment of itself when it contemplates these without concern for their form and abandons itself to the imagination and to a reason that has come to be connected with it—though quite without a determinate purpose, and merely expanding it—and finds all the might of the imagination still inadequate to reason's ideas.

* * *

§27. ON THE QUALITY OF LIKING IN OUR JUDGING OF THE SUBLIME

The feeling that it is beyond our ability to attain to an idea *that is a law for us* is RESPECT. Now the idea of comprehending every appearance that may be given us in the intuition of a whole is an idea enjoined on us by a law of reason, which knows no other determinate measure that is valid for everyone and unchanging than the absolute whole. But our imagination, even in its greatest effort to do what is demanded of it and comprehend a given object in a whole of intuition (and hence to exhibit the idea of reason), proves its own limits and inadequacy, and yet at the same time proves its vocation to [obey] a law, namely, to make itself adequate to that idea. Hence the feeling of the sublime in nature is respect for our own vocation. But by a certain subreption³ (in which respect for the object is substituted for respect for the idea of humanity within our[selves, as] subject[s]) this respect is accorded an object of nature that, as it were, makes intuitable for us the superiority of the rational vocation of our cognitive powers over the greatest power of sensibility.

Hence the feeling of the sublime is a feeling of displeasure that arises from the imagination's inadequacy, in an aesthetic estimation of magnitude, for an estimation by reason, but is at the same time also a pleasure, aroused by the fact that this very judgment, namely, that even the greatest power of sensibility is inadequate, is [itself] in harmony with rational ideas, insofar as striving toward them is still a law for us. For it is a law (of reason) for us, and part of our vocation, to estimate any sense object in nature that is large for us as being small when compared with ideas of reason; and whatever arouses in us the feeling of this supersensible vocation is in harmony with that law. Now the greatest effort of the imagination in exhibiting the unity [it needs] to estimate magnitude is [itself] a reference to something *large absolutely*, and hence also a reference to reason's law to adopt only this something as the supreme measure of magnitude. Hence our inner perception that every standard of sensibility is inadequate for an estimation of magnitude by reason is [itself] a harmony with laws of reason, as well as a displeasure that arouses in us the feeling of our supersensible vocation, according to which finding that every standard of sensibility is inadequate to the ideas of reason is purposive and hence pleasurable.

3. A misrepresentation; a misunderstanding derived from such a misrepresentation.

In presenting the sublime in nature the mind feels *agitated*, while in an aesthetic judgment about the beautiful in nature it is in *restful* contemplation. This agitation (above all at its inception) can be compared with a vibration, i.e., with a rapid alternation of repulsion from, and attraction to, one and the same object. If a [thing] is excessive for the imagination (and the imagination is driven to [such excess] as it apprehends [the thing] in intuition), then [the thing] is, as it were, an abyss in which the imagination is afraid to lose itself. Yet, at the same time, for reason's idea of the supersensible [this same thing] is not excessive but conforms to reason's law to give rise to such striving by the imagination. Hence [the thing] is now attractive to the same degree to which [formerly] it was repulsive to mere sensibility. The judgment itself, however, always remains only aesthetic here. For it is not based on a determinate concept of the object, and presents merely the subjective play of the mental powers themselves (imagination and reason) as harmonious by virtue of their contrast. For just as, when we judge the beautiful, imagination and *understanding* give rise to a subjective purposiveness of the mental powers by their *accordance*, so do imagination and *reason* here give rise to such a purposiveness by their *conflict*, namely, to a feeling that we have a pure and independent reason, or a power for estimating magnitude, whose superiority cannot be made intuitable by anything other than the inadequacy of that power which in exhibiting magnitudes (of sensible objects) is itself unbounded.

* * *

§28. ON NATURE AS A MIGHT

Might is an ability that is superior to great obstacles. It is called *dominance* [*Gewalt*] if it is superior even to the resistance of something that itself possesses might. When in an aesthetic judgment we consider nature as a might that has no dominance over us, then it is *dynamically sublime*.

If we are to judge nature as sublime dynamically, we must present it as arousing fear. (But the reverse does not hold: not every object that arouses fear is found sublime when we judge it aesthetically.) For when we judge [something] aesthetically (without a concept), the only way we can judge a superiority over obstacles is by the magnitude of the resistance. But whatever we strive to resist is an evil, and it is an object of fear if we find that our ability [to resist it] is no match for it. Hence nature can count as a might, and so as dynamically sublime, for aesthetic judgment only insofar as we consider it as an object of fear.

We can, however, consider an object *fearful* without being afraid of it, namely, if we judge it in such a way that we merely *think* of the case where we might possibly want to put up resistance against it, and that any resistance would in that case be utterly futile. Thus a virtuous person fears God without being afraid of him. For he does not think of wanting to resist God and his commandments as a possibility that should worry *him*. But for every such case, which he thinks of as not impossible intrinsically, he recognizes God as fearful.

Just as we cannot pass judgment on the beautiful if we are seized by inclination and appetite, so we cannot pass judgment at all on the sublime

in nature if we are afraid. For we flee from the sight of an object that scares us, and it is impossible to like terror that we take seriously. That is why the agreeableness that arises from the cessation of a hardship is *gladness*. But since this gladness involves our liberation from a danger, it is accompanied by our resolve never to expose ourselves to that danger again. Indeed, we do not even like to think back on that sensation, let alone actively seek out an opportunity for it.

On the other hand, consider bold, overhanging and, as it were, threatening rocks, thunderclouds piling up in the sky and moving about accompanied by lightning and thunderclaps, volcanoes with all their destructive power, hurricanes with all the devastation they leave behind, the boundless ocean heaved up, the high waterfall of a mighty river, and so on. Compared to the might of any of these, our ability to resist becomes an insignificant trifle. Yet the sight of them becomes all the more attractive the more fearful it is, provided we are in a safe place. And we like to call these objects sublime because they raise the soul's fortitude above its usual middle range and allow us to discover in ourselves an ability to resist which is of a quite different kind, and which gives us the courage [to believe] that we could be a match for nature's seeming omnipotence.

For although we found our own limitation when we considered the immensity of nature and the inadequacy of our ability to adopt a standard proportionate to estimating aesthetically the magnitude of nature's *domain*, yet we also found, in our power of reason, a different and nonsensible standard that has this infinity itself under it as a unit; and since in contrast to this standard everything in nature is small, we found in our mind a superiority over nature itself in its immensity. In the same way, though the irresistibility of nature's might makes us, considered as natural beings, recognize our physical impotence, it reveals in us at the same time an ability to judge ourselves independent of nature, and reveals in us a superiority over nature that is the basis of a self-preservation quite different in kind from the one that can be assailed and endangered by nature outside us. This keeps the humanity in our person from being degraded, even though a human being would have to succumb to that dominance [of nature]. Hence if in judging nature aesthetically we call it sublime, we do so not because nature arouses fear, but because it calls forth our strength (which does not belong to nature [within us]), to regard as small the [objects] of our [natural] concerns: property, health, and life, and because of this we regard nature's might (to which we are indeed subjected in these [natural] concerns) as yet not having such dominance over us, as persons, that we should have to bow to it if our highest principles were at stake and we had to choose between upholding or abandoning them. Hence nature is here called sublime [*erhaben*] merely because it elevates [*erhebt*] our imagination, [making] it exhibit those cases where the mind can come to feel its own sublimity, which lies in its vocation and elevates it even above nature.

This self-estimation loses nothing from the fact that we must find ourselves safe in order to feel this exciting liking, so that (as it might seem), since the danger is not genuine, the sublimity of our intellectual ability might also not be genuine. For here the liking concerns only our ability's *vocation*, revealed in such cases, insofar as the predisposition to this ability

is part of our nature, whereas it remains up to us, as our obligation, to develop and exercise this ability. And there is truth in this, no matter how conscious of his actual present impotence man may be when he extends his reflection thus far.

I admit that this principle seems farfetched and the result of some subtle reasoning, and hence high-flown [*überschwenglich*] for an aesthetic judgment. And yet our observation of man proves the opposite, and proves that even the commonest judging can be based on this principle, even though we are not always conscious of it. For what is it that is an object of the highest admiration even to the savage? It is a person who is not terrified, not afraid, and hence does not yield to danger but promptly sets to work with vigor and full deliberation. Even in a fully civilized society there remains this superior esteem for the warrior, except that we demand more of him: that he also demonstrate all the virtues of peace—gentleness, sympathy, and even appropriate care for his own person—precisely because they reveal to us that his mind cannot be subdued by danger. Hence, no matter how much people may dispute, when they compare the statesman with the general, as to which one deserves the superior respect, an aesthetic judgment decides in favor of the general. Even war has something sublime about it if it is carried on in an orderly way and with respect for the sanctity of the citizens' rights. At the same time it makes the way of thinking of a people that carries it on in this way all the more sublime in proportion to the number of dangers in the face of which it courageously stood its ground. A prolonged peace, on the other hand, tends to make prevalent a mere[ly] commercial spirit, and along with it base selfishness, cowardice, and softness, and to debase the way of thinking of that people.

* * *

§29. ON THE MODALITY OF A JUDGMENT ABOUT THE SUBLIME IN NATURE

Beautiful nature contains innumerable things about which we do not hesitate to require everyone's judgment to agree with our own, and can in fact expect such agreement without being wrong very often. But we cannot with the same readiness count on others to accept our judgment about the sublime in nature. For it seems that, if we are to pass judgment on that superiority of [such] natural objects, not only must our aesthetic power of judgment be far more cultivated, but also so must the cognitive powers on which it is based.

In order for the mind to be attuned to the feeling of the sublime, it must be receptive to ideas. For it is precisely nature's inadequacy to the ideas—and this presupposes both that the mind is receptive to ideas and that the imagination strains to treat nature as a schema for them—that constitutes what both repels our sensibility and yet attracts us at the same time, because it is a dominance [*Gewalt*] that reason exerts over sensibility only for the sake of expanding it commensurately with reason's own domain (the practical one) and letting it look outward toward the infinite, which for sensibility is an abyss. It is a fact that what is called sublime by us, having been prepared through culture, comes across as merely repellent to a person who

is uncultured and lacking in the development of moral ideas. In all the evidence of nature's destructive force [*Gewalt*], and in the large scale of its might, in contrast to which his own is nonexistent, he will see only the hardship, danger, and misery that would confront anyone forced to live in such a place. Thus (as Mr. de Saussure⁴ relates) the good and otherwise sensible Savoyard peasant did not hesitate to call anyone a fool who fancies glaciated mountains. He might even have had a point, if Saussure had acted merely from fancy, as most travelers tend to, in exposing himself to the dangers involved in his observations, or in order that he might some day be able to describe them with pathos. In fact, however, his intention was to instruct mankind, and that excellent man got, in addition, the soul-stirring sensation and gave it into the bargain to the readers of his travels.

But the fact that a judgment about the sublime in nature requires culture (more so than a judgment about the beautiful) still in no way implies that it was initially produced by culture and then introduced to society by way of (say) mere convention. Rather, it has its foundation in human nature: in something that, along with common sense, we may require and demand of everyone, namely, the predisposition to the feeling for (practical) ideas, i.e., to moral feeling.

This is what underlies the necessity—which we include in our judgment about the sublime—of the assent of other people's judgment to our own. For just as we charge someone with a lack of *taste* if he is indifferent when he judges an object of nature that we find beautiful, so we say that someone has no *feeling* if he remains unmoved in the presence of something we judge sublime. But we demand both taste and feeling of every person, and, if he has any culture at all, we presuppose that he has them. But we do so with this difference: taste we demand unhesitatingly from everyone, because here judgment refers the imagination merely to the understanding, our power of concepts; in the case of feeling, on the other hand, judgment refers the imagination to reason, our power of ideas, and so we demand feeling only under a subjective presupposition (though we believe we are justified and permitted to require [fulfillment of] this presupposition in everyone): we presuppose moral feeling in man. And so we attribute necessity to this [kind of] aesthetic judgment as well.

* * *

§40. ON TASTE AS A KIND OF *SENSUS COMMUNIS*

We often call the power of judgment a sense, when what we notice is not so much its reflection as merely its result. We then speak of a sense of truth, a sense of decency, of justice, etc. We do this even though we know, or at least properly ought to know, that a sense cannot contain these concepts, let alone have the slightest capacity to pronounce universal rules, but that a conception of truth, propriety, beauty, or justice could never enter our thoughts if we were not able to rise above the senses to higher cognitive powers. [This] *common human understanding*, which is merely man's sound ([but] not yet cultivated) understanding, is regarded as the very least

4. Horace Bénédict de Saussure (1740–1799), Swiss geologist and botanist [translator's note].

that we are entitled to expect from anyone who lays claim to the name of human being; and this is also why it enjoys the unfortunate honor of being called common sense (*sensus communis*), and this, indeed, in such a way that the word common (not merely in our language, where it is actually ambiguous, but in various others as well) means the same as *vulgar*—i.e., something found everywhere, the possession of which involves no merit or superiority whatever.

Instead, we must [here] take *sensus communis* to mean the idea of a sense *shared* [by all of us], i.e., a power to judge that in reflecting takes account (a priori), in our thought, of everyone else's way of presenting [something], in order *as it were* to compare our own judgment with human reason in general and thus escape the illusion that arises from the ease of mistaking subjective and private conditions for objective ones, an illusion that would have a prejudicial influence on the judgment. Now we do this as follows: we compare our judgment not so much with the actual as rather with the merely possible judgments of others, and [thus] put ourselves in the position of everyone else, merely by abstracting from the limitations that [may] happen to attach to our own judging; and this in turn we accomplish by leaving out as much as possible whatever is matter, i.e., sensation, in the presentational state, and by paying attention solely to the formal features of our presentation or of our presentational state. Now perhaps this operation of reflection will seem rather too artful to be attributed to the ability we call *common* sense. But in fact it only looks this way when expressed in abstract formulas. Intrinsically nothing is more natural than abstracting from charm and emotion when we seek a judgment that is to serve as a universal rule.

[Let us compare with this *sensus communis*] the common human understanding, even though the latter is not being included here as a part of the critique of taste. The following maxims may serve to elucidate its principles: (1) to think for oneself; (2) to think from the standpoint of everyone else; and (3) to think always consistently. The first is the maxim of an *unprejudiced*, the second of a *broadened*, the third of a *consistent* way of thinking. The first is the maxim of a reason that is never *passive*. A propensity to a passive reason, and hence to a heteronomy of reason, is called *prejudice*; and the greatest prejudice of all is *superstition*, which consists in thinking of nature as not subject to rules which the understanding through its own essential law lays down as the basis of nature. Liberation from superstition is called *enlightenment*; for although liberation from prejudices generally may also be called enlightenment, still superstition deserves to be called a prejudice preeminently (*in sensu eminenti*⁵), since the blindness that superstition creates in a person, which indeed it even seems to demand as an obligation, reveals especially well the person's need to be guided by others, and hence his state of a passive reason. As for the second maxim concerning [a person's] way of thinking, it seems that we usually [use a negative term and] call someone limited (of a *narrow* mind as opposed to a *broad* mind) if his talents are insufficient for a use of any magnitude (above all for intensive use). But we are talking here not about the power of cognition, but about the *way of thinking* [that involves] putting this power

5. In the prominent sense [of the term] (Latin).

to a purposive use; and this, no matter how slight may be the range and the degree of a person's natural endowments, still indicates a man with a *broadened way of thinking* if he overrides the private subjective conditions of his judgment, into which so many others are locked, as it were, and reflects on his own judgment from a *universal standpoint* (which he can determine only by transferring himself to the standpoint of others). The third maxim, the one concerning a *consistent* way of thinking, is hardest to attain and can in fact be attained only after repeated compliance with a combination of the first two has become a skill. We may say that the first of these maxims is the maxim of the understanding, the second that of judgment, the third that of reason.

Resuming now the thread from which I just digressed, I maintain that taste can be called a *sensus communis* more legitimately than can sound understanding, and that the aesthetic power of judgment deserves to be called a shared sense more than does the intellectual one, if indeed we wish to use the word *sense* to stand for an effect that mere reflection has on the mind, even though we then mean by sense the feeling of pleasure. We could even define taste as the ability to judge something that makes our feeling in a given presentation *universally communicable* without mediation by a concept.

The aptitude that human beings have for communicating their thoughts to one another also requires that imagination and understanding be related in such a way that concepts can be provided with accompanying intuitions, and intuitions in turn with accompanying concepts, these intuitions and concepts joining to [form] cognition. But here the harmony of the two mental powers is *law-governed*, under the constraint of determinate concepts. Only where the imagination is free when it arouses the understanding, and the understanding, without using concepts, puts the imagination into a play that is regular [i.e., manifests regularity], does the presentation communicate itself not as a thought but as the inner feeling of a purposive state of mind.

Hence taste is our ability to judge a priori the communicability of the feelings that (without mediation by a concept) are connected with a given presentation.

* * *

§43. ON ART IN GENERAL

(1) *Art* is distinguished from *nature* as doing (*facere*) is from acting or operating in general (*agere*); and the product or result of art is distinguished from that of nature, the first being a work (*opus*), the second an effect (*effectus*).

By right we should not call anything art except a production through freedom, i.e., through a power of choice that bases its acts on reason. For though we like to call the product that bees make (the regularly constructed honeycombs) a work of art, we do so only by virtue of an analogy with art; for as soon as we recall that their labor is not based on any rational deliberation on their part, we say at once that the product is a product of their nature (namely, of instinct), and it is only to their creator that we ascribe it as art.

[It is true that] if, as sometimes happens when we search through a bog, we come across a piece of hewn wood, we say that it is a product of art, rather than of nature, i.e., that the cause which produced it was thinking of

a purpose to which this object owes its form. Elsewhere too, I suppose, we see art in everything that is of such a character that before it became actual its cause must have had a presentation of it (as even in the case of bees), yet precisely without the cause's having [in fact] *thought* of that effect. But if we simply call something a work of art in order to distinguish it from a natural effect, then we always mean by that a work of man.

(2) *Art*, as human skill, is also distinguished from *science* ([i.e., we distinguish] *can* from *know*), as practical from theoretical ability, as technic from theory (e.g., the art of surveying from geometry). That is exactly why we refrain from calling anything art that we *can* do the moment we *know* what is to be done, i.e., the moment we are sufficiently acquainted with what the desired effect is. Only if something [is such that] even the most thorough acquaintance with it does not immediately provide us with the skill to make it, then to that extent it belongs to art. *Camper*⁶ describes with great precision what the best shoe would have to be like, yet he was certainly unable to make one.

(3) *Art* is likewise distinguished from *craft*. The first is also called *free art*, the second could also be called *mercenary art*. We regard free art [as an art] that could only turn out purposive (i.e., succeed) if it is play, in other words, an occupation that is agreeable on its own account; mercenary art we regard as labor, i.e., as an occupation that on its own account is disagreeable (burdensome) and that attracts us only through its effect (e.g., pay), so that people can be coerced into it. To judge whether, in a ranking of the guilds, watchmakers should be counted as artists but smiths as craftsmen, we would have to take a viewpoint different from the one adopted here: we would have to compare [*Proportion*] the talents that each of these occupations presupposes. Whether even among the so-called seven free arts⁷ a few may not have been included that should be numbered with the sciences, as well as some that are comparable to crafts, I do not here wish to discuss. It is advisable, however, to remind ourselves that in all the free arts there is yet a need for something in the order of a constraint, or, as it is called, a *mechanism*. (In poetry, for example, it is correctness and richness of language, as well as prosody and meter.) Without this the *spirit*, which in art must be *free* and which alone animates the work, would have no body at all and would evaporate completely. This reminder is needed because some of the more recent educators believe that they promote a free art best if they remove all constraint from it and convert it from labor into mere play.

* * *

§46. FINE ART IS THE ART OF GENIUS

Genius is the talent (natural endowment) that gives the rule of art. Since talent is an innate productive ability of the artist and as such belongs itself to nature, we could also put it this way: *Genius* is the innate mental predisposition (*ingenium*) *through which* nature gives the rule to art.

6. Peter Camper (1722–1789), Dutch anatomist and naturalist [translator's note].

7. That is, the liberal arts of medieval education, made up of the trivium (grammar, logic, and rhe-

toric) and the more advanced quadrivium (music, arithmetic, geometry, and astronomy). *Liber* means "free" in Latin.

Whatever the status of this definition may be, and whether or not it is merely arbitrary, or rather adequate to the concept that we usually connect with the word *genius* (these questions will be discussed in the following section), still we can prove even now that, in terms of the meaning of the word *genius* adopted here, fine arts must necessarily be considered arts of *genius*.

For every art presupposes rules, which serve as the foundation on which a product, if it is to be called artistic, is thought of as possible in the first place. On the other hand, the concept of fine art does not permit a judgment about the beauty of its product to be derived from any rule whatsoever that has a *concept* as its determining basis, i.e., the judgment must not be based on a concept of the way in which the product is possible. Hence fine art cannot itself devise the rule by which it is to bring about its product. Since, however, a product can never be called art unless it is preceded by a rule, it must be nature in the subject (and through the attunement of his powers) that gives the rule to art; in other words, fine art is possible only as the product of *genius*.

What this shows is the following: (1) *Genius* is a *talent* for producing something for which no determinate rule can be given, not a predisposition consisting of a skill for something that can be learned by following some rule or other; hence the foremost property of *genius* must be *originality*. (2) Since nonsense too can be original, the products of *genius* must also be models, i.e., they must be *exemplary*; hence, though they do not themselves arise through imitation, still they must serve others for this, i.e., as a standard or rule by which to judge. (3) *Genius* itself cannot describe or indicate scientifically how it brings about its products, and it is rather as *nature* that it gives the rule. That is why, if an author owes a product to his *genius*, he himself does not know how he came by the ideas for it; nor is it in his power [*Gewalt*] to devise such products at his pleasure, or by following a plan, and to communicate [his procedure] to others in precepts that would enable them to bring about like products. (Indeed, that is presumably why the word *genius* is derived from [Latin] *genius*, [which means] the guardian and guiding spirit that each person is given as his own at birth, and to whose inspiration [*Eingebung*] those original ideas are due.) (4) Nature, through *genius*, prescribes the rule not to science but to art, and this also only insofar as the art is to be fine art.

* * *

§48. ON THE RELATION OF GENIUS TO TASTE

Judging beautiful objects to be such requires *taste*; but fine art itself, i.e., *production* of such objects, requires *genius*.

If we consider *genius* as the talent for fine art (and the proper meaning of the word implies this) and from this point of view wish to analyze it into the powers that must be combined in order to constitute such a talent, then we must begin by determining precisely how natural beauty, the judging of which requires only taste, differs from artistic beauty, whose possibility (which we must also bear in mind when we judge an object of this sort) requires *genius*.

A natural beauty is a *beautiful thing*; artistic beauty is a *beautiful presentation* of a thing.

* * *

§49. ON THE POWERS OF THE MIND WHICH CONSTITUTE GENIUS

Of certain products that are expected to reveal themselves at least in part to be fine art, we say that they have no *spirit*, even though we find nothing to censure in them as far as taste is concerned. A poem may be quite nice and elegant and yet have no spirit. A story may be precise and orderly and yet have no spirit. An oration may be both thorough and graceful and yet have no spirit. Many conversations are entertaining, but they have no spirit. Even about some woman we will say that she is pretty, communicative, and polite, but that she has no spirit. Well, what do we mean here by spirit?

Spirit [*Geist*] in an aesthetic sense is the animating principle in the mind. But what this principle uses to animate [or quicken] the soul, the material it employs for this, is what imparts to the mental powers a purposive momentum, i.e., imparts to them a play which is such that it sustains itself on its own and even strengthens the powers for such play.

Now I maintain that this principle is nothing but the ability to exhibit *aesthetic ideas*; and by an aesthetic idea I mean a presentation of the imagination which prompts much thought, but to which no determinate thought whatsoever, i.e., no [determinate] *concept*, can be adequate, so that no language can express it completely and allow us to grasp it. It is easy to see that an aesthetic idea is the counterpart (pendant) of a *rational idea*, which is, conversely, a concept to which no *intuition* (presentation of the imagination) can be adequate.

For the imagination ([in its role] as a productive cognitive power) is very mighty when it creates, as it were, another nature out of the material that actual nature gives it. We use it to entertain ourselves when experience strikes us as overly routine. We may even restructure experience; and though in doing so we continue to follow analogical laws, yet we also follow principles which reside higher up, namely, in reason (and which are just as natural to us as those which the understanding follows in apprehending empirical nature). In this process we feel our freedom from the law of association (which attaches to the empirical use of the imagination); for although it is under that law that nature lends us material, yet we can process that material into something quite different, namely, into something that surpasses nature.

Such presentations of the imagination we may call *ideas*. One reason for this is that they do at least strive toward something that lies beyond the bounds of experience, and hence try to approach an exhibition of rational concepts (intellectual ideas), and thus [these concepts] are given a semblance of objective reality. Another reason, indeed the main reason, for calling those presentations ideas is that they are inner intuitions to which no concept can be completely adequate. A poet ventures to give sensible expression to rational ideas of invisible beings, the realm of the blessed, the realm of hell, eternity, creation, and so on. Or, again, he takes [things] that are indeed exemplified in experience, such as death, envy, and all the other vices, as well as love, fame, and so on; but then, by means of an imagination that emulates the example of reason in reaching [for] a maximum, he ventures to give these sensible expression in a way that goes beyond the limits of experience, namely, with a completeness for which no example can be found in nature. And it is actually in the art of poetry that the power [i.e., faculty] of aesthetic ideas can manifest itself to full extent. Considered by itself, however, this power is actually only a talent (of the imagination).

Now if a concept is provided with [*unterlegen*] a presentation of the imagination such that, even though this presentation belongs to the exhibition of the concept, yet it prompts, even by itself, so much thought as can never be comprehended within a determinate concept and thereby the presentation aesthetically expands the concept itself in an unlimited way, then the imagination is creative in [all of] this and sets the power of intellectual ideas (i.e., reason) in motion: it makes reason think more, when prompted by a [certain] presentation, than what can be apprehended and made distinct in the presentation (though the thought does pertain to the concept of the object [presented]).

* * *

In a word, an aesthetic idea is a presentation of the imagination which is conjoined with a given concept and is connected, when we use imagination in its freedom, with such a multiplicity of partial presentations that no expression that stands for a determinate concept can be found for it. Hence it is a presentation that makes us add to a concept the thoughts of much that is ineffable, but the feeling of which quickens our cognitive powers and connects language, which otherwise would be mere letters, with spirit.

So the mental powers whose combination (in a certain relation) constitutes *genius* are imagination and understanding. One qualification is needed, however. When the imagination is used for cognition, then it is under the constraint of the understanding and is subject to the restriction of adequacy to the understanding's concept. But when the aim is aesthetic, then the imagination is free, so that, over and above that harmony with the concept, it may supply, in an unstudied way, a wealth of undeveloped material for the understanding which the latter disregarded in its concept. But the understanding employs this material not so much objectively, for cognition, as subjectively, namely, to quicken the cognitive powers, though indirectly this does serve cognition too. Hence genius actually consists in the happy relation—one that no science can teach and that cannot be learned by any diligence—allowing us, first, to discover ideas for a given concept, and, second, to hit upon a way of *expressing* these ideas that enables us to communicate to others, as accompanying a concept, the mental attunement that those ideas produce. The second talent is properly the one we call spirit. For in order to express what is ineffable in the mental state accompanying a certain presentation and to make it universally communicable—whether the expression consists in language or painting or plastic art—we need an ability [*viz.*, spirit] to apprehend the imagination's rapidly passing play and to unite it in a concept that can be communicated without the constraint of rules (a concept that on that very account is original, while at the same time it reveals a new rule that could not have been inferred from any earlier principles or examples).

If, after this analysis, we look back to the above explication of what we call *genius*, we find: *First*, genius is a talent for art, not for science, where we must start from distinctly known rules that determine the procedure we must use in it. *Second*, since it is an artistic talent, it presupposes a determinate concept of the product, namely, its purpose; hence genius presupposes understanding, but also a presentation (though an indeterminate one) of the material, i.e., of the intuition, needed to exhibit this concept, and hence pre-

supposes a relation of imagination to understanding. *Third*, it manifests itself not so much in the fact that the proposed purpose is achieved in exhibiting a determinate concept, as, rather, in the way *aesthetic ideas*, which contain a wealth of material [suitable] for that intention, are offered or expressed; and hence it presents the imagination in its freedom from any instruction by rules, but still as purposive for exhibiting the given concept. Finally, *fourth*, the unstudied, unintentional subjective purposiveness in the imagination's free harmony with the understanding's lawfulness presupposes such a proportion and attunement of these powers as cannot be brought about by any compliance with rules, whether of science or of mechanical imitation, but can be brought about only by the subject's nature.

These presuppositions being given, genius is the exemplary originality of a subject's natural endowment in the *free* use of his cognitive powers. Accordingly, the product of a genius (as regards what is attributable to genius in it rather than to possible learning or academic instruction) is an example that is meant not to be imitated, but to be followed by another genius. (For in mere imitation the element of genius in the work—what constitutes its spirit—would be lost.) The other genius, who follows the example, is aroused by it to a feeling of his own originality, which allows him to exercise in art his freedom from the constraint of rules, and to do so in such a way that art itself acquires a new rule by this, thus showing that the talent is exemplary. But since a genius is nature's favorite and so must be regarded as a rare phenomenon, his example gives rise to a school for other good minds, i.e., a methodical instruction by means of whatever rules could be extracted from those products of spirit and their peculiarity; and for these [followers] fine art is to that extent imitation, for which nature, through a genius, gave the rule.

But this imitation becomes *aping* if the pupil *copies* everything, including even the deformities that the genius had to permit only because it would have been difficult to eliminate them without diminishing the force of the idea. This courage [to retain deformities] has merit only in a genius. A certain *boldness* of expression, and in general some deviation from the common rule, is entirely fitting for a genius; it is however not at all worthy of imitation, but in itself always remains a defect that [any]one must try to eliminate, though the genius has, as it were, a privilege to allow the defect to remain [anyway], because the inimitable [element] in the momentum of his spirit would be impaired by timorous caution.

* * *

§59. ON BEAUTY AS THE SYMBOL OF MORALITY

* * *

Now I maintain that the beautiful is the symbol of the morally good; and only because we refer [*Rücksicht*] the beautiful to the morally good (we all do so [*Beziehung*] naturally and require all others also to do so, as a duty) does our liking for it include a claim to everyone else's assent, while the mind is also conscious of being ennobled, by this [reference], above a mere receptivity for pleasure derived from sense impressions, and it assesses the value of other people too on the basis of [their having] a similar maxim in their power of judgment. The morally good is the intelligible that taste has

in view, as I indicated in the preceding section;⁸ for it is with this intelligible that even our higher cognitive powers harmonize, and without this intelligible contradictions would continually arise from the contrast between the nature of these powers and the claims that taste makes. In this ability [taste], judgment does not find itself subjected to a heteronomy from empirical laws, as it does elsewhere in empirical judging—concerning objects of such a pure liking it legislates to itself, just as reason does regarding the power of desire. And because the subject has this possibility within him, while outside [him] there is also the possibility that nature will harmonize with it, judgment finds itself referred to something that is both in the subject himself and outside him, something that is neither nature nor freedom and yet is linked with the basis of freedom, the supersensible, in which the theoretical and the practical power are in an unknown manner combined and joined into a unity. I shall now bring up a few points of this analogy [between the beautiful and the morally good], noting at the same time what difference there is between them.

(1) The beautiful we like *directly* (but only in intuition reflect[ed upon], not in its concept, as we do morality). (2) We like it *without any interest*. (Our liking for the morally good is connected necessarily with an interest, but with an interest that does not precede our judgment about the liking but is produced by this judgment in the first place.) (3) In judging the beautiful, we present the *freedom* of the imagination (and hence [of] our power [of] sensibility) as harmonizing with the lawfulness of the understanding. (In a moral judgment we think the freedom of the will as the will's harmony with itself according to universal laws of reason.) (4) We present the subjective principle for judging the beautiful as *universal*, i.e., as valid for everyone, but as unknowable through any universal concept. (The objective principle of morality we also declare to be universal[ly valid], i.e., [valid] for all subjects, as well as for all acts of the same subject, but also declare to be knowable through a universal concept.) Hence not only is a moral judgment capable of [having] determinate constitutive principles, but its possibility *depends* on our basing the[se] maxims on those principles and their universality.

The common understanding also habitually bears this analogy in mind, and beautiful objects of nature or of art are often called by names that seem to presuppose that we are judging [these objects] morally. We call buildings or trees majestic and magnificent, or landscapes cheerful and gay; even colors are called innocent, humble, or tender, because they arouse sensations in us that are somehow analogous to the consciousness we have in a mental state produced by moral judgments. Taste enables us, as it were, to make the transition from sensible charm to a habitual moral interest without making too violent a leap; for taste presents the imagination as admitting, even in its freedom, of determination that is purposive for the understanding, and it teaches us to like even objects of sense freely, even apart from sensible charm.

8. Section 58, omitted from our selection.

EDMUND BURKE

1729–1797

The sublime, which Edmund Burke examines in his major work *A Philosophical Enquiry into the Origins of Our Ideas of the Sublime and Beautiful* (1757), is one of the most intriguing terms in the history of literary criticism and theory. When invoked to name the defining quality of a great literary or artistic work, it usually suggests grandeur, vastness, awe, immense power. But the concept has a complex history, and critics and theorists have for centuries explored its meanings. It was first described in the treatise *On Sublimity*, written in the first century C.E. by a Greek rhetorician known (because of an early misattribution) as LONGINUS; in this text, the sublime is defined as “excellence in language” and as the “expression of a great spirit.” It is associated as well with frightening, huge phenomena in nature—volcanoes, storms, the surging seas. Here already are signs of the tensions and ambiguities that Burke, and others in the eighteenth and nineteenth centuries, inquired into. Is the sublime a fact about nature or art, or both? Is the sublime a property of the work of literature itself? Or is it, instead, less in the work than in the soul, mind, or character of the genius who produces the work? Or—yet another variation—is it an extraordinary experience brought about by the power of the perceiver, and thus testimony not to the work or to the author but to something in the reader, something special in the intensity of the reader’s response?

Burke’s contribution to aesthetics is significant, although he is best known as a political theorist and statesman. He was born in Dublin, Ireland; his father, a lawyer, was a Protestant, and his mother was a Roman Catholic. He attended Trinity College in Dublin from 1743 to 1748 and then in 1750 began the study of law at the Middle Temple in London. His first publication, a satiric work titled *A Vindication of Natural Society*, was published anonymously in 1756. It was followed the next year by the *Enquiry*, also published anonymously, and this book won praise from scholars and critics in England and abroad. Burke soon became friends with a number of accomplished writers and artists, including Oliver Goldsmith, SAMUEL JOHNSON, and Joshua Reynolds; Johnson called Burke’s work on the sublime “an example of true criticism.” Beginning in 1758, Burke was also the editor (anonymously) of *The Annual Register*, a survey of world affairs; he held the position for three decades.

In 1765 Burke was appointed secretary to the marquess of Rockingham, a notable Whig political leader, and he became a member of Parliament. He took an active role in debates over the relationship between Parliament and the king, as George III attempted to increase the power of the monarchy; the Whigs sought to limit royal authority. In his pamphlet *Thoughts on the Cause of the Present Discontents* (1770), Burke criticized George’s choice of ministers and presented a new conception of political “party.” Traditionally, political parties had been seen as inherently subversive and unpatriotic, as well as sources of factionalism; but Burke viewed parties as collectives brought together on the basis of shared public principles. Rightly conceived, “party” was a “constitutional link between king and parliament, providing consistency and strength in administration, or principled criticism in opposition.”

In addition to his efforts to limit the power of the king, Burke was involved in the 1760s and 1770s in the disputes about how best to govern the American colonies, a question considered in *Thoughts*. He delivered a number of speeches on this issue, faulting the policies of the British government for being rigid, contradictory, and unworkable. He called for “conciliation”—not an end to imperial authority but a more pragmatic exercise of it that would take into serious account the reasons for the colonists’ complaints about taxation and lack of representation.

Burke was also an angry, incisive critic of the French Revolution, which broke out in 1789 and which many British writers, including WILLIAM WORDSWORTH and SAMUEL TAYLOR COLERIDGE, initially welcomed and supported. In his classic text *Reflections on the Revolution in France* (1790), Burke inveighed against unfettered democracy and dangerous appeals to the universal “rights of man” as he defended tradition, monarchy, and hereditary aristocracy. He resisted abstract speculation and (as he defined them) systems and schemes for social and political change that ignored the long history and organic interrelatedness of sociopolitical life, culture, and institutions. Society, for Burke, means a “partnership” between “those who are living, those who are dead, and those who are yet to be born.” It is dangerously wrong to interfere with this partnership, however alluring the ideals brought forward as justification.

In our selection, we see Burke writing as a literary theorist, taking up a subject that previous critics had discussed and that resonated in the verse of contemporary poets. He is indebted, for example, to JOSEPH ADDISON’s essays on taste, the imagination, and the sublime (see above) and to DAVID HUME’s “Of the Standard of Taste” (1757; see above). Like these writers, he operates within the empirical tradition that John Locke had established in *An Essay Concerning Human Understanding* (1690)—that knowledge derives from sense experience and that simple ideas are combined into more complex ones. Burke has also absorbed the melancholy, reflective, sometimes ominous and disquieting poetry of Edward Young (“Night Thoughts,” 1742), Thomas Gray (“Elegy Written in a Country Churchyard,” 1751), and others. He is interested in the psychological and physical nature of our emotional responses to the exalted and the fearful, the terrible and terrifying, both in art and in nature.

In the excerpt below, Burke begins with a cogent account of the limitations of curiosity and novelty. These at first might strike us as positive terms—and to an extent they are, as Burke describes them. But, he explains, the problem with curiosity is that it is fickle, taking us all too quickly from one object of attention to another as it offers us the promise of some novelty, of something new and unusual that momentarily rouses us from the sense of familiarity with which we experience life as a whole. Yet to keep us from restlessness, anxiety, and weariness—Burke’s words—our minds require the stimulation of other types of powers and passions, an observation that leads Burke to an inquiry into the more profound sensations of pain and pleasure.

Before Burke can depict the complex emotion surrounding the special experience of the sublime, he must briefly rehearse a psychology of relevant emotions. He maps them into two main groups. The social affects of pleasure and joy, linked with life and health, contrast sharply with the private sensations of pain and danger, which are tied to illness, death, and self-preservation. The former, observes Burke, have a weak impact on our emotions in comparison with the latter, more powerful passions. In his account, the king of personal terrors is death. Burke associates the aesthetic experience of the sublime with the most powerful private emotions, provided they are faced at a safe “aesthetic distance.”

These early sections might prompt us to compare Burke with other philosophers and writers of the eighteenth century interested in similar ideas, such as Samuel Johnson and David Hume; with the poets and critics of the Romantic era who took issue with them; and with the theorists who spoke either for or against affective response and reader response in the twentieth century. But these sections are a preparation for section VII, where Burke introduces his understanding of “the sublime,” which is, he maintains, “the strongest emotion which the mind is capable of feeling.” The meaning of the sublime and the difference between the sublime and the beautiful, which Burke highlights here and develops in detail in later chapters, are the most significant features of his book.

Used as an adjective, “sublime” (from the Latin *sublimis*, “on high, uplifted, raised up”) in the sixteenth and seventeenth centuries meant grand, elevated, lofty. By the middle of the eighteenth century, it also suggested the highest moral, intellectual, or emotional level, as well as great nobility of character. Late in the century, it was used as both an adjective and a noun to refer, as it does today, to a sensation—overwhelming awe, astonishment, fear, terror—produced by great scenes in nature and powerful works of literature and art.

Though Burke read Longinus’s text when he was a student at Trinity, he seems almost to have been fascinated by the idea and experience of the sublime. For example, while in his teens he commented in a letter on a flood he saw from a distance: “It gives me pleasure to see nature in these great though terrible scenes. It fills the mind with grand ideas, and turns the soul in upon itself.” In his *Essay on Criticism* (1711; see above), ALEXANDER POPE had highlighted the order, harmony, and proportion that characterized Nature—and that writers should seek to embody in their work. But in this letter and in his book on the sublime, Burke is getting at an irrational element in both nature and art, something not captured by terms such as *reason*, *order*, *proportion*, and *balance*. The experience of the sublime, in all of its intensity, does partake of the irrational. But if we experienced it only as the irrational, we would feel only terror, not delight. Our perspective should exist at a distance, sufficiently detached from the experience that we are able to enjoy, contemplate, and reflect upon it. As we engage with sublime literary works, by maintaining an aesthetic distance we can perceive their status as representations of reality, not as reality itself.

Burke thus delves into the response of the reader or viewer to the sublime, and in his attention to the psychological nature of response he looks forward to the philosopher IMMANUEL KANT in his *Critique of Judgment* (1790), the German dramatist and critic G. E. LESSING, Coleridge, and RALPH WALDO EMERSON. Coleridge and Emerson, and, later, Walt Whitman, discover the sublime in the commonplace and everyday through the power of the perceiving mind—the capacity to recognize and voice, as Whitman does, the awe-inspiring infinite meaningfulness of a leaf of grass. Burke’s influence on the understanding of the “terror” associated with the sublime is also apparent in the theory and practice of the Gothic novel; in *The Mysteries of Udolpho* (1794), Ann Radcliffe describes the impact of terror on the mind in Burkean terms: “A terror of this nature, as it occupies and expands the mind, and elevates it to a high expectation, is purely sublime, and leads us, by a kind of fascination, to seek even the object from which we appear to shrink.”

Unlike some theorists of the era, though like Kant later in the century, Burke makes a distinction between the sublime and the beautiful. The sublime he connects to terror, obscurity, vastness, infinity; the beautiful he associates with smallness, brightness of color, the finite. His book stands roughly midway between the elegant neoclassicism of JOHN DRYDEN and Pope and the transcendence-seeking Romantic poetry and criticism of Wordsworth and Coleridge. Burke was one of the central figures in the challenge to the tradition that Dryden and Pope represented, and he prepared the way for the literary revolution of the 1790s—which coincided with the French Revolution that he despised. In yet another irony, for the deconstructionists PAUL DE MAN, JACQUES DERRIDA, and their followers, the sublime came to signify the plurality in language that keeps meaning from ever achieving a fixed form: dizzying, disorienting, and disorder-generating, it is dramatically at odds with the values that Burke in his political writing so eloquently defended.

A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful Keywords: Aesthetics, Affect, The Body, Enlightenment Theory, Interpretation Theory, Language

From A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful

From Part I

SECTION I. NOVELTY

The first and the simplest emotion which we discover in the human mind, is Curiosity. By curiosity, I mean whatever desire we have for, or whatever pleasure we take in novelty. We see children perpetually running from place to place to hunt out something new; they catch with great eagerness, and with very little choice, at whatever comes before them; their attention is engaged by every thing, because every thing has, in that stage of life, the charm of novelty to recommend it. But as those things which engage us merely by their novelty, cannot attach us for any length of time, curiosity is the most superficial of all the affections; it changes its object perpetually; it has an appetite which is very sharp, but very easily satisfied; and it has always an appearance of giddiness, restlessness and anxiety. Curiosity from its nature is a very active principle; it quickly runs over the greatest part of its objects, and soon exhausts the variety which is commonly to be met with in nature; the same things make frequent returns, and they return with less and less of any agreeable effect. In short, the occurrences of life, by the time we come to know it a little, would be incapable of affecting the mind with any other sensations than those of loathing and weariness, if many things were not adapted to affect the mind by means of other powers besides novelty in them, and of other passions besides curiosity in ourselves. These powers and passions shall be considered in their place. But whatever these powers are, or upon what principle soever they affect the mind, it is absolutely necessary that they should not be exerted in those things which a daily and vulgar use have brought into a stale unaffecting familiarity. Some degree of novelty must be one of the materials in every instrument which works upon the mind; and curiosity blends itself more or less with all our passions.

SECTION II. PAIN AND PLEASURE

It seems then necessary towards moving the passions of people advanced in life to any considerable degree, that the objects designed for that purpose, besides their being in some measure new, should be capable of exciting pain or pleasure from other causes. Pain and pleasure are simple ideas, incapable of definition. People are not liable to be mistaken in their feelings, but they are very frequently wrong in the names they give them, and in their reasonings about them. Many are of the opinion, that pain arises necessarily from the removal of some pleasure; as they think pleasure does from the ceasing or diminution of some pain. For my part I am rather inclined to imagine, that pain and pleasure in their most simple and natural manner of affecting, are each of a positive nature, and by no means necessarily dependent on each other for their existence. The human mind is often, and I think it is for the most part, in a state neither of pain nor pleasure, which I call a state of indifference. When I am carried from this state into a state of actual pleasure, it does not appear necessary that I should pass through the medium of any sort

of pain. If in such a state of indifference, or ease, or tranquillity, or call it what you please, you were to be suddenly entertained with a concert of music; or suppose some object of a fine shape, and bright lively colours to be presented before you; or imagine your smell is gratified with the fragrance of a rose; or if without any previous thirst you were to drink of some pleasant kind of wine; or to taste of some sweetmeat without being hungry; in all the several senses, of hearing, smelling, and tasting, you undoubtedly find a pleasure; yet if I enquire into the state of your mind previous to these gratifications, you will hardly tell me that they found you in any kind of pain; or having satisfied these gratifications, you will hardly tell me that they found you in any kind of pain; or having satisfied these several senses with their several pleasures, will you say that any pain has succeeded, though the pleasure is absolutely over? Suppose on the other hand, a man in the same state of indifference, to receive a violent blow, or to drink of some bitter potion, or to have his ears wounded with some harsh and grating sound; here is no removal of pleasure; and yet here is felt, in every sense which is affected, a pain very distinguishable. It may be said perhaps, that the pain in these cases had its rise from the removal of the pleasure which the man enjoyed before, though that pleasure was of so low a degree as to be perceived only by the removal. But this seems to me a subtilty, that is not discoverable in nature. For if, previous to the pain, I do not feel any actual pleasure, I have no reason to judge that any such thing exists; since pleasure is only pleasure as it is felt. The same may be said of pain, and with equal reason. I can never persuade myself that pleasure and pain are mere relations, which can only exist as they are contrasted: but I think I can discern clearly that there are positive pains and pleasures, which do not at all depend upon each other. Nothing is more certain to my own feelings than this. There is nothing which I can distinguish in my mind with more clearness than the three states, of indifference, of pleasure, and of pain. Every one of these I can perceive without any sort of idea of its relation to any thing else. Caius is afflicted with a fit of the cholic;¹ this man is actually in pain; stretch Caius upon the rack, he will feel a much greater pain; but does this pain of the rack arise from the removal of any pleasure? or is the fit of the cholic a pleasure or a pain just as we are pleased to consider it?

SECTION III. THE DIFFERENCE BETWEEN THE REMOVAL OF PAIN AND POSITIVE PLEASURE

We shall carry this proposition yet a step further. We shall venture to propose, that pain and pleasure are not only, not necessarily dependent for their existence on their mutual diminution or removal, but that, in reality, the diminution or ceasing of pleasure does not operate like positive pain; and that the removal or diminution of pain, in its effect has very little resemblance to positive pleasure.² The former of these propositions will, I believe, be much more readily allowed than the latter; because it is very evident that pleasure, when it has run its career, sets us down very nearly where it found us. Pleasure of every kind quickly satisfies; and when it is over, we relapse into indif-

1. That is, colic: severe abdominal pain.

2. Mr. Locke thinks that the removal or lessening of a pain is considered and operates as a pleasure, and the loss or diminishing of pleasure as a pain. It is this opinion which we consider here

[Burke's note]. Burke quotes "this opinion" directly from *An Essay Concerning Human Understanding* (1690), 2.20.16, by the English philosopher John Locke (1632–1704).

ference, or rather we fall into a soft tranquillity, which is tinged with the agreeable colour of the former sensation. I own, it is not at first view so apparent, that the removal of a great pain does not resemble positive pleasure: but let us recollect in what state we have found our minds upon escaping some imminent danger, or on being released from the severity of some cruel pain. We have on such occasions found, if I am not much mistaken, the temper of our minds in a tenor very remote from that which attends the presence of positive pleasure; we have found them in a state of much sobriety, impressed with a sense of awe, in a sort of tranquillity shadowed with horror. The fashion of the countenance and the gesture of the body on such occasions is so correspondent to this state of mind, that any person, a stranger to the cause of the appearance, would rather judge us under some consternation, than in the enjoyment of any thing like positive pleasure.

ὥς δ' ὅτ' ἄν ἄνδρ' ἄτη πυκινὴ λάβῃ, ὅς τ' ἐνὶ πατρὶ
 φῶτα κατακτείνας ἄλλων ἐξίκετο δῆμον,
 ἀνδρὸς ἐς ἀφνειοῦ, θάμβος δ' ἔχει εἰσορόωντα,³

Iliad, 24

*As when a wretch, who conscious of his crime,
 Pursued for murder from his native clime,
 Just gains some frontier, breathless, pale, amazed;
 All gaze, all wonder!*

This striking appearance of the man whom Homer supposes to have just escaped an imminent danger, the sort of mixt passion of terror and surprize, with which he affects the spectators, paints very strongly the manner in which we find ourselves affected upon occasions any way similar. For when we have suffered from any violent emotion, the mind naturally continues in something like the same condition, after the cause which first produced it has ceased to operate. The tossing of the sea remains after the storm; and when this remain of horror has entirely subsided, all the passion, which the accident raised, subsides along with it; and the mind returns to its usual state of indifference. In short, pleasure (I mean any thing either in the inward sensation, or in the outward appearance like pleasure from a positive cause) has never, I imagine, its origin from the removal of pain or danger.

SECTION IV. OF DELIGHT AND PLEASURE, AS OPPOSED TO EACH OTHER

But shall we therefore say, that the removal of pain or its diminution is always simply painful? or affirm that the cessation or the lessening of pleasure is always attended itself with a pleasure? by no means. What I advance is no more than this; first, that there are pleasures and pains of a positive and independent nature; and secondly, that the feeling which results from the ceasing or diminution of pain does not bear a sufficient resemblance to positive pleasure to have it considered as of the same nature, or to entitle it to be known by the same name; and thirdly, that upon the same principle the removal or qualification of pleasure has no resemblance to positive pain. It is

3. Homer (ca. 8th c. B.C.E.), *Iliad* 24.480–82. The English version, slightly misquoted, is from ALEXANDER POPE's translation (1715–20).

certain that the former feeling (the removal or moderation of pain) has something in it far from distressing, or disagreeable in its nature. This feeling, in many cases so agreeable, but in all so different from positive pleasure, has no name which I know; but that hinders not its being a very real one, and very different from all others. It is most certain, that every species of satisfaction or pleasure, how different soever in its manner of affecting, is of a positive nature in the mind of him who feels it. The affection is undoubtedly positive; but the cause may be, as in this case it certainly is, a sort of *Privation*. And it is very reasonable that we should distinguish by some term two things so distinct in nature, as a pleasure that is such simply, and without any relation, from that pleasure, which cannot exist without a relation, and that too a relation to pain. Very extraordinary it would be, if these affections, so distinguishable in their causes, so different in their effects, should be confounded with each other, because vulgar use has ranged them under the same general title. Whenever I have occasion to speak of this species of relative pleasure, I call it *Delight*; and I shall take the best care I can, to use that word in no other sense. I am satisfied the word is not commonly used in this appropriated signification; but I thought it better to take up a word already known, and to limit its signification, than to introduce a new one which would not perhaps incorporate so well with the language. I should never have presumed the least alteration in our words, if the nature of the language, framed for the purposes of business rather than those of philosophy, and the nature of my subject that leads me but of the common track of discourse, did not in a manner necessitate me to it. I shall make use of this liberty with all possible caution. As I make use of the word *Delight* to express the sensation which accompanies the removal of pain or danger; so when I speak of positive pleasure, I shall for the most part call it simply *Pleasure*.

SECTION V. JOY AND GRIEF

It must be observed, that the cessation of pleasure affects the mind three ways. If it simply ceases, after having continued a proper time, the effect is *indifference*; if it be abruptly broken off, there ensues an uneasy sense called *disappointment*; if the object be so totally lost that there is no chance of enjoying it again, a passion arises in the mind, which is called *grief*. Now there is none of these, not even grief, which is the most violent, that I think has any resemblance to positive pain. The person who grieves, suffers his passion to grow upon him; he indulges it, he loves it: but this never happens in the case of actual pain, which no man ever willingly endured for any considerable time. That grief should be willingly endured, though far from a simply pleasing sensation, is not so difficult to be understood. It is the nature of grief to keep its object perpetually in its eye, to present it in its most pleasurable views, to repeat all the circumstances that attend it, even to the last minuteness; to go back to every particular enjoyment, to dwell upon each, and to find a thousand new perfections in all, that were not sufficiently understood before; in grief, the *pleasure* is still uppermost; and the affliction we suffer has no resemblance to absolute pain, which is always odious, and which we endeavour to shake off as soon as possible. The *Odyssey* of Homer, which abounds with so many natural and affecting images, has none more

striking than those which Menelaus⁴ raises of the calamitous fate of his friends, and his own manner of feeling it. He owns indeed, that he often gives himself some intermission from such melancholy reflections, but he observes too, that melancholy as they are, they give him pleasure.

ἀλλ' ἔμπηξ πάντας μὲν ὀδυρόμενος καὶ ἀχεύων
πολλάκις ἐν μεγάροισι καθήμενος ἡμετέροισιν
ἄλλοτε μὲν τε γόῳ φρένα τέρπομαι, ἄλλοτε δ' αὖτε
παύομαι· αἰψήρως δὲ κόρος κρυεροῖο γόοιο.⁵

*Still in short intervals of pleasing woe,
Regardful of the friendly dues I owe,
I to the glorious dead, for ever dear,
Indulge the tribute of a grateful tear.*

Odyssey. 4

On the other hand, when we recover our health, when we escape an imminent danger, is it with joy that we are affected? The sense on these occasions is far from that smooth and voluptuous satisfaction which the assured prospect of pleasure bestows. The delight which arises from the modifications of pain, confesses the stock from whence it sprung, in its solid, strong, and severe nature.

SECTION VI. OF THE PASSIONS WHICH BELONG TO SELF-PRESERVATION

Most of the ideas which are capable of making a powerful impression on the mind, whether simply of Pain or Pleasure, or of the modifications of those, may be reduced very nearly to these two heads, *self-preservation* and *society*; to the ends of one or the other of which all our passions are calculated to answer. The passions which concern self-preservation, turn mostly on *pain* or *danger*. The ideas of *pain*, *sickness*, and *death*, fill the mind with strong emotions of horror; but *life* and *health*, though they put us in a capacity of being affected with pleasure, they make no such impression by the simple enjoyment. The passions therefore which are conversant about the preservation of the individual, turn chiefly on *pain* and *danger*, and they are the most powerful of all the passions.

SECTION VII. OF THE SUBLIME

Whatever is fitted in any sort to excite the ideas of pain, and danger, that is to say, whatever is in any sort terrible, or is conversant about terrible objects, or operates in a manner analogous to terror, is a source of the *sublime*; that is, it is productive of the strongest emotion which the mind is capable of feeling. I say the strongest emotion, because I am satisfied the ideas of pain are much more powerful than those which enter on the part of pleasure. Without all doubt, the torments which we may be made to suffer, are much greater in their effect on the body and mind, than any pleasures which the most learned voluptuary could suggest, or than the liveliest imagination, and the most

4. King of Sparta; though he returned safely from Troy after the object of the Trojan War was achieved (the retrieval of his wife, Helen), many

Greeks died in battle or on their way home.

5. Homer, *Odyssey* 4.100–103. The English version is from Pope's translation (1715–20).

sound and exquisitely sensible body could enjoy. Nay I am in great doubt, whether any man could be found who would earn a life of the most perfect satisfaction, at the price of ending it in the torments, which justice inflicted in a few hours on the late unfortunate regicide in France.⁶ But as pain is stronger in its operation than pleasure, so death is in general a much more affecting idea than pain; because there are very few pains, however exquisite, which are not preferred to death; nay, what generally makes pain itself, if I may say so, more painful, is, that it is considered as an emissary of this kind of terrors. When danger or pain press too nearly, they are incapable of giving any delight, and are simply terrible; but at certain distances, and with certain modifications, they may be, and they are delightful, as we every day experience.⁷ The cause of this I shall endeavour to investigate hereafter.

SECTION VIII. OF THE PASSIONS WHICH BELONG TO SOCIETY

The other head under which I class our passions, is that of *society*, which may be divided into two sorts. I. The society of the *sexes*, which answers the purposes of propagation; and next, that more *general society*, which we have with men and with other animals, and which we may in some sort be said to have even with the inanimate world. The passions belonging to the preservation of the individual, turn wholly on pain and danger; those which belong to *generation*, have their origin in gratifications and *pleasures*; the pleasure most directly belonging to this purpose is of a lively character, rapturous and violent, and confessedly the highest pleasure of sense; yet the absence of this so great an enjoyment, scarce amounts to an uneasiness; and except at particular times, I do not think it affects at all. When men describe in what manner they are affected by pain and danger; they do not dwell on the pleasure of health and the comfort of security, and then lament the *loss* of these satisfactions: the whole turns upon the actual pains and horrors which they endure. But if you listen to the complaints of a forsaken lover, you observe, that he insists largely on the pleasures which he enjoyed, or hoped to enjoy, and on the perfection of the object of his desires; it is the *loss* which is always uppermost in his mind. The violent effects produced by love, which has sometimes been even wrought up to madness, is no objection to the rule which we seek to establish. When men have suffered their imaginations to be long affected with any idea, it so wholly engrosses them as to shut out by degrees almost every other, and to break down every partition of the mind which would confine it. Any idea is sufficient for the purpose, as is evident from the infinite variety of causes which give rise to madness: but this at most can only prove, that the passion of love is capable of producing very extraordinary effects, not that its extraordinary emotions have any connection with positive pain.

From *Part III*

SECTION XXVII. THE SUBLIME AND BEAUTIFUL COMPARED

On closing this general view of beauty, it naturally occurs, that we should compare it with the sublime; and in this comparison there appears a remark-

6. Robert-François Damiens (1715–1757), who attempted to kill Louis XV on January 5, 1757, was tortured to death on March 26.

7. Here Burke touches on the key notion of aesthetic distance.

able contrast. For sublime objects are vast in their dimensions, beautiful ones comparatively small; beauty should be smooth, and polished; the great, rugged and negligent; beauty should shun the right line, yet deviate from it insensibly; the great in many cases loves the right line, and when it deviates, it often makes a strong deviation; beauty should not be obscure; the great ought to be dark and gloomy; beauty should be light and delicate; the great ought to be solid, and even massive. They are indeed ideas of a very different nature, one being founded on pain, the other on pleasure; and however they may vary afterwards from the direct nature of their causes, yet these causes keep up an eternal distinction between them, a distinction never to be forgotten by any whose business it is to affect the passions. In the infinite variety of natural combinations we must expect to find the qualities of things the most remote imaginable from each other united in the same object. We must expect also to find combinations of the same kind in the works of art. But when we consider the power of an object upon our passions, we must know that when any thing is intended to affect the mind by the force of some predominant property, the affection produced is like to be the more uniform and perfect, if all the other properties or qualities of the object be of the same nature, and tending to the same design as the principal;

*If black and white blend, soften, and unite
A thousand ways, are there no black and white?*⁸

If the qualities of the sublime and beautiful are sometimes found united, does this prove that they are the same, does it prove that they are any way allied, does it prove even that they are not opposite and contradictory? Black and white may soften, may blend, but they are not therefore the same. Nor when they are so softened and blended with each other, or with different colours, is the power of black as black, or of white as white, so strong as when each stands uniform and distinguished.

1757, 1759

8. Slightly misquoted from Pope, *An Essay on Man* (1733–34), 2.213–14.

GOTTHOLD EPHRAIM LESSING

1729–1781

Gotthold Ephraim Lessing is known for having questioned one of the most famous statements never meant. In HORACE's *Ars Poetica*, the Latin phrase *ut pictura poesis* (as painting, so poetry) was taken by many generations of critics to be prescriptive ("poetry *should* be like painting") rather than analogical ("poetry, like painting, does the following . . ."). Regardless of Horace's intent, the prescription has been immensely productive for poetry; but in *Laocoön* (1766) Lessing attacks this presumption of equivalence between poetry and painting, spelling out the differences between the visual and the verbal arts.

Born in Kamenz, Saxony, to a country pastor, Lessing was the first of twelve children (five died in childhood). After acquiring a solid education in languages and sciences, he enrolled at the University of Leipzig and soon fell under the spell of a more worldly and freethinking friend. His parents, alarmed by this influence and by Lessing's familiarity with the theater, called him home. When he explained to them that the hostility between church and theater could be overcome by improving the theater, he was allowed to return to Leipzig, where he became actively involved with a theatrical company, writing and producing plays. Unfortunately, the company failed, leaving Lessing to cover the debts; he fled, first to Wittenberg, then to Berlin.

Once in Berlin, he declared financial independence; working as a translator, reviewer, and playwright, he became the first German author to live by his pen. He found intellectual companionship with several close friends, especially the philosopher Moses Mendelssohn, who was introduced to Lessing as a chess partner and who influenced many of Lessing's aesthetic ideas.

In Berlin Lessing developed his gifts for both drama and debate. To him, the recommendation that German theater imitate seventeenth-century French classical drama (an idea promoted by Johann Christoph Gottsched) seemed a terrible mistake. The French had literalized ARISTOTLE and tied the theater to an overly formal set of rules. In his play *Miss Sara Sampson* (1755), Lessing attempted something quite different from PIERRE CORNEILLE, the epitome of classicism. He wrote the first German bourgeois tragedy—that is, a tragedy involving not the court but a middle-class family. He also entered the first of several intense polemical exchanges on unlikely topics by writing *Vademecum* (1754), a critique of a translation of Horace written by a pastor who was, unfortunately for Lessing, a protégé of Frederick II of Prussia. Frederick later repaid him by not appointing him to the post of royal librarian in Berlin.

Though he was barely supporting himself, the next few years were very productive: he wrote fables and a treatise on fables, plays, and a life of Sophocles, and he collaborated on the *Letters Concerning the Most Recent Literature* (1759–81) with his friends Mendelssohn and Gotthold Samuel Nicolai. In these letters, Lessing continued his campaign to free drama from French classicism, arguing that it should take its inspiration from Shakespeare. He also became close friends with a poet and military man who later served as the model for the hero of his comedy of honor, *Minna von Barnhelm* (1767). In 1760 Lessing took up a post as secretary to a general in Breslau. His excellent salary enabled him to send money to his family and to buy books. It was during this period that he wrote *Laokoon, oder Über die Grenzen der Malerei und Poesie* (*Laocoön, or On the Limits of Painting and Poetry*), from which our selection is taken.

Thwarted in his hopes to become the royal librarian in Berlin, he became dramatist and consultant to a repertory theater in Hamburg. There he began publishing the periodical the *Hamburg Dramaturgy* (which contained views far more radical than any he could practice), invested in a publishing house, and engaged again in a polemic—this time with the antiquarian Christian Adolphe Klotz, who had attacked his *Laocoön*. In response, he wrote *Letters of Antiquarian Content* (1768–69) and *How the Ancients Portrayed Death* (1769). Finally, unable to extricate himself from the dispute, frustrated with the constraints of the theater, and unsuccessful in business, he took refuge in the post of librarian at the Ducal Library in Wolfenbüttel.

Lessing was well suited for the job, though the library was dilapidated and isolated. As he put it in order, he corresponded with scholars and, in 1773, began publishing some of the library's holdings. He also began a correspondence with the recently widowed Eva König (whose family he had known in Hamburg), whom he married in 1776; a year later Eva gave birth to a child, and both died within days.

Lessing continued his work in drama, completing *Emilia Galotti*, a political tragedy, in 1772. *Nathan the Wise*, a dramatic poem about religious tolerance, was performed at Easter 1778; it stirred controversy by putting its message of universal brotherhood in the mouth of a noble Jew. Lessing went on publishing his library

discoveries as well, and the fragments from Heinrich Samuel Reimarus's thesis on natural religion embroiled him in his final, and most intense, polemical exchange. His main attacker was Johann Melchior Goeze, and Lessing's angry *Anti-Goeze* pamphlets of 1778 and other writings on religion led to his being censored: he had to submit his later writings to the duke for approval. His provocative argument was that the truth of religion could never be captured in any fixed form; even the Bible was full of errors and contradictions. It was the *search* for truth and not any one Truth that proved the value of humanity. Little wonder that Lessing fell so readily into polemic: for him, such exchanges did not lead to truth but enacted it. In his last work, *The Education of the Human Race* (1780), Lessing continued to analyze the relation between reason and faith, education and revelation. Furious with all existing religions, Lessing was equally furious with smug atheism or complacent freethinking. His health declined after 1778, and he died at Wolfenbüttel at the age of fifty-two.

In spite of the variety of his interests and writings, Lessing's importance for literary criticism in English rests almost exclusively on the impact of his 1766 *Laocoön*. He begins it by discussing the role of the critic, whose duty with respect to the work of art is to make distinctions and discern causes rather than simply to register effects. While endorsing the well-known saying of the early fifth-century B.C.E. poet Simonides that painting is mute poetry and poetry a speaking picture, he argues that although the two arts are similar in *aim* (imitation) and in *effect* (pleasure), they differ greatly in *means* (visual versus verbal). Lessing goes on to analyze their differences.

In the course of his essay, Lessing takes on a veritable bookshelf of other writings, most notably Count Caylus's *Tableaux tirés de l'Iliade, de l'Odyssee d'Homère et de l'Enéide de Virgile, avec des observations générales sur le costume* (1757, *Scenes from Homer's Iliad and Odyssey and Virgil's Aeneid, with General Comments about Costume*); Joseph Spence's 1747 dialogues on visual and verbal art called *Polymetis*; and, most important, Johann Joachim Winckelmann's 1754 *Gedanken über die Nachahmung der griechischen Werke* (*Thoughts on the Imitation of Greek Works*). It is Winckelmann's concept of classical Greek "noble simplicity and quiet grandeur" that Lessing wishes to combat, not in the visual arts (where, he argues, it belonged) but in the verbal arts: epic and (implicitly) tragedy. The cold formalism of classical French drama was too much like sculpture; Lessing wants to make sure that the art of imitation in drama draws on Aristotle (plot is the "imitation of an *action*") rather than PLATO (mimesis is the imitation of a *form*). Winckelmann's idealization of Greek beauty had a powerful appeal; indeed, it was still being attacked a century later by FRIEDRICH NIETZSCHE in *The Birth of Tragedy* (1872; see below).

Laocoön stands as the first modern contribution to what we might call "media studies," in the sense that Lessing attempts to describe the limits and possibilities of the visual and verbal *media*. Our selection highlights the lines of the analysis and minimizes the polemical digressions and extended classical allusions, emphasizing the argument—which runs as follows. Painting is more similar to its subject than poetry is: in painting, both the medium and the thing imitated are visual, whereas poetry can use only words, arbitrary designations, to convey things that do not resemble words at all. In addition, visual art is static while verbal art unfolds through succession. Visual art is an art of *space*; verbal art is an art of *time*. Verbal art cannot equal the instant vividness of sculpture or painting, but it can depict things that visual art cannot capture: invisibility, negation, rhetoric. Visual art, in order to achieve maximum dynamism, has to choose the "pregnant moment," the moment most suggestive of the entire situation.

The word "pregnant" has come to have a life of its own in Lessing criticism in English; it was used by many translators (though not ours) to render the German *fruchtbar* ("fruitful"—here translated "effective") and *prägnant* (from the verb *prägen*, "to stamp, emboss, impress"; the adjective does mean "pregnant," but only figuratively, as "pregnant with meaning"—here translated "suggestive"). Behind the German word lies a Latin one (*praegnans*, "pregnant"). This phantom pregnancy is

a good symbol of what Lessing is describing: the moment most likely to contain forces that can be continued in the imagination of the spectator. In visual art, therefore, a covert narrative force is always present. The same force exists in verbal descriptions of purely visual phenomena; even when poetry depicts an object rather than an action, it moves along the object in time as if from the standpoint of the object's maker rather than of its passive viewer.

Lessing's distinction between the arts has often been contested. In his 1957 essay on Lessing, the art historian E. H. Gombrich points out that visual art itself is conventional, not natural. In 1945 the literary critic Joseph Frank protested that a literary work of art exists not just in time but also in space. And many art historians have objected that a painting cannot be viewed all at once; it must be experienced through time. Taking an opposite tack, some theorists of *ecphrasis* (the depiction of a work of visual art in a poem) have felt that Lessing opens up possibilities he doesn't pursue. Far from being impossible in poetry, *ecphrasis* constitutes an interesting poetic challenge.

Because of his persistent fascination with what could *not* be visualized, Lessing is a particularly useful theorist of verbal art. In his discussion of fables, he points out that the test of a good fable is the impossibility of illustrating it. In his last writings about religion, he argues that even writing has too positive an existence to convey what escapes representation altogether. Perhaps this dissatisfaction with *every* medium is what makes his writings so suggestive for literary and aesthetic theory.

Laocoön Keywords: Aesthetics, Language, Media, Poetry

*From Laocoön*¹

From Preface

The first person to compare painting with poetry was a man of fine feeling who observed that both arts produced a similar effect upon him. Both, he felt, represent absent things as being present and appearance as reality. Both create an illusion, and in both cases the illusion is pleasing.

A second observer, in attempting to get at the nature of this pleasure, discovered that both proceed from the same source. Beauty, a concept which we first derive from physical objects, has general rules applicable to a number of things: to actions and thoughts as well as to forms.

A third, who examined the value and distribution of these general rules, observed that some of them are more predominant in painting, others in poetry. Thus, in the one case poetry can help to explain and illustrate painting, and in the other painting can do the same for poetry.

The first was the amateur, the second the philosopher, and the third the critic.

The first two could not easily misuse their feelings or their conclusions. With the critic, however, the case was different. The principal value of his observations depends on their correct application to the individual case. And since for every one really discerning critic there have always been fifty clever ones, it would have been a miracle if this application had always been made with the caution necessary to maintain a proper balance between the two arts.

* * *

1. Translated by Edward Allen McCormick (who sometimes adds clarifying words or phrases in square brackets); the full title is *Laocoön, or On the Limits of Painting and Poetry*.

From *Chapter One*

The general and distinguishing characteristics of the Greek masterpieces of painting and sculpture are, according to Herr Winckelmann,² noble simplicity and quiet grandeur, both in posture and in expression. "As the depths of the sea always remain calm," he says "however much the surface may be agitated, so does the expression in the figures of the Greeks reveal a great and composed soul in the midst of passions."

Such a soul is depicted in Laocoön's³ face—and not only in his face—under the most violent suffering. The pain is revealed in every muscle and sinew of his body, and one can almost feel it oneself in the painful contraction of the abdomen without looking at the face or other parts of the body at all. However, this pain expresses itself without any sign of rage either in his face or in his posture. He does not raise his voice in a terrible scream, which Virgil describes his Laocoön as doing;⁴ the way in which his mouth is open does not permit it. Rather he emits the anxious and subdued sigh described by Sadolet.⁵ The pain of body and the nobility of soul are distributed and weighed out, as it were, over the entire figure with equal intensity. Laocoön suffers, but he suffers like the Philoctetes of Sophocles⁶; his anguish pierces our very soul, but at the same time we wish that we were able to endure our suffering as well as this great man does.

Expressing so noble a soul goes far beyond the formation of a beautiful body. This artist must have felt within himself that strength of spirit which he imparted to his marble. In Greece artists and philosophers were united in one person, and there was more than one Metrodorus.⁷ Philosophy extended its hand to art and breathed into its figures more than common souls. . . .⁸

The remark on which the foregoing comments are based, namely that the pain in Laocoön's face is not expressed with the same intensity that its violence would lead us to expect, is perfectly correct. It is also indisputable that this very point shows truly the wisdom of the artist. Only the ill-informed observer would judge that the artist had fallen short of nature and had not attained the true pathos of suffering.

2. Johann Joachim Winckelmann (1717–1768), German classical scholar whose *Thoughts on the Imitation of Greek Works in Painting and Sculpture* (1754) prompted Lessing's response.

3. A Trojan priest. The best-known version of his story is found in the *Aeneid*, by the Roman poet Virgil (70–19 B.C.E.), who describes how when Laocoön unsuccessfully tries to warn his countrymen against the Greek "gift" of the Trojan horse, the goddess Athena sends two huge serpents to strangle him and his two sons (2.40–56, 199–227). The famous sculpture described by Winckelmann represents the three dying figures in the grip of the snakes; discovered in 1506, it is thought to be a collaborative work of the 2d century B.C.E. Laocoön is thus depicted in both sculpture and poetry, giving Lessing the pivot on which he will differentiate between the arts.

4. *Aeneid* 2.222.

5. Jacopo Sadoletto (1477–1547), Italian prelate and poet, who wrote a poem about the Laocoön group when it was discovered.

6. Greek tragedian (ca. 496–406 B.C.E.); *Philoctetes* was performed in 409. The Greek hero Philoctetes used the bow and arrows of Heracles; he sailed for Troy but was left behind on an island because a wound on his foot, caused by snakebite, produced a horrible smell. He remained alone for 10 years, until on the advice of an oracle he and his bow were brought to Troy.

7. An Athenian (2d c. B.C.E.) who, according to Pliny the Elder (23/24–79 C.E.; see *Natural History* 35.135), was both a painter and a philosopher.

8. Winckelmann, *Thoughts on the Imitation of Greek Works*, pp. 21, 22 [Lessing's note]. Some of the author's notes have been edited, and some omitted.

But as to the reasons on which Herr Winckelmann bases this wisdom, and the universality of the rule which he derives from it, I venture to be of a different opinion.

* * *

[I]f, according to the ancient Greeks, crying aloud when in physical pain is compatible with nobility of soul, then the desire to express such nobility could not have prevented the artist from representing the scream in his marble. There must be another reason why he differs on this point from his rival the poet,⁹ who expresses this scream with deliberate intention.

From *Chapter Two*

Whether it be fact or fiction that Love inspired the first artistic effort in the fine arts,¹ this much is certain: she never tired of guiding the hands of the old masters. Painting, as practiced today, comprises all representations of three-dimensional bodies on a plane. The wise Greek, however, confined it to far narrower limits by restricting it to the imitation of beautiful bodies only. The Greek artist represented only the beautiful, and ordinary beauty, the beauty of a lower order, was only his accidental subject, his exercise, his relaxation. The perfection of the object itself in his work had to give delight, and he was too great to demand of his audience that they be satisfied with the barren pleasure that comes from looking at a perfect resemblance, or from consideration of his skill as a craftsman. Nothing in his art was dearer to him or seemed nobler than its ultimate purpose.

“Who would want to paint you when no one even wants to look at you?” an old epigrammatist² asks of an exceedingly deformed man. Many an artist of our time would say, “Be as ugly as possible, I will paint you nevertheless. Even though no one likes to look at you, they will still be glad to look at my picture, not because it portrays you but because it is a proof of my art, which knows how to present such a monster so faithfully.”

* * *

The law of the Olympic judges sprang from the same idea of the beautiful. Every victor in the Olympic games received a statue, but only the three-time winner had a portrait-statue erected in his honor. This was to prevent the increase of mediocre portraits among works of art, for a portrait, although admitting idealization, is dominated by likeness. It is the ideal of one particular man and not of man in general.

We laugh when we hear that among the ancients even the arts were subject to the civil code. But we are not always right when we do so. Unquestionably, laws must not exercise any constraint on the sciences, for the ultimate goal of knowledge is truth. Truth is a necessity to the soul, and it is tyranny to impose the slightest constraint on the satisfaction of this essential need. But the ultimate goal of the arts is pleasure, and this pleasure is not indispens-

9. That is, Virgil.

1. Lessing alludes to the story of a Corinthian maid who, saddened by her lover's impending departure, drew his outline on a wall while he

slept (see Pliny the Elder, *Natural History* 35.151); her father, a potter, filled in the outline with clay and thus invented bas-relief.

2. Antiochus of Syracuse (5th c. B.C.E.).

able. Hence it may be for the lawmaker to determine what kind of pleasure and how much of each kind he will permit.

The plastic arts in particular—aside from the inevitable influence they exert on the character of a nation—have an effect that demands close supervision by the law. If beautiful men created beautiful statues, these statues in turn affected the men, and thus the state owed thanks also to beautiful statues for beautiful men. (With us the highly susceptible imagination of mothers seems to express itself only in producing monsters.)

From this point of view I believe I can find some truth in some of the ancient tales which are generally rejected as outright lies. The mothers of Aristomenes, Aristodamas, Alexander the Great, Scipio, Augustus, and Galerius³ all dreamed during pregnancy that they had relations with a serpent. The serpent was a symbol of divinity, and the beautiful statues and paintings depicting Bacchus, Apollo, Mercury, or Hercules⁴ were seldom without one. Those honest mothers had feasted their eyes on the god during the day, and their confused dreams recalled the image of the reptile. Thus I save the dream and abandon the interpretation born of the pride of their sons and the impudence of the flatterer. For there must be some reason why the adulterous fantasy was always a serpent.

But I am digressing. I wanted simply to establish that among the ancients beauty was the supreme law of the visual arts. Once this has been established, it necessarily follows that whatever else these arts may include must give way completely if not compatible with beauty, and, if compatible, must at least be subordinate to it.

Let us consider expression. There are passions and degrees of passion which are expressed by the most hideous contortions of the face and which throw the whole body into such unnatural positions as to lose all the beautiful contours of its natural state. The ancient artists either refrained from depicting such emotions or reduced them to a degree where it is possible to show them with a certain measure of beauty.

* * *

If we apply this now to the Laocoön, the principle which I am seeking becomes apparent. The master strove to attain the highest beauty possible under the given condition of physical pain. The demands of beauty could not be reconciled with the pain in all its disfiguring violence, so it had to be reduced. The scream had to be softened to a sigh, not because screaming betrays an ignoble soul, but because it distorts the features in a disgusting manner. Simply imagine Laocoön's mouth forced wide open, and then judge! Imagine him screaming, and then look! From a form which inspired pity because it possessed beauty and pain at the same time, it has now become an ugly, repulsive figure from which we gladly turn away. For the sight of pain provokes distress; however, the distress should be transformed, through beauty, into the tender feeling of pity.

3. This list mixes the legendary (the first 2 are Greek heroes) and the historical—the great general Alexander of Macedonia (356–323 B.C.E.), the Roman general Scipio Africanus (236–184/83 B.C.E.), and the Roman emperors Augustus (63 B.C.E.–14 C.E.) and Galerius (ca. 250–ca. 311 C.E.).

4. The Roman name for Heracles, the greatest of the Greek heroes. Bacchus: Greek and Roman god of wine and a name of Dionysus, whose cult was orgiastic. Apollo: Greek and Roman god of music, healing, and prophecy. Mercury: Roman messenger of the gods.

The wide-open mouth, aside from the fact that the rest of the face is thereby twisted and distorted in an unnatural and loathsome manner, becomes in painting a mere spot and in sculpture a cavity, with most repulsive effect.

* * *

From *Chapter Three*

As I have already said, art has been given a far wider scope in modern times. It is claimed that representation in the arts covers all of visible nature, of which the beautiful is but a small part. Truth and expression are art's first law, and as nature herself is ever ready to sacrifice beauty for the sake of higher aims, so must the artist subordinate it to his general purpose and pursue it no farther than truth and expression permit. It is enough that truth and expression transform the ugliest aspects of nature into artistic beauty.

But even if we were willing to leave these ideas for the moment unchallenged as to their value, we would still have to consider, quite independently of these ideas, why the artist must nevertheless set certain restraints upon expression and never present an action at its climax.

The single moment of time to which art must confine itself by virtue of its material limitations will lead us, I believe, to such considerations.

If the artist can never make use of more than a single moment in ever-changing nature, and if the painter in particular can use this moment only with reference to a single vantage point, while the works of both painter and sculptor are created not merely to be given a glance but to be contemplated—contemplated repeatedly and at length—then it is evident that this single moment and the point from which it is viewed cannot be chosen with too great a regard for its effect. But only that which gives free rein to the imagination is effective.⁵ The more we see, the more we must be able to imagine. And the more we add in our imaginations, the more we must think we see. In the full course of an emotion, no point is less suitable for this than its climax. There is nothing beyond this, and to present the utmost to the eye is to bind the wings of fancy and compel it, since it cannot soar above the impression made on the senses, to concern itself with weaker images, shunning the visible fullness already represented as a limit beyond which it cannot go. Thus, if Laocoön sighs, the imagination can hear him cry out; but if he cries out, it can neither go one step higher nor one step lower than this representation without seeing him in a more tolerable and hence less interesting condition. One either hears him merely moaning or else sees him dead.

Furthermore, this single moment, if it is to receive immutable permanence from art, must express nothing transitory. According to our notions, there are phenomena, which we conceive as being essentially sudden in their beginning and end and which can be what they are only for a brief moment. However, the prolongation of such phenomena in art, whether agreeable or otherwise, gives them such an unnatural appearance that they make a weaker impression the more often we look at them, until they finally

5. In German, *fruchtbar*: "fruitful."

fill us with disgust or horror. La Mettrie,⁶ who had himself portrayed in painting and engraving as a second Democritus, seems to be laughing only the first few times we look at him. Look at him more often and the philosopher turns into a fop. His laugh becomes a grin. The same holds true for screaming. The violent pain which extorts the scream either soon subsides or else destroys the sufferer. When a man of firmness and endurance cries out he does not do so unceasingly, and it is only the seeming perpetuity of such cries when represented in art that turns them into effeminate helplessness or childish petulance. This, at least, the artist of the Laocoön had to avoid, even if screaming had not been detrimental to beauty, and if his art had been allowed to express suffering without beauty.

Among the ancient painters Timomachus⁷ seems to have been the one most fond of subjects that display extreme passion. His raving Ajax and his infanticide Medea⁸ were famous paintings, but from the descriptions we have of them it is clear that he thoroughly understood and was able to combine two things: that point or moment which the beholder not so much sees as adds in his imagination, and that appearance which does not seem so transitory as to become displeasing through its perpetuation in art. Timomachus did not represent Medea at the moment when she was actually murdering her children, but a few moments before, when a mother's love was still struggling with her vengefulness. We can foresee the outcome of this struggle; we tremble in anticipation of seeing Medea as simply cruel, and our imagination takes us far beyond what the painter could have shown us in this terrible moment. But for this very reason we are not offended at Medea's perpetual indecision, as it is represented in art, but wish it could have remained that way in reality. We wish that the duel of passions had never been decided, or at least had continued long enough for time and reflection to overcome rage and secure the victory for maternal feelings. This wisdom on the part of Timomachus has earned him lavish and frequent praise and raised him far above another, unknown painter who was foolish enough to depict Medea at the height of her rage, thus endowing her brief instant of madness with a permanence that is an affront to all nature.

* * *

From *Chapter Nine*

If we wish to compare the painter and the poet in particular instances, we must first know whether they both enjoyed complete freedom; whether, that is to say, they could work toward producing the greatest possible effect in their respective arts without any external constraint.

6. Julien Offroy de La Mettrie (1709–1751), French physician and philosopher, whose *L'Homme machine* (1747) made him the most notorious materialist of his day. The Greek Democritus (ca. 460–ca. 370 B.C.E.) was also a materialist (he argued that everything, including the soul, is composed of atoms); he was known as the “laughing philosopher,” perhaps because he believed that individuals were responsible for their own well-being.

7. Painter of Byzantium (1st c. B.C.E.) mentioned

by Pliny the Elder (35.11).

8. A sorceress from Colchis who took revenge on her husband Jason (for deserting her to marry a king's daughter) by killing his (and her) two children. Ajax: one of the greatest Greek warriors at Troy; driven mad by Athena, he killed animals believing that he was attacking the Greek leaders who had refused to give him the armor of the dead Achilles (when he regained his senses, he killed himself). Both figures were often treated in art and tragedies.

Religion often represented just such an external constraint on the classical artist. His work, destined for worship and devotion, could not always be as perfect as it would have been if he had had as his sole aim the pleasure of his spectators. But superstition overloaded the gods with symbols, and the most beautiful gods were not always honored as such.

In the temple at Lemnos, from which the pious Hypsipyle⁹ rescued her father in the disguise of the god, Bacchus was represented with horns. No doubt he appeared this way in all his temples since the horns were symbolic and one of his necessary attributes. Only the free artist, who did not have to create his Bacchus for some temple, omitted this symbol; and if we find none with horns among the extant statues of him, we may perhaps take this as proof that none of them belongs among the consecrated ones under which he was actually worshiped. Besides this, it is highly probable that the wrath of pious iconoclasts during the first centuries of Christianity fell in great part on these latter. Only seldom did they spare a work of art, because it had not been desecrated by adoration.

However, since pieces of both kinds are to be found among the excavated objects of antiquity, I should prefer that only those be called works of art in which the artist had occasion to show himself as such and in which beauty was his first and ultimate aim. None of the others, which betray too obvious traces of religious conventions, deserves this name because in their case the artist did not create for art's sake,¹ but his art was merely a handmaid of religion, which stressed meaning more than beauty in the material subjects it allotted to art for execution. By this I do not mean to say that religion has not also frequently sacrificed meaning for beauty, or, out of consideration for art and the more refined taste of the period, has ceased to emphasize it to such a degree that beauty alone would seem to be the sole object.

* * *

From *Chapter Ten*

I comment on an expression of astonishment in Spence² which clearly shows how little thought he must have given to the limits of poetry and painting. "As to the muses in general," he says, "it is strange that the poets are so brief in describing them, far briefer in fact than might be expected for goddesses to whom they are so greatly indebted."³

What can this mean but that he is amazed that when poets speak of the muses they do not use the mute language of painters? To the poets Urania is the muse of astronomy; we recognize her office from her name and her functions. The artist, in order to make her recognizable, must show her pointing with a wand to a celestial globe. The wand, the globe, and the pointing position are his letters, from which he lets us spell out the name Urania. But when the poet wishes to say that Urania had foreseen his death long ago in the stars,

9. Daughter of King Thoas, the son of Dionysus; the women of the island of Lemnos killed all the other men, who had left their wives for Thracian women.

1. Possibly the first use of the expression "art for art's sake."

2. Joseph Spence (1699–1768), an Oxford profes-

sor whose *Polymetis* (1747), written in dialogues, is one of the targets of Lessing's criticism.

3. *Polymetis*, Dialogue VIII, p. 91 [Lessing's note]. "Muses": in Greek mythology, the 9 daughters of memory who preside over the arts and all intellectual pursuits.

Ipsa diu positis lethum praedixerat astris Uranie . . .⁴

why should he, out of respect for the painter, add: "Urania, her wand in hand, the celestial globe before her"? It is as though a man who can and may speak were at the same time using those signs which the mutes in the Turkish seraglio⁵ invented among themselves for lack of a voice.

Spence again expresses the same astonishment when speaking of the moral beings, those divinities whom the ancients made preside over the virtues and the conduct of human life. "It should be remarked," he says, "that the Roman poets have far less to say about the best of these moral beings than one would expect. On this point the artists are much more complete, and whoever wants to know what appearance each of them made need only look at the coins of the Roman emperors. The poets, to be sure, often speak of these beings as persons, but of their attributes, their clothing and their appearance in general they have little to say."⁶

When the poet personifies abstractions, he characterizes them sufficiently by their names and the actions he has them perform.

The artist lacks these means and must therefore add to his personified abstractions symbols by which they may be recognized. But because these symbols are something different and mean something different, they make the figures allegorical.

The female figure with a bridle in her hand; another leaning against a pillar—these are, in art, allegorical figures. For the poet, however, Moderation and Constancy are not allegorical beings but simply personified abstractions.

Necessity invented these symbols for the artist, for only through them can he make it understood what this or that figure is supposed to represent. But why should the poet have forced upon him what the artist had to accept of necessity; a necessity which he himself has no part of?

The very thing which so surprised Spence should be prescribed to poets as a general law. They must not convert the necessities of painting into a part of their own wealth. Nor must they regard the means that art has invented in order to keep up with poetry as perfections which should give them reason for envy. When the artist adorns a figure with symbols, he raises what was a mere figure to a higher being; but if the poet employs these artistic trimmings, he turns that higher being into a puppet.

* * *

Chapter Twelve

Homer⁷ treats of two kinds of beings and actions, visible and invisible. This distinction cannot be made in painting, where everything is visible and visible in but one way. Hence, when Count Caylus⁸ makes the pictures of invisible actions follow the visible ones in an unbroken sequence, and when in his paintings showing mixed actions, i.e., those in which both visible and invis-

4. Statius, *Thebaid* 8.551 [Lessing's note]; the preceding clause translates the Latin. Statius (ca. 46–96 c.e.), Roman poet.

5. The harem, women's quarters overseen at courts by eunuchs and, in Lessing's account, mutes.

6. *Polymetis*, Dialogue X, pp. 137, 139 [Lessing's

note].

7. Greek epic poet (ca. 8th c. B.C.E.) to whom the *Iliad* and the *Odyssey* are attributed.

8. Philippe de Tubières (1692–1765), French art critic; his book of criticism *Scenes from Homer's Iliad and Odyssey and Virgil's Aeneid* (1757) is the third of Lessing's targets.

ible beings take part, he does not and perhaps cannot specify how the latter (which only we who look at the picture are supposed to discover in it) are to be introduced so that the figures in the painting do not see them (or at least appear not to see them)—when Count Caylus does this, I say, the series as a whole as well as a number of single pictures necessarily become extremely confused, incomprehensible, and self-contradictory.

Still, with the book before us it would be possible to remedy this fault. The worst of it is that when painting erases the distinction between visible and invisible beings it simultaneously destroys all those characteristic features by which this latter, higher order is raised above the lower one.

For example, when the gods, who are divided as to the fate of the Trojans, finally come to blows, the entire battle is represented in the poem as being invisible.⁹ This invisibility gives the imagination free rein to enlarge the scene and envisage the persons and actions of the gods on a grander scale than the measure of ordinary man. But painting must adopt a visible scene, whose various indispensable parts become the scale for the figures participating in it—a scale which the eye has ready at hand and whose lack of proportion to the higher beings makes them appear monstrous on the artist's canvas.

Minerva, whom Mars¹ ventures to attack first in this battle, steps back and with her mighty hand seizes a large, black, rough stone which the united strength of men had rolled there for a landmark in times past:

ἢ δ' ἀναχασσαμένη λίθον εἴλετο χειρὶ παχείῃ
 κείμενον ἐν πεδίῳ, μέλανα, τρηχύν τε μέγαν τε,
 τὸν ῥ' ἄνδρες πρότεροι θέσαν ἔμμεναι οὖρον ἀρούρης.²

In order to form a proper estimate of the size of this stone we should remember that Homer makes his heroes twice as strong as the strongest men of his own time but tells us that these again were surpassed in strength by the men whom Nestor³ knew in his youth. Now I ask, if Minerva hurls a stone which no one man, not even one from Nestor's youth, could set up as a landmark—if Minerva hurls such a stone at Mars, of what stature is the goddess supposed to be? If her stature is in proportion to the size of the stone, then the element of the marvelous disappears. A man three times my size naturally ought to be able to hurl a stone three times as large as I can. But if the stature of the goddess is not in proportion to the size of the stone, an improbability for the eye arises in the painting whose offensiveness is not removed by the cold calculation that a goddess must possess superhuman strength. Wherever I see a greater effect, I also expect to see a greater cause.

And Mars, thrown to the ground by this mighty stone,

ἐπὰ δ' ἐπέσχε πέλεθρα πεσὼν,⁴

covered seven acres of land. It is impossible for the painter to give the god this extraordinary size, and yet if he does not do so, it is no longer Mars—or at least not the Homeric Mars—who is lying on the ground, but a common warrior.

9. *Iliad* 21.385 [Lessing's note].

1. Ares, Greek god of war. Minerva: Athena, Greek goddess of war and wisdom.

2. But Athene giving back caught up in her heavy hand a stone / that lay in the plain, black and rugged and huge, one which men / of a former time had set there as boundary mark of the

cornfield; *Iliad* 21.403–5 (trans. Richmond Lattimore) [translator's note]. "Corn" here refers to grain.

3. The oldest of the Greek generals who fought at Troy.

4. Falling, he covered seven *plethra*; *Iliad* 21.407. One *plethron* was 10,000 square feet.

Longinus⁵ says that it seemed to him now and then as though Homer raised his men to gods and reduced his gods to men. Painting carries out this reduction. In it everything which in the poem raises the gods above godlike human creatures vanishes altogether. Size, strength, and swiftness—qualities which Homer always has in store for his gods in a higher and more extraordinary degree than that bestowed on his finest heroes—must in the painting sink to the common level of humanity. Jupiter and Agamemnon, Apollo and Achilles, Ajax and Mars⁶ all become exactly the same kind of beings, recognizable by nothing more than their outward conventional symbols.

The means which painting uses to convey to us that this or that object must be thought of as invisible is a thin cloud veiling the side of the object that is turned toward the other persons in the pictures. It appears that this cloud was borrowed from Homer, for when in the tumult of battle one of the more important heroes runs into great danger, from which only a divine power can save him, the poet has the protecting divinity envelop him in a thick cloud, or in darkness, and so carry him away, as Paris is carried off by Venus, or Idæus by Neptune, or Hector by Apollo.⁷ And Caylus never fails to recommend heartily this mist or cloud to the artist when he outlines for him a painting of such occurrences. And yet who can fail to see that concealment by cloud or night is, for the poet, nothing more than a poetic expression for rendering a thing invisible? For that reason it has always been a source of surprise to me to see this poetic expression actually used and a real cloud introduced in the painting, behind which the hero stands hidden from his enemy as behind a screen. That was not what the poet intended. It exceeds the limits of painting, for in this case the cloud is a true hieroglyphic, a mere symbol, which does not render the rescued hero invisible, but says to the spectators: you must imagine to yourselves that he is invisible. It is no better than the scrolls that issue from the mouths of figures in old Gothic paintings.

It is true that when Apollo rescues Hector from Achilles, Homer has the latter make three further thrusts with his spear into the thick mist (τρίς δ' ἡέρα τύψε βαθείαν).⁸ But in the language of poetry this means only that Achilles was so enraged that he made the three additional thrusts before realizing that his enemy was no longer before him. Achilles did not see an actual mist, and the power of the gods to render invisible did not lie in any mist, but in their ability to bear the object away swiftly. It was only to show that this abduction took place too quickly for the human eye to follow the disappearing body that the poet first conceals it in a mist or cloud. And it was not because a cloud appeared in place of the abducted body, but because we think of that which is wrapped in mist as being invisible. Accordingly, Homer sometimes inverts the case, and instead of rendering the object invisible, causes the subject to be struck blind. For example, Neptune blinds Achilles when he rescues Aeneas from his murderous hands by suddenly

5. The name given the 1st century C.E. author of *On Sublimity* (see above); the reference is to section 7.

6. Lessing pairs each god with an appropriate man. Jupiter: Zeus, king of the Gods. Agamemnon: king of Mycenae and leader of the Greeks at Troy. Achilles: the greatest Greek warrior at Troy and the focus of the *Iliad*.

7. All episodes from the *Iliad* (3.380–82, 5.23, 20.443–44). Paris: prince of Troy who was

awarded the most beautiful woman in the world by Aphrodite (Venus), goddess of love, for naming her the most beautiful of 3 goddess. Idæus: son of a Trojan priest of Hephaestus who is in fact saved by Hephaestus, the god of the forge, and not Poseidon (Neptune), the god of the sea. Hector: oldest prince of Troy and the greatest of the Trojan warriors (Apollo favored the Trojans). 8. *Iliad* 20.446 [Lessing's note].

snatching him out of the thick of the fight and placing him in the rear.⁹ Actually, however, Achilles' eyes are no more blinded than, in the former example, the abducted heroes are wrapped in a cloud. The poet merely makes this or that addition in order to make more palpable to our senses that extreme rapidity of abduction which we call disappearance.

However, painters have appropriated the Homeric mist not only in those cases where Homer himself used it, or would have used it (namely, in rendering persons invisible or causing them to disappear), but in every instance where the spectator is supposed to see something in the painting which the characters themselves, or some of them, cannot see. Minerva became visible to Achilles alone when she prevented him from assaulting Agamemnon.¹ I know of no other way to express this, says Caylus, than by concealing her from the rest of the council by a cloud. But this is in complete violation of the spirit of the poet! Invisibility is the natural condition of his gods; no blindfolding, no interruption of the rays of light is needed to prevent them from being seen; but an enlightenment, an increased power of mortal vision is required, if they are intended to be seen. Thus it is not only that in painting the cloud is an arbitrary and not a natural sign; but this arbitrary sign does not even possess the definite distinctness which it could have as such, for it is used both to render the visible invisible and the invisible visible.

Chapter Fifteen

As experience shows, the poet can raise to this degree of illusion the representation of objects other than those that are visible. Consequently, whole categories of pictures which the poet claims as his own must necessarily be beyond the reach of the artist. Dryden's *Song for St. Cecelia's Day*² is full of musical pictures which leave the painter's brush idle. But I do not want to stray too far from my subject with such examples, from which in the final analysis we learn little more than that colors are not sounds and ears not eyes.³

I will confine myself rather to the consideration of pictures of visible objects only, which are common to both poet and painter. Why is it that a number of poetic pictures of this kind are of no use to the painter and, conversely, many real pictures lose most of their effect when treated by the poet? Example may guide me here. I repeat: the picture of Pandarus⁴ in the fourth book of the *Iliad* is one of the most elaborate and graphic in all of Homer. From the seizing of the bow to the flight of the arrow every moment is painted, and all these moments follow in such close succession and yet are so distinct, one from the other, that if we did not know how a bow should be handled, we would be able to learn it from this description alone. Pandarus takes out his bow, strings it, opens the quiver, chooses an unused, well-feathered arrow, adjusts the arrow's notch to the string and draws

9. *Iliad*, 20.321–29 [Lessing's note]. Aeneas: Trojan ally, a son of Aphrodite and later the founder of the colony that became Rome.

1. *Iliad* 1.194–98.

2. Also called *Alexander's Feast*, this ode was written in 1687 and set to music by Handel in 1739 [translator's note]. JOHN DRYDEN (1631–1700),

English poet, dramatist, and critic.

3. An allusion to a quotation in Caylus from Jean de la Fontaine (1621–1695), French author of fables.

4. An ally of the Trojans who broke the truce between the Greeks and Trojans in the passage described (*Iliad* 4.105–26).

both back; the string is brought close to the breast, the metal point of the arrow comes close to the bow, the great round bow springs open again with a clang, the string vibrates, and the arrow has sped away, flying eagerly toward its mark.

Caylus cannot have overlooked this splendid picture. What, then, did he find there to make him consider it unable to afford material to his artists? And why was it that the council of deliberating and drinking gods seemed to him better suited for his purpose? The subjects are visible in both cases, and what more than visible subjects does the painter need to fill his canvas?

The difficulty must be this: although both subjects, being visible, are equally suitable for actual painting, there is still this essential difference between them: in the one case the action is visible and progressive, its different parts occurring one after the other in a sequence of time, and in the other the action is visible and stationary, its different parts developing in co-existence in space. But if painting, by virtue of its symbols or means of imitation, which it can combine in space only, must renounce the element of time entirely, progressive actions, by the very fact that they are progressive, cannot be considered to belong among its subjects. Painting must be content with coexistent actions or with mere bodies which, by their position, permit us to conjecture an action. Poetry, on the other hand. . . .

From Chapter Sixteen

But I shall attempt now to derive the matter from its first principles.

I reason thus: if it is true that in its imitations painting uses completely different means or signs than does poetry, namely figures and colors in space rather than articulated sounds in time, and if these signs must indisputably bear a suitable relation to the thing signified, then signs existing in space can express only objects whose wholes or parts coexist, while signs that follow one another can express only objects whose wholes or parts are consecutive.

Objects or parts of objects which exist in space are called bodies. Accordingly, bodies with their visible properties are the true subjects of painting.

Objects or parts of objects which follow one another are called actions. Accordingly, actions are the true subjects of poetry.

However, bodies do not exist in space only, but also in time. They persist in time, and in each moment of their duration they may assume a different appearance or stand in a different combination. Each of these momentary appearances and combinations is the result of a preceding one and can be the cause of a subsequent one, which means that it can be, as it were, the center of an action. Consequently, painting too can imitate actions, but only by suggestion through bodies.

On the other hand, actions cannot exist independently, but must be joined to certain beings or things. Insofar as these beings or things are bodies, or are treated as such, poetry also depicts bodies, but only by suggestion through actions.

Painting can use only a single moment of an action in its coexisting compositions and must therefore choose the one which is most suggestive⁵ and

5. In German, *den prägnantesten wählen*: "choose the most pregnant (with meaning)."

from which the preceding and succeeding actions are most easily comprehensible.

Similarly, poetry in its progressive imitations can use only one single property of a body. It must therefore choose that one which awakens the most vivid image of the body, looked at from the point of view under which poetry can best use it. From this comes the rule concerning the harmony of descriptive adjectives and economy in description of physical objects.

I should put little faith in this dry chain of reasoning did I not find it completely confirmed by the procedure of Homer, or rather if it had not been just this procedure that led me to my conclusions. Only on these principles can the grand style of the Greek be defined and explained, and only thus can the proper position be assigned to the opposite style of so many modern poets, who attempt to rival the painter at a point where they must necessarily be surpassed by him.

I find that Homer represents nothing but progressive actions. He depicts bodies and single objects only when they contribute toward these actions, and then only by a single trait. No wonder, then, that where Homer paints, the artist finds little or nothing to do himself; and no wonder that his harvest can be found only where the story assembles a number of beautiful bodies in beautiful positions and in a setting favorable to art, however sparingly the poet himself may paint these bodies, these positions, and this setting. If we go through the whole series of paintings as Caylus proposes them, one by one, we find that each is a proof of this remark.

* * *

From *Chapter Seventeen*

But the objection will be raised that the symbols of poetry are not only successive but are also arbitrary; and, as arbitrary symbols, they are of course able to represent bodies as they exist in space. Examples of this might be taken from Homer himself. We need only to recall his shield of Achilles⁶ to have the most decisive instance of how discursively and yet at the same time poetically a single object may be described by presenting its coexistent parts.

I shall reply to this twofold objection. I call it twofold because a correct deduction must hold good even without examples; and, conversely, an example from Homer is of importance to me even when I am unable to justify it by means of deduction.

It is true that since the symbols of speech are arbitrary, the parts of a body may, through speech, be made to follow one another just as readily as they exist side by side in nature. But this is a peculiarity of speech and its signs in general and not as they serve the aims of poetry. The poet does not want merely to be intelligible, nor is he content—as is the prose writer—with simply presenting his image clearly and concisely. He wants rather to make the ideas he awakens in us so vivid that at that moment we believe that we feel the real impressions which the objects of these ideas would produce on us. In this moment of illusion we should cease to be conscious of the means which the poet uses for this purpose, that is, his words. This

6. Forged by the god Hephaestus to replace the armor borrowed by his friend Patroclus, whom Hector killed; its intricate work is described at length (*Iliad* 18.478–608).

was the substance of the definition of a poetical painting given above. But the poet is always supposed to paint, and we shall now see how far bodies with their coexistent parts adapt themselves to this painting.

* * *

From *Chapter Eighteen*

And yet should Homer himself have lapsed into this lifeless description of material objects? I do hope that there are but few passages which one can find to support this; and I feel certain that these few passages are of such a nature as to confirm the rule to which they seem to be the exception.

It remains true that succession of time is the province of the poet just as space is that of the painter.

It is an intrusion of the painter into the domain of the poet, which good taste can never sanction, when the painter combines in one and the same picture two points necessarily separate in time, as does Fra Mazzuoli⁷ when he introduces the rape of the Sabine women⁸ and the reconciliation effected by them between their husbands and relations, or as Titian⁹ does when he presents the entire history of the prodigal son, his dissolute life, his misery, and his repentance.

It is an intrusion of the poet into the domain of the painter and a squandering of much imagination to no purpose when, in order to give the reader an idea of the whole, the poet enumerates one by one several parts or things which I must necessarily survey at one glance in nature if they are to give the effect of a whole.

But as two equitable and friendly neighbors do not permit the one to take unbecoming liberties in the heart of the other's domain, yet on their extreme frontiers practice a mutual forbearance by which both sides make peaceful compensation for those slight aggressions which, in haste and from force of circumstance, the one finds himself compelled to make on the other's privilege: so also with painting and poetry.

To support this I will not cite the fact that in great historical paintings the single moment is always somewhat extended, and that perhaps there is not a single work comprising a wealth of figures in which each one of them is in exactly that motion and position it should be in at the moment of the main action; some are represented in the attitude of a somewhat earlier, others in that of a somewhat later moment. This is a liberty which the master must justify by certain refinements in the arrangement—in the way he uses his figures and places them closer to or more distant from the main action—which permits them to take a more or less momentary part in what is going on. I shall merely make use of a remark made by Mengs concerning Raphael's¹ drapery. "In his paintings," he says, "there is a reason for every fold,

7. Francesco Mazzuoli (1503–1540), Italian painter.

8. A famous legend of early Rome. Romulus, its mythical founder, gained wives for the men he had gathered to his new city by inviting neighboring peoples to a festival and seizing the women. The war that followed between Romans and Sabines ended when the Sabine women thrust themselves onto the battlefield between their fathers and their new husbands, leading to peace

and the union of the foes under a single government.

9. Tiziano Vecelli (1488/90–1576), Italian painter. For the story of the prodigal son, see Luke 15.11–32.

1. Raffaello Santi (1483–1520), Italian painter. Anton Raphael Mengs (1728–1779), German painter and art critic; a close friend of Winckelmann.

whether it be because of its own weight or because of the movement of the limbs. Sometimes we can tell from them how they were before, and Raphael even tried to attach significance to this. We can see from the folds whether an arm or a leg was in a backward or forward position prior to its movement; whether the limb had moved or is moving from contraction to extension, or whether it had been extended and is now contracted.”² It is indisputable that in this case the artist is combining two different moments into one. For since that part of the drapery which lies on the foot immediately follows it in its forward motion—unless the drapery be of very stiff material and hence entirely unsuitable for painting—there is no moment in which the garment can form any other fold whatsoever except that which the actual position of the limb requires. However, if it is permitted to form a different fold, then the drapery is represented at the moment preceding and the limb at the following. Nevertheless, who would be so particular with the artist who finds it advantageous to show us these two moments at the same time? Who would not praise him rather for having had the understanding and the courage to commit such a minor error for the sake of obtaining greater perfection of expression?

The poet deserves the same forbearance. His progressive imitation actually allows him to allude to only one side, only one characteristic of his material objects at one time. But when the happy structure of his language permits him to do this in a single word, why should he not be allowed to add a second word now and then? And why not even a third, if it is worth the trouble? Or even a fourth? I have already said that for Homer a ship is only a black ship, or a hollow ship, or a swift ship, or at the most a well-manned black ship. This is to be understood of his style in general. Here and there we find a passage in which he adds a third descriptive epithet. Καμπύλα κύκλα, χάλκεα, ὀκτάκνημα³ round, bronze, eight-spoked wheels. And also a fourth: ἀσπίδα πάντοσ' ἐῖσιν, καλὴν, χαλκείην, ἐξήλατον,⁴ a uniformly smooth, beautiful, embossed bronze shield. Who would censure him for this? Who would not rather thank him for this little extravagance when he feels what a good effect it can have in some few suitable passages?

But I shall not allow the particular justification of either poet or painter to be based on the above-mentioned analogy of the two friendly neighbors. A mere analogy neither proves nor justifies anything. The following consideration must be their real justification: just as in the painter's art two different moments border so closely on one another that we can, without hesitation, accept them as one, so in the poet's work do the several features representing the various parts and properties in space follow one another in such rapid succession that we believe we hear them all at once.

It is in this, I say, that the excellence of Homer's language aids him unusually well. It not only allows him the greatest possible freedom in the accumulation and combination of epithets, but it finds such a happy arrangement for these accumulated adjectives that the awkward suspension of their noun disappears. Modern languages are lacking entirely in one or more of these advantages. For example, the French must paraphrase the καμπύλα κύκλα, χάλκεα, ὀκτάκνημα with “the round wheels, which were of bronze and had

eight spokes." They give the meaning but destroy the picture. Yet the picture is everything here and the meaning nothing; and without the former the latter turns the liveliest of poets into a tiresome bore, a fate which has often befallen our good Homer under the pen of the conscientious Madame Dacier.⁵ The German language, on the other hand, can usually translate Homer's epithets with equally short equivalent adjectives, although it is unable to imitate the advantageous arrangement of Greek. We can say, to be sure, *die runden, ehernen, achtspeichigten* . . . [the round, brazen, eight-spoked], but *Räder* [wheels] drags behind. Who does not feel that three different predicates, before we learn the subject, can produce only an indistinct and confused picture? The Greek combines the subject and the first predicate, and leaves the others to follow. He says, "round wheels, brazen, eight-spoked." And so we know immediately what he is speaking of. In conformity with the natural order of thought, we first become acquainted with the thing itself and then with its accidents. Our [German] language does not enjoy this advantage. Or should I say, it does enjoy it but can seldom make use of it without ambiguity? Both amount to the same thing. For if we place the adjectives after the subject, they must stand *in statu absoluto*, i.e., in uninflected form. Hence, we must say *runde Räder, ehern und achtspeichigt* (round wheels, brazen and eight-spoked). However, in this *statu* the German adjectives are identical with the German adverbs, and if we take them as such with the next verb that is predicated of the subject, they not infrequently produce a completely false, and in any case a very uncertain meaning.

But I am lingering over trifles and it may appear as if I were going to forget the shield, the shield of Achilles, that is—the famous picture which more than anything else caused Homer to be considered by the ancients a master of painting.⁶ A shield, it will be said, is a single material object which the poet cannot present by describing its coexistent parts. And yet Homer, in more than a hundred splendid verses, has described this shield, its material, its form, all the figures which filled its enormous surface, so exactly and in such detail that it was not difficult for modern artists to produce a drawing of it exact in every part.

My answer to this particular objection is that I have already answered it. Homer does not paint the shield as finished and complete, but as a shield that is being made. Thus, here too he has made use of that admirable artistic device: transforming what is coexistent in his subject into what is consecutive, and thereby making the living picture of an action out of the tedious painting of an object. We do not see the shield, but the divine master as he is making it. He steps up to the anvil with hammer and tongs, and after he has forged the plates out of the rough, the pictures which he destines for the shield's ornamentation rise before our eyes out of the bronze, one after the other, beneath the finer blows of his hammer. We do not lose sight of him until all is finished. Now the shield is complete, and we marvel at the work. But it is the believing wonder of the eyewitness who has seen it forged.

From *Chapter Twenty-One*

We might ask whether poetry does not lose too much when we take from her all depictions of physical beauty? But who would do this? If we dissuade her from taking one particular way to attain such pictures, and from following confusedly the footsteps of a sister art without ever reaching the same goal, do we thereby exclude her from every other path where art in turn must see poetry take the lead?

The same Homer, who so assiduously refrains from detailed descriptions of physical beauties, and from whom we scarcely learn in passing that Helen had white arms and beautiful hair,⁷ nevertheless knows how to convey to us an idea of her beauty which far surpasses anything art is able to accomplish toward that end. Let us recall the passage where Helen steps before an assembly of Trojan elders. The venerable old men see her, and one says to the other:

οὐ νέμεσις Τρῳᾶς καὶ ἐϋκνήμιδας Ἀχαιοὺς
τοιγῆδ' ἀμφὶ γυναικὶ πολὺν χρόνον ἄλγεα πάσχειν·
αἰνῶς ἀθανάτησι θεῇς εἰς ὧπα ἔοικεν.⁸

What can convey a more vivid idea of beauty than to let cold old age acknowledge that she is indeed worth the war which had cost so much blood and so many tears?

What Homer could not describe in all its various parts he makes us recognize by its effect. Paint for us, you poets, the pleasure, the affection, the love and delight which beauty brings, and you have painted beauty itself.

no blame on Trojans and strong-greaved Achaeans / if for long time they suffer hardship for a woman like this one. / Terrible is the likeness of her face to immortal goddesses" (trans. Lattimore).

FRIEDRICH VON SCHILLER

1759–1805

Friedrich von Schiller was one of the foremost German writers of the late eighteenth and early nineteenth centuries. Perhaps best known for his dramas, he was also an editor, a journalist, a writer of vivid letters (especially to Goethe and to the German philologist and diplomat Wilhelm von Humboldt), a historian, a translator of Euripides, Shakespeare, and Racine, a poet, and a literary theorist.

Born in Marbach, Germany, Schiller became an army medical officer in Stuttgart in 1780. But soon he began seriously working on poetry and drama, choosing a literary career. He published *Die Räuber* (1781, *The Robbers*) at his own expense, and its performance in 1782 was a landmark in German theatrical history. Romantic writers in England, especially SAMUEL TAYLOR COLERIDGE and the critic William

Hazlitt, admired *The Robbers* for its presentation of the themes of liberty, abuse of power, and authoritarianism.

On the recommendation of Goethe, Schiller was named professor of history at the University of Jena in 1789, and in 1797–98 they worked together on a collection of ballads, a collaboration contemporaneous with that of WILLIAM WORDSWORTH and Coleridge in England.

Many readers admire Schiller's lyrics and ballads, though his long didactic poems (e.g., *The Artists*, 1789, on the power of art to civilize and bring compassion to mankind) are more famous; best known to English-speaking audiences is his "Ode to Joy," which Beethoven set to music in his monumental Ninth Symphony.

In several influential texts on literary and dramatic theory, aesthetics, and the sublime, Schiller explored the relations between art, politics, and history. He looked primarily to IMMANUEL KANT's *Critique of Judgment* (1790; see above), and his development of and response to Kant's ideas later influenced the literary theory of the German Romantic writers and of Coleridge.

In *On the Aesthetic Education of Man* (1795), Schiller was writing in the immediate aftermath of the French regicide and Reign of Terror, during which thousands were executed. The sufferings and shocks of the French Revolution inform his inquiry into the role of art: how can humankind achieve freedom when the failure of political solutions is so graphically displayed? In this text, which grew from a series of actual letters to a benefactor (our selection contains three letters), Schiller explains that freedom can occur only through education, and the key to education is the experience of beauty—the elevation of mind and soul through art. Beauty allows persons to ennoble their nature; each of us can become a "beautiful soul" (*schöne Seele*) harmonizing duty and inclination through art, which Schiller associates with the "play impulse" or "play drive" that makes reconciliation and transcendence possible.

Schiller's *On Naive and Reflective Poetry* (1795–96), a companion piece, contrasts the ancients and the moderns, their different attitudes toward nature, and their performances in poetry. (Often the title's second adjective is given as "sentimental," but this term does not adequately translate *sentimentalisch*.) Modern poets, Schiller states, will never regain the naive—that is, the immediate and unconscious—relationship to nature that the ancients enjoyed. He focuses not on rules to be obeyed or ignored but rather on different types of consciousness. As in *On the Aesthetic Education of Man*, his primary concern is the author's conception of self and of the ideals and purposes of art—the motivating power that informs and imparts life to the text.

Schiller's broad sense of a break between a harmonious past and the divided or disrupted present in which artists perceive the difficulty, if not the impossibility, of embodying their hopes and desires in their actual work, is echoed in the poetry and criticism of MATTHEW ARNOLD, T. S. ELIOT, and many other nineteenth- and twentieth-century writers. They may disagree on the timing, but all emphasize that this shift in consciousness—a dissociation of sensibility—manifests itself in the operations of individual thought and feeling and in the style and structure of poetry.

In the selection below from *On the Aesthetic Education of Man*, Schiller touches on the sense of acute modern cultural crisis that impels his arguments about the priority of the aesthetic. He summons up an optimistic vision of the artist preparing "the shape of things to come," even as he testifies to the ordeal of being an artist in a hostile environment. Defy the world's opinion: this is Schiller's advice to those wondering whether they can endure in the midst of an unsympathetic and corrupt age. The artist should be true to the heart's "noble impulses": "Impart to the world you would influence a *Direction* towards the good, and the quiet rhythm of time will bring it to fulfilment." Through our inner potential, we revitalize ourselves and reinvigorate (and sometimes disturb and unsettle) others.

The weakness of this position is that Schiller separates "the rhythm of time" (which he trusts) from the very different rhythm of the world of Utility that, he

concedes, now rules but that he believes can be transcended. Others grappled more directly with the comprehensive changes driven by the accelerating power of capitalism, described by the Scottish-born historian (and biographer of Schiller) Thomas Carlyle in "Signs of the Times" (1829): "Not the external and the physical alone is now managed by machinery, but the internal and spiritual also. . . . Men are grown mechanical in head and in heart, as well as in hand." Not just KARL MARX and FRIEDRICH ENGELS but the Victorian critics and social reformers John Ruskin and William Morris responded to this alienation in ways that Schiller—whose aesthetic works are grounded less in historical reference and analysis than in idealization of the harmonious wholeness of the ancient Greeks—could not.

Yet Schiller, a prophet of the alienation that would pain many later authors, believed that this alienation could be overcome through the civilizing power of literature, enabling a higher Ideal to triumph over the degraded principles and practices to which persons were currently (and mistakenly) loyal. A passionate advocate for individual and political freedom, Schiller gave everything to his art; "the Muses drained me dry," he wrote to Goethe (1795), and, after a long period of poor health, he died in his mid-forties.

On the Aesthetic Education of Man Keywords: Aesthetics, Defense of Criticism, Modernity, Poetry, Romantic Theory

*From On the Aesthetic Education of Man*¹

Second Letter

1. But should it not be possible to make better use of the freedom you accord me than by keeping your attention fixed upon the domain of the fine arts? Is it not, to say the least, untimely to be casting around for a code of laws for the aesthetic world at a moment when the affairs of the moral offer interest of so much more urgent concern, and when the spirit of philosophical inquiry is being expressly challenged by present circumstances to concern itself with that most perfect of all the works to be achieved by the art of man: the construction of true political freedom?

2. I would not wish to live in a century other than my own, or to have worked for any other. We are citizens of our own Age no less than of our own State. And if it is deemed unseemly, or even inadmissible, to exempt ourselves from the morals and customs of the circle in which we live, why should it be less of a duty to allow the needs and taste of our own epoch some voice in our choice of activity?

3. But the verdict of this epoch does not, by any means, seem to be going in favour of art, not at least of the kind of art to which alone my inquiry will be directed. The course of events has given the spirit of the age a direction which threatens to remove it ever further from the art of the Ideal. This kind of art must abandon actuality, and soar with becoming boldness above our wants and needs; for Art is a daughter of Freedom, and takes her orders

1. Translated by E. M. Wilkinson and L. A. Willoughby. These letters were originally addressed to Schiller's benefactor Friedrich Christian (1745–1814), duke of Augustenburg.

from the necessity inherent in minds, not from the exigencies of matter. But at the present time material needs reign supreme and bend a degraded humanity beneath their tyrannical yoke. *Utility* is the great idol of our age, to which all powers are in thrall and to which all talent must pay homage. Weighed in this crude balance, the insubstantial merits of Art scarce tip the scale, and, bereft of all encouragement, she shuns the noisy marketplace of our century. The spirit of philosophical inquiry² itself is wresting from the imagination one province after another, and the frontiers of art contract the more the boundaries of science expand.

4. Expectantly the gaze of philosopher and man of the world alike is fixed on the political scene, where now, so it is believed, the very fate of mankind is being debated. Does it not betray a culpable indifference to the common weal not to take part in this general debate? If this great action is, by reason of its cause and its consequences, of urgent concern to every one who calls himself man, it must, by virtue of its method of procedure, be of quite special interest to every one who has learnt to think for himself. For a question which has hitherto always been decided by the blind right of might, is now, so it seems, being brought before the tribunal of Pure Reason³ itself, and anyone who is at all capable of putting himself at the centre of things, and of raising himself from an individual into a representative of the species, may consider himself at once a member of this tribunal, and at the same time, in his capacity of human being and citizen of the world, an interested party who finds himself more or less closely involved in the outcome of the case. It is, therefore, not merely his own cause which is being decided in this great action; judgement is to be passed according to laws which he, as a reasonable being, is himself competent and entitled to dictate.

5. How tempting it would be for me to investigate such a subject in company with one who is as acute a thinker as he is a liberal citizen of the world! And to leave the decision to a heart which has dedicated itself with such noble enthusiasm to the weal of humanity. What an agreeable surprise if, despite all difference in station, and the vast distance which the circumstances of the actual world make inevitable, I were, in the realm of ideas, to find my conclusions identical with those of a mind as unprejudiced as your own! That I resist this seductive temptation, and put Beauty before Freedom, can, I believe, not only be excused on the score of personal inclination, but also justified on principle. I hope to convince you that the theme I have chosen is far less alien to the needs of our age than to its taste. More than this: if man is ever to solve that problem of politics in practice he will have to approach it through the problem of the aesthetic, because it is only through Beauty that man makes his way to Freedom. But this cannot be demonstrated without my first reminding you of the principles by which Reason is in any case guided in matters of political legislation.

2. Pertaining not only to the study of fundamental principles but also to the empirical investigation into practical things.

3. See IMMANUEL KANT, *The Critique of Pure Reason* (1781). In the preface, Kant states that his

goal is to "assure to reason its lawful claims, and dismiss all groundless pretensions, not by despotic decrees, but in accordance with its own eternal and unalterable laws."

Sixth Letter

1. Have I not perhaps been too hard on our age in the picture I have just drawn? That is scarcely the reproach I anticipate. Rather a different one: that I have tried to make it prove too much. Such a portrait, you will tell me, does indeed resemble mankind as it is today; but does it not also resemble any people caught up in the process of civilization, since all of them, without exception, must fall away from Nature by the abuse of Reason before they can return to her by the use of Reason?

2. Closer attention to the character of our age will, however, reveal an astonishing contrast between contemporary forms of humanity and earlier ones, especially the Greek. The reputation for culture and refinement, on which we otherwise rightly pride ourselves *vis-à-vis* humanity in its *merely* natural state, can avail us nothing against the natural humanity of the Greeks. For they were wedded to all the delights of art and all the dignity of wisdom, without however, like us, falling a prey to their seduction. The Greeks put us to shame not only by a simplicity to which our age is a stranger; they are at the same time our rivals, indeed often our models, in those very excellences with which we are wont to console ourselves for the unnaturalness of our manners. In fullness of form no less than of content, at once philosophic and creative, sensitive and energetic, the Greeks combined the first youth of imagination with the manhood of reason in a glorious manifestation of humanity.

3. At that first fair awakening of the powers of the mind, sense and intellect did not as yet rule over strictly separate domains; for no dissension had as yet provoked them into hostile partition and mutual demarcation of their frontiers. Poetry had not as yet coquetted with wit, nor speculation prostituted itself to sophistry. Both of them could, when need arose, exchange functions, since each in its own fashion paid honour to truth. However high the mind might soar, it always drew matter lovingly along with it; and however fine and sharp the distinctions it might make, it never proceeded to mutilate. It did indeed divide human nature into its several aspects, and project these in magnified form into the divinities of its glorious pantheon; but not by tearing it to pieces; rather by combining its aspects in different proportions, for in no single one of their deities was humanity in its entirety ever lacking. How different with us Moderns! With us too the image of the human species is projected in magnified form into separate individuals—but as fragments, not in different combinations, with the result that one has to go the rounds from one individual to another in order to be able to piece together a complete image of the species. With us, one might almost be tempted to assert, the various faculties appear as separate in practice as they are distinguished by the psychologist in theory, and we see not merely individuals, but whole classes of men, developing but one part of their potentialities, while of the rest, as in stunted growths, only vestigial traces remain.

4. I do not underrate the advantages which the human race today, considered as a whole and weighed in the balance of intellect, can boast in the

face of what is best in the ancient world. But it has to take up the challenge in serried ranks, and let whole measure itself against whole. What individual Modern could sally forth and engage, man against man, with an individual Athenian for the prize of humanity?

5. Whence this disadvantage among individuals when the species as a whole is at such an advantage? Why was the individual Greek qualified to be the representative of his age, and why can no single Modern venture as much? Because it was from all-unifying Nature that the former, and from the all-dividing Intellect that the latter, received their respective forms.

6. It was civilization itself which inflicted this wound upon modern man. Once the increase of empirical knowledge, and more exact modes of thought, made sharper divisions between the sciences inevitable, and once the increasingly complex machinery of State necessitated a more rigorous separation of ranks and occupations, then the inner unity of human nature was severed too, and a disastrous conflict set its harmonious powers at variance. The intuitive and the speculative understanding now withdrew in hostility to take up positions in their respective fields, whose frontiers they now began to guard with jealous mistrust; and with this confining of our activity to a particular sphere we have given ourselves a master within, who not infrequently ends by suppressing the rest of our potentialities. While in the one a riotous imagination ravages the hard-won fruits of the intellect, in another the spirit of abstraction stifles the fire at which the heart should have warmed itself and the imagination been kindled.

7. This disorganization, which was first started within man by civilization and learning, was made complete and universal by the new spirit of government. It was scarcely to be expected that the simple organization of the early republics should have survived the simplicity of early manners and conditions; but instead of rising to a higher form of organic existence it degenerated into a crude and clumsy mechanism. That polypoid⁴ character of the Greek States, in which every individual enjoyed an independent existence but could, when need arose, grow into the whole organism, now made way for an ingenious clock-work, in which, out of the piecing together of innumerable but lifeless parts, a mechanical kind of collective life ensued. State and Church, laws and customs, were now torn asunder; enjoyment was divorced from labour, the means from the end, the effort from the reward. Everlastingly chained to a single little fragment of the Whole, man himself develops into nothing but a fragment; everlastingly in his ear the monotonous sound of the wheel that he turns, he never develops the harmony of his being, and instead of putting the stamp of humanity upon his own nature, he becomes nothing more than the imprint of his occupation or of his specialized knowledge. But even that meagre, fragmentary participation, by which individual members of the State are still linked to the Whole, does not depend upon forms which they spontaneously prescribe for themselves (for how could one entrust to their freedom

4. That is, like a polyp: a small, simple water animal that is attached to a surface (such as coral), or a small mass of cells that grows in the body.

of action a mechanism so intricate and so fearful of light and enlightenment?); it is dictated to them with meticulous exactitude by means of a formulary which inhibits all freedom of thought. The dead letter takes the place of living understanding, and a good memory is a safer guide than imagination and feeling.

8. When the community makes his office the measure of the man; when in one of its citizens it prizes nothing but memory, in another a mere tabularizing⁵ intelligence, in a third only mechanical skill; when, in the one case, indifferent to character, it insists exclusively on knowledge, yet is, in another, ready to condone any amount of obscurantist⁶ thinking as long as it is accompanied by a spirit of order and law-abiding behaviour; when, moreover, it insists on special skills being developed with a degree of intensity which is only commensurate with its readiness to absolve the individual citizen from developing himself in extensity—can we wonder that the remaining aptitudes of the psyche are neglected in order to give undivided attention to the one which will bring honour and profit? True, we know that the outstanding individual will never let the limits of his occupation dictate the limits of his activity. But a mediocre talent will consume in the office assigned him the whole meagre sum of his powers, and a man has to have a mind above the ordinary if, without detriment to his calling, he is still to have time for the chosen pursuits of his leisure. Moreover, it is rarely a recommendation in the eyes of the State if a man's powers exceed the tasks he is set, or if the higher needs of the man of parts constitute a rival to the duties of his office. So jealously does the State insist on being the sole proprietor of its servants that it will more easily bring itself (and who can blame it?) to share its man with the Cytherean, than with the Uranian, Venus.⁷

9. Thus little by little the concrete life of the Individual is destroyed in order that the abstract idea of the Whole may drag out its sorry existence, and the State remains for ever a stranger to its citizens since at no point does it ever make contact with their feeling. Forced to resort to classification in order to cope with the variety of its citizens, and never to get an impression of humanity except through representation at second hand, the governing section ends up by losing sight of them altogether, confusing their concrete reality with a mere construct of the intellect; while the governed cannot but receive with indifference laws which are scarcely, if at all, directed to them as persons. Weary at last of sustaining bonds which the State does so little to facilitate, positive society begins (this has long been the fate of most European States) to disintegrate into a state of primitive morality, in which public authority has become but one party *more*, to be hated and circumvented by those who make authority necessary, and only obeyed by such as are capable of doing without it.

10. With this twofold pressure upon it, from within and from without, could humanity well have taken any other course than the one it actually

5. Making lists or tables.

6. Opposed to enlightenment or the spread of knowledge; deliberately making something obscure or withholding knowledge from the gen-

eral public.

7. Uranian Venus presides over sacred love; Cytherean Venus presides over profane love.

took? In its striving after inalienable possessions in the realm of ideas, the spirit of speculation could do no other than become a stranger to the world of sense, and lose sight of matter for the sake of form. The practical spirit, by contrast, enclosed within a monotonous sphere of material objects, and within this uniformity still further confined by formulas, was bound to find the idea of an unconditioned Whole receding from sight, and to become just as impoverished as its own poor sphere of activity. If the former was tempted to model the actual world on a world conceivable by the mind, and to exalt the subjective conditions of its own perceptual and conceptual faculty into laws constitutive of the existence of things, the latter plunged into the opposite extreme of judging all experience whatsoever by one particular fragment of experience, and of wanting to make the rules of its *own* occupation apply indiscriminately to all others. The one was bound to become the victim of empty subtilities, the other of narrow pedantry; for the former stood too high to discern the particular, the latter too low to survey the Whole. But the damaging effects of the turn which mind thus took were not confined to knowledge and production; it affected feeling and action no less. We know that the sensibility of the psyche depends for its intensity upon the liveliness, for its scope upon the richness, of the imagination. The preponderance of the analytical faculty must, however, of necessity, deprive the imagination of its energy and warmth, while a more restricted sphere of objects must reduce its wealth. Hence the abstract thinker very often has a *cold* heart, since he dissects his impressions, and impressions can move the soul only as long as they remain whole; while the man of practical affairs often has a *narrow* heart, since his imagination, imprisoned within the unvarying confines of his own calling, is incapable of extending itself to appreciate other ways of seeing and knowing.

11. It was part of my procedure to uncover the disadvantageous trends in the character of our age and the reasons for them, not to point out the advantages which Nature offers by way of compensation. I readily concede that, little as individuals might benefit from this fragmentation of their being, there was no other way in which the species as a whole could have progressed. With the Greeks, humanity undoubtedly reached a maximum of excellence, which could neither be maintained at that level nor rise any higher. Not maintained, because the intellect was unavoidably compelled by the store of knowledge it already possessed to dissociate itself from feeling and intuition in an attempt to arrive at exact discursive understanding; not rise any higher, because only a specific degree of clarity is compatible with a specific fullness and warmth. This degree the Greeks had attained; and had they wished to proceed to a higher stage of development, they would, like us, have had to surrender their wholeness of being and pursue truth along separate paths.

12. If the manifold potentialities in man were ever to be developed, there was no other way but to pit them one against the other. This antagonism of faculties and functions is the great instrument of civilization—but it is only the instrument; for as long as it persists, we are only on the way to becoming civilized. Only through individual powers in man becoming isolated, and arrogating to themselves exclusive authority, do they come into conflict with

the truth of things, and force the Common Sense, which is otherwise content to linger with indolent complacency on outward appearance, to penetrate phenomena in depth. By pure thought usurping authority in the world of sense, while empirical thought is concerned to subject the usurper to the conditions of experience, both these powers develop to their fullest potential, and exhaust the whole range of their proper sphere. And by the very boldness with which, in the one case, imagination allows her caprice to dissolve the existing world-order, she does, in the other, compel Reason to rise to the ultimate sources of knowing, and invoke the law of Necessity against her.

13. One-sidedness in the exercise of his powers must, it is true, inevitably lead the individual into error; but the species as a whole to truth. Only by concentrating the whole energy of our mind into a *single* focal point, contracting our whole being into a single power, do we, as it were, lend wings to this individual power and lead it, by artificial means, far beyond the limits which Nature seems to have assigned to it. Even as it is certain that all individuals taken together would never, with the powers of vision granted them by Nature alone, have managed to detect a satellite of Jupiter which the telescope reveals to the astronomer, so it is beyond question that human powers of reflection would never have produced an analysis of the Infinite or a Critique of Pure Reason,⁸ unless, in the individuals called to perform such feats, Reason had separated itself off, disentangled itself, as it were, from all matter, and by the most intense effort of abstraction armed their eyes with a glass for peering into the Absolute. But will such a mind, dissolved as it were into pure intellect and pure contemplation, ever be capable of exchanging the rigorous bonds of logic for the free movement of the poetic faculty, or of grasping the concrete individuality of things with a sense innocent of preconceptions and faithful to the object? At this point Nature sets limits even to the most universal genius, limits which he cannot transcend; and as long as philosophy has to make its prime business the provision of safeguards against error, truth will be bound to have its martyrs.

14. Thus, however much the world as a whole may benefit through this fragmentary specialization of human powers, it cannot be denied that the individuals affected by it suffer under the curse of this cosmic purpose. Athletic bodies can, it is true, be developed by gymnastic exercises; beauty only through the free and harmonious play of the limbs. In the same way the keying up of individual functions of the mind can indeed produce extraordinary human beings; but only the equal tempering of them all, happy and complete human beings. And in what kind of relation would we stand to either past or future ages, if the development of human nature were to make such sacrifice necessary? We would have been the serfs of mankind; for several millennia we would have done slaves' work for them, and our mutilated nature would bear impressed upon it the shameful marks of this servitude. And all this in order that a future generation might in blissful indolence attend to the care of its moral health, and foster the free growth of its humanity!

8. That is, Kant's *Critique of Pure Reason*.

15. But can Man really be destined to miss himself for the sake of any purpose whatsoever? Should Nature, for the sake of her own purposes, be able to rob us of a completeness which Reason, for the sake of hers, enjoins upon us? It must, therefore, be wrong if the cultivation of individual powers involves the sacrifice of wholeness. Or rather, however much the law of Nature tends in that direction, it must be open to us to restore by means of a higher Art the totality of our nature which the arts themselves have destroyed.

Ninth Letter

1. But is this not, perhaps, to argue in a circle? Intellectual education is to bring about moral education, and yet moral education is to be the condition of intellectual education? All improvement in the political sphere is to proceed from the ennobling of character—but how under the influence of a barbarous constitution is character ever to become ennobled? To this end we should, presumably, have to seek out some instrument not provided by the State, and to open up living springs which, whatever the political corruption, would remain clear and pure.

2. I have now reached the point to which all my preceding reflections have been tending. This instrument is Fine Art; such living springs are opened up in its immortal exemplars.

3. Art, like Science, is absolved from all positive constraint and from all conventions introduced by man; both rejoice in absolute *immunity* from human arbitrariness. The political legislator may put their territory out of bounds; he cannot rule within it. He can proscribe the lover of truth; Truth itself will prevail. He can humiliate the artist; but Art he cannot falsify. True, nothing is more common than for both, science as well as art, to pay homage to the spirit of the age, or for creative minds to accept the critical standards of prevailing taste. In epochs where character becomes rigid and obdurate, we find science keeping a strict watch over its frontiers, and art moving in the heavy shackles of rules; in those where it becomes enervated and flabby, science will strive to please, and art to gratify. For whole centuries thinkers and artists will do their best to submerge truth and beauty in the depths of a degraded humanity; it is they themselves who are drowned there, while truth and beauty, with their own indestructible vitality, struggle triumphantly to the surface.

4. The artist is indeed the child of his age; but woe to him if he is at the same time its ward or, worse still, its minion! Let some beneficent deity snatch the suckling betimes from his mother's breast, nourish him with the milk of a better age, and suffer him to come to maturity under a distant Grecian sky. Then, when he has become a man, let him return, a stranger, to his own century; not, however, to gladden it by his appearance, but rather, terrible like Agamemnon's son,⁹ to cleanse and to purify it. His theme he

9. Orestes, who "cleansed" his home on his return by killing his mother Clytemnestra and her lover Aegisthus, who had murdered Agamemnon (a

myth often treated in Greek tragedy, most notably in Aeschylus's *Oresteia* trilogy, 458 B.C.E.).

will, indeed, take from the present; but his form he will borrow from a nobler time, nay, from beyond time altogether, from the absolute, unchanging, unity of his being. Here, from the pure aether¹ of his genius, the living source of beauty flows down, untainted by the corruption of the generations and ages wallowing in the dark eddies below. The theme of his work may be degraded by vagaries of the public mood, even as this has been known to ennoble it; but its form, inviolate, will remain immune from such vicissitudes. The Roman of the first century had long been bowing the knee before his emperors when statues still portrayed him erect; temples continued to be sacred to the eye long after the gods had become objects of derision; and the infamous crimes of a Nero or a *Commodus*² were put to shame by the noble style of the building whose frame lent them cover. Humanity has lost its dignity; but Art has rescued it and preserved it in significant stone. Truth lives on in the illusion of Art, and it is from this copy, or after-image, that the original image will once again be restored. Just as the nobility of Art *survived* the nobility of Nature, so now Art goes before her, a voice rousing from slumber and preparing the shape of things to come. Even before Truth's triumphant light can penetrate the recesses of the human heart, the poet's imagination will intercept its rays, and the peaks of humanity will be radiant while the dews of night still linger in the valley.

5. But how is the artist to protect himself against the corruption of the age which besets him on all sides? By disdaining its opinion. Let him direct his gaze upwards, to the dignity of his calling and the universal Law, not downwards towards Fortune and the needs of daily life. Free alike from the futile busyness which would fain set its mark upon the fleeting moment, and from the impatient spirit of enthusiasm which applies the measure of the Absolute to the sorry products of Time, let him leave the sphere of the actual to the intellect, which is at home there, whilst he strives to produce the Ideal out of the union of what is possible with what is necessary. Let him express this ideal both in semblance and in truth, set the stamp of it upon the play of his imagination as upon the seriousness of his conduct, let him express it in all sensuous and spiritual forms, and silently project it into the infinity of time.

6. But not everyone whose soul glows with this ideal was granted either the creative tranquillity or the spirit of long patience required to imprint it upon the silent stone, or pour it into the sober mould of words, and so entrust it to the executory hands of time. Far too impetuous to proceed by such unobtrusive means, the divine impulse to form often hurls itself directly upon present-day reality and upon the life of action, and undertakes to fashion anew the formless material presented by the moral world. The misfortunes of the human race speak urgently to the man of feeling; its degradation more urgently still; enthusiasm is kindled, and in vigorous souls ardent longing drives impatiently on towards action. But did he ever ask himself whether those disorders in the moral world offend his reason, or whether they do not rather wound his self-love? If he does not yet know the answer, he will detect

1. For the Greeks, the clear air beyond the clouds; the element breathed by the gods.

2. Both were notoriously cruel emperors of Rome: Nero (37–68 C.E.), emperor 54–68; Commodus

(161–192), emperor 180–92. Under the Republic, which ended in the 1st century B.C.E., Romans did not “bow the knee.”

it by the zeal with which he insists upon specific and prompt results. The pure moral impulse is directed towards the Absolute. For such an impulse time does not exist, and the future turns into the present from the moment that it is seen to develop with inevitable Necessity out of the present. In the eyes of a Reason which knows no limits, the Direction is at once the Destination, and the Way³ is completed from the moment it is trodden.

7. To the young friend of truth and beauty who would inquire of me how, despite all the opposition of his century, he is to satisfy the noble impulses of his heart, I would make answer: Impart to the world you would influence a *Direction* towards the good, and the quiet rhythm of time will bring it to fulfilment. You will have given it this direction if, by your teaching, you have elevated its thoughts to the Necessary and the Eternal, if, by your actions and your creations, you have transformed the Necessary and the Eternal into an object of the heart's desire. The edifice of error and caprice will fall—it must fall, indeed it has already fallen—from the moment you are certain that it is on the point of giving way. But it is in man's inner being that it must give way, not just in the externals he presents to the world. It is in the modest sanctuary of your heart that you must rear victorious truth, and project it out of yourself in the form of beauty, so that not only thought can pay it homage, but sense, too, lay loving hold on its appearance. And lest you should find yourself receiving from the world as it is the model you yourself should be providing, do not venture into its equivocal company without first being sure that you bear within your own heart an escort from the world of the ideal. Live with your century; but do not be its creature. Work for your contemporaries; but create what they need, not what they praise. Without sharing their guilt, yet share with noble resignation in their punishment, and bow your head freely beneath the yoke which they find as difficult to dispense with as to bear. By the steadfast courage with which you disdain their good fortune, you will show them that it is not through cowardice that you consent to share their sufferings. Think of them as they ought to be, when called upon to influence them; think of them as they are, when tempted to act on their behalf. In seeking their approval appeal to what is best in them, but in devising their happiness recall them as they are at their worst; then your own nobility will awaken theirs, and their unworthiness not defeat your purpose. The seriousness of your principles will frighten them away, but in the play of your semblance they will be prepared to tolerate them; for their taste is purer than their heart, and it is here that you must lay hold of the timorous fugitive. In vain will you assail their precepts, in vain condemn their practice; but on their leisure hours you can try your shaping hand. Banish from their pleasures caprice, frivolity, and coarseness, and imperceptibly you will banish these from their actions and, eventually, from their inclinations too. Surround them, wherever you meet them, with the great and noble forms of genius, and encompass them about with the symbols of perfection, until Semblance conquer Reality, and Art triumph over Nature.

1795

3. See John 14.6 (KJV): "Jesus saith unto him, I am the way, the truth, and the life: no man cometh unto the Father, but by me."

MARY WOLLSTONECRAFT

1759–1797

Mary Wollstonecraft wrote one of the first treatises of modern feminism. A *Vindication of the Rights of Woman* (1792) inserts an analysis of the relations between the sexes into a wholesale revolutionary attack on hereditary privilege of all sorts—birth, wealth, rank, and gender. Of course, not every revolutionary theorist in the 1790s would include male privilege on such a list: the French National Assembly's Declaration of the Rights of Man in 1789 said nothing about the rights of women. Yet Wollstonecraft's argument for rational education for both sexes was based on the promise of freedom enthusiastically greeted by many English writers in the early days of the French Revolution.

Wollstonecraft had previously written *A Vindication of the Rights of Men* (1790), one of the first polemical responses to EDMUND BURKE's conservative *Reflections on the Revolution in France* (1790). Months before Thomas Paine's perhaps better-known *Rights of Man* (1791–92), Wollstonecraft composed the first *Vindication* at white heat; it was printed anonymously. For Wollstonecraft, Burke's defense of the charms of existing arrangements was of a piece with the implicit gendering of his earlier aesthetic distinction between the beautiful and the sublime in his *Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful* (1757; see above). Beauty was a property of weaker entities than man; sublimity, of stronger. Women's beauty was thus synonymous with women's inferiority. In both her *Vindications*, Wollstonecraft skillfully demystifies all arguments designed to justify inequality on the basis of existing arrangements, customs, or feelings alone.

As the second-born and first daughter of six children, she experienced firsthand the preference accorded men in both property and dignity. Her older brother was the only grandchild to inherit part of his grandfather's fortune (made in the silk industry), much of which was consumed by Mary's father as he attempted to lead the life of a gentleman farmer. As his finances worsened, he appropriated money that had been set aside for the other children and seems to have become increasingly brutal. At age nineteen Mary decided to strike out on her own.

In addition to trying her hand at several of the positions open to middle-class women without resources (lady's companion, governess, seamstress), Wollstonecraft opened a school at Newington Green with her two younger sisters and a dear friend, Fanny Blood. Although Mary's formal education had ended when she was fifteen, she was an avid reader and later taught herself French, German, Dutch, and Italian. The school failed, but the experience gave rise to Wollstonecraft's first publication, *Thoughts on the Education of Daughters* (1786), and to an acquaintance with antiestablishment thinkers, especially the dissenter Dr. Richard Price (whose sermon on the anniversary of England's Glorious Revolution of 1688 was soon to provoke Burke's *Reflections*).

While working as a governess for the Kingsborough family in Ireland, Wollstonecraft wrote her first novel—*Mary, A Fiction* (1788); when dismissed by the Kingsboroughs (for reasons that are unclear), she returned to London, where her sympathetic publisher, Joseph Johnson, put her to work doing translations and reviews for his new *Analytical Review*. Around his table gathered some of the most interesting intellectuals of the day, including the radical thinker Thomas Paine, the painter Henry Fuseli, the political philosopher and novelist William Godwin, and the poet William Blake.

When the Bastille prison was stormed by a Paris mob in 1789, inaugurating the French Revolution, English radicals looked to France with great enthusiasm. As

WILLIAM WORDSWORTH would later put it in his poem "French Revolution" (1809), "Bliss was it in that dawn to be alive[.] . . . What temper at the prospect did not wake / To happiness unthought of?" (also included in *The Prelude* [1805] 10.692–707). It was in this climate that Mary Wollstonecraft composed her *Vindications*. To the promise of liberty and equality for all men, Wollstonecraft added the simple but radical idea that women, too, had a right to develop their faculties freely, that the laws subjecting them to fathers or husbands could be changed, and that their existing defects (and indeed their charms) were largely a result of social conditioning, and could be modified. By comparing women to military men—both are fond of dress, trained in obedience, and not expected to think for themselves—she implies that education and socialization account for more differences than does gender alone.

At the time of writing *A Vindication of the Rights of Woman*, Wollstonecraft was just beginning to experience the additional complications that a life of passion could create for an independent woman attempting to live by her reason. She fell in love with Henry Fuseli and horrified his wife by suggesting that the three of them might live together. Soon thereafter, she went to Paris alone.

Once in France, she wrote about the French Revolution (her *Historical and Moral View of the Origin and Progress of the French Revolution, and the Effect It Has Produced in Europe* was published in 1794), observed the Reign of Terror with increasing recoil, and fell in love with a dashing American, Gilbert Imlay, who, when British citizens were being rounded up, registered her as his wife for her protection. She conceived a child with him, whom she named Fanny, after Fanny Blood. Though the birth was without complications, Wollstonecraft's life was not. Imlay was often absent on "business," and on two occasions when Wollstonecraft was to join him in London, she discovered evidence of his infidelities. She twice attempted suicide; between attempts, she offered to journey to Scandinavia to investigate some business dealings for Imlay, and, traveling with a toddler and an attendant, wrote letters detailing her travels (later published as *Letters Written during a Short Residence in Norway, Denmark, and Sweden*, 1796). But the relationship with Imlay was over. As VIRGINIA WOOLF memorably surmised in her 1929 short essay on Wollstonecraft (reprinted in *The Second Common Reader*): "Tickling minnows he had hooked a dolphin, and the creature rushed him through the waters till he was dizzy and only wanted to escape."

Wollstonecraft reentered the circle of intellectuals around Joseph Johnson, and this time she found a great deal to discuss with the forty-year-old William Godwin, who was now at the peak of his career (having published *Political Justice* in 1793 and the novel *Caleb Williams* in 1794). Soon "it was friendship melting into love," as Godwin later described it. Both of them were opposed to marriage on principle—he felt that all formal commitments violate the feelings that inspire them, and she felt that marriage laws disadvantage women. Nevertheless, when Mary found herself pregnant again, they married at the beginning of 1797 so that the child would be legitimate. Ironically, many "respectable" acquaintances who had wanted to believe that Mary was married to Imlay broke off relations when this gesture of propriety revealed the earlier illegitimacy.

The author of *A Vindication of the Rights of Woman* was happily working on a novel titled *Maria, or The Wrongs of Woman* (the play—and lack of symmetry—between universal "rights" and gender-specific "wrongs" sums up the differences between Wollstonecraft's treatises and her novels) while she awaited the birth of "William." But she and Godwin had little chance to test their marital experiment. On September 10, 1797, she died of an infection contracted during unsuccessful attempts to remove her broken and unexpelled placenta, eleven days after giving birth to a daughter—the future Mary Shelley, author of a Gothic novel of education (*Frankenstein*) and wife of a passionate disciple of both Godwin and Wollstonecraft, PERCY BYSSHE SHELLEY.

Unlike other middle-class women, whose husbands, fathers, wealth, or connections veiled their legal powerlessness, Mary Wollstonecraft clearly saw the damage caused by sexual inequality. She was socialized for but she never experienced a life of respectable dependency. The first readers of *A Vindication of the Rights of Woman* applauded her apparent commitment to bourgeois respectability, but when Godwin published in his *Memoirs of Mary Wollstonecraft* (1798) a frank account of her subsequent sexual life, the increasingly conservative public reacted to her lack of deference (for which modern feminists applaud her) with horror. Her freedom and independence were seen as proof of licentiousness and immorality.

Mary Wollstonecraft was a cultural and not a literary critic, but as an acute reader of the contradictions inherent in the literary tradition she is a forerunner of “ideological” reading. Literature was central to her work in several fundamental ways. In her novels, she plumbs the conflicts between reason and emotion (“sensitivity”), or within reason itself, neither of which are dealt with in her treatises. In her reply to Burke, she does not separate his aesthetic from his political theory. And she finds at the heart of the literary canon the same sexual inequality and incoherence she is arguing against in society at large.

In the extract printed below, for example, Wollstonecraft begins by pointing out two incompatible moments in Milton’s *Paradise Lost*: Adam’s plea to God for an equal and Eve’s birth as an unequal. How are these to be reconciled? If God exists, she argues, and if humans are all characterized by their capacity for immortality, then one God fits all, and virtue must be the same in kind, if not in degree, for both sexes. The obedience and secondariness expected of women (“He for God only, she for God in him,” as Milton put it) make a mockery of true companionship, giving women access only to a reflection of the light of reason that they should seek for themselves. In good Enlightenment fashion, Wollstonecraft comes close to taking the Serpent’s role, arguing Eve out of blind obedience and into independent thinking.

Wollstonecraft is particularly concerned with the education of women, entering a larger discussion concerning education in general during the period. Jean-Jacques Rousseau’s *Emile* (1762) had argued that men should have *less* rather than *more* education. Society needed to return to, preserve, and nurture man’s natural goodness. Wollstonecraft agreed with much that Rousseau wrote about fresh air, exercise, and natural reason, but she vigorously criticized his differentiation between the educations of Emile and of Sophie. While Emile was expected to develop all his faculties, Sophie was expected to develop only in such a way as to remain “pleasing” to men. Wollstonecraft was not alone in calling for change—she had reviewed with approval Catharine Macauley Graham’s *Letters on Education* (1790), and her treatise was dedicated to Charles-Maurice de Talleyrand-Périgord, who had promoted women’s education in a 1791 report to the French National Assembly—but her logic was particularly incisive.

Today Wollstonecraft is celebrated for her early advocacy of women’s equality and rationality and for arguing against the degradation and subjugation of women justified by “the arbitrary power of beauty.” Her unblinking accounts of existing female defects in mind, body, and character—which sometimes sound misogynist themselves—were in the service of the new forms of freedom and education sought by proponents of Enlightenment reason and revolutionary change.

***A Vindication of the Rights of Woman* Keywords:** Enlightenment Theory, Feminist Criticism, Gender, Women’s Literature

From A Vindication of the Rights of Woman

From Chapter II.

The Prevailing Opinion of a Sexual Character Discussed

To account for, and excuse the tyranny of man, many ingenious arguments have been brought forward to prove, that the two sexes, in the acquirement of virtue, ought to aim at attaining a very different character: or, to speak explicitly, women are not allowed to have sufficient strength of mind to acquire what really deserves the name of virtue. Yet it should seem, allowing them to have souls, that there is but one way appointed by Providence to lead *mankind* to either virtue or happiness.

If then women are not a swarm of ephemerons¹ triflers, why should they be kept in ignorance under the specious name of innocence? Men complain, and with reason, of the follies and caprices of our sex, when they do not keenly satirize our headstrong passions and groveling vices.—Behold, I should answer, the natural effect of ignorance! The mind will ever be unstable that has only prejudices to rest on, and the current will run with destructive fury when there are no barriers to break its force. Women are told from their infancy, and taught by the example of their mothers, that a little knowledge of human weakness, justly termed cunning, softness of temper, *outward* obedience, and a scrupulous attention to a puerile kind of propriety, will obtain for them the protection of man; and should they be beautiful, every thing else is needless, for, at least, twenty years of their lives.

Thus Milton² describes our first frail mother; though when he tells us that women are formed for softness and sweet attractive grace, I cannot comprehend his meaning, unless, in the true Mahometan³ strain, he meant to deprive us of souls, and insinuate that we were beings only designed by sweet attractive grace, and docile blind obedience, to gratify the senses of man when he can no longer soar on the wing of contemplation.

How grossly do they insult us who thus advise us only to render ourselves gentle, domestic brutes! For instance, the winning softness so warmly, and frequently, recommended, that governs by obeying. What childish expressions, and how insignificant is the being—can it be an immortal one? who will condescend to govern by such sinister methods! “Certainly,” says Lord Bacon, “man is of kin to the beasts by his body; and if he be not of kin to God by his spirit, he is a base and ignoble creature!”⁴ Men, indeed, appear to me to act in a very unphilosophical manner when they try to secure the good conduct of women by attempting to keep them always in a state of childhood. Rousseau⁵ was more consistent when he wished to stop the progress of reason in both sexes, for if men eat of the tree of knowledge, women will come in for a taste;⁶ but, from the imperfect cultivation which their understandings now receive, they only attain a knowledge of evil.

1. Short-lived (literally, living only one day).

2. John Milton (1608–1674), English poet whose epic poem, *Paradise Lost* (1667), tells the biblical story of the fall of humankind; Wollstonecraft refers to 4.298.

3. Muslim. Islam was thought to deny that women have souls.

4. Francis Bacon (1561–1626), *Essays or Counsels Civil and Moral* (1625), Essay 16, “Of Atheism”

[D. L. Macdonald and Kathleen Scherf’s note].

5. Jean-Jacques Rousseau (1712–1778), Swiss-born French political philosopher; author of *Emile, or, On Education* (1762). All references to Rousseau in this selection are to book 5 of *Emile*, unless otherwise specified.

6. See Genesis 2–3. The story of “man’s first disobedience” (1.1) in eating this fruit forms the center of Milton’s *Paradise Lost*.

Children, I grant, should be innocent; but when the epithet is applied to men, or women, it is but a civil term for weakness. For if it be allowed that women were destined by Providence to acquire human virtues, and by the exercise of their understandings, that stability of character which is the firmest ground to rest our future hopes upon, they must be permitted to turn to the fountain of light, and not forced to shape their course by the twinkling of a mere satellite.⁷ Milton, I grant, was of a very different opinion; for he only bends to the indefeasible right of beauty, though it would be difficult to render two passages which I now mean to contrast, consistent. But into similar inconsistencies are great men often led by their senses.

“To whom thus Eve with *perfect beauty* adorn’d.
My Author and Disposer, what thou bidst
Unargued I obey; so God ordains;
God is *thy law*, *thou mine*: to know no more
Is Woman’s *happiest* knowledge and her *praise*.”⁸

These are exactly the arguments that I have used to children; but I have added, your reason is now gaining strength, and, till it arrives at some degree of maturity, you must look up to me for advice—then you ought to *think*, and only rely on God.

Yet in the following lines Milton seems to coincide with me; when he makes Adam thus expostulate with his Maker.

“Hast thou not made me here thy substitute,
And these inferior far beneath me set?
Among *unequals* what society
Can sort, what harmony or true delight?
Which must be mutual, in proportion due
Giv’n and receiv’d; but in *disparity*
The one intense, the other still remiss
Cannot well suit with either, but soon prove
Tedious alike: of *fellowship* I speak
Such as I seek, fit to participate
All rational delight—”⁹

In treating, therefore, of the manners of women, let us, disregarding sensual arguments, trace what we should endeavour to make them in order to co-operate, if the expression be not too bold, with the supreme Being.

By individual education, I mean, for the sense of the word is not precisely defined, such an attention to a child as will slowly sharpen the senses, form the temper, regulate the passions as they begin to ferment, and set the understanding to work before the body arrives at maturity; so that the man may only have to proceed, not to begin, the important task of learning to think and reason.

To prevent any misconstruction, I must add, that I do not believe that a private education can work the wonders which some sanguine writers have attributed to it. Men and women must be educated, in a great degree, by the opinions and manners of the society they live in. In every age there has been

7. That is, women should turn to the sun, not the moon.

8. Milton, *Paradise Lost* 4.634–38 (Wollstone-

craft’s italics).

9. *Paradise Lost* 8.381–91 (Wollstonecraft’s italics). “Participate”: partake of.

a stream of popular opinion that has carried all before it, and given a family character, as it were, to the century. It may then fairly be inferred, that, till society be differently constituted, much cannot be expected from education. It is, however, sufficient for my present purpose to assert, that, whatever effect circumstances have on the abilities, every being may become virtuous by the exercise of its own reason; for if but one being was created with vicious inclinations, that is positively bad, what can save us from atheism? or if we worship a God, is not that God a devil?

Consequently, the most perfect education, in my opinion, is such an exercise of the understanding as is best calculated to strengthen the body and form the heart. Or, in other words, to enable the individual to attain such habits of virtue as will render it independent. In fact, it is a farce to call any being virtuous whose virtues do not result from the exercise of its own reason. This was Rousseau's opinion respecting men:¹ I extend it to women, and confidently assert that they have been drawn out of their sphere by false refinement, and not by an endeavour to acquire masculine qualities. Still the regal homage which they receive is so intoxicating, that till the manners of the times are changed, and formed on more reasonable principles, it may be impossible to convince them that the illegitimate power, which they obtain, by degrading themselves, is a curse, and that they must return to nature and equality, if they wish to secure the placid satisfaction that unsophisticated affections impart. But for this epoch we must wait—wait, perhaps, till kings and nobles, enlightened by reason, and, preferring the real dignity of man to childish state, throw off their gaudy hereditary trappings: and if then women do not resign the arbitrary power of beauty—they will prove that they have *less* mind than man.

I may be accused of arrogance; still I must declare what I firmly believe, that all the writers who have written on the subject of female education and manners from Rousseau to Dr. Gregory,² have contributed to render women more artificial, weak characters, than they would otherwise have been; and, consequently, more useless members of society. I might have expressed this conviction in a lower key; but I am afraid it would have been the whine of affection, and not the faithful expression of my feelings, of the clear result, which experience and reflection have led me to draw. When I come to that division of the subject, I shall advert to the passages that I more particularly disapprove of, in the works of the authors I have just alluded to; but it is first necessary to observe, that my objection extends to the whole purport of those books, which tend, in my opinion, to degrade one half of the human species, and render women pleasing at the expence of every solid virtue.

Though, to reason on Rousseau's ground, if man did attain a degree of perfection of mind when his body arrived at maturity, it might be proper, in order to make a man and his wife *one*, that she should rely entirely on his understanding; and the graceful ivy, clasping the oak that supported it, would form a whole in which strength and beauty would be equally conspicuous. But, alas! husbands, as well as their helpmates, are often only overgrown children; nay, thanks to early debauchery, scarcely men in their outward

1. Expressed early in *Emile*.

2. John Gregory (1724–1773), *A Father's Legacy to His Daughters* (1774). Wollstonecraft included

form—and if the blind lead the blind, one need not come from heaven³ to tell us the consequence.

Many are the causes that, in the present corrupt state of society, contribute to enslave women by cramping their understandings and sharpening their senses. One, perhaps, that silently does more mischief than all the rest, is their disregard of order.

To do every thing in an orderly manner, is a most important precept, which women, who, generally speaking, receive only a disorderly kind of education, seldom attend to with that degree of exactness that men, who from their infancy are broken into method, observe. This negligent kind of guess-work, for what other epithet can be used to point out the random exertions of a sort of instinctive common sense, never brought to the test of reason? prevents their generalizing matters of fact—so they do to-day, what they did yesterday, merely because they did it yesterday.

This contempt of the understanding in early life has more baneful consequences than is commonly supposed; for the little knowledge which women of strong minds attain, is, from various circumstances, of a more desultory kind than the knowledge of men, and it is acquired more by sheer observations on real life, than from comparing what has been individually observed with the results of experience generalized by speculation. Led by their dependent situation and domestic employments more into society, what they learn is rather by snatches; and as learning is with them, in general, only a secondary thing, they do not pursue any one branch with that persevering ardour necessary to give vigour to the faculties, and clearness to the judgment. In the present state of society, a little learning is required to support the character of a gentleman; and boys are obliged to submit to a few years of discipline. But in the education of women, the cultivation of the understanding is always subordinate to the acquirement of some corporeal accomplishment; even while enervated by confinement and false notions of modesty, the body is prevented from attaining that grace and beauty which relaxed half-formed limbs never exhibit. Besides, in youth their faculties are not brought forward by emulation; and having no serious scientific study, if they have natural sagacity it is turned too soon on life and manners. They dwell on effects, and modifications, without tracing them back to causes; and complicated rules to adjust behaviour are a weak substitute for simple principles.

As a proof that education gives this appearance of weakness to females, we may instance the example of military men, who are, like them, sent into the world before their minds have been stored with knowledge or fortified by principles. The consequences are similar; soldiers acquire a little superficial knowledge, snatched from the muddy current of conversation, and, from continually mixing with society, they gain, what is termed a knowledge of the world; and this acquaintance with manners and customs has frequently been confounded with a knowledge of the human heart. But can the crude fruit of casual observation, never brought to the test of judgment, formed by comparing speculation and experience, deserve such a distinction? Soldiers, as well as women, practise the minor virtues with punctilious politeness. Where is then the sexual difference, when the education has

3. That is, be Jesus; in Matthew 15.14 he declares that “if the blind lead the blind, both shall fall into the ditch.”

been the same? All the difference that I can discern, arises from the superior advantage of liberty, which enables the former to see more of life.

It is wandering from my present subject, perhaps, to make a political remark; but, as it was produced naturally by the train of my reflections, I shall not pass it silently over.

Standing armies can never consist of resolute, robust men; they may be well disciplined machines, but they will seldom contain men under the influence of strong passions, or with very vigorous faculties. And as for any depth of understanding, I will venture to affirm, that it is as rarely to be found in the army as amongst women; and the cause, I maintain, is the same. It may be further observed, that officers are also particularly attentive to their persons, fond of dancing, crowded rooms, adventures, and ridicule.⁴ Like the *fair* sex, the business of their lives is gallantry.—They were taught to please, and they only live to please. Yet they do not lose their rank in the distinction of sexes, for they are still reckoned superior to women, though in what their superiority consists, beyond what I have just mentioned, it is difficult to discover.

The great misfortune is this, that they both acquire manners before morals, and a knowledge of life before they have, from reflection, any acquaintance with the grand ideal outline of human nature. The consequence is natural; satisfied with common nature, they become a prey to prejudices, and taking all their opinions on credit, they blindly submit to authority. So that, if they have any sense, it is a kind of instinctive glance, that catches proportions, and decides with respect to manners; but fails when arguments are to be pursued below the surface, or opinions analyzed.

May not the same remark be applied to women? Nay, the argument may be carried still further, for they are both thrown out of a useful station by the unnatural distinctions established in civilized life. Riches and hereditary honours have made cyphers of women to give consequence to the numerical figure;⁵ and idleness has produced a mixture of gallantry and despotism into society, which leads the very men who are the slaves of their mistresses to tyrannize over their sisters, wives, and daughters. This is only keeping them in rank and file, it is true. Strengthen the female mind by enlarging it, and there will be an end to blind obedience; but, as blind obedience is ever sought for by power, tyrants and sensualists are in the right when they endeavour to keep women in the dark, because the former only want slaves, and the latter a play-thing. The sensualist, indeed, has been the most dangerous of tyrants, and women have been duped by their lovers, as princes by their ministers, whilst dreaming that they reigned over them.

I now principally allude to Rousseau, for his character of Sophia is, undoubtedly, a captivating one, though it appears to me grossly unnatural; however it is not the superstructure, but the foundation of her character, the principles on which her education was built, that I mean to attack; nay, warmly as I admire the genius of that able writer, whose opinions I shall

4. Why should women be censured with petulant acrimony, because they seem to have a passion for a scarlet coat? Has not education placed them more on a level with soldiers than any other class of men? [Wollstonecraft's note]. "Ridicule": that

which is ridiculous.

5. That is, women are merely zeroes ("ciphers") to add to the family name, inflating its value but being nothing in themselves.

often have occasion to cite, indignation always takes place of admiration, and the rigid frown of insulted virtue effaces the smile of complacency, which his eloquent periods⁶ are wont to raise, when I read his voluptuous reveries. Is this the man, who, in his ardour for virtue, would banish all the soft arts of peace, and almost carry us back to Spartan discipline? Is this the man who delights to paint the useful struggles of passion, the triumphs of good dispositions, and the heroic flights which carry the glowing soul out of itself?—How are these mighty sentiments lowered when he describes the pretty foot and enticing airs of his little favourite! But, for the present, I wave⁷ the subject, and, instead of severely reprehending the transient effusions of overweening sensibility, I shall only observe, that whoever has cast a benevolent eye on society, must often have been gratified by the sight of humble mutual love, not dignified by sentiment, or strengthened by a union in intellectual pursuits. The domestic trifles of the day have afforded matters for cheerful converse, and innocent caresses have softened toils which did not require great exercise of mind or stretch of thought: yet, had not the sight of this moderate felicity excited more tenderness than respect? An emotion similar to what we feel when children are playing, or animals sporting,⁸ whilst the contemplation of the noble struggles of suffering merit has raised admiration, and carried our thoughts to that world where sensation will give place to reason.

Women are, therefore, to be considered either as moral beings, or so weak that they must be entirely subjected to the superior faculties of men.

Let us examine this question. Rousseau declares that a woman should never, for a moment, feel herself independent, that she should be governed by fear to exercise her *natural* cunning, and made a coquetish slave in order to render her a more alluring object of desire, a *sweeter* companion to man, whenever he chooses to relax himself. He carries the arguments, which he pretends to draw from the indications of nature, still further, and insinuates that truth and fortitude, the corner stones of all human virtue, should be cultivated with certain restrictions, because, with respect to the female character, obedience is the grand lesson which ought to be impressed with unrelenting rigour.

What nonsense! when will a great man arise with sufficient strength of mind to puff away the fumes which pride and sensuality have thus spread over the subject! If women are by nature inferior to men, their virtues must be the same in quality, if not in degree, or virtue is a relative idea; consequently, their conduct should be founded on the same principles, and have the same aim.⁹

Connected with man as daughters, wives, and mothers, their moral character may be estimated by their manner of fulfilling those simple

6. Sentences.

7. Waive.

8. Similar feelings has Milton's pleasing picture of paradisiacal happiness ever raised in my mind; yet, instead of envying the lovely pair, I have, with conscious dignity, or Satanic pride, turned to hell for sublimer objects. In the same style, when viewing some noble monument of human art, I have traced the emanation of the

Deity in the order I admired, till, descending from that giddy height, I have caught myself contemplating the grandest of all human sights;—for fancy quickly placed, in some solitary recess, an outcast of fortune, rising superior to passion and discontent [Wollstonecraft's note].

9. Rousseau argues that men's and women's virtues are essentially different [Macdonald and Scherf's note].

duties; but the end, the grand end of their exertions should be to unfold their own faculties and acquire the dignity of conscious virtue. They may try to render their road pleasant; but ought never to forget, in common with man, that life yields not the felicity which can satisfy an immortal soul. I do not mean to insinuate, that either sex should be so lost in abstract reflections or distant views, as to forget the affections and duties that lie before them, and are, in truth, the means appointed to produce the fruit of life; on the contrary, I would warmly recommend them, even while I assert, that they afford most satisfaction when they are considered in their true, sober light.

Probably the prevailing opinion, that woman was created for man, may have taken its rise from Moses's poetical story;¹ yet, as very few, it is presumed, who have bestowed any serious thought on the subject, ever supposed that Eve was, literally speaking, one of Adam's ribs, the deduction must be allowed to fall to the ground; or, only be so far admitted as it proves that man, from the remotest antiquity, found it convenient to exert his strength to subjugate his companion, and his invention to shew that she ought to have her neck bent under the yoke, because the whole creation was only created for his convenience or pleasure.

Let it not be concluded that I wish to invert the order of things; I have already granted, that, from the constitution of their bodies, men seem to be designed by Providence to attain a greater degree of virtue. I speak collectively of the whole sex; but I see not the shadow of a reason to conclude that their virtues should differ in respect to their nature. In fact, how can they, if virtue has only one eternal standard? I must therefore, if I reason consequentially, as strenuously maintain that they have the same simple direction, as that there is a God.

It follows then that cunning should not be opposed to wisdom, little cares to great exertions, or insipid softness, varnished over with the name of gentleness, to that fortitude which grand views alone can inspire.

I shall be told that woman would then lose many of her peculiar graces, and the opinion of a well known poet might be quoted to refute my unqualified assertion. For Pope has said, in the name of the whole male sex,

"Yet ne'er so sure our passion to create,
As when she touch'd the brink of all we hate."²

In what light this sally places men and women, I shall leave to the judicious to determine; meanwhile I shall content myself with observing, that I cannot discover why, unless they are mortal,³ females should always be degraded by being made subservient to love or lust.

To speak disrespectfully of love is, I know, high treason against sentiment and fine feelings; but I wish to speak the simple language of truth, and rather to address the head than the heart. To endeavour to reason love out of the world, would be to out Quixote⁴ Cervantes, and equally offend against

1. Moses was traditionally credited with writing the first 5 books of the Bible; see Genesis 2.18–25.

2. ALEXANDER POPE (1688–1744), *Epistle II, To a Lady: Of the Characters of Women* (1735), 51–52.

3. That is, unless they are not as capable as men

of immortal life.

4. That is, to be more foolishly impractical than Don Quixote, the overly idealistic title character of the novel (1605, 1615) by Miguel de Cervantes (1547–1616).

common sense; but an endeavour to restrain this tumultuous passion, and to prove that it should not be allowed to dethrone superior powers, or to usurp the sceptre which the understanding should ever coolly wield, appears less wild.

Youth is the season for love in both sexes; but in those days of thoughtless enjoyment provision should be made for the more important years of life, when reflection takes place of sensation. But Rousseau, and most of the male writers who have followed his steps, have warmly inculcated that the whole tendency of female education ought to be directed to one point:—to render them pleasing.

Let me reason with the supporters of this opinion who have any knowledge of human nature, do they imagine that marriage can eradicate the habitude of life? The woman who has only been taught to please will soon find that her charms are oblique sunbeams, and that they cannot have much effect on her husband's heart when they are seen every day, when the summer is passed and gone. Will she then have sufficient native energy to look into herself for comfort, and cultivate her dormant faculties? or, is it not more rational to expect that she will try to please other men; and, in the emotions raised by the expectation of new conquests, endeavour to forget the mortification her love or pride has received? When the husband ceases to be a lover—and the time will inevitably come, her desire of pleasing will then grow languid, or become a spring of bitterness; and love, perhaps, the most evanescent of all passions, gives place to jealousy or vanity.

I now speak of women who are restrained by principle or prejudice; such women, though they would shrink from an intrigue with real abhorrence, yet, nevertheless, wish to be convinced by the homage of gallantry that they are cruelly neglected by their husbands; or, days and weeks are spent in dreaming of the happiness enjoyed by congenial souls till their health is undermined and their spirits broken by discontent. How then can the great art of pleasing be such a necessary study? it is only useful to a mistress; the chaste wife, and serious mother, should only consider her power to please as the polish of her virtues, and the affection of her husband as one of the comforts that render her task less difficult and her life happier.—But, whether she be loved or neglected, her first wish should be to make herself respectable, and not to rely for all her happiness on a being subject to like infirmities with herself.

* * *

GERMAINE NECKER DE STAËL

1766–1817

Mme de Staël is one of the few women writers without whom the history of French literature cannot be told. Bridging the gap between the old regime and the Revolution, between national and comparative literatures, and between classical aesthetics and *littérature engagée*, her writings were an advance justification of both Romanticism and realism in France. Celebrated for her conversation, condemned for her sexuality, and alternately lauded and vilified for her politics, she embodied the kind of freedom that revolutionary theorists seldom imagined for women. She was a child of the Enlightenment and never abandoned the principles of self-realization it entailed. “The only reason to fear women’s wit,” she wrote in 1800, “would be some sort of scrupulous anxiety about their happiness. And indeed, by developing their rational minds one might well be enlightening them as to the misfortunes often connected with their fate; but the same reasoning would apply to the effect of the enlightenment on the happiness of the human race in general, a question which seems to me to have been decided once and for all.”

Germaine de Staël was born in Paris to Swiss Protestant parents. Her father, Jacques Necker, had amassed a fortune in banking, thanks to French laws that prevented most Catholics from lending money at high interest. Her mother, Suzanne (née Curchod), maintained a celebrated salon. Germaine seems not to have inherited her mother’s great beauty, but her childhood was spent in the company of famous Enlightenment figures such as Edward Gibbon, chronicler of the fall of the Roman Empire and former suitor of Suzanne Curchod; Denis Diderot and Jean d’Alembert, authors of the *Encyclopédie*; and many others. Her father, appointed to act as Louis XVI’s finance minister in 1777, was lionized by both the king, whose treasury he restored, and the people, whom he fed. Indeed, it was his dismissal by the king in 1789 that led to the storming of the Bastille.

At age nineteen, Germaine Necker was one of the wealthiest heiresses in Europe. Her parents, seeking a son-in-law who was not Catholic, briefly considered William Pitt the Younger, but she was unwilling to move to England. In 1786 she settled on a young Swedish suitor very much in favor with the French and the Swedish courts. Erik Magnus de Staël-Holstein, a penniless nobleman, had had his eye on Germaine’s fortune since she was twelve. King Gustavus III made him Swedish ambassador to France for life (in a complicated bargain in which France gave Sweden the Caribbean Island of St. Barthélémy), and Germaine was assured she would never have to live in Sweden.

Germaine de Staël supplemented this marriage of convenience through passionate involvements with some of the most interesting men of the century. Her lovers were numerous; among the best known were Charles-Maurice de Talleyrand, then bishop of Autun; Count Louis de Narbonne, whose ambivalence during the early revolutionary period led him to support both Lafayette and the royal family; Benjamin Constant, whose brilliant conversation matched her own and who fictionalized their affair in his novel *Adolphe* (1816); and Adolphe Ribbing, who masterminded the assassination of the same Swedish king who had brought about her marriage. August Wilhelm von Schlegel was central to her intellectual life and preceptor to her children (she gave birth to five, and only the first—who died in infancy—was conceived within marriage). Her last love was a younger man and a commoner, John Rocca, with whom at forty-five she bore a mentally disabled son and whom she secretly married before she died (Erik having died in 1802). On reading Mme de Staël’s first novel, *Delphine* (1802), and recognizing the autobiographical elements in it, Talleyrand quipped: “Mme de Staël has disguised both herself and me as

women in her novel." De Staël's mother, influenced by Jean-Jacques Rousseau's theories of education in his *Emile* (1762) but switching the gender roles presented in that work, had brought her daughter up with the independence of an *Emile*, not the compliance of a *Sophie*.

Although she wanted nothing more than to live in Paris, Mme de Staël spent most of her adult life elsewhere—not just in France but also in England, Germany, Italy, Sweden, Russia, Austria, and, most important, Switzerland, where her parents, in and out of favor in France, had bought the château of Coppet in 1784. Her exile by Napoleon in 1803 to "forty leagues from Paris" was only the most official of her banishments by political forces on the left and on the right. Her defense of a constitutional monarchy was too royalist for the revolutionary Jacobins, and her defense of a republic was too revolutionary for the aristocratic *émigrés*. A moderate in favor of both liberty and property, she offended everyone. The authors of the French constitution frequented her Paris salon, but she wrote in defense of Queen Marie Antoinette. Napoleon, neither constitutional nor republican, was a worthy opponent for fourteen years. He not only exiled her from Paris but also planted spies in her entourage, had her correspondence read, took offense at all her writings, and stopped publication of her *On Germany* in 1810. Yet her opposition to Napoleon did not prevent a certain identification: in his final days, she informed him of a plot on his life. In 1815, when Napoleon was at last defeated, she hoped for a constitutional monarchy but rallied to the support of the restoration of Louis XVIII; she was reimbursed, in the process, for the two million francs her father had lent the royal treasury.

Wherever she lived, Mme de Staël configured a brilliant salon around her. Her passion for intellectual conversation both seduced and exhausted her guests, whom she received, in the manner of the old regime, from the moment she awoke to the moment she retired (a day whose length grew as her insomnia worsened). Conversations within the "Groupe de Coppet" (Coppet Group) revolved around liberal opposition to Napoleon and around Romantic ideals of literature and human progress. Leading figures such as Johann Wolfgang von Goethe, Wilhelm von Humboldt, Lord Byron, Simonde de Sismondi, and Juliette Récamier fueled Mme de Staël's changing sense of the possibilities. Her château at Coppet has remained a gathering place for scholars and writers; colloquia on her work regularly take place there, where she was laid to rest next to her parents.

De Staël's early "Essay on Fictions," published in 1795 (our first selection), makes the case, in her characteristic epigrammatic style, for what was eventually to become the nineteenth-century realist novel. Novels, she claims, should broaden their range to include every human predicament, not simply romantic love. Novels can give the creative intellect the space to explore every intractable problem facing postrevolutionary man and woman. Fictions in which "nothing is true and everything is likely" will challenge novel writers to represent what they take to be the real. Unlike philosophical allegories, which subordinate fiction to ideas, and historical fictions, which subordinate fiction to facts, the novel can re-create the world as it is and, in the process, change it. Useless if merely accurate or merely imaginary, literature has the power to move, to awaken, to inform, to distract, and to console. Far from being outside of history, the novel can come to grips with everything that *makes* history.

On Literature Considered in Its Relationship to Social Institutions (1800), from which our second selection is taken, is a fitting monument to the turn from the eighteenth to the nineteenth century. Deeply connected to the fate of the French Revolution, which had just passed through the Reign of Terror (during which Mme de Staël lost many friends and was almost executed herself), *On Literature* describes history as an ongoing process that, whatever its setbacks, ultimately heads toward human progress and perfectibility. As a domain in which the mind can stretch itself to the utmost, literature is an intimate part of that process. When, in later conversa-

tion, Mme de Staël was introduced to Goethe's views on art for art's sake, she found this Weimar aesthetic contrary to all she hoped for from literature, but so dialectical was her mind that she loved to find an idea she could resist. As Goethe later reported, "My obstinate contrariness often drove her to despair, but it was then that she was at her most amiable and that she displayed her mental and verbal agility most brilliantly."

Romanticism in France is rooted in the writings of Rousseau, another Swiss, but by all accounts the decisive turn was taken when Mme de Staël introduced German Romanticism to the French. In her book *On Germany* (1810), she offered Europe and particularly France an alternative to the empire of Napoleon with his taste for classicism and absolutism. Her division between northern literature (melancholy, medieval, Christian, emotional, misty—Romantic) and southern literature (sunny, rational, sensual, pagan—classical) was both cosmopolitan and nationalist in an age when modern nationalism was just taking shape. All of the categories were problematic, but despite the rhetorical force of Mme de Staël's oppositions, their thrust was less essential ("the German soul," "the French mind") than dialectical. Within the French tradition, the seeds of Romanticism already existed: all that was needed was to make them grow. And German thinkers would provide the nutrients.

In addition to her theoretical and political writings, de Staël is famous for two novels—*Delphine* (1802) and *Corinne, or Italy* (1807). The latter paints a portrait of a celebrated, independent woman artist; her art is deepened by her love for an Englishman who, initially attracted by her talent, eventually abandons her for a less complex partner. Corinne, who is half English and half Italian, combines the genius of the Mediterranean with the sensitivity of the North in her poetry, but she suffers, in the end, from culture's inability to incorporate superior and complex women. Mme de Staël had much to say about the plight of the woman intellectual, whether living in a monarchy or in a republic, a plight that is nowhere more cogently analyzed than in our selection from *On Literature*. The category of "exceptional woman," a term invented by French culture both to counteract and to appropriate women like Mme de Staël, continued to function well into the twentieth century, as SIMONE DE BEAUVOIR was to find out. By separating the exception from the condition of women in general, society recognizes and benefits from female talent without having to change its view—often shared by the exceptional woman herself—of women as such.

From Essay on Fictions¹

Introduction

Man's most valuable faculty is his imagination. Human life seems so little designed for happiness that we need the help of a few creations, a few images, a lucky choice of memories to muster some sparse pleasure on this earth and struggle against the pain of all our destinies—not by philosophical force, but by the more efficient force of distraction. The dangers of imagination have been discussed a good deal, but there is no point in looking up what impotent mediocrity and strict reason have said on this topic over and

1. Translated by Vivian Folkenflik.

over again. The human race is not about to give up being stimulated, and anyone who has the gift of appealing to people's emotions is even less likely to give up the success promised by such talent. The number of necessary and evident truths is limited; it will never be enough for the human mind or heart. The highest honor may well go to those who discover such truths, but the authors of books producing sweet emotions or illusions have also done useful work for humanity. Metaphysical precision cannot be applied to man's affections and remain compatible with his nature. Beginnings are all we have on this earth—there is no limit. Virtue is actual and real, but happiness floats in space; anyone who tries to examine happiness inappropriately will destroy it, as we dissolve the brilliant images of the mist if we walk straight through them. And yet the advantage of fictions is not the pleasure they bring. If fictions please nothing but the eye, they do nothing but amuse; but if they touch our hearts, they can have a great influence on all our moral ideas. This talent may be the most powerful way there is of controlling behavior and enlightening the mind. Man has only two distinct faculties: reason and imagination. All the others, even feeling, are simply results or combinations of these two. The realm of fiction, like that of imagination, is therefore vast. Fictions do not find obstacles in passions: they make use of them. Philosophy may be the invisible power in control of fictions, but if she is the first to show herself, she will destroy all their magic.

When I talk about fictions, I will therefore be considering them from two perspectives of content and charm: this kind of writing may contain pleasure without useful purpose, but never vice versa. Fictions are meant to attract us; the more moral or philosophical the result one is trying to achieve, the more they have to be decked out with things to move us, leading us to the goal without advance warning. In mythological fictions I will consider only the poet's talent; these fictions could well be examined in the light of their religious influence, but such a point of view is absolutely foreign to my subject. I will be discussing the writings of the ancients according to the impression they create in our times, so my concern must be with their literary talent rather than their religious beliefs.

Fictions can be divided into three groups: (1) marvelous and allegorical fictions, (2) historical fictions, (3) fictions in which everything is both invented and imitated, where nothing is true and everything is likely.²

This topic should really be discussed in an extensive treatise including most existing literary works and involving thoughts on almost every topic, since the complete exposition of any one idea is connected to the whole chain of ideas. But I am only trying to prove that the most useful kind of fiction will be novels taking life as it is, with delicacy, eloquence, depth, and morality, and I have excluded everything irrelevant to that goal from this essay.

III

The third and last part of this essay must deal with the usefulness of natural fictions, as I call them, where everything is both invented and imitated, so that nothing is true but everything looks true to life. Tragedies with completely imaginary subjects will not be included here; they portray a more

2. That is, realist novels, discussed under heading III.

lofty nature, an extraordinary situation at an extraordinary level. The verisimilitude of such plays depends on events that are extremely rare, and morally applicable to very few people. Comedies and other dramas are in the theater what novels are to other fiction: their plots are taken from private life and natural circumstances. However, the conventions of the theater deprive us of the commentary which gives examples of reflections their individuality. Dramas are allowed to choose their characters among people other than kings and heroes, but they can show only broadly defined situations, because there is no time for nuance. And life is not concentrated like that—does not happen in contrasts—is not really theatrical in the way plays have to be written. Dramatic art has different effects, advantages, and means which might well be discussed separately, but I think only the modern novel is capable of achieving the constant, accurate usefulness we can get from the picture of our ordinary, habitual feelings. People usually make a separate case of what they call philosophical novels; all novels should be philosophical, as they should all have a moral goal. Perhaps, however, we are not guided so inevitably toward this moral goal when all the episodes narrated are focused on one principal idea, exempting the author from all probability in the way one situation follows another. Each chapter then becomes a kind of allegory—its events are only there to illustrate the maxim at the end. The novels *Candide*, *Zadig*, and *Memnon*,³ while delightful in other respects, would be much more useful if they were not marvelous, if they offered an example instead of an emblem and if, as I say, the whole story did not have to relate to the same goal. Such novels are at the same disadvantage as teachers: children never believe them, because they make everything that happens relate to the lesson at hand. Children unconsciously know already that there is less regularity than that in real life. Events are also invented in novels like Richardson's and Fielding's,⁴ where the author is trying to keep close to life by following with great accuracy the stages, developments, and inconsistencies of human history, and the way the results of experience always come down to the morality of actions and the advantages of virtue, nonetheless. In these novels, however, the feelings are so natural that the reader often believes he is being spoken to directly, with no artifice but the tactfulness of changing the names.

The art of novel-writing does not have the reputation it deserves because of a throng of bad writers overwhelming us with their colorless productions; in this genre, perfection may require the greatest genius, but mediocrity is well within everyone's grasp. This infinite number of colorless novels has almost used up the passion portrayed in them; one is terrified of finding the slightest resemblance in one's own life to the situations they describe. It has taken the very greatest masters to bring this genre back again, despite the writers who have degraded it. And others have dragged it even lower by including disgusting scenes of vice. Despite the fact that fiction's main advantage is to gather around man everything in nature that might be useful to him as a lesson or model, some writers supposed we might have some kind of use for these detestable paintings of evil habits. As if such fictions

3. Tales by Voltaire: *Zadig* was published in 1747; *Memnon* in 1749, *Candide* in 1759 [translator's note].

4. Samuel Richardson (1689–1761) and Henry Fielding (1707–1754), English novelists.

could ever leave a heart that rejected them in the same state of purity as a heart that had never known them! The novel as we conceive of it, however—as we have a few examples of it—is one of the most beautiful creations of the human mind, and one of the most influential on individual morality, which is what ultimately determines the morality of the public.

There is a very good reason why public opinion does not have enough respect for the writing of good novels, however. This is because novels are considered to be exclusively devoted to the portrayal of love—the most violent, universal, and true passion of them all, but also the passion which inspires no interest at any other time of life than youth, since youth is all it influences. We may well believe that all deep and tender feelings belong to the nature of love, and that hearts which have neither known nor pardoned love cannot feel enthusiasm in friendship, devotion in misery, worship of one's parents, passion for one's children. One can feel respect for one's duties, but no delight or self-surrender in their accomplishment, if one has not loved with all the strength of one's soul, ceasing to be one's self to live entirely in another. The destiny of women and the happiness of men who are not called upon to govern empires often depend for the rest of their lives on the role they gave to the influence of love in their youth. Nevertheless, when people reach a certain age, they completely forget the impression love made on them. Their character changes; they devote themselves to other goals, other passions; and these new interests are what we should extend the subjects of novels to include. A new career would then be open to authors who have the talent to paint all the emotions of the human heart, and are able to use their intimate knowledge of it to involve us. Ambition, pride, greed, vanity could be the primary topic of novels which would have situations as varied as those arising from love, and fresher plots. Will people object that such a tableau of men's passions exists in history, and that we should look for it there? History does not reach the lives of private men, feelings and characters that do not result in public events. History does not act on you with sustained moral interest. Reality often fails to make an effect; and the commentary needed to make a lasting impression would stop the essential quick narrative pace, and give dramatic form to a work that should have a very different sort of merit. And the moral of history can never be completely clear. This may be because one cannot always show with any degree of certainty the inner feelings that punish the wicked in their prosperity and reward the virtuous in their misery, or perhaps because man's destiny is not completed in this life. Practical morality is founded on the advantages of virtue, but the reading of history does not always put it in the limelight.

Great historians (especially Tacitus)⁵ do try to attach some moral to every event they relate, making us envy the dying Germanicus, and hate Tiberius at the pinnacle of his grandeur. But they can still portray only those feelings certified by facts. What stays with us from a reading of history is more likely to be the influence of talent, the brilliance of glory, the advantages of power, than the quiet, subtle, gentle morality which is the basis of individual happi-

5. Roman historian (ca. 55–ca. 120 C.E.). In *Annales* 2, Tacitus recounts the strains between Tiberius (42 B.C.E.–37 C.E.; emperor, 14 C.E.–37 C.E.) and his nephew Germanicus (15 B.C.E.–19

C.E.), whom he adopted but whose popularity he perceived as a threat; given command of the eastern provinces, Germanicus died (probably poisoned) in Syria.

ness and the relationship between individuals. Everyone would think me ridiculous if I said I set no value on history, and that I preferred fictions—as if fictions did not arise from experience, and as if the delicate nuances shown in novels did not come from the philosophical results and mother-ideas presented by the great panorama of public events! However, the morality of history only exists in bulk. History gives constant results by means of the recurrence of a certain number of chances: its lessons apply to nations, not individuals. Its examples always fit nations, because if one considers them in a general way they are invariable; but it never explains the exceptions. These exceptions can seduce each man as an individual; the exceptional circumstances consecrated by history leave vast empty spaces into which the miseries and wrongs that make up most private destinies could easily fall. On the other hand, novels can paint characters and feeling with such force and detail that they make more of an impression of hatred for vice and love for virtue than any other kind of reading. The morality of novels belongs more to the development of the internal emotions of the soul than to the events they relate. We do not draw a useful lesson from whatever arbitrary circumstance the author invents as punishment for the crime; what leaves its indelible mark on us comes from the truthful rendition of the scenes, the gradual process or sequence of wrongdoing, the enthusiasm for sacrifices, the sympathy for misfortune. Everything is so true to life in such novels that we have no trouble persuading ourselves that everything could happen just this way—not past history, but often, it seems, the history of the future.

Novels give a false idea of mankind, it has been said. This is true of bad novels, as it is true of paintings which imitate nature badly. When novels are good, however, nothing gives such an intimate knowledge of the human heart as these portrayals of the various circumstances of private life and the impressions they inspire. Nothing gives so much play to reflection, which finds much more to discover in details than in generalities. Memoirs would be able to do this if their only subjects were not, as in history, famous men and public events. If most men had the wit and good faith to give a truthful, clear account of what they had experienced in the course of their lives, novels would be useless—but even these sincere narratives would not have all the advantages of novels. We would still have to add a kind of dramatic effect to the truth; not deforming it, but condensing it to set it off. This is the art of the painter: far from distorting objects, it represents them in a way that makes them more immediately apprehended. Nature sometimes shows us things all on the same level, eliminating any contrasts; if we copy her too slavishly we become incapable of portraying her. The most truthful account is always an imitative truth: as a tableau, it demands a harmony of its own. However remarkable a true story may be for its nuances, feelings, and characters, it cannot interest us without the talent necessary for the composition of fiction. But despite our admiration for the genius that lets us penetrate the recesses of the human heart, it is impossible to bear all those minute details with which even the most famous novels are burdened. The author thinks they add to the picture's verisimilitude, blind to the fact that anything that slows down the interest destroys the only truth fiction has: the impression it produces. To put everything that happens in a room onstage is to destroy theatrical illusion completely. Novels have dramatic conventions

also: the only thing necessary in an invention is what adds to the effect one is creating. If a glance, a movement, or an unnoticed circumstance helps paint a character or develop our understanding of a feeling, the simpler the means, the greater the merit in catching it—but a scrupulously detailed account of an ordinary event diminishes verisimilitude instead of increasing it. Thrown back on a positive notion of what is true by the kind of details that belong only to truth, you soon break out of the illusion, weary of being unable to find either the instruction of history or the interest of a novel.

The greatest power of fiction is its talent to touch us; almost all moral truths can be made tangible if they are shown in action. Virtue has so much influence on human happiness or misery that one can make most of life's situations depend on it. Some severe philosophers condemn all emotions, wanting moral authority to rule by a simple statement of moral duty. Nothing is less suited to human nature. Virtue must be brought to life if she is to fight the passions with any chance of winning; a sort of exaltation must be aroused for us to find any charm in sacrifice; misfortune must be embellished for us to prefer it to the great charm of guilty enticement; and the touching fictions which incite the soul to generous feelings make it unconsciously engage itself in a promise that it would be ashamed to retract in similar circumstances. But the more real power there is in fiction's talent for touching us, the more important it becomes to widen its influence to the passions of all ages, and the duties of all situations. The primary subject of novels is love, and characters who have nothing to do with it are present only as accessories. It would be possible to find a host of new subjects if one followed a different plan. *Tom Jones*⁶ has the most general moral of any novel: love appears in it as only one of many means of showing the philosophical result. The real aim of *Tom Jones* is to show the uncertainty of judgments founded on appearances, proving the superiority of natural and what we may call involuntary virtues over reputations based on mere respect for external etiquette. And this is one of the most useful, most deservedly famous of all novels. *Caleb Williams*, by Mr. Godwin,⁷ is a recent novel which, despite some tedious passages and oversights, seems to give a good idea of this inexhaustible genre. Love plays no part in this fiction; the only motives for the action are the hero's unbridled passion for the world's respect and Caleb's overpowering curiosity, leading him to discover whether or not Falkland deserves the esteem he enjoys. We read this story with all the absorption inspired by romantic interest and the reflection commanded by the most philosophical tableau.

Some successful fictions do give pictures of life unrelated to love: several *Moral Tales* of Marmontel, a few chapters of *Sentimental Journey*, various anecdotes from the *Spectator*⁸ and other books on morality, some pieces taken from German literature, whose superiority is growing every day. There is still, however, no new Richardson devoting himself to paint men's other passions in a novel completely exploring the progress and consequences of these passions. The success of such a work would come from the truth of its

6. *The History of Tom Jones, a Foundling* (1749), a novel by Fielding.

7. William Godwin (1756–1836), English novelist and political theorist, married to MARY WOLLSTONECRAFT; *Caleb Williams* was published in 1794.

8. A periodical (1711–12) written by JOSEPH ADDISON and Richard Steele. Jean-François Marmontel (1723–1799), French author whose *Moral Tales* (1761–86) appeared first in a journal. *Sentimental Journey through England and France*: a 1768 narrative by Laurence Sterne.

characters, the force of its contrasts and the energy of its situations, rather than from that feeling which is so easy to paint, so quick to arouse interest, pleasing women by what it makes them remember even if it cannot attract them by the greatness or novelty of the scenes it presents. What beautiful things we would find in the Lovelace⁹ of ambition! What philosophical developments, if we were eager to explain and analyze all the passions, as novels have already done for love! Let no one object that books on morality are enough to teach us a knowledge of our duties; such books cannot possibly go into all the nuances of delicacy, or detail the myriad resources of the passions. We can glean a morality purer and higher from novels than from any didactic work on virtue; didactic works are so dry that they have to be too indulgent. Maxims have to be generally applicable, so they never achieve that heroic delicacy we may offer as a model but cannot reasonably impose as a duty. Where is the moralist who could say: "If your whole family wants you to marry a detestable man, and you are prompted by their persecution to give a few signs of the most innocent interest to the man you find attractive, you are going to bring death and dishonor upon yourself"? This, however, is the plot of *Clarissa*; this is what we read with admiration, without a word of protest to the author who touches us and holds us captive. What moralist would claim that it is better to abandon oneself to deep despair, the sort of despair that threatens life and disturbs the mind, rather than marry the most virtuous man in the world if his religion is different from your own? Well, we need not approve of the superstitious opinions of *Clementina*,¹ but love struggling against a scruple of conscience and duty winning out over passion are a sight that moves and touches even loose-principled people who would have rejected such a conclusion disdainfully if it had been a maxim preceding the tableau instead of an effect that followed it. In novels of a less sublime genre, there are so many subtle rules for women's conduct! We could support this opinion by quoting from masterpieces like *The Princess of Clèves*, *The Count of Comminge*, *Paul and Virginia*, *Cecilia*, most of the writings of Madame Riccoboni, *Caroline*, whose charm is felt by everyone, the touching episode of Caliste, the letters of Camilla,² in which the mistakes of a woman and their miserable consequences give a more moral and severe picture than the spectacle of virtue itself, and many other French, English, and German works. Novels have the right to offer the severest morality without revolting our hearts; they have captured feeling, the only thing that can successfully plead for indulgence. Pity for misfortune or interest in passion often win the struggle against books of morality, but good novels have the art of putting this emotion itself on their side and using it for their own ends.

There is still one serious objection to love stories: that they paint love in such a way as to arouse it, and that there are moments in life when this dan-

9. The villain-hero who seduces the title character in Richardson's *Clarissa, or The History of a Young Lady* (1747–48).

1. The Italian woman who renounces the eponymous hero of Richardson's *History of Sir Charles Grandison* (1753–54) [shortened translator's note].

2. All these works are novels. *The Princess of Clèves* is by Mme de La Fayette (1678); *The Count of Comminge* (1735) is by Mme de Tencin;

Paul and Virginia (1787) is by Jacques-Henri Bernadin de Saint-Pierre; *Cecilia* (1782) and *Camilla* (1796) are by Fanny Burney; Marie-Jeanne Riccoboni (1713–1792) wrote a number of novels in the mid-18th century. *Caroline* is probably *Caroline de Litchfield* (1785), by Isabelle de Montolieu. Isabelle de Charrière, later [Benjamin] Constant's intimate friend, wrote *Caliste* (1787) [translator's note].

ger wins out over every kind of advantage. This drawback could not exist in novels about any other human passion, however. By recognizing the most fleeting symptoms of a dangerous inclination from the very beginning, one could turn oneself as well as others away from it. Ambition, pride, and avarice often exist without the least consciousness on the part of those they rule. Love feeds on the portrait of its own feelings, but the best way to fight the other passions is to make them be recognized. If the features, tricks, means, and results of these passions were as fully shown and popularized by novels as the history of love, society would have more trustworthy rules and more scrupulous principles about all the transactions of life. Even if purely philosophical writings could predict and detail all the nuances of actions, as do novels, dramatic morality would still have the great advantage of arousing indignant impulses, and exaltation of soul, a sweet melancholy—the various effects of fictional situations, and a sort of supplement to existence. This impression resembles the one we have of real facts we might have witnessed, but it is less distracting for the mind than the incoherent panorama of events around us, because it is always directed toward a single goal. Finally, there are men over whom duty has no influence, and who could still be preserved from crime by developing within them the ability to be moved. Characters capable of adopting humanity only with the help of such a faculty of emotion, the physical pleasure of the soul, would naturally not deserve much respect; nevertheless, if the effect of these touching fictions became widespread enough among the people, it might give us some assurance that we would no longer have in our country those beings whose character poses the most incomprehensible moral problem that has ever existed. The gradual steps from the known to the unknown stop well before we reach any understanding of the emotions which rules the executioners of France. Neither events nor books can have developed in them the least trace of humanity, the memory of a single sensation of pity, any mobility within the mind itself for them to remain capable of that constant cruelty, so foreign to all the impulses of nature—a cruelty which has given mankind its first limitless concept, the complete idea of crime.

There are writings whose principal merit is the eloquence of passion, such as the “Epistle of Abelard” by Pope, *Werther*, the *Portuguese Letters*, and especially *The New Héloïse*.³ The aim of such works is often moral, but what remains with us more than anything else is the absolute power of the heart. We cannot classify such novels. Every century has one soul and one genius capable of achieving this—it cannot be a genre, it cannot be a goal. Who would want to proscribe these miracles of the word, these deep impressions which satisfy all the emotions of the passionate? Readers enthusiastic about such talent are very few in number; these works always do their admirers good. Let ardent, sensitive souls admire them; they cannot make their language understood by anyone else. The feelings that disturb such beings are rarely understood; constantly condemned, they would believe themselves

3. *Julie, or The New Heloise* (1761), an epistolary novel by Jean-Jacques Rousseau. “Epistle of Abelard”: *Eloisa to Abelard* (1717), by ALEXANDER POPE (1688–1744); Héloïse fell in love with and secretly married her tutor, the 11th-century theologian Pierre Abélard (on discovery, she was sent to a convent and he became a monk). *Werther*:

The Sorrows of Young Werther (1774), by Johann Wolfgang von Goethe. *The Portuguese Letters*: letters (published 1699) said to have been written by a Portuguese nun to her lover, a French officer, but probably written by their French “translator,” Gabriel Joseph de Lavergne, vicomte de Guilleragues.

alone in the world, they would soon hate their own nature for isolating them, if a few passionate, melancholy works did not make them hear a voice in the desert of life, letting them find in solitude a few rays of the happiness that escapes them in the middle of society. The pleasure of retreat is refreshing after the vain attempts of disappointed hope; far from this unfortunate creature, the entire universe may be in motion, but such eloquent, tender writing stays near him as his most faithful friend, the one who understands him best. Yes, a book must be right if it offers even one day's distraction from pain; it helps the best of men. Of course there are also sorrows that come from one's own character flaws, but so many of them come from superiority of mind or sensitivity of heart! and there are so many that would be easier to bear if one had fewer good qualities! I respect the suffering heart, even when it is unknown to me; I take pleasure in fictions whose only effect might be to comfort this heart by capturing its interest. In this life, which we pass through rather than feel, the distributor of the only real happiness of which human nature is capable would be someone who distracts man from himself and others, suspending the action of the passions by substituting independent pleasures for them—if the influence of his talent could only last.

1795

From On Literature Considered in Its Relationship to Social Institutions¹

On Women Writers (2.4)

Unhappiness is like the black mountain of Bember, at the edge of the blazing kingdom of Lahor. As long as you are climbing it, you see nothing ahead of you but sterile rocks; but once you are at the peak, heaven is at your head, and at your feet the kingdom of Cashmere.

—*The Indian Hut*, by Bernadin de Saint-Pierre²

The existence of women in society is still uncertain in many ways. A desire to please excites their minds; reason recommends obscurity; and their triumphs and failures are equally and completely arbitrary.

I believe a day will come when philosophical legislators will give serious attention to the education of women, to the laws protecting them, to the duties which should be imposed on them, to the happiness which can be guaranteed them. At present, however, most women belong neither to the natural nor to the social order. What succeeds for some women is the ruin of others; their good points may do them harm, their faults may prove useful. One minute they are everything, the next nothing. Their destiny resembles that of freedmen under the emperors: if they try to gain any influence, this unofficial power is called criminal, while if they remain slaves their destiny is crushed.

1. Translated by Vivian Folkenflik.

2. French naturalist and author (1737–1814), heavily influenced by the writings of Jean-Jacques Rousseau (1712–1788); his novel *The Indian Hut*

was published in 1791. "Lahor" and "Cashmere," now better known as Lahore and Kashmir, are regions of northern India (in 1947 Lahore was divided between India and Pakistan).

It would no doubt be generally preferable for women to devote themselves entirely to the domestic virtues, but the peculiar thing about men's judgments of women is that they are much likelier to forgive women for neglecting these duties than for attracting attention by unusual talent. Men are quite willing to tolerate women's degradation of the heart, so long as it is accompanied by mediocrity of mind. The best behavior in the world can scarcely obtain forgiveness for real superiority.

I am now going to discuss the various causes of this peculiar phenomenon, beginning with the condition of women writers in monarchies, then in republics. I am interested in the differences these political situations make in the destinies of women who set their minds upon literary celebrity; I will then consider more generally the sort of happiness fame can promise these women.

In monarchies, women have ridicule to fear; in republics, hatred.

In a monarchy, the sense of the right and proper is so acute that any unusual act or impulse to change one's situation looks ridiculous right away. Anything your rank or position forces you to do finds a thousand admirers; everything you invent spontaneously, with no obligation, is judged severely and in advance. The jealousy natural to all men calms down only if you can apologize for success under cover of some obligation. Unless you cover fame itself with the excuse of your situation and practical interests, if people think your only motive is a need to distinguish yourself, you will annoy those whom ambition is leading in the same direction as yourself.

Men can always hide their vanity or their craving for applause under the appearance or reality of stronger, nobler passions; but women who write are generally assumed to be primarily inspired by a wish to show off their wit. As a result, the public is very reluctant to grant its approval, and the public's sense that women cannot do without this approval is precisely what tempts it to deny it. In every walk of life, as soon as a man sees your obvious need of him, his feelings for you almost always cool down. A woman publishing a book makes herself so dependent on public opinion that those who mete it out make her harshly aware of their power.

These general causes, acting more or less uniformly in all countries, are reinforced by various circumstances peculiar to the French monarchy. The spirit of chivalry, still lingering on in France, was opposed in some respects to the overeager cultivation of letters even by men; it must have aroused all the more dislike for women concentrating on literary studies and turning their thoughts away from their primary concern, the sentiments of the heart. The niceties of the code of honor might well make men averse from submitting themselves to the motley criticism attracted by publicity. How much more must they have disliked seeing the creatures entrusted to their protection—their wives, sisters, daughters—running the gauntlet of public criticism, or even giving the public the right to make a habit of talking about them!

Great talent could triumph over all these considerations, but it was still hard for women to bear reputations as authors nobly, simultaneously combining them with the independence of high rank and keeping up the dignity, grace, ease, and unself-consciousness that were supposed to distinguish their habitual style and manners.

Women were certainly allowed to sacrifice household occupations to a love of society and its pleasures; serious study, however, was condemned as pedantic. If from the very first moment one did not rise above the teasing which went on from all sides, this teasing would end by discouraging talent and poisoning the well of confidence and exaltation.

Some of these disadvantages are not found in republics, especially if one of the goals of the republic is the encouragement of enlightenment. It might perhaps be natural for literature to become women's portion in such a state, and for men to devote themselves entirely to higher philosophy.

The education of women has always followed the spirit of the constitutions established in free countries. In Sparta, women were accustomed to the exercises of war; in Rome, they were expected to have austere and patriotic virtues. If we want the moving principle of the French Republic to be the emulation of enlightenment and philosophy, it is only reasonable to encourage women to cultivate their minds, so that men can talk with them about ideas that would hold their interest.

Nevertheless, ever since the Revolution men have deemed it politically and morally useful to reduce women to a state of the most absurd mediocrity. They have addressed women only in a wretched language with no more delicacy than wit. Women have no longer any motive to develop their minds. This has been no improvement in manners or morality. By limiting the scope of ideas we have not succeeded in bringing back the simplicity of primitive life: the only result of less wit has been less delicacy, less respect for public opinion, fewer ways to endure solitude. And this applies to everything else in the current intellectual climate too: people invariably think that enlightenment is the cause of whatever is going wrong, and they want to make up for it by making reason go backward. Either morality is a false concept, or the more enlightened we are the more attached to morality we become.

If Frenchmen could give their wives all the virtues of Englishwomen, including retiring habits and a taste for solitude, they would do very well to prefer such virtues to the gifts of brilliant wit. All the French will manage to do this way, however, is to make their women read nothing, know nothing, and become incapable of carrying on a conversation with an interesting idea, or an apt expression, or eloquent language. Far from being kept at home by this happy ignorance, Frenchwomen unable to direct their children's education would become less fond of them. Society would become more necessary to these women—and also more dangerous, because no one could talk to them of anything but love, and this love would not even have the delicacy that can stand in for morality.

If such an attempt to make women completely insipid and frivolous ever succeeded, there would be several important losses to national morality and happiness. Women would have fewer ways to calm men's furious passions. They would no longer have any useful influence over opinion—and women are the ones at the heart of everything relating to humanity, generosity, delicacy. Women are the only human beings outside the realm of political interest and the career of ambition, able to pour scorn on base actions, point out ingratitude, and honor even disgrace if that disgrace is caused by noble sentiments. The opinion of society would no longer have any power over men's actions at all if there were no women left in France enlightened

enough to make their judgments count, and imposing enough to inspire genuine respect.

I firmly believe that under the ancien régime, when opinion exerted such wholesome authority, this authority was the work of women distinguished by character and wit. Their eloquence was often quoted when they were inspired by some generous scheme or defending the unfortunate; if the expression of some sentiment demanded courage because it would offend those in power.

These are the same women who gave the strongest possible proofs of devotion and energy during the course of the Revolution.

Men in France will never be republican enough to manage without the independence and pride that comes naturally to women. Women may indeed have had too much influence on public affairs under the ancien régime; but they are no less dangerous when bereft of enlightenment, and therefore of reason. Their influence then turns to an inordinate craving for luxury, undiscerning choices, indelicate recommendations. Such women debase the men they love, instead of exalting them. And is the state the better off for it? Should the very limited risk of meeting a woman whose superiority is out of line with the destiny of her sex deprive the republic of France's reputation for the art of pleasing and living in society? Without any women, society can be neither agreeable nor amusing; with women bereft of wit, or the kind of conversational grace which requires the best education, society is spoiled rather than embellished. Such women introduce a kind of idiotic chatter and cliquish gossip into the conversation, alienating all the superior men and reducing brilliant Parisian gatherings to young men with nothing to do and young women with nothing to say.

We can find disadvantages to everything in life. There are probably disadvantages to women's superiority—and to men's; to the vanity of clever people; to the ambition of heroes; to the imprudence of kind hearts, the irritability of independent minds, the recklessness of courage, and so forth. But does that mean we should use all our energy to fight natural gifts, and direct our social institutions toward humbling our abilities? It is hardly as if there were some guarantee that such degradation would promote familial or governmental authority. Women without the wit for conversation or writing are usually just that much more skillful at escaping their duties. Unenlightened countries may not understand how to be free, but they are able to change their masters with some frequency.

Enlightening, teaching, and perfecting women together with men on the national and individual level: this must be the secret for the achievement of every reasonable goal, as well as the establishment of any permanent social or political relationships.

The only reason to fear women's wit would be some sort of scrupulous anxiety about their happiness. And indeed, by developing their rational minds one might well be enlightening them as to the misfortunes often connected with their fate; but that same reasoning would apply to the effect of enlightenment on the happiness of the human race in general, a question which seems to me to have been decided once and for all.

If the situation of women in civil society is so imperfect, what we must work toward is the improvement of their lot, not the degradation of their minds. For women to pay attention to the development of mind and reason would promote both enlightenment and the happiness of society in

general. The cultivated education they deserve could have only one really unfortunate result: if some few of them were to acquire abilities distinguished enough to make them hungry for glory. Even this risk, however, would do society no harm, and would only be unfortunate for the very limited number of women whom nature might dedicate to the torture of useless superiority.

And if there were to be some woman seduced by intellectual celebrity and insistent on achieving it! How easy it would be to divert her, if she were caught in time! She could be shown the dreadful destiny to which she was on the verge of committing herself. Examine the social order, she would be told; you will soon see it up in arms against any woman trying to raise herself to the height of masculine reputation.

As soon as any woman is pointed out as a person of distinction, the general public is prejudiced against her. The common people judge according to a few common rules which can be followed without taking any risks. Whatever goes beyond the habitual immediately offends people who consider daily routine the safeguard of mediocrity. A superior man is enough to startle them; a superior woman, straying even farther from the beaten track, must surprise and annoy them even more. A distinguished man almost always has some important career as his field of action, so his talents may turn out to be useful to the interests of even those who least value the delights of the mind. The man of genius may become a man of power, so envious and silly people humor him. But a clever woman is only called upon to offer them new ideas and lofty sentiments, about which they could not care less; her celebrity seems to them much ado about nothing.

Even glory can be a source of reproach to a woman, because it contrasts with her natural destiny. Strict virtue condemns the celebrity even of something which is good in itself, because it damages the perfection of modesty. Men of wit are so astounded by the existence of women rivals that they cannot judge them with either an adversary's generosity or a protector's indulgence. This is a new kind of combat, in which men follow the laws of neither kindness nor honor.

Suppose, as a crowning misfortune, a woman were to acquire celebrity in a time of political dissension. People would think her influence unbounded, even if she had no influence at all; accuse her of all her friends' actions; and hate her for everything she loved. It is far preferable to attack a defenseless target than a dangerous one.

Nothing lends itself more quickly to vague assumptions than the dubious life of a woman with a famous name and an obscure career. An empty-witted man may inspire ridicule, a man of bad character may drop under the weight of contempt, a mediocre man may be cast aside—but everyone would much rather attack the unknown power they call a woman. When the plans of the ancients did not work out, they used to convince themselves that fate had thwarted them. Our modern vanity also prefers to attribute its failures to secret causes instead of to itself; in time of need, what stands in for fatality is the supposed power of famous women.

Women have no way to show the truth, no way to throw light on their lives. The public hears the lie; only their intimate friends can judge the truth. What real way is there for a woman to disprove slanderous accusations? A man who had been slandered lets his actions answer the universe,

saying, "My life is a witness: it too must be heard."³ But where can a woman find any such witness? A few private virtues, hidden favors, feelings locked into the narrow circle of her situation, writings which may make her known in places where she does not live, in times when she will no longer exist.

A man can refute calumny in his work itself, but self-defense is an additional handicap for women. For a woman to justify herself is a new topic for gossip. Women feel there is something pure and delicate in their nature, quickly withered by the very gaze of the public. Wit, talent, passion in the soul may make them emerge from this mist which should always be surrounding them, but they will always yearn for it as their true refuge.

However distinguished women may be, the sight of ill will makes them tremble. Courageous in misfortune, they are cowards against dislike; thought uplifts them, but their character is still weak and sensitive. Most women whose superior abilities make them want renown are like Erminia dressed in armor.⁴ Warriors see the helmet, the lance, the bright plume of feathers, and think they are up against strength, so they attack with violence; with the very first blows, they have struck at the heart.

Such injustices can not only spoil a woman's happiness and peace of mind, but also alienate even the most important objects of her affection. Who can be sure that a libelous portrayal will not strike at the truth of memory? Who knows whether or not slanderers, having wreaked havoc with life, will rob death itself of the tender, regretful feelings that should be associated with the memory of a beloved woman?

So far I have portrayed only the unfairness of men: but what about the threat of injustice from other women? Do not women secretly arouse the malevolence of men? Do women ever form an alliance with a famous woman, sustaining her, defending her, supporting her faltering steps?

And that is still not all. Public opinion seems to release men from every duty toward a recognizably superior woman. Men can be ungrateful to her, unfaithful, even wicked, without making public opinion responsible for avenging her. "Is she not an extraordinary woman?" That says it all; she is abandoned to her own strength, and left to struggle with misery. She lacks both the sympathy inspired by a woman and the power protecting a man. Like the pariahs of India,⁵ such a woman parades her peculiar existence among classes she cannot belong to, which consider her as destined to exist on her own, the object of curiosity and perhaps a little envy: what she deserves, in fact, is pity.

1800

3. No source has been identified; but the quoted sentence is written in the French classical alexandrine (12-syllable) meter.

4. In Tasso's *Jerusalem Delivered* (1581), the princess Erminia wears borrowed armor to seek her love Tancred in the Christian camp [translator's

note].

5. Those who are at the bottom or outside of the traditional caste system of India (the words in the epigraph from *The Indian Hut* are spoken by a pariah).

FRIEDRICH SCHLEIERMACHER

1768–1834

German philosopher, classical philologist, and leading liberal Protestant theologian, Friedrich Schleiermacher is best known as a founder of modern general hermeneutics: that is, the art of understanding and interpreting discourse through systematic procedures. His most important contribution to the history of theory and criticism is arguably his “Outline of the 1819 Lectures,” a fragmentary document produced in midcareer and published from handwritten notes after his death in *Hermeneutics* (1959; 2d ed., 1974). In this pioneering depiction of the processes of textual understanding, Schleiermacher argued that to understand a text fully one must understand simultaneously the entire thought of a writer as well as the whole language he or she employs, keeping in mind that the language and the author’s thought reciprocally modify each other. The two major tasks of textual interpretation, according to Schleiermacher, are to comprehend the language and historical culture of a text (grammatical interpretation) and to reconstruct an author’s purpose (psychological or “technical” interpretation). With these insights Schleiermacher laid the foundation of modern hermeneutics, preparing the way for such important yet widely divergent twentieth-century theorists of interpretation as MARTIN HEIDEGGER and Hans-Georg Gadamer (1900–2002).

Schleiermacher was born in Breslau, Prussia, and studied at two Moravian Brethren schools and at the University of Halle. During the late 1790s he began his celebrated translation into German of almost all of Plato’s works (still in print); he was active in the Berlin circle of Romanticists, being a close associate and briefly roommate of Friedrich Schlegel, to whose vanguard journal, *Athenaeum*, he was an early contributor. He served as chaplain and professor of theology and philosophy at Halle between 1804 and 1806, later taking a position at the University of Berlin (1810–34), which he co-founded. Schleiermacher regularly preached at Trinity Church in Berlin, advocating the right of union for Reformed and Lutheran groups in Prussia, freedom of the church from the state, shorter working hours, social insurance, and women’s rights.

Schleiermacher’s theology reflects the influence of Romanticism and Moravian pietism, especially in his two most famous works, *On Religion: Speeches to Its Cultured Despisers* (1799) and *The Christian Faith* (1821–22), which argue that religion is an intuitive feeling for and dependence on the infinite realm, not a set of moral or metaphysical principles; religion needed no external justification. It was to convince his fellow German Romantics that they were not as far from religion as they believed that he undertook the first book, a confession of faith that gained him a national reputation overnight. Today he is often regarded as one of the most significant Protestant theologians since Luther. In his time his influence was wide, reaching such figures as RALPH WALDO EMERSON, who also devalued doctrine in favor of intuitive dependence on the infinite.

His interest in understanding the Bible led to Schleiermacher’s concern with hermeneutics. In his “Outline of the 1819 Lectures,” our selection, he expands on his basic distinction between grammatical and psychological interpretation, noting that the latter involves two distinct methods. Using the first, divinatory interpretation, one seeks to identify intuitively with the author; Schleiermacher sees this as representing a feminine dimension of our knowledge of human nature. (This mode of interpretation echoes his notions about religion as an intuitive feeling.) Using the second method, comparative interpretation, one works to understand a text as a type or historical genre; it is purportedly a masculine force.

Both psychological and grammatical interpretation primarily seek to isolate the text’s central idea, procedure, or motivating principle in light of which all textual details can be gauged. Artful interpretation requires such centering and also multiple

rigorous readings. But problems do arise, some of which are avoidable and some not. Interpretation necessarily gets caught up in various circularities. Readers early in the process intuit the meaning of a text, which then predetermines the directions of meaning. This is one version of the celebrated “hermeneutic circle” of interpretation, identified by Schleiermacher and later explored by leading hermeneuticists, especially Heidegger and Gadamer. To understand the whole text, Schleiermacher points out, one must understand each part; but to understand each part, one must understand the whole. He expands this circle by requiring that to understand an individual text, an interpreter must understand the complete historical context and vocabulary of a language—foreknowledge derived paradoxically from individual texts.

Schleiermacher catalogues several types of avoidable misunderstanding, which result from bias, mistaking a text’s meaning, or misjudging the value of a segment of text. (Under the influence of FRIEDRICH NIETZSCHE and SIGMUND FREUD, contemporary critics such as HAROLD BLOOM and PAUL DE MAN, unlike Schleiermacher, have come to conceive “misunderstanding” as an ineradicable, productive element of all understanding.) Moreover, for Schleiermacher allegorical interpretation—that is, reading symbolically—risks erroneously discovering everything in everything, unless the text itself legitimates the approach with an allusion appropriate to both the contextual and the central textual ideas. Finally, historical interpretation can run into trouble by construing an ancient text in terms of modern conditions instead of uncovering its writer’s relationship to his or her milieu and language.

Schleiermacher posits two broad categories of texts. “Objective texts” such as histories and epics require a minimum of psychological interpretation and a maximum of grammatical interpretation, whereas “subjective texts” such as personal letters and lyrics call for more psychological than grammatical interpretation. The goal of hermeneutics in either case is—as he famously declared—“to understand the discourse just as well and even better than its creator.” We have no way of knowing the creator’s purpose other than through reconstruction, but “No individual inspection of a work ever exhausts its meaning.”

Helpfully, Schleiermacher outlines four types of positive hermeneutical reconstruction. There are two types of grammatical or objective reconstruction—historical and divinatory—and two types of psychological or subjective reconstruction—historical and divinatory. In brief, objective historical reconstruction examines how language shapes the text, objective divinatory reconstruction analyzes how the text itself developed that language, subjective historical reconstruction explores the text as the product of the author’s soul, and subjective divinatory reconstruction attempts to determine how the process of writing affects the writer’s inner thoughts. Interpretation for Schleiermacher is at once psychological and grammatical, intuitive and comparative. It is an art of understanding, not just explaining, the act of a living, intuiting person gifted with foreknowledge and experience of life as well as linguistic and cultural competence—an art that always requires a leap into the midst of textual complexities and circularities.

Earlier German hermeneutics, as practiced in the contexts of theology, law, and literature, focused narrowly on philology, particularly its penchant for interpretive procedures and rules of validation. Schleiermacher here broadens its scope toward a phenomenological philosophy attentive to the roles of intuition, understanding, and foreknowledge in the lived world of human beings. This shift was variously amplified by his greatest successors, Wilhelm Dilthey (1833–1911), Heidegger, and Gadamer. Schleiermacher is generally credited with grounding hermeneutics in human understanding, with according language a foundational role in interpretation, and with highlighting the interdependence of mind and medium, subject and object, divination and comparison.

However much successors and followers admire and build on Schleiermacher’s work, they find problems with his hermeneutic theory. In the various editions of his *Truth and Method—Outline for a Philosophical Hermeneutics* (1960), Gadamer

characterizes the principle of divination as hopelessly Romantic. He faults Schleiermacher for not taking into account the historical context and prejudices of the interpreter, which, he shrewdly argues, are essential constituents of understanding. Intuition assumes uniform human experience; prejudices arise in a world of antagonistic standpoints. And the leading modern French hermeneuticist, Paul Ricoeur (1913–2005), contends that Schleiermacher does not sufficiently distinguish between the author and the ideas governing the work; Ricoeur sees the latter as the true object of interpretation. Schleiermacher vacillates, too, on what constitutes the “text” (or object of inquiry)—it is sometimes the author’s oeuvre (complete works), sometimes a particular work, and sometimes a genre or cultural archive.

Various critics, moreover, have noted Schleiermacher’s tendency, especially in his late works, to “psychologize”: that is, to pass through language to the supposed prelinguistic mental processes and intentions of the author, forgetting that grammar and psychology are interdependent. When this happens, Schleiermacher’s hermeneutics turns into psychological reconstruction, which is the direction taken by Dilthey. A similar path is staked out by E. D. Hirsch Jr. (b. 1928), who, however, turns to interpretive reconstruction as a way to rectify the rampant critical subjectivism and relativism that he believes plague contemporary literary criticism, including much hermeneutics.

In spite of criticisms, Schleiermacher’s contributions to hermeneutics should not be underestimated. His psychological notion of divination enabled him to explicitly correct and complement earlier Enlightenment concepts of rationality. He usefully jettisoned the old rigid separations of hermeneutics into specialized biblical, legal, and literary kinds, developing a self-conscious project for a general hermeneutics. Like his important contemporaries FRIEDRICH SCHILLER and SAMUEL TAYLOR COLERIDGE, he attempted to reconcile well-entrenched inherited philosophical oppositions, especially subject/object, finite/infinite, individual/social, and psychology/grammar. He construed understanding as an act of dialogue, not verification. Lastly, he pictured the act of interpretation as antiauthoritarian and nonhierarchical, in keeping with the radical social forces of his time (committed to toppling monarchical regimes and feudal class arrangements, manifested especially in the French Revolution) and with the dynamics of early democracy and capitalism. All these elements, which marked Schleiermacher historically as a Romantic, significantly influenced the work of later philosophical hermeneutics.

From Hermeneutics

From Outline of the 1819 Lectures¹

INTRODUCTION²

1. Hermeneutics as the art of understanding does not yet exist in general; rather, only various specialized hermeneutics exist.

1. Edited and translated by Jan Wojcik and Roland Haas, who occasionally insert the original German or explanatory words or phrases in brackets.

2. The Outline consists of an “Introduction,” “First Part: The Grammatical Exposition,” and “Second Part: The Technical (or Psychological) Interpretation.” The headings are somewhat misleading. The “Introduction” gives a systematic exposition of principles for analyzing the language and psychological manifestations of a literary text.

The “First Part” elaborates the principles for the analysis of language; the “Second Part” extends the “Introduction” in describing how the two parts of interpretation work together in the “divination” of a text. We limit our translation to the “Introduction” and the “Second Part” which comprise the heart of Schleiermacher’s hermeneutical principles. We have referred to the marginal notes Schleiermacher added to the manuscript in 1828 only when they clarified ambiguities in the text [translators’ note].

1. [We speak of] only the art of understanding, not the exposition of the understanding. The latter would only be a specialized part of the art of speaking and writing that could only be dependent on the general principles of hermeneutics.

2. This refers as well to difficult points in foreign-language texts. In reading them, one more often presumes familiarity with the subject matter and the language. When one is familiar with both, the distinction between them becomes difficult to make because one has perhaps not understood properly the more apparent. Only an artistic understanding consistently grasps the discourse [*Reden*] of a text [*Schrift*].³

3. Usually one supposes that one could rely on a healthy knowledge of human nature for formulating the general principles of interpretation. But then there is the danger that one would also tend to rely on a healthy feeling about the exceptional qualities of a text in determining what they meant.

2. It is very difficult to determine the exact nature of a general hermeneutics.

1. For a long time it was handled as a supplement to logic, but as one had to give up all logical tenets in its practice, this had to cease. The philosopher has no inclination to establish a theory about hermeneutics because he believes that it is more important to be understood than to understand.

2. Philology⁴ has made positive contributions throughout history. But its method of hermeneutics is simply to aggregate observations.

3. [Hermeneutics is] the art of relating discourse [*Reden*] and understanding [*Verstehen*] to each other; discourse, however, being on the outer sphere of thought, requires that one must think of hermeneutics as an art, and thus as philosophical.

1. Thus the art of exposition depends on their composition. They are mutually dependent to the point that where discourse is without art, so is the understanding of it.

4. Discourse is the mediation of shareable thought. As a result both rhetoric and hermeneutics share a common relationship to the dialectic.⁵

1. Discourse is of course also a mediation of thought among individuals. Thought becomes complete only through interior discourse, and in this respect discourse could be considered manifested thought. But where the thinker thinks original thoughts, he himself requires the art of discourse to transform them into expressions that afterwards require exposition [*Auslegung*].

2. The unity of hermeneutics and rhetoric results from the fact that every act of understanding is the obverse of an act of discourse, in that one must come to grasp the thought which was at the base of the discourse.

3. The dependence of both on the dialectic results from the fact that all development of knowledge is dependent on both discourse and understanding.

3. Discourse (*Reden*) is Schleiermacher's term for the discursive sense of a text, shaped by the particular language the author uses to express his inner thoughts (see 4–6). Here he makes a distinction between the literal meaning of a text (*Schrift*) and the discursive meaning (*Reden*) that is most obvious when one reads a somewhat unfam-

iliar foreign language (see 14.2) [translators' note].

4. The scholarly discipline dedicated to the historical understanding of foreign cultures through linguistic and comparative analysis of texts.

5. That part of logic concerned with thinking, notably thinking embodied in discourse.

5. As every discourse has a two-part reference, to the whole language and to the entire thought of its creator, so all understanding of speech consists of two elements [*Momenten*]*—*understanding the speech as it derives from the language and as it derives from the mind of the thinker.

1. Every speech derives from a given language. One can also turn this around and say that originally and continuously language only comes into being through discourse; at any rate, communication presupposes the accessibility of the language; that is, a shared knowledge of the same. When something comes between unmediated discourse and communication, the art of discourse begins, for one must take into consideration the possibility that the listener might find something strange in someone else's use of language.

2. Every discourse depends on earlier thought. One can also turn this around, of course, but in relation to communication it remains true, since the art of understanding only has to do with progressive thinking.

3. It follows that every person is on one hand a locus in which a given language is formed after an individual fashion and, on the other, a speaker who is only able to be understood within the totality of the language. In the same way, he is also a constantly developing spirit, while his discourse remains an object within the context of other intellection.

6. Understanding is only an interaction of these two elements.

1. Discourse can only be understood as a fact of the spirit if it is understood as a characteristic of the language, because the innateness of the language modifies the spirit.

2. It can also only be understood as a modification of the language if it is understood as a fact of the spirit, because all influences of individuals on the language are manifested through discourse.

7. Both stand completely equal, and one could only with injustice claim that the grammatical interpretation is the inferior and the psychological the superior.

1. The psychological is the superior only if one views language as the means by which the individual communicates his thoughts; the grammatical is then merely a cleaning away of temporary difficulties.

2. The grammatical is the superior if one views language as stipulating the thinking of all individuals and the individual's discourse only as a locus at which the language manifests itself.

3. Only by means of such a reciprocity could one find both to be completely similar.

8. The essential hermeneutical task is to handle every part in such a way that the handling of the other parts will produce no change in the results, or, in other words, every part must be handled as a discrete unit with equal respect paid to all other parts.

1. This reciprocity is important even if one part predominates over the other according to what was said in paragraph six.

2. But each is only complete if it makes the other redundant and contributes to construing the other, because indeed language [*Sprache*] can only be learned inasmuch as its discourse [*Rede*] can be understood; and in the same way, the inner cohesion of humanity can only be understood as it manifests itself externally through its discourse.

9. Exposition [*Auslegung*] is an art.

1. Every part stands by itself. Every composition is a finite certainty out of the infinite uncertainty. Language is an infinite because every element can be determined in a specific manner only through the other elements. And this is also true for the psychological part because every perspective of an individual is infinite; and the outside influences on people extend into the disappearing horizon. A composition composed of such elements cannot be defined by rules, which carry with them the security of their application.

2. Should the grammatical part be considered by itself, one would need in some cases a complete knowledge of the language, or, in others, a complete knowledge of the person. As neither can ever be complete, one must go from one to the other, and it is not possible to give any rules as to how this should be done.

10. The successful performance of the art depends on a linguistic talent and a talent for assessing individual human nature.

1. By the first point we do not mean the facility for learning foreign languages—the difference between the mother tongue and a foreign language does not come into consideration here for the time being; rather, a sense for the contemporaneity of a language, for analogy, difference, etc. One could mean by this that rhetoric and hermeneutics must always be together. Just as hermeneutics requires other talents, so also does rhetoric, if not always the same ones. The linguistic talent, at any rate, is shared, even if the hermeneutical method develops it differently than the rhetorical method does.

2. The knowledge of human nature is here the superior of those subjective elements in the development of discourse. No less importantly, hermeneutics and artistic human presentation are always together. But a great number of hermeneutical mistakes are based on the deficiency of linguistic talent, or in its faulty application.

3. Inasmuch as these talents are generally given by nature, so hermeneutics is a commonsense endeavor. Inasmuch as a person is missing one talent, he is crippled, and the other talents can only serve to help him adjudicate about that which all together would have permitted him to know directly.

11. Not all discourse is on an equal footing for exposition. Certain discourses have no value for it, others an absolute value; the majority lie between these two points.

1. Something of no value might excite no interest as an entity, but would still be important in the language as a reiteration which language requires for the preservation of its continuity. But that which repeats only already available things is worth nothing in itself. Like talking about the weather. Alone, this is not an absolute nothing, only minimal. For it developed itself in the same way as significant things.

2. When the grammatical aspect predominates in a work, even the most imaginative, we call it classical. When the psychological aspect predominates, we call it original. And, of course, one part could absolutely dominate the other only if the author was an absolute genius.

3. To be classical, a work must be more than transitory; it must determine subsequent production. No less so the original. And even the best work cannot be free from influence.

12. When both aspects of interpretation—the analysis of the grammatical and the psychological part of a text—are used equally throughout, they are nevertheless always used in different proportions.

1. This follows from the fact that something of grammatical insignificance does not necessarily have to be of psychological insignificance, and vice versa; and insignificance in one does not imply insignificance in the other.

2. A minimum of psychological interpretation is needed with a predominately objective subject. [To this belongs] pure history, especially of specific individuals, as comprehensive studies tend more to draw on subjective conclusions; also epics, commercial discussions which want to become history, and strictly didactic writings of every kind. The interpreter's subjectivity should not enter the exposition; rather, it should be affected by the exposition. A minimum of grammatical interpretation accompanies a maximum of psychological in the exposition of personal letters, especially when they transmit didactic advice or historical information. (Lyrics or polemics too?)

13. There is no other diversity in the methods of exposition aside from those cited above.

1. As an example, we can take the wonderful perspective which comes from the argument over the historical exposition of the New Testament, based on the question whether there are special modes of interpretation reserved for it alone. In this debate the assertion of the historical school is the only correct one, that the New Testament authors are products of their age. The only danger in their reasoning is their tendency to overlook the power of Christianity to create new concepts and forms of expression; they tend to explain everything in light of available concepts and forms. To correct the historical style of interpretation one has to resist this one-sidedness. Correct interpretation requires a relationship of the grammatical and psychological interpretation, since new concepts can arise out of new emotional experiences.

2. One would also err if one thought of a historical interpretation as simply a retrospective view of the textual events. One must keep in mind that what was written was often written in a different day and age from the one in which the interpreter lives; it is the primary task of interpretation not to understand an ancient text in view of modern thinking, but to rediscover the original relationship between the writer and his audience.

3. The Allegorical Interpretation. First of all, it is not an interpretation of an allegory, where the only purpose is to understand the figurative meaning without reference to whether there is truth at the base of it or not. Examples of allegories would be the parable of the sower, or the story of the rich man.⁶ Rather, allegorical interpretation begins with a presupposition that the meaning is lacking in the immediate context, and so one needs to supply a figurative one. With this supposition one is unsatisfied with the general principle that every speech can have only one grammatical meaning. The dissatisfaction arises, perhaps, from the correct assessment that an allusion in a text does point to a second meaning; one who does not comprehend it could completely follow the whole context, but would still be missing one meaning situated within the discourse. The danger is that one could find an

6. Both in the New Testament: for the sower, see Matthew 13.1–9, 18–23; for the rich man, see Luke 16.19–31.

allusion which is not situated within the discourse. Then one would dissect the discourse improperly. The test for a proper allusion is this: to see whether it seems entwined as one of the contextual ideas within the main line of thought, to assess whether the explicit thoughts inspire the implicit. But the contextual ideas are not therewith to be considered merely individual and insignificant. Rather, just as the whole world is made up of many men, each idea contributes to its whole sense, even if it appears only as its dark shadow.

There is, after all, a parallelism in many various lines of thought, so that something could inspire something else; for example, there is parallelism between the physical and ethical, and between the musical and the visual arts. One should be careful, however, to detect whether there are any indications for the figurative expressions one seems to detect. The allegorical interpretations which have been made without such indication, especially in traditional interpretations of Homer and the Bible, all depend on a special assumption. This is that the books of Homer⁷ and the Old Testament are special compendiums, the Old Testament above all, which contains all wisdom in some form or another. Along with this, both of them have appeared to have a mystical content compounded of sententious philosophy on the one hand and history on the other.

With myths, however, no technical interpretation is possible, since one cannot focus on an individual text⁸ and alternatively compare the literal and the figurative meaning. There is certainly a different situation regarding the New Testament which leads to two kinds of blunders. First, its association with the Old Testament encourages the use of the same methods often associated with the Old Testament interpretation. Second, the New Testament interpreters tend more than their Old Testament counterparts to view the Holy Spirit as the book's author. But the Holy Spirit cannot be thought of as a temporally contingent and characteristic consciousness. From this false view springs the inclination to find everything foreshadowed everywhere. Common sense, or precise instructions on how texts should be read, can protect texts from this inclination, but isolated passages which seem to be unmeaningful in themselves seem to encourage it.

4. Here the question occasionally intrudes upon us, whether the holy books of the Holy Spirit must be handled differently than others. We must not be concerned with dogmatic decisions about inspiration, since they themselves derive from interpretation. We must not distinguish between the preaching and the writing of the apostles, since their future church had to be built on the preaching. And it follows from this that we must not believe that the whole of Christianity directly developed from the writings, since they are all aimed at specific communities and could also not have been understood by subsequent readers if they had not been understood by the original audience. Each community simply sought out the specific characteristics of the Jesus story according to its own given particular focus on the many details. Therefore, we must expose it to the same method and consider that even if the authors were no more than dead tools, still the Holy Spirit could only have spoken through them as they themselves would have spoken.

5. The most dangerous deviation from this principle is encouraged by the cabalistic⁹ style of exposition which directs its endeavors to find

7. The *Iliad* and the *Odyssey* (ca. 8th c. B.C.E.), each divided into 24 books.

8. Myths have no single author and no single

established text; therefore technical (psychological) interpretation is impossible.

9. Esoteric, mystical.

everything in everything. Only their interpretive endeavors which respect the diversity which results from the various relationships of both constructed parts can rightfully be called exposition.

14. The difference between artful and crude exposition has nothing to do with whether the work is familiar or strange, or with the discourse or the text, but solely with whether one wants to understand certain things exactly or not.

1. If it were only foreign and old texts that needed the art, the original readers would not have needed it, and the art would then depend on the differences between them and us. This difference must first be resolved, of course, through a knowledge of language and history; the exposition begins only after a successful identification of the text's original meaning. The difference between interpreting an old foreign text and a local contemporary one is only that with the old text the process of discovering its relevance to its milieu cannot completely precede the identification of its meaning; rather, both must be integrated from the beginning.

2. The text [*Schrift*] is not always the focus of attention either. Otherwise the art would only become necessary through the difference between text and discourse; that is to say, by the absence of the living voice and by the inaccessibility of other personal influences. These things, however, require exposition themselves, while they always remain somewhat nebulous. A living voice can certainly facilitate understanding a great deal, but even the writer must take into consideration that writing is not the same as speaking. If it were, then the art of exposition would be superfluous, which is, of course, not the case. Consequently, the need for exposition depends on the difference between written and spoken discourse, when the latter does not accompany the former.

3. Thus, when discourse and text behave so that no other difference remains between them save the one indicated, it follows that the artfully correct exposition has no other goal than that which we have in hearing every common spoken discourse.

15. The careless practice of the art results from the fact that understanding is pursued in the light of a negative goal: that misunderstanding should be avoided.

1. Careless interpretation tends to limit its understanding to obtaining certain easy-to-attain goals.

2. But even it must avail itself of the art in difficult cases; and thus hermeneutics can even arise from the artless practice. But since it only sees difficulties as isolated problems, it becomes an aggregate of observations. And for the same reason tends to consider itself a specialized hermeneutics because it brings special methods to the solving of difficult problems. This is how the theological, the juristic, and the philological methods originated, and what they consider to be their special purposes.

3. The basis for their view is the peculiarity of their special languages and the peculiar manner in which their speakers communicate to their hearers.

16. Strict interpretation begins with misunderstanding and searches out a precise understanding.

1. This results from its beginning with an assumption about what the meaning is that properly should only be discovered in the way the language and intention present it.

2. Careless interpretation distinguishes only the [predetermined] sense from the manner of expression, which in fact depend on each other for their mutual identity, the determination of which is the minimum requirement for avoiding artless practice.¹

17. Two things should be avoided: qualitatively misunderstanding the content, and quantitatively misunderstanding nuance.

1. Examined objectively, qualitative misunderstanding is mistaking the place of a part of a discourse in the language with that of another one, as, for example, the confusion of the meaning of a word with that of another. The qualitative misunderstanding is subjective, the mistaking of the meaning of an expression, so that one gives the same thing a different meaning than the speaker gave to it in his sphere.

2. Quantitative misunderstanding arises from a subjective response to the value of the elaboration a speaker gives to a part of the text, or by analogy from an objective response to a part taken out of context.

3. The quantitative, which is normally taken little into account, always leads to the qualitative.

4. These negative expressions cover all interpretive operations. But one could not develop the rules from their negativity alone; rather, one must develop them positively, with a constant eye on the negative.

5. One must also distinguish the difference between passive and active misunderstanding. The latter is timidity which, however it might be the consequence of a bias that nothing can appear certain unless it is very obvious, can still entertain very false assumptions.

18. The art can only develop its rules from a positive formula, and this is the historical and the divinatory [prophetic], objective and subjective reconstruction [*Nachkonstruieren*] of the given discourse.

1. Objective historical reconstruction considers how the discourse behaves in the totality of the language, and considers a text's self-contained knowledge as a product of the language. Objective divinatory reconstruction assesses how the discourse itself developed the language. Without both of these, one cannot avoid qualitative and quantitative misunderstanding.

2. Subjective historical reconstruction considers a discourse as a product of the soul; subjective divinatory assesses how the process of writing affects the writer's inner thoughts. Without both, just as was the case above, misunderstanding is once again unavoidable.

3. The task is this, to understand the discourse just as well and even better than its creator. Since we have no unmediated knowledge of that which is within him, we must first seek to become conscious of much which he could have remained unconscious of, unless he had become self-reflectingly his own reader. For objective reconstruction he has no more data than we do.

4. Posed in this manner, the task is an infinite one, because there is an infinity of the past and the future that we wish to see in the moment of

1. Paraphrase: artful interpretation begins with a hunch about a text's meaning which it continuously corrects and refines; careless interpretation

begins with a prejudice about a text's meaning which it forces the text to support [translators' note].

discourse. Hence, this art is just as capable of inspiration as any other. In fact, a text has no meaning unless it can give rise to this inspiration. However, the decision on how far one wishes to pursue an approach must be, in any case, determined practically, and actually is a question for a specialized hermeneutics and not for a general one.

19. One must first equate oneself with the author by objective and subjective reconstruction before applying the art.

1. With objective reconstruction one proceeds through a knowledge of the language as the author used it. It must be more exact than even the original readers possessed, who themselves had to put themselves in the place of the author. With subjective reconstruction one proceeds through the knowledge of the author's inner and outer life.

2. But both can only be completely secured through a similarly complete exposition. For only from a reading of all of an author's works can one become familiar with his vocabulary, his character, and his circumstances.

20. The vocabulary and the history of the period in which an author works constitute the whole within which his texts must be understood with all their peculiarities.

1. This complete knowledge is contained within an apparent circle,² so that every extraordinary thing can only be understood in the context of the general of which it is a part, and vice versa. And all knowledge can only be scientific to the extent that it is complete.

2. This circle makes possible an identification with the author, and thus it follows that, first, the more complete knowledge we possess, the better bolstered we are for exposition, and, second, no material for exposition can be understood in isolation; rather, every reading makes us better suited for understanding by enriching our previous knowledge. We can only be satisfied with immediate understanding when dealing with the meaningless.

21. If the knowledge of the particular vocabulary can only be amassed during the exposition through lexical help and through individual observation, there can exist no self-sufficient exposition.

1. Only an independent knowledge of the actual life of a language gives one a source independent of the exposition for the knowledge of the vocabulary. For this reason we have only an incomplete understanding of what Greek and Latin words mean. Hence, the first lexical task in such cases is to consider the whole literature as a context for understanding the individual linguistic item. These complementary tasks balance each other through the exposition itself, contributing to an artful exposition.

2. Under the term *vocabulary* I subsume the dialect, period, and the mode—prose or poetry.

3. Even first impressions should be based on lexical meaning, for spontaneous interpretation can only rest on prior knowledge [*Vorkenntnisse*], but even all decisions about the language in dictionaries and in explanatory notes proceed from special and other perhaps unreliable expositions.

2. The troubling yet unavoidable "hermeneutic circle" of interpretation.

4. In the area of the New Testament, one can say with certainty that the unreliability and arbitrariness of the exposition rests largely on this fault. This is because contrasting analogies always develop from individual observations. For example, the development of New Testament vocabulary is rooted in classical antiquity and developed through Macedonian Greek through its use by the profane Jewish writers and by Josephus and Philo, by the deuterocanonical writers, and by the writers of the Septuagint,³ who flavored their Greek with Hebrewisms.

22. Even if the necessary knowledge of history comes only from prolegomena, there can still exist no self-sufficient exposition.

1. Such prolegomena are the sort of critical helps it is the duty of a publisher who desires to be a mediator to use. But they must depend on a knowledge of the whole literary circle a work belongs to, and the whole development of an author himself. Thus they are themselves dependent on exposition, and so are all reckonings whose beginnings are not determined by a specific goal. The exact expositor must, however, gradually glean everything from the sources themselves, and it is because of this that his task can only progress from easy to more difficult. But the dependency becomes most injurious if one brings in such notes in the prolegomena that actually could only be derived from the interpreted work itself.

2. The New Testament has given birth to a special discipline: the writing of the introduction. This is not an actual organic component of the theological discipline; but it is a practical expedient, partly for the beginner, partly for the master, since it is easier to bring together all of the relevant examinations in one place. But the expositor should always contribute to it so as to augment and relate the great mass of evidence.

23. An individual element can only be understood in light of its place in the whole text; and therefore, a cursory reading for an overview of the whole must precede the exact exposition.

1. Understanding appears to go in endless circles, for a preliminary understanding of even the individuals themselves comes from a general knowledge of the language.

2. Synopses that the author gives himself are too dry to engage even the technical aspect of interpretation, and with summaries like those publishers authorize for prefaces one comes under the influence of their interpretations.

3. The aim is to find the main idea in light of which the others must be measured, and this goes as well for the technical aspect—to find the main procedure from which the others can more easily be found. It is similarly indispensable for grammatical interpretation, which is obvious from the various forms of misunderstanding it often raises.

4. One can omit it easier when dealing with the unmeaningful, and although with difficult works it appears to be less helpful, it is actually all the more indispensable. A general summary is characteristically the least help in understanding difficult writers.

Should the exposition be done partially, one would eventually have to connect both aspects in the execution of the interpretation, but in theory

3. A Greek translation of the Hebrew Scriptures by Jewish scholars (ca. 3d c. B.C.E.), Flavius Josephus (b. 37/8 C.E.) and Philo Judaeus (ca. 20 B.C.E.—ca. 50 C.E.): secular Jewish writers of his-

tory and philosophy, respectively. "Deuterocanonical writers": authors of books of the Scriptures contained in the Septuagint but not in the Hebrew canon.

one must divide and handle each specially, even if afterwards one must endeavor to develop each so completely that the other becomes indispensable, or, what is more important, so that its result coincides with the first. The grammatical interpretation leads the way.

PART TWO THE TECHNICAL INTERPRETATION

1. The common beginning for both the technical and the grammatical interpretation is the general overview which grasps the unity of the work and the main features of the composition. The unity of the work, the theme, will be viewed here as the writer's motivating principle, and the foundation of the composition as his peculiar nature as it is manifested in each motif.

The unity of the work derives from the manner in which the grammatical constructions available in the language are composed or connected. The author sets a verbal object in motion as communication. The difference between popular and scientific works is that the author of the former arranges the subject according to his peculiar style, which mirrors itself in his ordering. Because each author has minor conceptions each of which is determined by his peculiarities, one can recognize them from among analogous omissions and anomalous inclusions.

I perceive the author as he functions in the language: partly bringing forth new things by his use of language, partly retaining qualities of language which he repeats and transmits. In the same way, from a knowledge of an area of speech, I can perceive the author's language as its product and see how he operates under its aegis. Both methods are the same process begun from different starting points.

2. The ultimate goal of the psychological [technical] exposition is nothing other than to perceive the consequences of the beginning; that is to say, to consider the work as it is formed by its parts, and to perceive every part in light of the work's overall subject as its motivation; this is also to say that the form is seen to be shaped by the subject matter.

When I have looked at everything individually, there is nothing left over to understand. It is also obvious in itself that the apparent contrast between understanding the individual parts and understanding the whole disappears when every part receives the same treatment as the whole. But the goal [of good interpretation] is only achieved in the continuity of both perspectives. Even when much is only to be understood grammatically, it is not understood fully unless one can make an intrinsic analysis which never loses sight of the genesis of the work.

3. The goal of good interpretation is to understand the style completely.

We are accustomed to understanding style as the handling of language. We presume that thought and language intertwine throughout, and the specific manner with which one understands the subject requires an understanding of the arrangement of words: i.e., the handling of language.

The peculiarity of an individual conception results from what is missing or added to a conventional conception. Whatever peculiarity results from imitation or habit results in a bad style.

4. Good interpretation can only be approximated.

We are, considering all advances in hermeneutical theory, still far from making it a perfect art, as the perennial fights over the writings of Homer and over the comparative merits of the three tragic writers⁴ show.

No individual inspection of a work ever exhausts its meaning; interpretation can always be rectified. Even the best is only an approximation of the meaning. Because interpretation so seldom succeeds, and because even the superior critic is open to criticism, we can see that we are still far from the goal of making hermeneutics a perfect art.

5. Before beginning the technical exposition, we must know the manner in which the subject occurred to the originator, and how he acquired his language, and anything else one can learn about his mannerisms.

First, one must consider the prior development of the genre of the work at the time when it was written; second, one must consider the use made of the genre typically in the place where the writer worked and in adjacent areas; finally, no exact understanding of the development and usage is possible without a knowledge of the related contemporary literature and especially the works the author might have used as a model. Such a cohesive study is indispensable.

The third goal raises very troublesome problems. We could say that the interpretive process as a whole is only as easy as this step is to take. But because even this step requires a judgment which can also be anticipated in the previous steps, it is possible that one might be able to omit it. Biographies of the author were originally annexed to their works for this purpose; nowadays this connection is overlooked. The best sort of prolegomena attends to the first two points.

With these contextualizations [*Vorkenntnissen*] in hand one can gain an excellent perception of the essential characteristic of a work upon a first reading.

6. The whole task requires the use of two methods, the divinatory and the comparative, which, however, as they constantly refer back to each other, must not be separated.

Using the divinatory, one seeks to understand the writer intimately [*unmittelbar*] to the point that one transforms oneself into the other. Using the comparative, one seeks to understand a work as a characteristic type, viewing the work, in other words, in light of others like it. The one is the feminine force in the knowledge of human nature; the other is the masculine.

Both refer back to each other. The first depends on the fact that every person has a susceptibility to intuiting others, in addition to his sharing many human characteristics. This itself appears to depend on the fact that everyone shares certain universal traits; divination consequently is inspired as the reader compares himself with the author.

But how does the comparative come to subsume the subject under a general type? Obviously, either by comparing, which could go on infinitely, or by divination.

4. That is, the Greek tragedians Aeschylus, Sophocles, and Euripides (all active 5th c. B.C.E.). "Perennial fights": over whether the *Iliad* and *Odyssey*

were by a single poet or were collections of short works put together from various sources.

Neither may be separated from the other, because divination receives its security first from an affirmative comparison, without which it might become outlandish. But the comparative of itself cannot yield a unity. The general and specific must permeate each other, and this can only happen by means of divination.

7. The idea of the work, by which the author's fundamental purpose [*Wille*] reveals itself, can only be understood in terms of the convergence of the basic material and its peculiarity of his developments.

The basic material by itself stipulates no set manner of execution. As a rule it is easy enough to determine, even if it is not exactly specified; but for all that, one can be mistaken. One finds the purpose of the work most precisely in its peculiar or characteristic development of its material. Often the characteristic motif has only a limited influence on certain sections of a work, but nonetheless shapes the character of the work by its influence on others. The interpretive knack is to somehow intuit the meaning while being cautiously aware of how the intuition in some ways predetermines the process of validating it.

1819, 1828

1959, 1974

GEORG WILHELM FRIEDRICH HEGEL

1770–1831

IMMANUEL KANT (1724–1804) and G. W. F. Hegel are the ARISTOTLE and PLATO of modern Continental philosophy, the two dominant figures from whom everything else flows. Hegel is a great synthesizer, a system builder who bequeaths to modern thought the conviction that an individual entity's meaning rests not in itself but in the relationship of that thing to other things within an all-encompassing, ever-changing whole. Where the part is *situated* is crucial. All modern criticism that stresses the historical and social context of utterances or artworks is Hegelian to some degree.

Hegel was the son of a minor court official in the duchy of Württemberg, in what is now Germany. He studied theology at the University of Tübingen, where he became friends with the poet Friedrich Hölderlin and the philosopher Friedrich von Schelling. After graduating in 1793, Hegel worked as a private tutor until he began teaching at the University of Jena in 1801, the year he published his first book. In 1807 he published *Phenomenology of Spirit*, the first version of his grand philosophical vision and one of the great philosophical masterpieces of all time. A sexual scandal (he had a child with his landlord's wife) forced Hegel to leave Jena in 1807, and he would not teach in a university again until 1816. He reached the height of his fame and influence with his lectures at the University of Berlin, which he delivered regularly from 1818 until his death. Many of these series were published either by Hegel himself or from the notes taken by his students, as was *Lectures on Fine Art* (1835–38).

Hegel is usually associated with the *dialectic*, which entails the confrontation of any thesis with its opposite (antithesis), and the resultant synthesis of the two through a process of "overcoming" (*aufgehoben* in German). We might call the dialectic the motor of the Hegelian system, stressing movement and change over stasis. This system, which places individual elements in relation to one another, is in

constant motion. Meaning and truth are never fixed, because they are always in process. The world possesses not determinate being but only momentary resting places on the stages of becoming. Hegel does believe that there will be stasis and perfection at the end of history, and at times he appears to believe that his philosophy is that end, the moment when consciousness fully understands its own nature—its essential unity with all that exists. Spirit (*Geist*) is the name Hegel most often uses to designate this fundamental unity, and the goal of philosophy is to gain the “absolute knowledge” that would consist of Spirit recognizing the world as its own emanation. The changes of history, its dialectical path, would then come to an end. The dream of such completion has proven extraordinarily alluring yet often dangerous. Shorn of that dream, Hegel’s philosophy gives us a dynamic world of interrelationships in which the various elements contend with one another through dialectical struggle. Hegel’s most famous disciple, KARL MARX, adopts both the vision of struggle and the dream of an end to strife. But Hegelian themes also echo, in a different key, throughout the work of poststructuralists such as MICHEL FOUCAULT and JULIA KRISTEVA.

Our first selection presents the most famous instance of dialectical confrontation in Hegel, the so-called Master-Slave (“lord” and “bondsman” in our translation) dialectic. Although dense and abstract, this section of *Phenomenology of Spirit* has been very influential, especially in France, where, by way of Alexandre Kojève’s celebrated *Introduction to the Reading of Hegel* (1947), it shaped the thought of Jean-Paul Sartre, SIMONE DE BEAUVOIR, JACQUES LACAN, and JACQUES DERRIDA, among others. The question Hegel asks is this: how does a human being come to consciousness of itself as a self (a consciousness that animals lack)? Hegel assumes that humans are not born with the sense “I am John Smith, and this is what I believe and am like.” How then do we acquire self-consciousness? Only in meeting with something that is not the self, according to Hegel. Confrontation with my limits, with the not-self, enables me to identify what is self, what belongs to me. The reality of this discovered self depends on two things: I must have the consciousness that I am a self (which Hegel calls “being-for-self”), and my existence must be acknowledged or recognized by other human beings (“being-for-others”). In Hegel’s words, “Self-consciousness exists in and for itself when, and by the fact that, it so exists for another; that is, it exists only in being acknowledged.”

Most interpreters have seen Hegel as demonstrating that selfhood is a social fact. The child develops a sense of self largely because others treat it as a self—and the self will be socially constructed in different ways, depending on how it is treated. Selves are not born but made, in a dialectical social process of interrelationships among selves. This ongoing process proceeds through “moments” that Hegel then identifies as stages on the way toward full self-consciousness. Just as the self develops consciousness over time, so the human species as a whole passes through moments in history on the path to absolute knowledge. *Phenomenology of Spirit* traces this movement of humans through time to the culminating moment of the full self-consciousness of Spirit.

In the Master-Slave dialectic, the counterposed selves who are coming to consciousness have so much at stake that their relationships are a constant source of strife, “such that they prove themselves and each other through a life-and-death struggle.” Selves do not take their fundamental dependence on others kindly. Here power enters the discussion, as Hegel imagines that each individual would prefer to guarantee continued recognition from the other, while not extending that recognition in turn. Such imbalance, taken to its extreme, is figured by Hegel as the relationship between a master and a slave, which is established in a battle that ends when the Slave grants recognition and service to the Master in return for continued life. (Both the Master and Slave stake their life in the battle, but the loser becomes a slave by choosing a life of servitude over death at the hand of the victor.)

The Master, however, finds victory hollow. Recognition, like love, has value only when it is freely given, when it comes from someone who is like me in status. If the other acknowledges my existence only because forced to do so, how can that calm my

lurking doubt about who I am? (Hegel not only anticipates the processes of self-formation described by SIGMUND FREUD but also describes the existential anxiety that haunts any attachment to "identity.") The Master's access to his own selfhood is mediated through his relationship to the Slave; and since that Slave is "not an independent consciousness, but a dependent one," the Master "is, therefore, not certain of *being-for-self* as the truth of himself." By obliterating the Slave's independence, the Master has removed the very "other" that must be encountered to achieve selfhood.

Meanwhile, the Slave moves from the "dread . . . it has experienced" in the face of "death, the absolute Lord [or Master]" to a fairly satisfactory self-consciousness achieved through work. (The Hegelian description of labor as redemptive greatly influenced Marx.) The Slave gains a sense of self because his labor has an effect on a material world of resistant objects. The Master has lost contact with the non-self (except with the Slave) because he has left all physical interaction with the world to the Slave. This ironic reversal of the Master-Slave relationship points toward the reciprocity of dependence that Hegel sees as characterizing human relationships: "They recognize themselves as *mutually recognizing* one another." Only if I am willing to acknowledge that the other is also a self, who has a need and a right to be a being-for-self, can I satisfactorily establish my own selfhood.

This account provides a memorable and persuasive model for understanding the complex dynamics of intersubjective relationships. Selfhood is a social product that individuals crave; identity has to be constructed through contentious interaction with and relation to others; this process makes us dependent on others, and thus inclined to resent and fear them; and such dependence involves forms of psychological and social power that are distinct from physical force or the power afforded by superior wealth. Whenever modern literary theorists and critics have been interested in questions of identity and of the self's confrontation with the other (however understood), Hegel's famous account of the Master-Slave dialectic has hovered in the background.

Our second selection consists of excerpts from the introduction to *Lectures on Fine Art*—Hegel's contribution to philosophical aesthetics, the field that seeks to define the aims of the arts, the features of art objects, the activity of artists, and the effects of the arts on audiences. Aesthetics dates from the 1750s, but Hegel clearly echoes Plato on the arts. For Hegel, the fundamental goal of humanity is to come to full consciousness of the Idea (or Spirit), and philosophy is the golden road to that goal. Yet, unlike Plato, he wants to praise art, not condemn it. Because Hegel accepts the superiority of spirit over matter, truth over appearance, universal over particular, intellectual over sensual, and logic over feeling, he must argue that art, understood correctly, is not merely a sensuous, material, singular thing; instead, it contributes to human understanding of the Idea.

Hegel takes the line of argument suggested by his model of thinking. Just as the self in the Master-Slave dialectic can come to self-consciousness only through encountering an other, so thinking needs to encounter an object. The Spirit or Idea dwells within humans, but as "a *thinking* consciousness" a person "draws out of himself and puts *before himself* what . . . is." After art has given Spirit a concrete form, it can be apprehended. This account makes art part of the philosophical project of coming to full consciousness—and provides Hegel with firm answers to a number of problems that bedevil aesthetics.

In the first part of our selection, Hegel reviews previous notions of the arts, steering a middle path between accounts that emphasize rules and those that rely on pure inspiration. More important, Hegel asserts the superiority of human-made artistic objects to God-made natural ones by appealing to their spiritual purpose. Spirit dwells in nature as well as in humans, but only humans are conscious of reaching an awareness of spirit. A man needs art "to lift the inner and outer world into his spiritual consciousness as an object in which he recognizes again his own self." In Hegel's quasi-religious philosophy, human life reaches its highest form when we recognize that the spirit of the creator permeates all of the created world, including ourselves. To discover this true self, to align ourselves with spirit, is to attain "free rationality."

True to his historicist convictions, in the second part of our selection Hegel presents the movement to full self-consciousness as occurring in stages. Symbolic, classical, and romantic art form a dialectical triad. Symbolic art, tied to “perceived natural objects,” attempts but fails to attach a spiritual significance to those objects. This failure has its uses, since at least “the foreignness of the Idea to natural phenomena” is made manifest. The gap here between the natural and the spiritual is, Hegel tells us, “sublime,” a striking revision of a category invoked in antiquity by LONGINUS and in the eighteenth century by JOSEPH ADDISON, EDMUND BURKE, and Kant.

The failure of primitive symbolic art, associated with the ancient Near East, generates its antithesis, classical art; and what Hegel sees as the higher, Western tradition begins. By focusing on “the human form,” the Greeks gave the Idea an adequate material embodiment. Since humans are a potent example of the union of spirit and body, Hegel finds ingenious the classical solution to the problem of “bring[ing] the spiritual before our eyes in a sensuous manner.” But it too has a defect—the opposite of that of symbolic art, which could not give the Idea a local habitation and name. Classical art fails because it “determine[s]” spirit “as particular and human,” thus obscuring its “absolute and eternal” essence.

This “defect . . . demands a transition to a higher form,” the Romantic. The threat of classical art lies in its sensuousness. Romantic art, even as it utilizes sensuous forms, must move both artist and audience (by irony and sublimity) toward “the *inwardness of self-consciousness*,” toward the indwelling spirit. As a synthesis and overcoming of symbolic and classical art, Romantic art dissociates the idea from the sensuous form (as does symbolic art) even as it presents the sensuous form (as does classical art). Romantic art stages the “inadequacy” of the material embodiment so that “the Idea . . . appear[s] *perfected* in itself as spirit and heart.”

Thus Hegel is a champion of Romantic art. In the move from sensuous form to inwardness, he places the expression of “subjective inner depth” and “reflective emotion” at the center of the artistic enterprise. This notion of art as expression is the cornerstone of Romantic aesthetics—WILLIAM WORDSWORTH, PERCY BYSSHE SHELLEY, and RALPH WALDO EMERSON are among the nineteenth-century writers who espouse some version of an expressivist aesthetic—and it continues to dominate popular understandings of art, especially poetry. But Hegel’s historicism also suggests a broader expressivist understanding of art, in which the artwork is viewed as an expression of an era, *zeitgeist*, culture, or nation rather than of the artist’s self. In both cases, artistic representation is tied not to some visible thing imitated by the artist but to some invisible ideas, emotions, attitudes, values, or spirit.

While much contemporary critical practice, knowingly or not, is Hegelian, postmodern theory has self-consciously struggled (sometimes desperately) to slough off Hegelian habits. The great problem is Hegel’s will to totality, the movement of his philosophy, through dialectical overcoming and synthesis, to include everything. Postmodern theorists resist this philosophical imperialism, this “totalizing impulse,” insisting that inclusion through the dialectic always comes at the price of overcoming what is most singular and different in the incorporated other. The problem with subsuming everything into a totalizing system is the erasure of difference. Hence, in our selection Hegel makes art safe for philosophy by downplaying or explaining away everything that makes art different from and even antithetical to thinking.

By highlighting the different and the singular, postmodernists question Hegel’s placing of everything into a relational, systematic whole. But since postmodern theory does accept that meaning is the product of systematic, though differential, relations, Hegel has been hard to negate. Because he can be neither banished nor embraced, Hegel remains a figure to whom much contemporary theory obsessively returns.

Phenomenology of Spirit Keywords: Identity, Marxism, Phenomenology, Post-structuralism, Subjectivity

Lectures on Fine Art Keywords: Aesthetics, Ethics, Phenomenology, Religion, Romantic Theory

From Phenomenology of Spirit¹

[*The Master-Slave Dialectic*]

178. Self-consciousness exists in and for itself when, and by the fact that, it so exists for another; that is, it exists only in being acknowledged [*als ein Anerkanntes*]. The Notion of this its unity in its duplication embraces many and varied meanings. Its moments, then, must on the one hand be held strictly apart, and on the other hand must in this differentiation at the same time also be taken and known as not distinct, or in their opposite significance. The twofold significance of the distinct moments has in the nature of self-consciousness to be infinite, or directly the opposite of the determinateness in which it is posited. The detailed exposition of the Notion of this spiritual unity in its duplication will present us with the process of Recognition [*Anerkennen*].

179. Self-consciousness is faced by another self-consciousness; it has come *out of itself*. This has a twofold significance: first, it has lost itself, for it finds itself as an *other* being; secondly, in doing so it has superseded the other, for it does not see the other as an essential being, but in the other sees its own self.

180. It must supersede this otherness of itself. This is the supersession of the first ambiguity, and is therefore itself a second ambiguity. First, it must proceed to supersede the *other* independent being in order thereby to become certain of *itself* as the essential being; secondly, in so doing it proceeds to supersede its *own* self, for this other is itself.

181. This ambiguous supersession of its ambiguous otherness is equally an ambiguous return *into itself*. For first, through the supersession, it receives back its own self, because, by superseding *its* otherness, it again becomes equal to itself; but secondly, it equally gives the other self-consciousness back again to itself, for it saw itself in the other, but supersedes this being of itself in the other and thus lets the other again go free.

182. Now, this movement of self-consciousness in relation to another self-consciousness has in this way been represented as the action of *one* self-consciousness, but this action of the one has itself the double significance of being both its own action and the action of the other as well. For the other is equally independent and self-contained, and there is nothing in it of which it is not itself the origin. The first does not have the object before it merely as it exists primarily for desire, but as something that has an independent existence of its own, which, therefore, it cannot utilize for its own purposes, if that object does not of its own accord do what the first does to it. Thus the movement is simply the double movement of the two self-consciousnesses. Each sees the *other* do the same as it does; each does itself what it demands of the other, and therefore also does what it does only in so far as the other does the same. Action by one side only would be useless because what is to happen can only be brought about by both.

1. Translated by A. V. Miller, who sometimes retains the original German or adds clarifying words or phrases in brackets and has added the paragraph numbers.

183. Thus the action has a double significance not only because it is directed against itself as well as against the other, but also because it is indivisibly the action of one as well as of the other.

184. In this movement we see repeated the process which presented itself as the play of Forces, but repeated now in consciousness. What in that process was *for us*, is true here of the extremes themselves. The middle term is self-consciousness which splits into the extremes; and each extreme is this exchanging of its own determinateness and an absolute transition into the opposite. Although, as consciousness, it does indeed come *out of itself*, yet, though out of itself, it is at the same time kept back within itself, is *for itself*, and the self outside it, is *for it*. It is aware that it at once is, and is not, another consciousness, and equally that this other is *for itself* only when it supersedes itself as being for itself, and is for itself only in the being-for-self of the other. Each is for the other the middle term, through which each mediates itself with itself and unites with itself; and each is for itself, and for the other, an immediate being to its own account, which at the same time is such only through this mediation.² They *recognize* themselves as *mutually recognizing* one another.

185. We have now to see how the process of this pure Notion of recognition, of the duplicating of self-consciousness in its oneness, appears to self-consciousness. At first, it will exhibit the side of the inequality of the two, or the splitting-up of the middle term into the extremes which, as extremes, are opposed to one another, one being only *recognized*, the other only *recognizing*.

186. Self-consciousness is, to begin with, simple being-for-self, self-equal through the exclusion from itself of everything else. For it, its essence and absolute object is 'I'; and in this immediacy, or in this [mere] being, of its being-for-self, it is an *individual*. What is 'other' for it is an unessential, negatively characterized object. But the 'other' is also a self-consciousness; one individual is confronted by another individual. Appearing thus immediately on the scene, they are for one another like ordinary objects, *independent* shapes, individuals submerged in the being [or immediacy] of *Life*—for the object in its immediacy is here determined as *Life*. They are, *for each other*, shapes of consciousness which have not yet accomplished the movement of absolute abstraction, of rooting-out all immediate being, and of being merely the purely negative being of self-identical consciousness; in other words, they have not as yet exposed themselves to each other in the form of pure being-for-self, or as self-consciousness. Each is indeed certain of its own self, but not of the other, and therefore its own self-certainty still has no truth. For it would have truth only if its own being-for-self had confronted it as an independent object, or, what is the same thing, if the object had presented itself as this pure self-certainty. But according to the Notion of recognition this is possible only when each is for the other what the other is for it, only when each in its own self through its own action, and again through the action of the other, achieves this pure abstraction of being-for-self.

187. The presentation of itself, however, as the pure abstraction of self-consciousness consists in showing itself as the pure negation of its objective

2. That is, the encounter with the other is necessary for self-consciousness.

mode, or in showing that it is not attached to any specific *existence*, not to the individuality common to existence as such, that it is not attached to life. This presentation is a twofold action: action on the part of the other, and action on its own part. In so far as it is the action of the *other*, each seeks the death of the other. But in doing so, the second kind of action, action on its own part, is also involved; for the former involves the staking of its own life. Thus the relation of the two self-conscious individuals is such that they prove themselves and each other through a life-and-death struggle. They must engage in this struggle, for they must raise their certainty of being *for themselves* to truth, both in the case of the other and in their own case. And it is only through staking one's life that freedom is won; only thus is it proved that for self-consciousness, its essential being is not [just] being, not the *immediate* form in which it appears, not its submergence in the expanse of life, but rather that there is nothing present in it which could not be regarded as a vanishing moment, that it is only pure *being-for-self*. The individual who has not risked his life may well be recognized as a *person*, but he has not attained to the truth of this recognition as an independent self-consciousness. Similarly, just as each stakes his own life, so each must seek the other's death, for it values the other no more than itself; its essential being is present to it in the form of an 'other', it is outside of itself and must rid itself of its self-externality. The other is an *immediate* consciousness entangled in a variety of relationships, and it must regard its otherness as a pure being-for-self or as an absolute negation.

188. This trial by death, however, does away with the truth which was supposed to issue from it, and so, too, with the certainty of self generally. For just as life is the *natural* setting of consciousness, independence without absolute negativity, so death is the *natural* negation of consciousness, negation without independence, which thus remains without the required significance of recognition. Death certainly shows that each staked his life and held it of no account, both in himself and in the other; but that is not for those who survived this struggle. They put an end to their consciousness in its alien setting of natural existence, that is to say, they put an end to themselves, and are done away with as *extremes* wanting to be *for themselves*, or to have an existence of their own. But with this there vanishes from their interplay the essential moment of splitting into extremes with opposite characteristics; and the middle term collapses into a lifeless unity which is split into lifeless, merely immediate, unopposed extremes; and the two do not reciprocally give and receive one another back from each other consciously, but leave each other free only indifferently, like things. Their act is an abstract negation, not the negation coming from consciousness, which supersedes in such a way as to preserve and maintain what is superseded, and consequently survives its own supersession.³

189. In this experience, self-consciousness learns that life is as essential to it as pure self-consciousness. In immediate self-consciousness the simple 'I' is the absolute object which, however, for us or in itself is absolute mediation, and has as its essential moment lasting independence. The dissolution of that simple unity is the result of the first experience; through this there is posited a pure self-consciousness, and a consciousness which is not purely for itself

3. This description of "the negation coming from consciousness" encapsulates the dialectic.

but for another, i.e. is a merely *immediate* consciousness, or consciousness in the form of *thinghood*. Both moments are essential. Since to begin with they are unequal and opposed, and their reflection into a unity has not yet been achieved, they exist as two opposed shapes of consciousness; one is the independent consciousness whose essential nature is to be for itself, the other is the dependent consciousness whose essential nature is simply to live or to be for another. The former is lord [*Herr*], the other is bondsman [*Knecht*].⁴

190. The lord is the consciousness that exists *for itself*, but no longer merely the Notion of such a consciousness. Rather, it is a consciousness existing *for itself* which is mediated with itself through another consciousness, i.e. through a consciousness whose nature it is to be bound up with an existence that is independent, or thinghood in general. The lord puts himself into relation with both of these moments, to a *thing* as such, the object of desire, and to the consciousness for which thinghood is the essential characteristic. And since he is (a) *qua* the Notion of self-consciousness an immediate relation of *being-for-self*, but (b) is now at the same time mediation, or a being-for-self which is for itself only through another, he is related (a) immediately to both, and (b) mediately to each through the other. The lord relates himself mediately to the bondsman through a being [a thing] that is independent, for it is just this which holds the bondsman in bondage; it is his chain from which he could not break free in the struggle, thus proving himself to be dependent, to possess his independence in thinghood. But the lord is the power over this thing, for he proved in the struggle that it is something merely negative; since he is the power over this thing and this again is the power over the other [the bondsman], it follows that he holds the other in subjection. Equally, the lord relates himself mediately to the thing through the bondsman; the bondsman, *qua* self-consciousness in general, also relates himself negatively to the thing, and takes away its independence; but at the same time the thing is independent *vis-à-vis* the bondsman, whose negating of it, therefore, cannot go to the length of being altogether done with it to the point of annihilation; in other words, he only *works* on it. For the lord, on the other hand, the *immediate* relation becomes through this mediation the sheer negation of the thing, or the enjoyment of it. What desire failed to achieve, he succeeds in doing, viz. to have done with the thing altogether, and to achieve satisfaction in the enjoyment of it. Desire failed to do this because of the thing's independence; but the lord, who has interposed the bondsman between it and himself, takes to himself only the dependent aspect of the thing and has the pure enjoyment of it. The aspect of its independence he leaves to the bondsman, who works on it.

191. In both of these moments the lord achieves his recognition through another consciousness; for in them, that other consciousness is expressly something unessential, both by its working on the thing, and by its dependence on a specific existence. In neither case can it be lord over the being of the thing and achieve absolute negation of it. Here, therefore, is present this moment of recognition, viz. that the other consciousness sets aside its own being-for-self, and in so doing itself does what the first does to it. Similarly, the other moment too is present, that this action of the second is the first's own action; for what the bondsman does is really the action of the

4. *Herr* and *Knecht* have often been translated "Master" and "Slave."

lord. The latter's essential nature is to exist only for himself; he is the sheer negative power for whom the thing is nothing. Thus he is the pure, essential action in this relationship, while the action of the bondsman is impure and unessential. But for recognition proper the moment is lacking, that what the lord does to the other he also does to himself, and what the bondsman does to himself he should also do to the other. The outcome is a recognition that is one-sided and unequal.

192. In this recognition the unessential consciousness is for the lord the object, which constitutes the *truth* of his certainty of himself. But it is clear that this object does not correspond to its Notion, but rather that the object in which the lord has achieved his lordship has in reality turned out to be something quite different from an independent consciousness. What now really confronts him is not an independent consciousness, but a dependent one. He is, therefore, not certain of *being-for-self* as the truth of himself. On the contrary, his truth is in reality the unessential consciousness and its unessential action.

193. The *truth* of the independent consciousness is accordingly the servile consciousness of the bondsman. This, it is true, appears at first *outside* of itself and not as the truth of self-consciousness. But just as lordship showed that its essential nature is the reverse of what it wants to be, so too servitude in its consummation will really turn into the opposite of what it immediately is; as a consciousness forced back into itself, it will withdraw into itself and be transformed into a truly independent consciousness.

194. We have seen what servitude is only in relation to lordship. But it is a self-consciousness, and we have now to consider what as such it is in and for itself. To begin with, servitude has the lord for its essential reality; hence the *truth* for it is the independent consciousness that it is *for itself*. However, servitude is not yet aware that this truth is implicit in it. But it does in fact contain within itself this truth of pure negativity and being-for-self, for it has experienced this its own essential nature. For this consciousness has been fearful, not of this or that particular thing or just at odd moments, but its whole being has been seized with dread; for it has experienced the fear of death, the absolute Lord. In that experience it has been quite unmannered, has trembled in every fibre of its being, and everything solid and stable has been shaken to its foundations. But this pure universal movement, the absolute melting-away of everything stable, is the simple, essential nature of self-consciousness, absolute negativity, *pure being-for-self*, which consequently is *implicit* in this consciousness. This moment of pure being-for-self is also *explicit* for the bondsman, for in the lord it exists for him as his *object*. Furthermore, his consciousness is not this dissolution of everything stable merely in principle; in his service he *actually* brings this about. Through his service he rids himself of his attachment to natural existence in every single detail; and gets rid of it by working on it.

195. However, the feeling of absolute power both in general, and in the particular form of service, is only implicitly this dissolution, and although the fear of the lord is indeed the beginning of wisdom, consciousness is not therein aware that it is a being-for-self. Through work, however, the bondsman becomes conscious of what he truly is. In the moment which corresponds to desire in the lord's consciousness, it did seem that the aspect of unessential relation to the thing fell to the lot of the bondsman, since in that

relation the thing retained its independence. Desire has reserved to itself the pure negating of the object and thereby its unalloyed feeling of self. But that is the reason why this satisfaction is itself only a fleeting one, for it lacks the side of objectivity and permanence. Work, on the other hand, is desire held in check, fleetingness staved off; in other words, work forms and shapes the thing. The negative relation to the object becomes its *form* and something *permanent*, because it is precisely for the worker that the object has independence. This *negative* middle term or the formative *activity* is at the same time the individuality or pure being-for-self of consciousness which now, in the work outside of it, acquires an element of permanence.⁵ It is in this way, therefore, that consciousness, *qua* worker, comes to see in the independent being [of the object] its *own* independence.

196. But the formative activity has not only this positive significance that in it the pure being-for-self of the servile consciousness acquires an existence; it also has negative significance with respect to its first moment, *fear*. For, in fashioning the thing, the bondsman's own negativity, his being-for-self, becomes an object for him only through his setting at nought the existing *shape* confronting him. But this objective *negative* moment is none other than the alien being before which it has trembled. Now, however, he destroys this alien negative moment, posits *himself* as a negative in the permanent order of things, and thereby becomes *for himself*, someone existing on his own account. In the lord, the being-for-self is an 'other' for the bondsman, or is only *for* him [i.e. is not his own]; in fear, the being-for-self is present in the bondsman himself; in fashioning the thing, he becomes aware that being-for-self belongs to *him*, that he himself exists essentially and actually in his own right. The shape does not become something other than himself through being made external to him; for it is precisely this shape that is his pure being-for-self, which in this externality is seen by him to be the truth. Through this rediscovery of himself by himself, the bondsman realizes that it is precisely in his work wherein he seemed to have only an alienated existence that he acquires a mind of his own. For this reflection, the two moments of fear and service as such, as also that of formative activity, are necessary, both being at the same time in a universal mode. Without the discipline of service and obedience, fear remains at the formal stage, and does not extend to the known real world of existence. Without the formative activity, fear remains inward and mute, and consciousness does not become explicitly *for itself*. If consciousness fashions the thing without that initial absolute fear, it is only an empty self-centered attitude; for its form or negativity is not negativity *per se*, and therefore its formative activity cannot give it a consciousness of itself as essential being. If it has not experienced absolute fear but only some lesser dread, the negative being has remained for it something external, its substance has not been infected by it through and through. Since the entire contents of its natural consciousness have not been jeopardized, determinate being still *in principle* attaches to it; having a 'mind of one's own' is self-will, a freedom which is still enmeshed in servitude. Just as little as the pure form can become essential being for it, just as little is that form, regarded as extended to the

5. Work as "formative activity," according to Hegel, creates a stable object that comes to signify a similar stability for the consciousness that shapes that object.

particular, a universal formative activity, an absolute Notion; rather it is a skill which is master over some things, but not over the universal power and the whole of objective being.

THE WORK OF ART AS A PRODUCT OF HUMAN ACTIVITY

(a) As for the first point, that a work of art is a product of human activity, this view has given rise to the thought that this activity, being the *conscious* production of an external object, can also be *known* and expounded, and learnt and pursued by others. For what one man makes, another, it may seem, could make or imitate too, if only he were first acquainted with the manner of proceeding; so that, granted universal acquaintance with the rules of artistic production, it would only be a matter of everyone's pleasure to carry out the procedure in the same manner and produce works of art. It is in this way that the rule-providing theories, mentioned above, with their prescriptions calculated for practical application, have arisen. But what can be carried out on such directions can only be something formally regular and mechanical. For the mechanical alone is of so external a kind that only a purely empty exercise of will and dexterity is required for receiving it into our ideas and activating it; this exercise does not require to be supplemented by anything concrete, or by anything not prescribed in universal rules. This comes out most vividly when such prescriptions do not limit themselves to the purely external and mechanical, but extend to the significant and spiritual activity of the artist. In this sphere the rules contain only vague generalities, for example that 'the theme should be interesting, every character should speak according to his standing, age, sex, and situation'. But if rules are to satisfy here, then their prescriptions should have been drawn up at the same time with such precision that they could be observed just as they are expressed, without any further spiritual activity of the artist's. Being abstract in content, however, such rules reveal themselves, in their pretence of adequacy to fill the consciousness of the artist, as wholly inadequate, since artistic production is not a formal activity in accordance with given specifications. On the contrary, as spiritual activity it is bound to work from its own resources and bring before the mind's eye a quite other and richer content and more comprehensive individual creations [than formulae can provide]. Therefore, in so far as such rules do actually contain something specific and therefore of practical utility, they may apply in case of need, but still can afford no more than specifications for purely external circumstances.

(b) Thus, as it turns out, the tendency just indicated has been altogether abandoned, and instead of it the opposite one has been adopted to the same

1. Translated by T. M. Knox, who sometimes adds explanatory words or phrases in brackets.

extent. For the work of art was no longer regarded as a product of *general* human activity, but as a work of an entirely *specialty gifted* spirit which now, however, is supposed to give free play simply and *only* to its own particular gift, as if to a specific natural force; it is to cut itself altogether loose from attention to universally valid laws and from a conscious reflection interfering with its own instinctive-like productive activity. Indeed it is supposed to be protected from such reflection, since its productions could only be contaminated and spoiled by such awareness. From this point of view the work of art has been claimed as a product of *talent* and *genius*, and the natural element in talent and genius has been especially emphasized. In a way, rightly, since talent is specific and genius universal capability, which man has not the power to give to himself purely and simply through his own self-conscious activity. On this topic we shall speak at greater length later.

Here we have only to mention the false aspect of this view, namely that in artistic production all consciousness of the artist's own activity is regarded as not merely superfluous but even deleterious. In that case production by talent and genius appears as only a *state* and, in particular, a state of *inspiration*. To such a state, it is said, genius is excited in part by an object, and in part can transpose itself into it by its own caprice, a process in which, after all, the good services of the champagne bottle are not forgotten. In Germany this notion became prominent at the time of the so-called *Period of Genius* which was introduced by Goethe's first poetical productions and then sustained by Schiller's.² In their earliest works these poets began afresh, setting aside all the rules then fabricated; they worked deliberately against these rules and thereby surpassed all other writers. However, I will not go further into the confusions which have been prevalent about the concept of inspiration and genius, and which prevail even today about the omnicompetence of inspiration as such. All that is essential is to state the view that, even if the talent and genius of the artist has in it a natural element, yet this element essentially requires development by thought, reflection on the mode of its productivity, and practice and skill in producing. For, apart from anything else, a main feature of artistic production is external workmanship, since the work of art has a purely technical side which extends into handicraft, especially in architecture and sculpture, less so in painting and music, least of all in poetry. Skill in technique is not helped by any inspiration, but only by reflection, industry, and practice. But such skill the artist is compelled to have in order to master his external material and not be thwarted by its intractability.

Now further, the higher the standing of the artist, the more profoundly should he display the depths of the heart and the spirit; these are not known directly but are to be fathomed only by the direction of the artist's own spirit on the inner and outer world. So, once again, it is study whereby the artist brings this content into his consciousness and wins the stuff and content of his conceptions.

* * *

2. Johann Wolfgang von Goethe (1749–1832) and FRIEDRICH VON SCHILLER (1759–1805) were the two most important poets of the Romantic period in Germany.

(c) A third view concerning the idea of the work of art as a product of human activity refers to the placing of the work of art in relation to the external phenomena of nature. Here the ordinary way of looking at things took easily to the notion that the human art-product ranked below the product of nature; for the work of art has no feeling in itself and is not through and through enlivened, but, regarded as an external object, is dead; but we are accustomed to value the living higher than the dead. That the work of art has no life and movement in itself is readily granted. What is alive in nature is, within and without, an organism purposefully elaborated into all its tiniest parts, while the work of art attains the appearance of life only on its surface; inside it is ordinary stone, or wood and canvas, or, as in poetry, an idea expressed in speech and letters. But this aspect—external existence—is not what makes a work into a product of fine art; a work of art is such only because, originating from the spirit, it now belongs to the territory of the spirit; it has received the baptism of the spiritual and sets forth only what has been formed in harmony with the spirit. Human interest, the spiritual value possessed by an event, an individual character, an action in its complexity and outcome, is grasped in the work of art and blazoned more purely and more transparently than is possible on the ground of other non-artistic things. Therefore the work of art stands higher than any natural product which has not made this journey through the spirit. For example, owing to the feeling and insight whereby a landscape has been represented in a painting, this work of the spirit acquires a higher rank than the mere natural landscape. For everything spiritual is better than any product of nature. Besides, no natural being is able, as art is, to present the divine Ideal.

Now on what the spirit draws from its own inner resources in works of art it confers permanence in their external existence too; on the other hand, the individual living thing in nature is transient, vanishing, changeable in outward appearance, while the work of art persists, even if it is not mere permanence which constitutes its genuine pre-eminence over natural reality, but its having made spiritual inspiration conspicuous.

But nevertheless this higher standing of the work of art is questioned by another idea commonly entertained. For nature and its products, it is said, are a work of God, created by his goodness and wisdom, whereas the art-product is a purely human work, made by human hands according to human insight. In this contrast between natural production as a divine creation and human activity as something merely finite there lies directly the misunderstanding that God does not work in and through men at all, but restricts the sphere of his activity to nature alone. This false opinion must be completely rejected if we are to penetrate to the true nature of art. Indeed, over against this view we must cling to the opposite one, namely that God is more honoured by what the spirit makes than by the productions and formations of nature. For not only is there something divine in man, but it is active in him in a form appropriate to the being of God in a totally different and higher manner than it is in nature. God is spirit, and in man alone does the medium, through which the Divine passes, have the form of conscious and actively self-productive spirit; but in nature this medium is the unconscious, the sensuous, and the external, which stands far below consciousness in worth. Now in art-production God is just as operative as

he is in the phenomena of nature; but the Divine, as it discloses itself in the work of art, has been generated out of the spirit, and thus has won a suitable thoroughfare for its existence, whereas just being *there* in the unconscious sensuousness of nature is not a mode of appearance appropriate to the Divine.

(d) Now granted that the work of art is made by man as the creation of his spirit, a final question arises, in order to derive a deeper result from the foregoing [discussion], namely, what is man's *need* to produce works of art? On the one hand, this production may be regarded as a mere play of chance and fancies which might just as well be left alone as pursued; for it might be held that there are other and even better means of achieving what art aims at and that man has still higher and more important interests than art has the ability to satisfy. On the other hand, however, art seems to proceed from a higher impulse and to satisfy higher needs,—at times the highest and absolute needs since it is bound up with the most universal views of life and the religious interests of whole epochs and peoples.—This question about the non-contingent but absolute need for art, we cannot yet answer completely, because it is more concrete than an answer could turn out to be at this stage. Therefore we must content ourselves in the meantime with making only the following points.

The universal and absolute need from which art (on its formal side) springs has its origin in the fact that man is a *thinking* consciousness, i.e. that man draws out of himself and puts *before himself* what he is and whatever else is. Things in nature are only *immediate* and *single*, while man as spirit *duplicates* himself, in that (i) he is as things in nature are, but (ii) he is just as much *for* himself; he sees himself, represents himself to himself, thinks, and only on the strength of this active placing himself before himself is he spirit. This consciousness of himself man acquires in a two-fold way: *first, theoretically*, in so far as inwardly he must bring himself into his own consciousness, along with whatever moves, stirs, and presses in the human breast; and in general he must see himself, represent himself to himself, fix before himself what thinking finds as his essence, and recognize himself alone alike in what is summoned out of himself and in what is accepted from without. *Secondly*, man brings himself before himself by *practical* activity, since he has the impulse, in whatever is directly given to him, in what is present to him externally, to produce himself and therein equally to recognize himself. This aim he achieves by altering external things whereon he impresses the seal of his inner being and in which he now finds again his own characteristics. Man does this in order, as a free subject, to strip the external world of its inflexible foreignness and to enjoy in the shape of things only an external realization of himself. Even a child's first impulse involves this practical alteration of external things; a boy throws stones into the river and now marvels at the circles drawn in the water as an effect in which he gains an intuition of something that is his own doing. This need runs through the most diversified phenomena up to that mode of self-production in external things which is present in the work of art. And it is not only with external things that man proceeds in this way, but no less with himself, with his own natural figure which he does not leave as he finds it but deliberately alters. This is the cause of all dressing up and adornment, even if it be barbaric, tasteless, completely disfiguring, or even pernicious like crushing the feet of Chinese

ladies,³ or slitting the ears and lips. For it is only among civilized people that alteration of figure, behaviour, and every sort and mode of external expression proceeds from spiritual development.

The universal need for art, that is to say, is man's rational need to lift the inner and outer world into his spiritual consciousness as an object in which he recognizes again his own self. The need for this spiritual freedom he satisfies, on the one hand, by making what is within him explicit to himself, but correspondingly by giving outward reality to this his explicit self, and thus in this duplication of himself by bringing what is in him into sight and knowledge for himself and others. This is the free rationality of man in which all acting and knowing, as well as art too, have their basis and necessary origin.

* * *

DEVELOPMENT OF THE IDEAL INTO THE PARTICULAR FORMS OF THE BEAUTY OF ART

But because the Idea is in this way a concrete unity, this unity can enter the art-consciousness only through the unfolding and then the reconciliation of the particularizations of the Idea,⁴ and, through this development, artistic beauty acquires a *totality of particular stages and forms*. Therefore, after studying artistic beauty in itself and on its own account, we must see how beauty as a whole decomposes into its particular determinations. This gives, as the *second* part of our study, the doctrine of the *forms of art*. These forms find their origin in the different ways of grasping the Idea as content, whereby a difference in the configuration in which the Idea appears is conditioned. Thus the forms of art are nothing but the different relations of meaning and shape, relations which proceed from the Idea itself and therefore provide the true basis for the division of this sphere. For division must always be implicit in the concept, the particularization and division of which is in question.

We have here to consider *three* relations of the Idea to its configuration.

(a) *First*, art begins when the Idea, still in its indeterminacy and obscurity, or in bad and untrue determinacy, is made the content of artistic shapes. Being indeterminate, it does not yet possess in itself that individuality which the Ideal demands; its abstraction and one-sidedness leave its shape externally defective and arbitrary. The first form of art is therefore rather a *mere search* for portrayal than a capacity for true presentation; the Idea has not found the form even in itself and therefore remains struggling and striving after it. We may call this form, in general terms, the *symbolic* form of art. In it the abstract Idea has its shape outside itself in the natural sensuous material from which the process of shaping starts⁵ and with which, in its appearance, this process is linked. Perceived natural objects are, on the one hand, primarily left as they are, yet at the same time the substantial Idea is imposed on them as their meaning so that they now acquire a vocation to express it and so are to be interpreted as if the Idea itself were present in them. A corollary of this is the fact that natural objects have in them an

3. That is, footbinding, a practice common among Chinese women from the 10th into the 20th century.
